DEAN
HOWELLS**

Mr. Howells carried an appreciative mental kodak with him during his recent London sojourn, and his delightful talk about sights and people in the English metropolis is most engaging. He has a keen and humorous contrasts between New York and London, chatting about the weather, street sights and noises, rambles about town, and his adventures with English lodgings and hansoms. Every page offers charm and entertainment.

HARPER & BROTHERS, NEW YORK

POLE BAKER

BY
WILL N. HARBEN

Author of "Abner Daniel," "The Georgians," "The Substitute," etc.

POLE BAKER will be remembered as a humorous character in "Abner Daniel." In this new novel he is the central character—a shrewd, kindly, shirt-sleeves philosopher, with some capital yarns to tell as well as an important part to play in the love affairs of a young couple with which the narrative is chiefly concerned. Indeed, were it not for his genius for meddling in other people's affairs to their own ultimate good, the romance of the young lovers would not have ended so happily. The characters and scenes are again those of Georgia, and the same good-humored, delightful narrative winds leisurely through this story as in its popular predecessors.

COMMENT

THE new year opens with the temporary obscuration of national by State politics. President ROOSEVELT's virtual assumption of the leadership of the Republican party in the Empire commonwealth being no longer susceptible of disguise. Events have forced him, against his will, to consent to play for the moment the part of dictator in his native State, and Governor HAGGINS is acting as his master of horse. It is well known that a similar arrogation of authority by President ARTHUR in 1882 split the Republican party in the State of New York, and caused the election of GROVER CLEVELAND to the Governorship by a plurality of nearly 200,000. There is only a superficial analogy, however, between the two situations. In 1882 no gross and scandalous misconduct had exposed the State leaders of the Republican party to public odium. Mr. ARTHUR's personal intervention in the State politics of New York in order to obtain for his Secretary of the Treasury, Judge FOLGER, the Republican nomination for the Governorship, was prompted, not by a desire to promote party regeneration and the common weal, but by the selfish wish to further his own candidacy for the nomination to the Presidency in 1884. No such egoistic motive for the attempt to rescue the Republican party in the Empire commonwealth from the disintegration and obliquity to which it has been brought by ex-Governor ORRILL and his accomplices can be imputed to Mr. ROOSEVELT. He has repeatedly and emphatically said that under no circumstances will he accept a renomination for the Presidency in 1908. Having, therefore, no selfish end to gain, and being safeguarded from suspicion on the part of fair-minded men, he was at liberty to remember that he is a native of New York, deeply interested in its welfare and in the purity, integrity, and efficiency of the political party to which his public life has been devoted. He would not have played the part of a man had he folded his arms and remained an impassive spectator of the humiliation and ruin of the once mighty organization to which he owed investiture with the powers of his great office. The interference which on ARTHUR's part was discreditable and hurtful is, in the case of President ROOSEVELT, laudable and indispensable. The former intermeddled to expatriate and disrupt; the latter has interposed to consolidate and save.

If Mr. ROOSEVELT's present attitude toward New York State politics differs by the whole diameter of morals from that assumed by Mr. ARTHUR in 1882, it is as sharply differentiated in respect of method. Mr. ROOSEVELT has never worn a dress-coat in burlesque to impress district leaders, nor been hand in glove with the small fry of machine politicians. He has never abused the Presidency by roving up and down his native State to make factional harangues and confabulate with local

wire-pullers. Such influence as he has deemed it opportune and needful to exert has been exercised with dignity, circumspection, and moderation. Those New York Republican leaders who desire the purgation and redemption of their party in their State have gone voluntarily to the President at Washington. He has not sought them in their homes, nor has he summoned them to the White House. They have asked for help as a right, and it has been accorded as a duty. From the midst of defeat, dissension, and distress they have sent forth a Macedonian cry, and the appeal has been answered in a discreet, a disinterested, an instructive, and an inspiring way. Mr. ROOSEVELT has named no names; he has confined himself to defining principles. He has dictated no particular candidates for the important offices of chairman of the Republican County Committee in the county of New York, of chairman of the State Committee, of Speaker of the Assembly, and the leader of the majority on the floor of that House; he has simply described the qualifications which fitting nominees for such posts ought to possess. No one knows better than the President that it is for the rank and file of the Republican party to pick out the men they would have requested them on committees and in the Legislature; but if their selection is a happy one, Mr. ROOSEVELT, as a fellow citizen and fellow Republican, has the right to offer the men selected all the support and encouragement at his disposal. So long as it is free from factional bias or favoritism, the President's lively interest in the purification of the New York Republican organization and in the political future of his native State is not only reasonable, but if it were not forthcoming he would be recalcitrant to the examples set by two illustrious predecessors, to wit, WASHINGTON and JEFFERSON, who, amid the strain and the whirl of national and international business, never failed to keep a vigilant watch on the local politics of the Old Dominion.

The reasons why the control of the Republican organization in the State of New York should be wrested from ex-Governor ORRILL are patent. In 1890, before ORRILL had been accused of any scandalous job or was in a position to plan and execute any great act of treachery, he was swept into the Governorship, mainly through McKINLEY's momentum, by a plurality of 111,000. His conduct as the State Executive was so unsatisfactory that when he was re-nominated for a second term in 1902 he proved so weak a candidate that he barely escaped defeat by a plurality of less than 3000 votes. Two years later, President ROOSEVELT carried the State by more than 175,000 plurality, whereas Mr. HAGGINS, who then labored under the disability of being tagged as "ORRILL's man," got less than 81,000. It follows that in 1898 the Republican candidate for Governor could not afford to be identified in the public mind with ORRILL, even though the latter should be amiable passive, instead of malignantly active. From the course which ORRILL pursued in the recent fight for the Mayorality, there is reason to believe that he would deliberately betray the Republican party. No well-informed observer doubts that last November, in the contest for Mayor of the city of New York, no fewer than a hundred thousand Republican votes were thrown to Mr. HENRY in response of a plot conceived by ORRILL and carried out by his tools. If the Republicans had given zealous and unanimous support to their ostensible nominee for the Mayorality, and had nominated from the start Mr. JENNER for District Attorney, instead of waiting until it was too late to place the latter's name on their official ticket, there is now a prevailing impression that Mr. IVINS would have been chosen Mayor. What ORRILL did once he might do again, if he were permitted to retain a grip on the Republican machine. Mr. HENRY, who is expected to be an independent candidate for Governor next year, is a rich man, and with a certain class of politicians money talks. Mr. E. H. HARRISMAN, in his testimony before the ARMSTRONG investigating committee, made it pretty evident that, in his opinion, he owned ORRILL, and we infer that the ear of the ex-Governor is peculiarly sensitive to the clink of coin. If, through a surreptitious combination with ORRILL, Mr. HENRY could secure in the State of New York anything like the amount of Republican support which he got last November in the city of that name, he would probably be elected Governor, and, with the State Executive, the Republicans would probably lose a majority of the seats in the House

of Representatives. Such a political revolution in his own State would scarcely tend to enhance President ROOSEVELT's prestige.

The expectation that the Federal Senate, restless under the prospect of effacement by the Executive, would try to evince independence in diverse ways was fulfilled before the holidays, and it remains to be seen whether the various groups of insurgents will be able to combine so as to thwart the President in any matter of importance. These groups include, first, the Senators who are opposed to government rate-making for railways, but these have been somewhat discouraged by the fact that the Pennsylvania Railroad and other conspicuous railway systems have rallied to Mr. ROOSEVELT's support; secondly, the representatives of the beet-sugar and the Louisiana cane-sugar interests, who object to the proposed immediate reduction and ultimate abolition of the existing duty on sugar imported from the Philippines; thirdly, the spokesmen of the domestic tobacco interests, who desire to defeat the proposal to reduce the existing duty on Filipino tobacco to twenty-five per cent. of the DUTY-free rate, and to extinguish it altogether in the course of a few years; fourthly, those Senators who regard as unjustifiable and dangerous the President's corollary from the MONROE doctrine, which has been practically exemplified in his assumption of control over the Dominican finances; and fifthly, those Senators who hold that the expenditure on the isthmus has been grossly wasteful, and that the President ought no longer to have a free hand in the disbursement of appropriations made for canal construction. If all these insurgents could be welded together by a log-rolling process, they would constitute a formidable aggregate, and might even dominate the Republican party caucus. It is scarcely conceivable, however, that such a fusion could be effected. The champions of the railways, as we have said, have to a certain extent lost heart since they were abandoned by some of their most influential clients, and few of them care anything about Philippine sugar and tobacco. The opponents of any considerable change in the duties now levied on Philippine products entering the United States would naturally act together, but, collectively, they can scarcely have any wish to reject the Dominican treaty, or to prevent the President from directing through his appointees the work to be done on the interoceanic waterway. We incline, therefore, to take for granted that the insurgents will be beaten piecemeal, except, possibly, that Mr. ROOSEVELT, owing to a noticeable change in public opinion, may fail to secure a rate bill conformed *entirely* to his personal views.

There is also in the Senate a group of Republican insurgents against the Statehood bill, which is in charge of Senator BREXING, and which has been stamped with the approval of the administration. To this bill, which, it will be remembered, provides for the admission of Oklahoma and Indian Territory as one State, and of Arizona and New Mexico as another State, it has been objected that the white inhabitants of Arizona ought not to be put under the heel of the growers, or Mexican half-breeds, who constitute so large a part of New Mexico's population. For us this argument has but little force. When California became a State, the white emigrants from the United States and Europe were outnumbered by the growers, yet from the start the former had no difficulty in asserting their ascendancy. We apprehend that if, after the consolidation of Arizona and New Mexico, there were any "swamping" done, it would not be by the Mexican half-breeds. Besides, the argument advanced by the advocates of separate Statehood, if it proves anything, proves too much. It would condemn New Mexico, which at present is considerably the more populous of the two Territories, to exclusion from Statehood for an indefinite period. For if the whites of Arizona, plus the whites of New Mexico, could not keep down the growers, how could the whites of New Mexico hope to do it alone? The friends of Arizona ought to realize that that Territory has no chance of securing Statehood except through fusion with New Mexico, for the conclusive reason that the census of 1900 gave it less than 123,000 inhabitants, and the growth since has not brought it within eyeshot of the requisite population. We want no more States like Montana, Idaho, Wyoming, and Nevada, which, with an aggregate population of less than 550,000, offset in the Federal Senate the huge commonwealths of New York, Pennsylvania,

Illinois, and Ohio, which in 1900 had between them over 22,500,000 people. Arizona and New Mexico, put together, had in 1900 only about 320,000 inhabitants, or a good deal less than either Oklahoma or Indian Territory separately. We repeat what we have formerly said, that the admission into the Union of Arizona and New Mexico as a single State is of very doubtful expediency, and that the admission of either singly would be preposterous.

It will be recalled that in his last annual message the President reiterated with emphasis the recommendation made in December, 1904, that Congress should carefully consider whether the power of the Bureau of Corporations cannot constitutionally be extended to cover interstate transactions in insurance. The practical method of settling the constitutional question would be for Congress to pass a law investing the Bureau of Corporations with such extension of power, so that its constitutionality might be tested in the United States Supreme Court. In this and other ways both Houses of Congress have shown a disposition to heed promptly the President's advice. Senator MALLON, of Nebraska, has introduced a bill creating a Bureau of Insurance under the Department of Commerce and Labor, said bureau to be administered by an insurance commissioner. We understand that this bill does not, as regards some of its provisions, meet with the approval of Senator DAYTON, a spokesman of the large insurance companies, although he believes that, under the interstate commerce clause of the Constitution, the Federal government has power to regulate insurance companies doing an interstate business, and that, ultimately, this power will be upheld by the United States courts. We can hardly expect him to acquiesce in the bill introduced by Representative MORRELL, of Pennsylvania, which, under serious penalties, requires life-insurance companies to return fifty per cent. of the premium money paid on any policy that may lapse.

The New Jersey Senator sees grave defects also in the bill submitted by Representative DAYTON, of Minnesota, providing that insurance companies not living up to certain regulations prescribed by Congress should be deprived of the use of the United States mails. Mr. DAYTON pronounces it irreconcilable with the policy of a republican government to place such enormous power in the hands of the Postmaster-General, and to permit any one man to say whether the insurance companies of the country should be cut off from mailing privileges. Less convincing is his argument against the bill introduced by Representative BUTLER AWES, of Massachusetts, which is understood to be regarded favorably by the administration, and which provides that no insurance company shall get a license to do business hereafter in the District of Columbia, the Territories, or our insular possessions, unless in the States also it should live up to a certain Federal code of regulations. Mr. DAYTON, of course, did not deny the constitutional power of Congress to legislate for the several areas in question. But he maintained that even if the larger companies should seek to secure licenses to do business in the Territories and the District of Columbia, with the idea that the procurement of such licenses would enhance their standing in the States, such a law would not reach fraudulent companies which are continually springing up and defying State laws. That may be, but the total business of such fraudulent companies is insignificant compared with that transacted by a dozen of the larger companies. Mr. DAYTON intimates that the larger companies might not care to obtain a Federal license, because the aggregate business done by them in the District of Columbia, the Territories, and the islands is but a drop in the bucket compared with the whole volume of their transactions. That, we submit, is a question to be tested by experiment. If a single one of the larger companies applied for a Federal license, and undertook in good faith to comply with the Federal code of regulations, and agreed to give Federal officials every desired facility for ascertaining the exactitude of its compliance, we imagine that its competitors would quickly follow suit.

The President's last annual message made a relatively brief reference to the methods of raising the Federal revenue. He said, however, that Federal legislators ought to consider whether it is not desirable that the tariff laws should provide for applying, as against or in favor of any other nation, maximum and minimum tariff rates, established by Congress,

so as to secure a certain reciprocity of treatment between other nations and ourselves. This, manifestly, was a suggestion of an expedient by which might be averted the tariff war now threatened by Germany's denunciation of the *modus vivendi* which, for the moment, regulates commerce between that country and the United States. Scarcely had the first session of the Fifty-ninth Congress opened when replies were made to the suggestion in both Houses. They were of widely divergent tenor, however. One of these expressed the views of those who desire a reduction of the DINGLEY tariff, while two others emanated from the "stand-patters." Mr. JOHN SMITH WILLIAMS, of Mississippi, the leader of the Democratic minority, introduced on the first day of the session in the House of Representatives a bill proposing to levy only four-fifths of the DINGLEY rates on articles imported from countries that give our products sent thither for sale or consumption within their borders the minimum rate. This bill has not the slightest chance of becoming a law, having been voted down in the Ways and Means Committee when offered as a rider to the Philippines tariff bill. Mr. McCLEARY of Minnesota has introduced in the House, and Mr. LOUSE of Massachusetts has offered in the Senate, a bill providing for an increase of twenty-five per cent. over the present DINGLEY rates on articles coming into the United States which are the growth or product of the soil or industry of any country discriminating against the commodities exported thither from the United States. As this measure is said to be regarded with favor by most of the Republican members of the Ways and Means Committee of the House and by Senator ALDRICH, chairman of the Senate Finance Committee, we may assume that if any serious attempt is made during the present session to give the President such wide discretion as may enable him to make an agreement with Germany, it will follow substantially the lines of the McCLEARY bill. There is no time to be lost if the application of the maximum rates by Germany to imports from the United States is to be averted. The WILLIAMS bill is much better calculated to answer the purpose, but the bill concocted by the stand-patters is doubtless better than nothing. The notion that, even should the Federal legislature take no action in the premises, the Executive might manage to conciliate Germany by granting to German goods certain special favors and exemptions at ports of entry, will not bear examination. France and other "most favored nations" would, of course, protest forthwith against such discrimination.

We are missing most of the details of a great spectacular European drama. We hear comparatively little of what goes on in Russia. There is more news there, by far, than a group of the liveliest American newspapers could gather if they were on the ground and had their usual facilities to work with. The Russian newspapers at their best could not cope with the details of it, and the general demoralization of the means and appliances of civilization includes newspapers too. There must be tremendous stories to tell, and in time we shall hear some of them, but now we hardly more than see the smoke that tells that Russia is afire. The hard fighting and great destruction of life and property at Moscow, which is still in progress at this writing, at least craves that there are troops that are still loyal to the existing government, and that rebels who aim at the destruction of all order and authority will not have a walkover, as yet. But beyond that the news is too meagre to comment on, and though the government troops still hold out in Moscow, the fighting at this writing still goes on, and the final issue is still uncertain.

Mr. CARLETON MOWATT set forth the other day in the Sunday edition of the *New York Herald* some remarkable figures and facts on the extraordinary accumulation of wealth in the United States, which has taken place in the last quarter of a century, and which has been particularly noticeable during the short period which has elapsed since the late M. G. MICHAM, the well-known British statistician, pointed out that the American republic was even then richer than any country on the globe, not excepting the British Empire. Mr. MOWATT points out that the last annual report of the Comptroller of the Currency shows that the stock of gold in the United States (\$1,129,400,000) is greater than that held in any other country, while our banking power aggregates nearly

fourteen billions, as against less than twenty billions for all foreign countries put together. We produce one-third of the world's coal, one-third of its grain, one-fifth of its wheat, and three-fourths of its cotton. We produce more steel and iron than England and Germany combined, and our manufactures are nearly double those of the United Kingdom. Our railroads carry twice as much merchandise every year as is carried by all the other railways of all the other nations on the earth collectively. Some twenty years ago, Mr. JAMES BAYNE directed attention in *The American Commonwealth* to the fact that even then there were in the United States a greater number of gigantic private fortunes than in any other country in the world. To-day it is computed that there are in the United States no fewer than seventy estates that average in value thirty-five million dollars each. There are ten private fortunes aggregating two billion dollars—those, namely, of JOHN D. ROCKEFELLER, ANDREW CARNEGIE, MANSFIELD FIELD, W. K. VANDERBILT, JOHN JACOB ASTOR, J. P. MORGAN, RUSSELL SAGE, J. J. HILL, Senator W. A. CLARK, and WILLIAM ROCKEFELLER. There are four hundred fortunes aggregating three billions of dollars, and four thousand five hundred aggregating ten billions of dollars. Five thousand men in this country, whose aggregate wealth is estimated at fifteen billions of dollars, actually own, to say nothing of how much they control, nearly one-sixth of our entire national wealth, in money, land, mines, buildings, industries, franchises, and everything else of value; which sixth, if put into gold, would give them all of the yellow metal above ground in the world, and leave more than nine thousand million dollars still owing them.

How is the remaining five-sixths of the national wealth distributed? WALTON calculates in his *Handbook of Currency and Wealth* that in the United States more than four million families, comprising nearly a third of the nation, must get along on annual incomes of less than four hundred dollars per family; more than one-half of all the families in the United States get less than six hundred dollars; two-thirds of the families get less than nine hundred dollars, while only one in twenty of the nation's families is able to obtain an income of over three thousand dollars a year. Mr. MOWATT cites the conclusions of experts in financial statistics to the effect that whatever may befall individual multimillionaires, or individual sons or grandsons of multimillionaires, the rich are destined to grow so much richer that in thirty or forty years under existing conditions the five thousand richest Americans, instead of having fifteen billions between them, as they have to-day, may have fifty or a hundred billions. Some well-informed persons go so far as to assert that JOHN D. ROCKEFELLER alone should be live to 1926, when he would still be a younger man than RUSSELL SAGE is to-day, would himself be able to dispose of eight billions of dollars. The mind reels when it comes to reckon what might be accomplished with so vast a capital were it left to a son or grandson of great strength of intellect and character.

There have been rumors from time to time during the last half-year of what might have been vulgarly but not inaccurately called a ruction in the Boston Art Museum. Lately the Boston newspapers have discussed it at more or less length, but beyond disclosing that there was a conflict between two purposes, represented respectively by Mr. WARREN, the president of the museum, and Dr. EDWARD ROBINSON, until lately the director, they have not made it apparent what the trouble was. Not even Mr. ARTHUR BATES, who has published several letters in the *Transcript* on the subject, has done more than to divulge that President WARREN's desire and Director ROBINSON's were irreconcilable, and that one or the other of them would have to go. The one to go has been Mr. ROBINSON, who resigned some months ago, and has since been invited to come to New York and be assistant to Sir PHILIP CLARKE in the Metropolitan Museum. Both Mr. WARREN and Dr. ROBINSON are very much respected men, and no doubt the reason why the Boston papers have treated the difference between them so gingerly has been because both of them have obviously been acting from the highest motives and by decent methods, and because both were entitled on their merits as public servants to the carefulst consideration. But the Boston papers have been so circumspect that we have been

unable to discover what the true basis of the trouble has been, until last week some light was let in upon the subject by the *Evening Post*.

The *Post* explains that two theories of museum policy are in conflict, the scholastic and the æsthetic. The aim of the scholastic conception is to make museum collections as complete and representative as possible, and to arrange them chronologically, to serve primarily the purpose of the special student, and incidentally to spread a knowledge of art history among the people. Necessarily, says the *Post*, where this conception prevails more beauty of arrangement is subordinated to logical sequence, and many objects are shown in spite of intrinsic mediocrity or unattractiveness because of their instructiveness *enest* the development of art. This is the orthodox conception of museum management, and the British Museum is an excellent example of it. The other and newer conception takes greater heed of museums of art as public institutions to which vastly more people go for entertainment and pleasurable edification than for systematic study. The newer (æsthetic) ideal includes an arrangement of collections which shall separate to some extent the treasures which interest only the student of art from those which attract by far the larger number of visitors. Such an arrangement, the innovators maintain, would best serve the interests both of the student and of the art-loving public. The public would find the things it wants to enjoy so arranged that it may best enjoy them, in galleries not overladen with objects for which it does not care. The student would find the special collections which he wants to study so bonded that he can best get at and study them. Boston is about to build a new museum building, and in planning the arrangement of it it makes very important differences which conception of museum management shall prevail. So then, as interpreted by the *Post*, the throes of disagreement which have distressed the officers and trustees of the Boston museum are pains incident to the settlement of the question whether public art museums should be a form of university extension in art history, or should also "contribute more directly to the pleasures of life by presenting the most beautiful productions of man's mind and hand in the most harmonious order and surroundings." The importance of the question seems amply to warrant the earnestness with which it has been discussed.

Two seats on the New York Stock Exchange were sold last week for \$95,000 and another one the same day for \$97,500. The value of these seats has trebled, or more, within ten years. They are desirable because they afford to a competent holder a comparatively easy way to make money. There are only eleven hundred of them altogether, and the number cannot be increased, and as by far the greater part of the securities dealt in in this country change hands by means of the New York Stock Exchange, the eleven hundred brokers have a virtual monopoly of an enormous and increasing business. We take it for granted that any judicious man who had his choice of what he should do for a living would choose not to be a stock-broker. We find therefore that the attractiveness of easy money-making outweighs by nearly \$100,000 the natural disinclination to engage in an objectionable calling. All observers may not agree that the calling is objectionable. It is a necessary calling. All will agree as to that. There must be some apparatus for bringing together the buyers and sellers of securities and making prices at which they can trade. Investors who want to buy stocks or bonds absolutely need, as a rule, brokers to act for them and somebody to constitute a market. But a small number of brokers could take care of all the real investors. About ninety-nine-hundredths of the stock-brokers' business is done for speculators, who buy stocks that they believe will go up and sell stocks which they think will go down.

So pretty much all the brokers' offices are gambling-shops, run wide open, in conformity with the law and under supervision of various prophets. We are all gamblers when we buy or sell stocks on a margin, anticipating a rise or a fall, and the brokers are the gentlemen *croupiers* who assist us in getting up our money, and in getting hands on our gains when we are winners. It must be counted as one of the drawbacks of the stock-brokers' calling that they see so much of us in our greediest, most selfish, and least pleasing aspects.

Whenever we stand at the ticker-tape we are trying to get some other chap's money without giving him anything in return. To be sure, the other chap, unknown, as a rule to us, is trying to do the same by us. It is dog eat dog. But that, though it may relieve our consciences somewhat, can hardly console our broker, who can merely reflect that while he is subjected to the spectacle of our avarice, some brother broker is constrained to be spectator to the counter earnings of whoever is selling what we buy or buying what we sell. Moreover, the minds of the poor brokers must be forever on the fluctuations of securities. They must have opinions as to what is going up and what is going down; must be judges whether at any given moment the two of spades or the knave of diamonds is the *Ekkeid* card. That must be very wearying to a good mind. Evidently they pay a good deal more for the privilege of making money easily than the hundred thousand dollars (nearly) the new ones now pay for a seat. No philosopher can hesitate to consider that stock-broking is an awful trade, nor can he help wondering if the brokers dare tell their children what they do—for some of them do have children, and raise them, like other people, as well as they can. One would naturally suppose that stock-brokers would become such by action of the criminal courts, in consideration of grave offences against society, and as an alternative to a period of restricted liberty and hard labor. On the contrary, they are all brokers by free choice, and most of the brokers are worthy and respected men, and practically all of them live up to a standard of integrity that in certain particulars is exceedingly high, and with which every prospective new broker must give satisfactory evidence of his ability to conform before he is admitted to the painful privileges of his purchased seat.

It is matter of common observation that tall girls are numerous in this generation of Americans. We are told (in the *World*) that the American woman had added an inch to her stature within a comparatively short period, and now averages five feet six, instead of five feet five, as she lately did. She has attained to this elevation, it seems, by wanting to be tall and by taking exercise to that end, besides studying Mr. Guesey's pictures. In the department stores (the *World* says) all sizes in garments have increased, and whereas shirt lengths used to average from thirty-seven to forty-one inches, now the ordinary lengths are from forty-two to fifty-one inches. But it seems our men are dwindling. Whereas our girls and women have less drudgery than women ever had before, and more time and opportunity for physical development, our boys for the most part go early into business, and spend long hours each day in factory, store, or office, so that their natural development is checked. The girls gain on the boys after the age of fifteen. It is suggested that nature is busy working out the type of man who is best adapted to endure the nervous strain of American business life, and is now experimenting with an undersized, carefully fashioned sample, capable of getting along with little food—to the relief of his digestion,—and adapted for the concentration of vital energy on nerves and brain instead of on bone and muscle. It may come in time that most of the eating for the race will be done by the women, who are coming, it seems, to have more leisure for that duty and a physical apparatus better adapted to it. What is trusted to keep the development of women from too far outrunning the development of the men is the propensity of tall handsome girls to marry short, wiry, successful men. Half the brides nowadays, they tell us, are a trifle taller than their mates.

The *Boston Herald* inquires to Mr. Firmata, Boston's new Mayor, a purpose to build a new City Hall, and plant it in the Public Garden. The proposal is harmless, of course, because impossible of fulfillment, but it is interesting for the light it sheds on Mayor Firmata's understanding. New York, it is true, once built a post-office in its City Hall Park, and located up Central Park with an enormous Art Museum, but that was before the relative value of park space and buildings was as clearly appreciated as it is now. Boston's new and active district-attorney is still conducting a battle of the windmills against the bars of the principal hotels of the city, which at this writing still manage to keep open. It is not yet apparent that the voters of the New England metropolis voted to their advantage at the last election.

The New Year at Home

No far as we can foresee—we cannot, of course, foretell the crops of 1906—the era of high prosperity upon which we have lately entered seems likely to continue for at least another twelve-month. The period of industrial, commercial, and financial depression which, according to the political economists, we are doomed to experience once in ten years, arrived on time in 1903-4, though some of us knew it not, forgetting that, while unfavorable conditions rear with a close approach to decennial regularity, they are not always equally severe. Yet, though it is patent that we suffered very much less in 1903-4 than we had in the first year of CLEVELAND's administration, it will be recognized that the depression was severe enough when we bear in mind that Steel common dropped to 8%, that other industrial stocks declined proportionately, and that even the securities of the southern railroads underwent a surprising fall. If we accept the calculations of the late Professor JEVONS and other students of the subject, we should expect to touch bottom again in 1913-14, and, consequently, we should not look for the high-water mark of the present flood-tide of prosperity before 1906-7. This is, at all events, a pleasing prospect, and perhaps as well founded as any.

From a political viewpoint, 1906 is likely to be watched in the United States with almost as lively interest as if it were a Presidential year. In November a new House of Representatives will be chosen, and in the course of the twelfth month the State Legislatures will be elected by which a third of the Federal Senate is to be renewed. It follows that politicians will have their hands full with fence-mending during the coming summer. Will President ROOSEVELT be stronger or weaker in the two Houses of the Federal legislature in 1907 than he is to-day? That is a question of some moment which will be settled this year. There are those who prophesy that trouble is brewing for the Chief Magistrate in the Senate-House, and that some of the most forceful leaders of the Republican majority in that Chamber are planning to discredit and unseat him. They are said in confidential chat to recall with some satisfaction the fact that ANDREW JACKSON, at a time when he had almost as firm a grasp upon the House of Representatives as has Mr. ROOSEVELT to-day, was subjected to the humiliation of seeing his conduct branded in the Senate with a resolution of censure—a resolution which afterwards was expunged from the records. There is a material difference in the two cases, however. ANDREW JACKSON had some rancorous enemies amid the Senators of his own party, and no friends among his Whig opponents by whom the resolution was carried. Mr. ROOSEVELT has, it is true, some bitter, though, as yet, unavowed, antagonists among the Republican Senators, as well as some devoted friends, but almost all of the Democratic Senators, his ostensible opponents, seem disposed to support his policy in most important particulars. In the House, as we have said, he commands an influence such as JACKSON himself never quite possessed. Should, nevertheless, his friends fail to control the Republican political machinery of his native State, or should New York elect a Democratic Governor, the President's prestige throughout the Union might undergo a considerable shrinkage. At present neither event seems probable. It is scarcely credible that such a man as ex-Governor THOMAS T. CORTLANDT, who has retained a grip upon the Republican State machine, or that, if deprived of a power he has abused, he can manage to effect a serious breach in the ranks of the Republican voters. On the other hand, the Democratic party in the same commonwealth is sharply and, to all appearances, irreparably split between the partisans of Mayor McVEIGHAN and those of Mr. HENRICK. If things shall go in New York as he would like them to, we opine that Mr. ROOSEVELT's influence will remain substantially unimpaired throughout the year, in which case most Republican members of the House of Representatives, together with the outgoing Republican Senators, who will have to face their constituents, may deem it expedient to profess themselves staunch supporters of the President. That his intentions are upright and patriotic, and that most of his attempts to carry them out are wise, is the deep-rooted conviction of a large majority of the American people. That the people are behind the President in his demand that in certain cases railway rates shall be revised by a body of appointees of the Federal administration, like the Interstate Commerce Committee, seems evident from the fact that so gigantic a corporation as the Pennsylvania Railroad has made up its mind no longer to oppose the President's wishes in the matter. With the great railway systems divided on the subject, and with the House of Representatives resolutely and almost unanimously upholding the President's project, it seems improbable that obstruction in the Senate will much longer avail.

We shall know within the year whether Mr. ROOSEVELT's attempt to develop the MONROE doctrine as to avert the indefinite occupation of the custom-houses of a Latin-American commonwealth for the purpose of enforcing the payment of more or less honest debts arising out of contract is to be frustrated by the Senate, or sanctioned by it, and thereby established as henceforth a settled principle of our Federal government. It is no exaggeration to say that the fate of many a weak republic on this side

of the Atlantic hangs on the success of Mr. ROOSEVELT's experiment in Santo Domingo. We must choose between alternatives; no third course is possible. That was discerned and clearly pointed out by the President and his able confidant, Secretary Root, a year or more ago. Either we must ourselves assume the function of collecting and apportioning the customs revenue of indebted American commonwealths, or we must revert to the passive attitude assumed by us in 1902 at the time of the blockade of Venezuelan exports by allied war-ships, and permit that function to be discharged by European creditor powers. There are some obvious reasons why, in such cases, it behooves us to accept the office of receiver. In the first place, the receiver would be appointed at the request and in the interest, not of the creditors, but of the debtor. Such a receiver could be trusted to see to it that the indebted commonwealth got such a share of the customs revenue as was needed for its running expenses. He could also be trusted to scrutinize narrowly the claims of foreign creditors, and to pay none until it had been adjudged valid by an impartial tribunal. It is evident, lastly, that it would be for such a receiver's interest to complete the performance of his duty as quickly as possible, instead of prolonging, on one pretext or another, his control of a sister republic's income. Let us suppose, on the other hand, that, through the Senate's refusal to ratify the Santo Domingo treaty, our Federal Executive should be obliged to refrain from interposing between a weak, indebted American republic and a European creditor power. It is manifest that, as a matter of principle, if a third of the customs revenue of two Venezuelan republics may be confiscated for the benefit of European creditors, the process of sequestration may be extended to the whole revenue of all that country's ports of entry. If, then, at any time, a European power—Germany, for instance—furthering the tremendous expansion of its Caribbean commerce that will follow the construction of a canal at Panama, should desire to secure practical, though not ostensible, control of harbors adjacent to the interoceanic waterway, all it would need to do would be to buy up the claims of European creditors against Colombia, or Venezuela, or some Central American state, and occupy its seaports for a period which, on one pretext or another, could easily be prolonged. The debtor republic, mired in the revenue on which it has mainly depended hitherto for the support of its internal administration, would find itself in a position where it would be strongly, if not irresistibly, tempted to co-opt at Germany's use of its harbors for stations of cooling and repair.

The inhabitants of our insular possessions have cause to mark with deep concern during the new year the indications of a disposition on the part of our Federal legislature to cooperate with our Executive in the furtherance of their welfare. Undoubtedly no time is to be lost in putting an end to the monstrous anomaly by which citizenship is withheld from the natives of Porto Rico, who, nevertheless, is subject to the jurisdiction of the United States. No less imperative is it that Congress should amend or modify the law by which the fertilizing infusus of American capital into the island has been obstructed. Under the pretext of safeguarding the Porto-Ricans from exploitation, we have condemned their sugar and tobacco industries to perish of inanition. Although there is absolutely no agricultural product in the United States which is unprotected against foreign competition, we have, thus far, refused to impose even a slight duty upon coffee in the interest of the insular product. To say that we have treated the island as a stepchild is grossly to understate the facts. We have starved her almost to death, and instead of teaching her to love the national flag we have driven her almost to abominate it. The Porto-Ricans did not ask to be separated from Spain, which had always afforded a lucrative market for their chief staple, coffee. They would have fought to the death had they supposed that, while they were to be robbed of one market, they were not to receive an equivalent in another; and that, while Spanish capital would be barred out, they would also be cut off from the stimulus of American investments. There has never been in modern times a more ghastly exhibition of cynical and reckless selfishness than has been presented in Congress by its treatment of Porto Rico. It is equally patent that unless we wish the Filipinos, whom we profess to regard as our wards, to die of strangulation, it is our duty to admit their products, and especially their sugar and tobacco, free of duty to the American market. Let us hope that Congress at last will listen to the voice of justice and of common sense, and that all our insular possessions will have cause to bless the era of prosperity that begins for them in 1906.

The New Year Abroad

EXCEPT outside of Russia, where the problem of a nation's destiny seems on the verge of solution for good or ill, the coming year seems likely to be fraught with unusual interest in Europe. In parts of Africa, and in the Far East, before January is over England is expected to witness a new general election, which will determine whether the assumption of office by the Liberals, who

have held it only for one brief period of three years since July, 1896, will again be transient or will be prolonged. The also of the majority which the new Premier, Sir HENRY CAMPBELL-BANNESEMAN, will have at his back in the next House of Commons depends upon the question whether the Liberal members will be supported at the ballot-box, not only by the thick-and-thin Liberals, but also by the Unionist free-traders, by the Union-Labor vote, and by the Irish vote in English constituencies, which, it may be recalled, was thrown by TAYLOR to the Conservatives in 1895. Mr. GLADSTONE being thus compelled to seek the aid of the Irish Nationalists. It will prove scarcely practicable to combine at the polls such incongruous elements, and we shall therefore not be surprised if Mr. JOHN K. BARNESMAN's band of some eighty home-rulers should hold once more the balance of power. If the Irish Nationalists shall seek a prelate use of this advantage, and content themselves with such successive instalments of home rule as the House of Lords might be prevailed upon to sanction, the Liberal government may be relatively durable. In an event, however, is its task a light one, for, to say nothing of the difficulty of satisfying the demands of union labor, the radicals and Workmen, headed by Mr. LLOYD GEORGE, now a member of the cabinet, are almost certain to bring to the front the question of disestablishing the Church of England in Wales, which most of the Premier's Anglican supporters in both Houses will earnestly oppose. Then, again, the Neo-conservatives will insist upon the abolition or drastic emendation of the education act passed by the late government, which taxes them for the support not only of national, or non-sectarian schools, but also of schools managed in the interest of the Anglican establishment. That is another point on which the Liberal administration may be wrecked. So it is manifest that English newspapers will be worth reading during the coming twelvemonth.

In France during the month of January the Senate and the present Chamber of Deputies are to meet in joint session at Versailles for the purpose of choosing a successor to M. LOUBET in the Presidency of the Republic. There is no lack of candidates for the office, including M. FALLIERES, President of the Senate; M. DOUMERGUE, formerly Governor-General of Indo-China, and since a conspicuous member of the Chamber of Deputies; and M. HANAUER and M. MORAGUES, both ex-Premiers. It looks to-day as if the choice would lie between the two first named, though there is a chance that Premier DOUMERGUE may be brought forward as a dark horse. In the spring the term of the present Chamber of Deputies, which was elected in 1902, expires, and the outcome of the general appeal to the constituencies may throw some light on the willingness of the peasantry to see the burden of supporting the Catholic episcopate and clergy transferred from the state to their own shoulders, though it should be kept in view that the whole weight of the load will not be felt until the present bishops and priests are dead. So long as M. DOUMERGUE remains Premier the relations of Germany and France seem unlikely to be subjected to severe tension, although it is difficult to foresee the result of the Moroccan conference, which, we presume, will be held at Algiers, the Sultan having rejected Spain's proposal to substitute Madrid. It is taken for granted that in the conference the views of France will be upheld by Great Britain, Russia, and, probably, Spain, and that Germany will be supported by Austria cordially, and by Italy reluctantly, so that the United States, though comparatively disinterested, may be forced to play an important part.

Continuance of internal tranquillity in the German Empire depends to some extent upon the question whether revolution or reaction shall triumph in Russia. If one outcome of the agitation in the Czar's dominions should be the permanent concession of such large powers of self-government to his Polish subjects as have already been granted to the Poles, the Poles of Posen may revolt against the Emperor WILLIAM'S Germanizing policy. The Hungarian sovereign has no occasion to fear a similar outbreak among the Poles of Galicia, for they already possess autonomy. But he has troubles of his own elsewhere. In order to put an end to the predominance of the Magyars in the Hungarian Parliament he has decided to adopt the expedient of granting manhood suffrage to the whole population of Hungary, the Slavic and Rumanian components of which outweigh numerically the Magyar element. For the sake of consistency he has felt constrained to make the same concession to the Cisleithan kingdom, where, although the Germans are outnumbered in the proportion almost of two to one by other nationalities, they have hitherto possessed a political power out of all proportion to their voice, through an antiquated and inequitable distribution of seats according to classes. These are both leaps in the dark, and as one can foresee their effect on the stability and internal relations of the Dual Monarchy.

In European Turkey, although the fiscal administration of the three vilayets of Macedonia is to be confided to apportioners of the allied powers, which lately applied coercion to the Sultan by a naval demonstration, nobody expects that the fierce rival and religious antagonisms will be thus allayed, for Greeks and Bulgarians hate each other more intensely than the Christians collectively hate the Moslems; nevertheless, it is probable that by

this expedient the expansion of the Turks from Europe has been for a while postponed. In British India it remains to be seen whether Lord KITCHENER will resign the post of Commander-in-Chief, now that Sir H. CAMPBELL-BANNESEMAN has announced his intention of maintaining the principle, fidelity to which Lord CURZON his viceroyalty, the principle that military must be kept subordinate to civil authority. Because England is authorized by treaty to call upon Japan for aid in the event of a Russian invasion of India, it is possible that the Liberal government, which has already declared itself in favor of a reduction of armaments, may think that it can with impunity put aside Lord KITCHENER'S defensive plans. To colorists this seems a short-sighted, not to say pusillanimous, course, for when the Russian action is reorganized and rehabilitated in its own esteem it will doubtless seek to regain in India the prestige it lost in the Far East, and Englishmen could not, without forfeiting their self-respect, acknowledge themselves incapable of retaining India without help from Japan.

We observe, lastly, that in South Africa the British Liberal government will resume the policy of magnanimity associated with Mr. GLADSTONE'S name, and concede forthwith to the Boers of the former Transvaal and Orange Free State an elective legislature, to which will be left the settlement of the grave economic question whether Chinese laborers shall be imported to work the mines of the Rand.

Personal and Pertinent

"SLIPPERS," the six-toed gray cat of the ROOSEVELT children, is reported in the daily press as having returned to the White House after a long absence.

JACK KUBELER played his violin at the White House the other evening, and he must have done all sorts of things to WIEKOWSKI, PARANIEL, LALO, &c., because next day Mr. ROOSEVELT sent him a copy of *The Rough Riders*.

Shooting for five hours at Seltosa Marshes recently, the Kaiser's bag amounted to 1136 pheasants and hares, representing one kill every seventeen seconds. Oh, never mind; this doesn't affect the record for lobsters, beaver, and mountain-lions.

A card bearing the autograph of Miss ADA REHAN and a five-cent coin have been received at the office of the State Comptroller of New York. The five-cent piece represented the amount of the collateral inheritance tax on the bequest of Mrs. JOHN GLENNER to Miss REHAN.

The first practical outcome of Lord ROBERTS'S appeal for national efficiency in the use of the rifle is the formation of the Northern Counties Industrial Rifle League. In opening the first competition of the league in St. George's Hall, Newcastle-on-Tyne, the Hon. ALICE ROBERTS, "Bob's" daughter, showed how much she had taken her father's doctrine to heart by scoring no "laner," narrowly missing the bull's-eye.

What remarkable people our simple country includes! Or perhaps it is only that our simple newspapers print remarkable news items. At this writing they impute intention to sundry citizens of eastern Oregon to start a wedding-present fund for Miss ALICE ROOSEVELT, with lists in every State, and a hoped-for total of about a million dollars. Incredible! Impossible! Unnecessary! But how pleasantly fantastic!

A company has been formed in New York to supply pedigree chickens at \$1 a pound and silver eggs at \$1 a dozen to those who can afford to pay for such refined edibles. Each fowl is to be accompanied by a pedigree affidavit and silver disk, giving the age of the bird, how it was raised, and other interesting data. The published accounts of the organization make an mention of the requirement of a pedigree on the part of the purchaser, but it is obvious that he must have a silver disk—stamped with "United States of America," a spread eagle, etc.

We offer the expression of a sincere sympathy to Lucky LON FITZGERALD in the loss of a wife only recently acquired, and maintained by him in luxury and pride at considerable cost in hard earned money. That he should have been lonely at last in a fight was only the common lot—a lot as inevitable as death itself. But that his new wife should turn ship-rat on him was a hard blow. FITZGERALD is an engaging character, a well-conducted person for a man of his calling, and a man of feeling and many pleasant human qualities. He is entitled to find consolation in the knowledge that a wife that would abandon a beaten man at his first defeat could never have become a valuable domestic asset. He is not alone in his grief. The papers announce that the most eminent of current college football-players has sustained an analogous bereavement of the heart. He was not married to her, not yet—but had reason to hope to be. In the high tide of his glory he was moved back. Such are the tribulations of war, and even heroes, backed or triumphant, cannot always dodge them.

A Powerful New Weapon for the Navy

By Walter L. Beasley

THE United States navy has just adopted a new high-speed turbine torpedo, possessing superior advantages over the Whitehead now in use. This self-propelling missile has the extreme range of 4000 yards, the contract guaranteed range being 1500 yards, and travels at the rate of 35 to 37 knots. Its pace at first is nearly a mile a minute. These record-breaking performances outclass the old Whiteheads by eight to ten knots in speed and almost double the distance in range. Though available to European nations, the possession of this exceptionally speedy and more destructive fighting machine gives to this country, for the immediate future at least, the supremacy in torpedo weapons which greatly adds to the efficiency of American naval power. The new model, the Bliss-Leavitt, is a cigar-shaped shell of steel, with tapering lines, 15 feet 9 inches long, 17½ inches in largest diameter, weighing 3000 pounds. It is divided into three main parts, the war head, the front section, holding the explosive charge, 132 pounds of wet gun cotton, the air tank or chamber, and the after-body or tail containing the engine, steering gear, controlling mechanism, rubbers, and propellers. Its superiority over the old Whitehead type lies in a superheating process employed in the air-chamber and the use of a turbine or rotary engine. Besides these, additional innovations are incorporated, such as a larger and more powerful air chamber, tested to stand a pressure of 3000 pounds to the square inch, though only 2250 pounds is the amount used in action. Two four-blade propellers supplant the old two-blade ones. The present torpedo can be discharged equally as well from

The Gyroscope Mechanism which is the "Man at the Wheel" inside the Navy's new Torpedo

submerged tubes in ships—a special advantage for submarines; this feat was not possible with the Whitehead. The vital and revolutionary feature of the new torpedo is a superheating scheme device. An elevated lamp in the air chamber, automatically ignited at the moment of discharge from the tube, generates vast heat expansion and energy. This increased motive power is applied to a 150 horse power turbine engine, driving the propeller shafts farther and with greater speed than it was hitherto possible. The new missile, a marvel of mechanical skill, contains inside, it is said, in the neighborhood of 800 to 1000 different pieces of steel, brass, and bronze, forming a network of delicate automatic adjustments. It is the costliest single piece of ordnance in the navy, \$5000 being paid for each one. The enormous destructive possibilities, however, in time of warfare, of a well aimed shot, capable of blowing up or disabling an enemy's \$5,000,000 battleship and permitting the capture of sea to land men, is considered well worth this heavy expenditure. A \$2,000,000 appropriation has been authorized to obtain the first installment of these torpedoes. A number have already been tested and delivered to be distributed to the various vessels in the service. The Navy Department has decided to give renewed attention to the question of accuracy and precision in shooting torpedoes. To become expert in firing, and to get thoroughly acquainted with the various parts and delicate adjustments of the new weapon, daily practice and drills are now going on at the torpedo station Newport by the members of the

Charging the Air Flask of the Torpedo to a Pressure of 2250 Pounds in the Squibs Tank, to provide the Muzzle Power

Stuffing the Torpedo in the Tube with the Care and Precision which 132 Pounds of wet Gun cotton demand

seamen gunners' class, specially detailed officers, and others. The *Trawlers* and several destroyers are used to give the men practice under probable service conditions. The most exhaustive and successful exhibition of the work of the new torpedo has been carried on aboard the converted steamer *Sarah Thorpe* in Noyach Bay, near Sag Harbor, Long Island. Here the Navy Department has stationed torpedo experts and several gunners to witness and record the run of each one, which is required to come up to the necessary contract speed, range, and accuracy. After making three

hull's-eye out of five shots, the torpedo is shipped to Newport and turned over to the government. The torpedo is fired out of a tube about twenty feet in length, the interior being well greased; the lower forward half being cut away, leaving a top-like spoon, which aids the torpedo to slip out, and to make the initial dive into the water in a nearly horizontal position. In preparing to launch or fire the torpedo the first operation is, filling the air chamber or flask with compressed air, the motive power; 2250 pounds to the square inch is forced into the hollow forged-steel cylinder, located

The Torpedo on its Flight. At the extreme Left side of the Photograph the Tail of the Torpedo may be seen about to enter the Water

The Torpedo at the Moment of leaving the Tube, with its 130-horse power Motor revvering the Propellers at Full Speed

just behind the war or explosive head. This takes twenty minutes to charge. The various automatic mechanisms are adjusted, one of the most important being the ingenious gyroscope, which acts as the pilot or man at the wheel, steering the flying torpedo in a direct course, and keeping it at the proper depth during its swift flight through the water. If the torpedo from any cause runs out of the straight direction, the gyroscope, by means of the vertical rudders, steers the torpedo back again into its original and proper

course. An impulse charge of about ninety pounds of compressed air sends the torpedo, with propellers turning, out from the tube. After making a dive of five feet the torpedo rights itself, and darts off for the target on a bee-line, plunging through the water at a pace of a mile a minute. A submerged net, 100 feet long, 1200 yards away, is used as a target. The torpedo goes through the meshes, and after each shot the net is pulled up, the torn opening indicating the success of the shot. The required deviation is

Reverring one of the new 27000 Torpedoes for Recharging and Repairing after a practice shot

Men of the Benue Gunners' Class at the Newport Station receiving instruction in handling the Torpedo

range is fifteen yards to the right and left of the bull's-eye, or centre, and thirty inches above and below five feet in depth. Each must come within these measurements, three out of five shots, before acceptance. The average speed is thirty-five knots, though thirty-seven has been obtained in several instances. The time is about sixty seconds for 1200 yards. A distance gear automatically shuts off the air from the engine and stops the torpedo on the end of a predetermined run, causing it to float to the surface; it

is then towed back to the steamer by a launch, carefully hoisted out of the water by a ring fastened around the centre, recharged, and fired over again. Well-informed ordnance experts claim that, notwithstanding the surpassing speed and range of the new type, the torpedo can only be considered in a pioneer and infant stage at present, and, from the limitless possibilities of still greater improvements, it is likely to be relied upon as the coming war weapon of the future.

THE RECENT DISASTER AT CHARING CROSS STATION, LONDON

The photographs above were connected with the recent disaster at Charing Cross Station, London, in which four persons are reported to have been killed and several injured by the collapse of the station roof. The station is the terminus of the South Eastern and Chatham Railway Company, and thousands of persons pass through it daily. The roof, which had been undergoing repairs, fell early in the afternoon of December 6, and in collapsing thrust out a portion of one of the side walls against the adjoining Apollo Theatre, damaging it badly. Most of the men who were killed or injured were workmen engaged in repairing the station roof. An express train crowded with passengers pulled out of the station just before the fall of the roof, averting what might have been a disaster of far greater proportions.

EVENTS IN THE RUSSIAN CRISIS

The revolution in Russia has brought the empire into an unparalleled civil strife, and now the most serious situation has arisen in Moscow, where, the despatches relate, fully 5000 of the revolutionists have been killed and 15,000 wounded in two days

The New British Cabinet

By Sydney Brooks

London, December 21, 1921.

IT is the opinion of England that "C.B." has done well. (Need I say that by "C.B." is meant Sir Henry Campbell-Bannerman?) Even lazily England has no time for such a mouthful, and friend and foe have agreed upon "C.B." as a legitimate and tractable abbreviation. The country, then, is of opinion that "C.B." has made the best of good material. The cabinet he has formed is judged in strong cabinet. It is a cabinet on which the new Prime Minister need not fear to take the popular verdict. The ease and smoothness with which it has been formed are in themselves a sufficient answer to the taunts of Liberal disunity. It impresses people with a sense of comprehensiveness and balance. It is likely to be harmonious, there is no reason why it should not be stable; if only the electorate will return it to power by an adequate working majority. Its efficiency can only be tested by results, but so far as names and past performances go, it ought to prove a cabinet with a genuine capacity for achievement. Individually and collectively it inspires more confidence and respect than the Unionist cabinet of 1920, but certainly than the cabinet which has ruled England for the last two years. There are members in it of the widest experience and authority in public affairs. There are other members who are new to office, but whose Parliamentary record has raised hopes of great things. No one can say of "C.B." government that it represents a single group, or a single school of political thought, or the interests of a single governing family. In this respect it is singularly diversified, but its diversity no more implies the possibility of friction than its untroubled past implies the possibility of stagnation. The maximum of Liberal strength and availability cannot be said of what cabinet, in England or out of it, can it be said that it furnishes the best intelligence and practicality of the party? The new government would be stronger if it included Lord Rosebery, but Lord Rosebery is off at a phrase, and in the wilderness of the country, remains outside a government that his immediate lieutenants, whose views on Irish policy are identical with his own, have felt an difficulty about entering. It would be stronger, too, if it included Sir Charles Dillke, in whom the party possesses an army reservoir of extraordinary knowledge, courage, and proved administrative efficiency. But an old and necessary scandal, the fear of the Non-conformist conscience, and perhaps a goodly share of British phylisianism, prevented "C.B." from offering Sir Charles Dillke a portfolio. It was possibly felt that to include him in the cabinet before the general election might raise awkward questions, and in some way weaken the appeal of the Liberals to public opinion. Personally, I do not believe that any such results would have followed, people generally agreeing that whatever may have been Sir Charles Dillke's shortcomings, he was a man of high character, high energy, down, and that if he is elected to Parliament, and if the party uses his services—as it has used them—in opposition, it is debared from excluding him from the cabinet on merely "moral" grounds. I do not, however, despite of yet seeing him a member of the government. It is understood that after the election, in which everybody assumes a Liberal and free-trade victory, "C.B." will retire to the House of Lords, and that other rear, rearrangements will be made. Their upshot may and it is hoped will be that Sir Charles Dillke will at last be given an office worthy of his remarkable abilities.

Among the personalities of the new cabinet mention should first be made of "C.B." not that he is its strongest member, but because fortune has placed him at the head of it. His wariness friends do not pretend that "C.B." rises in any way above the average of British Prime Ministers. A case might, indeed, be made out to show that he falls considerably below it. Nobody expects from him the brilliant dialectics, the profound policies, or the masterful influence of a Disraeli, a Salisbury, or a Gladstone. The country has quietly written him down as an efficient, imperturbable, but eminently uninspiring administrator. It does not respect him of state-ship; it has no reason to think him in any sense one of England's great men. Nevertheless, both the country and the party are well content to see "C.B." in his present position. There is a feeling that he has deserved it, and that it means to him the reward of solid, persistent services. Ten years ago nothing could have seemed less likely than that "C.B." would rise to the Premiership. Ten years ago the Rosebery cabinet left because "C.B." as Minister for War, had neglected, or, rather, was made out to have neglected, to keep in hand a sufficient supply of ordnance. It was a snip vote, but that pronounced against him was a purely partisan snip vote, but it was enough to turn the government out and to throw a certain shadow over "C.B.'s" career. As a matter of fact, "C.B." had proved a capable and extremely popular minister—popular, I mean, in Pall Mall. He rendered the country a great service in getting rid of the Duke of Cambridge as commander-in-chief, and in his management of the War Office, so far as the outside public could learn, he showed not, indeed, genius or anything like it, but good sense, tact, and more decision than had been expected from a man of his intense good nature.

In 1909 "C.B." was elected to the leadership of the Liberal party in the House of Commons—elected by a process of elimination. Sir William Harcourt had thrown up the task in disgust and despair; there was nobody marked out as its successor; and the party turned to "C.B." as the second or third best. He was never really the leader of the whole party; the Rosebery section

gave him no more than a casual and half-hearted allegiance; and the Rosebery section counted and negotiated all internal divisions of the party approached a cabinet, "C.B." stuck his post with unswerving stability. He was in a hopeless Parliamentary minority; in flank, rear, and front he was pelted by every missile of Parliamentary warfare; the Irish Nationalists formally broke off their relations with the Liberal party; the country, then in the very delirium of Jingoism, would scarcely listen to Liberal proposals; "C.B." was in a position to open his mouth at any public meeting; and "C.B." raised the national resentment to white heat by declaring that the British army was waging war in South Africa by "methods of barbarism." All public men commit at least one "blaring" error. That was "C.B.'s"; but no blarney, for as a leader, it was his only one. His leadership, if leadership it could be called, was otherwise free from the more glaring errors. It had, indeed, some negative merits of a not inconsiderable value.

"C.B." has always been noted for a temperament that verges on the psychomotoric. Things do not affect him as they affect other men; and this happy odd of insensibility stood him in good stead during the hopeless years that immediately preceded and immediately followed the election of 1906. It enabled him never to be crushed in spirit by the most overwhelming defeats, to keep on fighting and to pick himself up again as though nothing particular had happened. He developed, too, a pronounced strain of circumspection. He took to writing out his speeches. Formerly a finished debater, with a real command of humor and epigram, he lost his spontaneity, began to weigh every word, and would no longer trust himself to the inspiration of the moment. But his mastery of his mind, his unshakable courage, and his persevering plodding he displayed something like enthusiasm. Gradually a reaction set in. No man could be kicked so often and in so many places and could take it so soundly without winning at the least the half-pitying, half-amused, half-resentment of his English countrymen; and no man could be so continually in his place in the House of Commons, ready for whatever might come along, without establishing some sort of claim upon the gratitude of his party. When Liberal misadventure once more hit him, it was felt that "C.B." if he had not actually produced it himself, was, at any rate, the first to be entitled to credit by it. In the dark days of seclusion and internal dissension a man with more definite opinions and more force of character might have brought the party to total wreckage, "C.B." at least did nothing to widen the breach; and that negative achievement is justly written down on his credit side of his account. But he has been a poor man and forced to carve his own way in life and in politics. "C.B." might have developed his faculties to a fuller and higher stretch. As it is, he remains a placid, humorous, cultivated man of nearly seventy, whose elevation has been largely accidental, whose temper is moderate, whose mental equipment is not that of a statesman of the first rank.

It is rather, however, with his lieutenants than with "C.B." himself that the country is most concerned. It was with a relief that completely overrode the laws of party that the news came that Sir Edward Grey's resignation of the Foreign Secretaryship was received. His presence in Downing Street is a guarantee that the continuity of British foreign policy will be preserved. Sir Edward Grey is almost one of the curiosities of latter-day English politics. No man has risen so high with apparently so little qualification. He never adverted of tries to push himself forward; he wears in general an air of distraction and even boredom; he rarely speaks except on matters of foreign policy; and a body acquaintance might easily assume that the young Northernland baronet's real interests were wrapped up in tennis and fly-fishing. Yet he made a reputation as an Ambassador in Foreign Affairs in the last Liberal government that he has since more than maintained. A grave and balanced detachment, a measured transparency, characterize all his utterances and stamp his mental processes. There is no man of whom the public knows less, and yet it is his grave and balanced detachment, his sober, sober, the impression he conveys of a lofty character, his pale, pale disinterestedness, his calm of strength of personality and conviction with temperance in judgment and expression, and the proved breadth and firmness of his grasp on the principles and details of foreign policy, make him one of the best Foreign Secretaries in whom England and England's allies may place every trust.

Another very able and distinguished man is Mr. Asquith, the new Chancellor of the Exchequer. Mr. Asquith had a brilliant career at Oxford, which he followed up by an even more brilliant one at the bar. He came into office at the election of 1906, and, as a result of his work, so quickly, indeed, that Mr. Gladstone appointed him Home Secretary in 1907. In that position he showed not only extraordinary capacity, but very real courage in some of the courses he took for the maintenance of internal law and order. There has been no better Home Secretary furnished by either party for half a century. In foreign affairs Mr. Asquith follows Lord Rosebery's lead, and took, therefore, during the Rosebery war a line that, though it made him unpopular with some sections of his party, commanded the instant assent of the average Englishman. But it was not until the fiscal question arose that Mr. Asquith showed his true character. He was a man of really exceptional powers. Such a character, previously called his tremendous, loud style. He at once took it up with order, dignity, Mr. Chamberlain's footstep from town to town, and answered him speech for speech until at times it almost

MARK TWAIN RECEIVING A LAUREL WREATH FROM JOAN OF ARC AT THE DINNER OF THE SOCIETY OF AMERICAN ILLUSTRATORS

Mark Twain was the guest of honor at a recent dinner of the Alliance Association given by the Society of American Illustrators. When he arose to speak a young woman, clad in armor to represent Joan of Arc, appeared and presented him with a laurel wreath in recognition of his admirable character of the life of the Model of artists, which was published anonymously.

Buchanan's Wife

By Justus Miles Forman

SYNOPSIS OF PRECEDING CHAPTERS

The opening scenes introduce the reader to Elizabeth Buchanan, a woman of wealth and excellent nature, and her beautiful wife, Beatrice, who has been forced into a mistaken marriage with him because of his money. Beatrice has had, previous to her marriage, a love affair with a young explorer, Harry Faring, her husband, realizing that she is marrying with love, and attracted by a mysterious power, isolates upon her in leaving Faring to join a honeymoon at their country-place, Buchanan Lodge. Faring arrives before dinner, and, during a brief moment together, he and Beatrice discover that in spite of her marriage they are still as deeply in love with each other as they were before.

CHAPTER III

THE FIRST CARR

THIS first dinner at Buchanan Lodge began with inharmonious elements, and the elements remained as discord through the meal. In the first place, Beatrice Buchanan's feeling of relief—almost of relief—over her part with Faring had been at best but a momentary pleasure. Through a natural disinclination and long dress he had almost entirely lost any remnant of small talk which he may once have possessed, and, in consequence, Lady Sybil, who sat at his right, and Arabella Crowley, at his left, had a bad time of it.

Stanford was by nature too silent to be of much use in such a crisis, and, as a result, the talk was almost entirely confined to Faring and Harry Faring, who had found ground of common interest in certain African explorations through the Uganda country. Faring, it appeared, had taken part in two of the earlier expeditions, and Colonel Everley was, as usual, able to furnish facts.

Arabella Crowley, stanch old soul, did her best in the way of engaging Lady Sybil across their silent host, and little Miss Trever, from time to time, uttered loudly when she could find a listener, but in all it was a dismal bore, and as it went forward it became more and more dismal, for there began to occur those fatal moments of complete silence, after one of which at least three people invariably start to speak at the same moment and then fall again into a dreary silence.

Then a thing happened which all of once changed the lagging gloom of the dinner table into something quite different and very much more. Colonel Everley, suddenly becoming aware that he and Faring had maintained an unintermitted dialogue for half an hour or more, broke off with an embarrassed laughing apology, and turned to his hostess, at whose right he sat. He looked again to rally her upon her altered appearance.

"I thought when we came, you know," he said, "that you weren't at all fit. I said so to Sybil. I said, 'Mrs. Buchanan ought not to be having' horse-parties; she ought to be in bed.' And Sybil thought so too. But, by Jove! I only wants a dinner and people around you and all! What? I never saw such a difference in a few hours. You've got a vision like that, though. Never looks herself till evening."

It will be reasonably evident that Everley was not a tactful man. He meant well, but he was more at his ease with men. His remark was to the point, however, even if better made. Mrs. Buchanan's extreme nervousness and depression and the strong effect she was making to fade these had sent an unusual flood of color to her cheeks and a sort of redness fire to her dark eyes. The effect was extremely beautiful, but only the type of human being represented by Colonel Everley could by any chance have

mistaken it for well-being.

She turned a swift, half-frightened glance towards Harry Faring's inevitable face and thence to the laughing eyes of her husband across the table. Buchanan leaned forward with an odd little smile. The hand was playing at the stem of his wine glass.

"All phenomena may be traced to a cause," said he, looking down at the glass which he fingered. "My—Mrs. Buchanan's high spirits this evening are easily traceable. She is looking back to her young dream. You wouldn't know, of course, but in the days of long ago her heart and Mr. Faring's beat as one. Until tonight they have scarcely seen each other since that happy time. Hence these smiles and blushes."

Now this speech, if rendered in a sufficiently humorous fashion—half barbed, in fact—might pass, though in questionable style, as a fairly unobjectionable, but Buchanan spoke it with a certain mocking deliberation, and the thing tore close to the verge of an atrocious insult. Indeed, for every one at the table who knew the man—in other words, to every one but the Everleys—the intent must have seemed quite beyond question.

What reason he could have had for making the speech it is impossible to imagine. What madness was lurking in the man to drive him to so sudden a length one cannot think. It must have been a sudden uprising of that malice which had been so slowly growing in him. It is not impossible that his nerves, as well as Beatrice Buchanan's, were racked and quivering this night.

For an interminable-seeming moment there was dead silence. Then Colonel Everley gave a start, amazed laugh, fixing his glass in his eye, and staring up the table at his host to see how the thing was to be taken.

"I say!" he exclaimed. "I say, you know!" and he turned to look across at young Faring.

Beatrice Buchanan had gone perfectly white, but, after a moment, the color came flooding back to her cheeks, once more, and she faced about towards the Englishman with a ready smile.

"Now you know the story of my life," she said, lightly. "Please say that you think it is very pretty and romantic! Fancy! The two ancient sweethearts, after many years—how many is it, Harry?—only two—brought face to face once more in the present—only, at the very dinner-table—of the cruel husband of one of them! I call that real drama, you know. The only weak point," she complained, "is that neither Mr. Faring nor I seems able properly to play up to the part, do we? We ought to sigh and weep—perhaps it might have been ghastly and all that. We're far too stupid, Harry."

Colonel Everley laughed again, a bit more easily this time, and said it was a rum thing—that that he hadn't seen the same situation before, of course, many times over. Now he had a cousin whose—And Harry Faring of course began some laudatory remark to Lady Sybil, and old Arabella Crowley plunged into the middle with a rapid fire of other nonsense, so that with every one talking very fast and no one listening at all, the worst of the situation was faded over, but through it all there remained, asked for and unheeded, a sense of calamity, an atmosphere unshared of stem, and the remembrance of the dinner would with a terrible haste which would have been almost comic if it had not been something much worse.

When at last the women had gone, Stanford made a slight motion of the head to young Faring, and at once moved up into the vacant chair next his host, leaving the other two men at the far end of the table. He was, in his quiet, still fashion, thoroughly angry, for he believed that Buchanan's speech had been meant for an unobtrusive insult to his wife, so framed that, if loved with it, he could readily dismiss any seriousness, but Stanford was wise. He had lived, in his five and forty years, through more experiences and vicissitudes than most men ever meet in their whole

life's span, and he had the wit to see that Buchanan was in no condition of nerves or temper to engage in general talk. In particular, he did not wish him to be thrown with young Faring.

He began at once, therefore, a dissertation of unsurpassed dulness and interminable possibilities, and it did not in the least annoy him to see that Buchanan made no pretense whatever of paying heed, but sat in a sort of gloomy apathy, staring at the table before him, and, from time to time, raising his little liqueur glass of Chartreuse to sip from it.

They sat there for half an hour or more, until at last Stanbroke had to suggest that they would be missed in the drawing-room, and in all that while Buchanan said, "Yes, yes," once, very abstractedly, and, "Quite so," two or three times. When the Russian suggested that they rejoin the women he rose at once, silent but amenable, and followed the other three men without a word. Stanbroke said afterwards to Arabella Crowley that he seemed in a sort of daze, as if he neither saw nor heard any of the things about him. And, in the light of what occurred later that night, Stanbroke spent many hours in wondering what was in the man's mind at this time. For that matter, though, no one was ever able to say what was in Buchanan's mind, either at this time or any other. He could not be judged by other men's standards. He dwelt apart.

Meanwhile in the drawing-room it so happened that Lady Sybil and little Miss Trevor—Allanor Trevor, as she chose to subscribe herself since spelling out the name on Queen Eleanor's tomb in Westminster Abbey—found themselves together, and sat down in a corner of the big room to discuss the characters of certain common friends in London and in Washington. Beatrice Buchanan had moved across to an open window and stood a moment, raising her head to the carous of the soft night breeze. Arabella Crowley joined her there, and the two stepped out through the window upon the terrace, where the moonlight lay in silvery satin barred by velvet shadows.

The younger woman turned her face to the milky moon, and it wrinkled and quivered and went gaunt, like the face of one who dwells in unbearable agony.

"You see, Aunt Arabella!" she cried, shaking.

"You see! How is one to bear such things—such a life!"

"Oh, yes, dear child," said Mrs. Crowley. "Oh, yes, child, I see. I do not know what I should say to you," she said. "I expect it is partly because I am still very angry at—your husband—"

That was a shameful thing he did!—and partly because there is really nothing any one can say, in such matters, that will be of any avail. Oh, my dear! I am afraid we women were meant to suffer—for some inscrutable reason. I wonder what. So few of us are allowed to live happy lives. I am an old woman, child, and I have had both joy and suffering, but I think, looking back upon it now, after so many years, I

think there was far, far more suffering than joy. And I believe it has been so with all the women I have known. Women must weep, Betty, even if men don't work. I do not know why. I cannot think that it is quite just, but it is true." She took one of Mrs. Buchanan's hands between her own, which age was beginning to mark with wrinkles and distended veins.

"I'm not very comforting, am I?" she said. "Alas! I can find no great comfort to offer you. I can only say that you were very brave to-night. I loved you for that, as did we all, I think, who knew. Just go on being brave. It's the only thing."

But the younger woman turned upon her with a sort of fierce desperation.

"I cannot go on, Aunt Arabella!" she cried. "It has become intolerable. Ah, you can't fancy how intolerable it is! I'm in prison here, a prison where they're allowed to torture me. They don't do that in other prisons—only mine. In other prisons they shut you up and make you work—let you work. Here I must be idle, idle and watched—spied upon—insulted, at so-to-night at dinner." She wrung her hands, standing there, tall and white and pitiful in the moonlight.

"I want my happiness, Aunt Arabella!" she wept. "They've taken my happiness from me, and my youth, and all I had that makes life bearable. What right have people—grown, experienced people who know—to sell a girl into such slavery? Oh, yes, they did it! They sold me to Herbert Buchanan just as truly as girls are sold to Turks in Stanbroke. And I was a child and I thought it didn't matter. I thought it meant just having more money than I'd ever had before, and plenty of nice people round me constantly, and the freedom that I wanted. And Harry—Faring was—away. I thought he'd forgotten, and so I consented."

She faced old Arabella Crowley, blazing anger from her great eyes.

"How dared they let me do such a thing?" she cried. "They—my own people who brought me into the world and said they loved me. They knew, I didn't, and still they planned and smiled and said it was a splendid match and that I'd be very happy—happy!" She began to weep.

"I want my happiness!" she wept. "I was lied out of it, tricked out of it, and I have a right to happiness. I want it back."

"The waters do not flow uphill, child," said old Arabella Crowley. "I am afraid there is nothing for it but just to go on being brave. I wish there were something that could be done, but—I don't know what. Only, my dear, Harry Faring mustn't stay here. You must send him away. I'll speak to him, if you like. He mustn't stay. It is much worse for every one concerned."

Mrs. Buchanan dropped her hands and turned away with a little tired sigh. Her burst of passion, it would seem, was spent, and left but a great weariness behind it.

"Yes," she said, as if she

Drawn by Will Gould

"And still they . . . said it was a splendid match and that I'd be very happy"

did not greatly care. "Yes, I expect he mustn't stay. It is harder with Harry here. Oh, much harder! It's like—looking through the bars at—oh, Aunt Arabella," she cried, and quite suddenly her voice began to shake again—"Aunt Arabella, I've loved him so! There's no use in trying to lie to you or to myself. It's that that's making my life here so hideous. Without that I suppose I could get on somehow in spite of every thing else, but with it I can't. Something's got to happen. Brave? I'm not brave! There's no bravery in me, nothing but hatred and resentment and—oh, what am I going to do?"

Old Arabella soothed and petted her as best she might in her half-soldier, half-tender fashion, for she saw that the woman was almost at the end of her strength and that a little more of this sort of thing might entirely undo her for rejoicing her guest's insanity. No little bit of little she brought her back to calmness and self-possession, and by the time the two went in through the open window to the drawing-room one must have looked very closely to see that Mrs. Buchanan had been on the verge of an absolute nervous breakdown.

The men entered the room almost directly after them. "And now," said old Arabella Crowley to herself, "look out for trouble!" And she crossed the room to Buchanan's side with Beria Stambolof's intent—to isolate the man, for she did not know how far he might take it into his head to go, once he had made a breakaway by that sort of the state of mind. She and never known Buchanan to look out of that fashion before—his ill humors commonly taking the form of morose silence—and it put her off her reckoning. He might do anything, she said nervously to herself.

It was a matter of fact she need have had no fear. Buchanan, in leaving the dining-room, had, by some supreme effort, shaken off his depression and bitterness and seemed rather anxious to make himself agreeable. He talked for a few moments very pleasantly to old Arabella, and then, with an apology, moved over towards where Lady Scyllid sat in her corner. As he went he passed young Faring, and nodded, smiling. Then, as if at a sudden thought, he halted beside the other man, and touched him on the shoulder with the sort of familiar gesture which one friend uses towards another, but which was not in the least like Buchanan's. "I hope I don't bring too deep a blush to you, something at dinner," he said. "It was a rather silly thing to say." A bit of red came up over his own face as he spoke. Doubtless the apology cost him something.

Young Faring, because the man was glad, smiled as pleasantly as he could and made some trivial remark, with the intent of passing the thing off as easily as possible. Then, as Buchanan started to move away, he stopped him.

"Oh, there was something I meant to tell you," he said. "I really didn't have a chance earlier. I dare say it's of no consequence, anyhow. As I was crying about it, I had before me a man looking about among the fir near the gate. He couldn't have been a gardener, because he had no tools or anything, and because he drew back and tried to hide himself among the shrubs as my trap turned into the drive. I was in a hired cart, you know; my train was very late. The wheel got stuck so that the trap was back under the porte cochere of the house, I chanced to look back, and the chap was still down there near the gate. It's nearly half a mile, but I could see him standing among the shrubbery. I dare say he thought he was hidden. I spoke to the butler about it, and he said he would send a gardener down, but I thought I'd best just mention it to you as well. Doubtless they chased the fellow away promptly."

"Oh, thanks very much!" said Buchanan. "Yes, I'm glad you spoke of it. I don't like vagabonds loitering about the place. We had an insignificant robbery only a few days ago. Something was stolen from the stables. I dare say this fellow to-day was an ordinary tramp who was trying to screw up his courage to the point of coming to the house to beg. Did he look that sort?"

"Well—no! No, hardly," said young Faring. "Of course I hadn't a good look at him, but his clothes seemed better than a tramp's would be. No, I shouldn't think he was a tramp. To tell the truth, he looked more like a discharged groom or something. I remember that he had a long whitish scar across one cheek. I saw it plainly from the trap. An old scar. But—" He halted suddenly as Buchanan made a little exclamation.

"What is it?" he asked. "I'm doubly glad you spoke," said the older man. "This fellow with the scarred cheek I believe to be a thief or a crook of some sort. He came to me yesterday as I was standing on the terrace under, and asked me to give him a little money for him to do, for, of course, my butler and coachman and head gardener hire their own men in the usual fashion, and I never interfere. But this chap was so entertaining in answering some questions that I took him into my study—I was feeling rather bored at the time and he talked to him there. I gave him a five-pound bill and sent him away. It occurred to me afterwards that in taking such a man into the house I acted very foolishly. I dare say he took copious notes while he was there. Yes, I am very glad you spoke about seeing him. He's here again for no good, I'm sure, I must have the gardener keep a close watch." He paused and gave a little retrospective laugh.

"The chap was most amusing," he said. "He had been everywhere and had seen a great many things. Also I think he had seen rather better things. His manners were excellent. Buchanan nodded, and then he gave him a five-pound bill, and young Faring crossed the room to where his hostess and Stambolof stood near one of the windows.

Colonel Everley had maneuvered little Allison Trevor into a corner apart. He was fond of young girls of the half-breed type, he said he liked to watch their little ways—and it was beyond

question that Miss Trevor was very pretty and that her extreme ingenuousness was entirely real. She had great store of the "little ways" which Everley so liked to watch.

The two glanced in glance across the room where Stambolof and Faring stood talking with their hostess, and Colonel Everley nodded his head.

"There are two good men!" said he. "You'll go a long way before you find better. I should like to see more of that Faring. I never met him until to-night, but I have heard of him. He did some good work in Africa last year."

"How much they look alike, don't they?" said little Miss Trevor. "Stambolof and Harry Faring."

Everley put up his glass.

"They are—aren't they?" he exclaimed. "I hadn't seen them together before. By Jove! they do! They had very much the same type; though, of course, they're quite different in every other way. This young Faring is essentially a man of action. He's a man I should pick to take command of a difficult situation. He's adequate, Faring is. That's just the word! He'd be adequate to anything that was given him. He's not brilliant, I should think, but he's sure and steady, and he never lets go when he has taken hold. Look at his eyes and that jaw of his! Ah, he's a good man! I should like to work with him."

Little Miss Trevor stirred protestingly in her chair. "They are—aren't they?" she thought—

Isn't M. Stambolof all those things too? Oh, surely he must be! "Stambolof!" said he. "Oh, well—yes, I suppose so, but—well, you see, Stambolof's out of the running, rather, isn't he? Stambolof's a sort of walking tombstone. Stambolof's a man who gives you the impression of having lived his life and finished it long ago and of just staying on because he—well, can't die. Not one doesn't think of Stambolof as doing anything nowadays. He's done it all. He's waiting to die."

The girl shivered.

"How horrible! How very horrible!" she said. "I'm sure it isn't so. I don't like to think that of him."

"It's true, though," insisted Everley. "If you could look inside of Stambolof you'd find any heart there—or so called or any of the common things. You'd find ashes, I expect. Oh, yes, his eyes ended some seven or eight years ago. And he's not old either. He's no older than I am—four or five and forty, I should think—but, you see, he's not like other people. He's like a man in a book—one of those grand person people. You know about it all, I suppose?"

"No, not the girl. I'm afraid I don't. I know that M. Stambolof had had a very tragic life, and that something very terrible happened to him to make him so—unhappy, but I never knew just what it was."

"Well, don't suppose there's any reason for not talking about it. I've thought about it ever since I was a child. I was in London and Paris does, because the affair was widely talked about at the time it happened. That must have been nearly eight years ago, I think. You see, there was a Frenchman, the Comte de Colonne—de Vitry-Colonne—who had an extremely beautiful wife. I expect she had been a very good woman. But she was a blackguard and fearfully jealous, and he used to ill-treat her shamefully. Well, it was a rather open secret that Beria Stambolof loved her, too, and that she returned it—she was very unhappy, you understand—but it was just as openly known that she loved him, too, and that there was nothing wrong."

"Then one night at a dinner-party out at Colonne's chateau near Fontainebleau, Colonne, who was in a nasty humor, and had been drinking a bit too much wine, probably, insulted his wife foully before all the guests. Stambolof got up and struck him in the face, and half an hour later, in Colonne's own hall, with ten or three of the other men holding candles, they fought a most informal duel with swords and Colonne was killed—ran through the heart."

Little Miss Trevor gave a little shivering gasp of horror, and she stared across the room at the Russian, with his gray-eyebrowed face and tragic eyes, who stood so quietly talking to his hostess. She remembered just then that she had never seen him laugh; that when he smiled only his lips smiled, his hollow eyes were somber and still.

"But the Countess?" she asked, presently—"the Countess? What became of her?"

"Ah, Amille!" said Colonel Everley. "She went, I believe, to certain relatives in Paris, but the shock, and all she had been suffering for a long time, had broken her body. She was never strong. She died within a month. After that Stambolof disappeared, he went away somewhere for two or three years, and when he came back he was—like that! Yes, he's a living tombstone. Stambolof is—a sepulchre. There's only ashes inside him, I expect. He's not the man to live anything like that down. There's too much of him to live. He's not a man of his natural melancholy. He's only half Russian, by the way. His mother was English."

"Could any man live such a thing down?" asked little Miss Trevor after a silence.

"Oh, what?" said he. "Oh, dear me, yes! Oh, Lord, yes! Hoops of men. But they're longer like than that. Everley has too much Russian in him. They're all dreamers, those chaps. There's something sad about them all."

Little Miss Trevor sat silent again for a long time. Her hands were twisting together in her lap and her eyes were lowered to them. "I don't think I shall go to bed," she said.

"Thank you for—telling me that, I'm—glad to know. I think, do you know, that I'll be off up-stairs, if you don't mind. I've a sort of headache to-night. You don't mind?"

Colonel Everley rose at once, and said it was the best thing she could do if she had a headache.

"Though, as I do
courage, I do
mind!" he pro-
tested, gallantly.
"Fraid I've been
boring you with
all this tragedy."

"Oh no," she
said, quickly;
"no, really! I'm
—so very glad
you told me I'm
glad to know
about it. How
some men have—
suffered, haven't
they, Colonel
Eversley? I'll
only one could
help them—make
it up to them
somehow! Of
course one can't,
though!" She
paused a mo-
ment, rather as
if she hoped that
he would say
something more
—an answer, per-
haps, the hall-
questioning tone
in which she had
said, "Of course
they can't,
though?" Then
she nodded and
said, "Good
night," and went
across the room
to Betrix Buchan-
an.

The Eversleys
very soon made
their excuses and
went up stairs
too, Lady Schill
protesting that
they had been
kept so busy in
Washington and
New York for
the past forty-
night that she
had forgotten
what sleep was
like. Indeed, she
looked tired and
really ill.

"And as for
you," she said
loudly, "my dear
lady," said Stan-
bolof in his best
voice when the oth-
ers had gone, "if
I may presume
to offer advice I
should say, do
you go and take
your sleep now.
For the remainder of the week we shall probably keep you up
to unweary hours. Therefore sleep while you may. You also
are tired."

"She is coming this instant," said Arabella Crowley, "with
me. She is tired, and so am I. We will leave you now to your own
devices—managing thereby, I take it, whiskey and tobacco. Stan-
bolof, you are to drive me over to Red Rose to-morrow. The Yun-
ny Cartieris are there, and I want you to see them again. Good
night!"

The three men, thus left alone, stood talking for a few mo-
ments—at least Stanbolof and young Faring talked. Buchanan
seeming again to have dropped back into his brooding mood. Then,
finally, the host said:

"I shall go to my study. I think, for a pipe before turning in.
Would you care to come?" He spoke as it were to both, but he
looked towards Stanbolof, and there was a sort of shy, deprecating
appeal in his tone which could not have failed to reach
the man. But Stanbolof shook his head.

"Thank! not to-night, I think," said he. "Like the others, I
need my sleep. I shall have a turn up and down the terrace
yonder for a breath of air and then go to my bed. Another time
if you will be so good." He laid a hand on Harry Faring's
shoulder. "You will join me?" he said.

"Yes, yes, certainly!" said Faring. Buchanan turned away.
"As you like," he said, "as you like. Good night to you
both!" He hesitated a moment, that half-ashamed appeal, almost
wistfulness, in his bearing as it had been in his voice. Then he
went out of the room, and as he went his shoulders seemed to
drop as if he were tired.

There were many things in Stanbolof's tragic life to remember

Drawn by Will Geiss

"May I speak freely?" asked the Russian

and brood over,
many things
which could never
be forgotten,
and long after
this time he con-
fessed to Harry
Faring that one
of them was the
wistfulness in
Buchanan's bear-
ing, the tired
droop of the
shoulders, the
odd, loosely,
friendly spirit
which seemed to
hang about him
as he left the
drawing-room
that night to go
alone to his
study.

"If only I had
gone with him!"
the Russian
would say. "Who
knows?"

But the two,
left together,
went out upon
the terrace, where
was still silvered
by moonlight,
for the moon was
full, and they
lighted cigarettes
and walked up
and down the
long stretch,
breathing in the
sweet, summer-
night air.

"May I speak
freely?" asked
the Russian after
a little time.

"We have not
known each other
very long, but
there is—Is it
not so?—a cer-
tain sympathy
between us which
makes frank
speech possible.
You must go
away from here.
It will not do for
you to stay."

"Oh yes," said
young Faring,
readily. "Yes,
of course I must
go. I shall have
some business
to-morrow, and I
shall say that
one of them calls
me back to New

York upon urgent affairs. No, after what happened to-night at
dinner I could not remain, of course. Is the man mad?"

"Very nearly, I think," said Stanbolof. "He is of the stuff
of which mania is made. Have you noticed his eyes and the con-
struction of his skull? He is exceedingly sane, and he is exceed-
ingly melancholy by temperament—and it is the worst type of
melancholy. Now I, I suppose, am unimpaired, too, but it is a
very different sort. I could not go mad. Buchanan might very
easily. He is more nervous than you would believe, and irritable
and malicious. That which he did to-night was sheer malice. I
was very angry for a time, but afterwards when I thought it
over I was less angry and more sorry. The man is scarcely re-
sponsible for what he does."

"That makes it no easier for his wife," said Faring.
"No, of course not, and it makes what he did no less of an in-
sult. Still, in a way, I am sorry for him. He is very lonely."

Faring looked away.
"It was very—jolly of you," he said, awkwardly, "to take the
man on, as you did, when the women had gone—sitting and talk-
ing to him, I mean. I'm afraid I—I should have strangled him,
I expect. I was—grateful, you know. I'd—d like you to
know it."

Stanbolof smiled a bit sadly in the moonlight.
"My friend," he said, "the situation was, to a less degree—
greatly less—so like another case, of which you have doubtless
heard, that I could not hasten with all my power to avert what—
what happened in the other case."

"Yes, I—know," said young Faring. "I know. I was thinking
of that. Oh, for God's sake, what's to come of this? Betrix

Correspondence

"LEISURED" WOMEN

SAN FRANCISCO, December 21, 1901.

To the Editor of Harper's Weekly:

SIR.—I was much interested in an article by Mrs. Russell Sage in the *North American Review*, in which the writer made suggestions for the philanthropic employment of "leisured women." I am glad to recognize the kindest intentions on the part of the author of the article, but I submit that her ideas are altruistic, and could not be put into effective action. She believes that women of leisure owe a social debt, for instance, to the wives of salaried men who are doomed to live in boarding-houses, and advocate an effort on the part of the more fortunate women with houses to help that great class of homeless wives or spinners. Very well indeed—but how? These women in boarding-houses do not regard themselves as objects of charity (however much they, intrinsically, need help), and they would instantly resent any effort to improve their affairs. They would detect, with the sensitiveness of an electrometer, the inevitable though unconscious patronage of their benefactors, and the game, so to speak, would be up. But why not begin at the root of the matter? Why not organize among wealthy and leisured women a society for the improvement of boarding-houses, or for the prevention of cruelty to boarders? Why not work for legislation that will bring boarding-houses into the pale of higher civilization? They now sit serenely apart, governed by independent women who are not under the unfortunate beings obliged by penny to subsidize under their regime. I do not refer to the exceptional boarding-houses, run by women who are practical housekeepers, but to the blocks upon blocks of houses where dust accumulates in corners, where carpets are never taken up and cleaned, where soiled window-curtains hang forbiddingly behind dismal fireplaces, where towels are set at a premium and table-linen at a minimum, where hot water is a precious commodity, where furnaces emit a repulsive breath in winter, and hot odors of cooking permeate the house in summer, where the landlady in too incident to go a-marting in person, and serves to her tired and discouraged victims third-rate food in a third-rate condition. To bring about better conditions is the sharp city boarding-house where so many thousands are obliged to live—young and old, healthy and delicate, people of culture and refinement or of ordinary experience, whose hearts, in any case, cry out for the devices of plain but cleanly and satisfying living—to improve their methods, as we have improved our hotels and tenement-houses,—that would be a noble work worthy any leisured woman's best time and highest philanthropic effort, or, for that matter, of any man's.

I am, sir,

M. R. MEYERS.

A CORRECTION

HARRISBURG, Pa., December 19, 1901.

To the Editor of Harper's Weekly:

SIR.—I read in the WEEKLY of recent date, in an editorial on the subject of the suicide of Cuthbert Clark, of the wrecked Enterprise National Bank, of Allegheny, in which you refer to Pennsylvania State officials and their manipulation of State funds for their personal aggrandizement, the following:

"J. Blake Walters, cashier of the State Treasury, took refuge in suicide from exposure."

I have waited for ten years to see that statement made in some reputable journal, that I might refute it. There is not a word of truth in the statement.

J. Blake Walters was cashier of the State Treasury of Pennsylvania from 1878 to 1880. He did not commit suicide. He did not die in office. J. Blake Walters died in Harrisburg at his home on Walnut Street from an organic disease. He was stricken in Philadelphia, and brought to his death in this city in 1882, after lingering a short space, during which many of his friends called on him, he died, with clergy at his bedside.

The error in stating him committing suicide was first printed in a New York yellow journal in 1865. It has never been denied, however, because J. Blake Walters left no child nor child to defend him, and his friends paid no attention to the repeated printing of the story in the newspapers.

But when a journal like HARPER'S WEEKLY repeats the statement it is true that somebody comes to the front and tells the facts. Fortunately, I was never in need with J. Blake Walters, but I was his friend, and he was mine at a time when a friend meant, to me, a great deal more than it does now.

I am, sir,

THOMAS M. JONES.

POLITICS AND STATISTICS

WILMINGTON, L. T., December 15, 1901.

To the Editor of Harper's Weekly:

SIR.—The one-State plan for Oklahoma and Indian Territory is, by its supporters, said to have been opposed by the same influences—railroads, mines, politicians, sleeping-car companies, etc.—that are now opposing joint Statehood in New Mexico and Arizona. The chief feature in the Oklahoma and Sequoyah fight are the political phases of the situation. From a careful estimate, based upon election returns, it is almost a settled fact that Oklahoma, as it now stands, if admitted without being attached to Indian Territory, will show a Republican majority of from 12,000 to 20,000. Indian Territory, if it is admitted as Sequoyah, will show a Demo-

cratic plurality of at least 45,000, owing to the fact that it is largely settled by Texas and Arkansas settlers and emigrants.

It will be readily noted that in the event of one State there will be a Democratic majority in all coming elections of from 25,000 to 35,000. As in all other cases of this kind, the political grater is at work; he has his nose to grind, and by making the single Statehood near his nose he will be ready for one sooner than if he should have to wait for the two States to come in separately.

I am, sir,

P. S. COLEMAN.

THE THOUGHT PROCESS IN ANIMALS

ST. PAUL, MINN., December 12, 1901.

To the Editor of Harper's Weekly:

SIR.—Noticing a communication to your valuable paper from a correspondent in Wyoming which was headed, "Animals that Think," I will relate an instance which may be interesting to your inquiring friend.

A neighbor of mine is the possessor of two fine hunting-dogs, and on a recent occasion went out after ducks. One bird which was jumped down fell into a rapidly moving stream. One of the dogs leaped in, but could not overtake the duck. The other dog ran down the bank and jumped in at the side of the first, awaiting its arrival, and safely landed it. This can be verified for you.

I am, sir,

JAMES HEALERT.

AUTO SPEEDING

NEW YORK, December 12, 1901.

To the Editor of Harper's Weekly:

SIR.—The spectacle of New York's Police Commissioner appearing before a Long Island justice of the peace and being fined \$25 by that justice for oversteering his automobile is not so uncommensurate as it would at first appear.

It is true that here is no officer of the law, of high position, convicted of breaking a law. But how? By exceeding the speed set down by a local board at a limit of a certain number of miles an hour.

The very fact of the chauffeur being an employee of New York's Police Commissioner, his master being in the machine, and going at the rate of twenty-six miles an hour are proof that automobile speed is a thing that cannot be measured by human judgment, and no apparatus has yet been invented which on a machine will measure time and space simultaneously. The only apparatus which seems to measure speed with any accuracy is composed of two long-bladed shuttles in the ditch! Few men can gauge speed, anyway, and the speed of an automobile is impossible to gauge by any other method of locomotion. The steam machine that glides along with scarcely a sound save the rumbling of the wheels may be going faster than the explosive machine that makes a terrific and continuous emission of sound, and yet, unless both machines were travelling together, so you could compare them, the average individual would claim superiority of speed for the explosive machine.

Law lays down the rate of speed and the penalty for exceeding it. The driver or his master is unable intuitively to measure that speed or the speed limit. Let some inventor set his brakes to work and furnish the community of automobiles an instrument which will give to them automatically a record; and meantime let the local authorities divide a portion of the fines they receive by marking off the roads in rights of a mile in a manner that will give drivers a chance to regulate their speed to the conditions imposed. If this latter is done local communities will be able to gauge their speed by using a great deal for less, which should be the aim and endeavor of every portion of this country.

I am, sir,

H. SMITH.

THE ILLITERATE VOTER

ATLANTA, MISS., December 11, 1901.

To the Editor of Harper's Weekly:

SIR.—Are we not showing the illiterate voter too much consideration? Has any young man who became of age in the twentieth century a just claim to the right of suffrage if he cannot read and write, or at least read? Perhaps there are some outlying districts where such qualifications would be difficult of attainment, but they must be rare. Most of our States are doing a great deal for the promotion of general intelligence, but, in not a few, gross ignorance is considered merely a personal inconvenience, not a positive drawback. If a man will not rise to his opportunities we must leave the opportunities to his luck.

Everybody knows that a high degree of intelligence is not incompatible with wealth; but, unless the trend of events is in a false direction in every civilized country, the well-informed man is a better citizen than the ignorant. Now that reading matter of an interesting and entertaining kind is coming more and more within the reach of almost everybody, who cares to strip forth his hand, and good periodicals may be had by all who will be able a few cents a week for the purpose, it is time to put a penalty on those who will not use their opportunities to gain enlightenment through the medium of the press.

I am, sir,

CHARLES W. SCHEPPEL.

The New Plays

REALISM IN ACTING

BY HENRY MILLER

M. COQUELIN, the famous French actor, believes that acting should be wholly a matter of mental and methodical preparation. In a cleverly written book, published some years ago, he asserted that the potency of an actor's art is marred if he shares in the emotions which he is called upon to express. This view brought from Henry Irving a complete but temperate contradiction, supported by a very able argument; and the understanding and conviction it brought to me have never been disturbed.

The question of the degree in which an actor should yield himself to the emotions he is portraying has been discussed from many points of view. As M. Coquelin is the high priest of the doctrine that emotion or feeling should never enter into the work of an actor, his lack of effect as simulating pathos militates against him and his belief, no matter how great may be one's admiration for his remarkable technique. Again, one hears of a player who declares that he gives himself up entirely to the part, forgetting all else but the situations and conditions in which the drama places him. I trust it will not seem presumptuous to suggest that this is largely a delusion, for there are players whose emotions lie so far beneath the surface that nothing short of tremendous concentration of mind and imagination can arouse them. This kind of actor, though, by sheer force of the endeavor needful to arouse a temperamental response, runs a risk of becoming set in method and deficient in plasticity of expression.

To my mind the best results are brought about by the co-ordination of a dual consciousness working in harmony, allied to a well-developed power of expression through voice, face, and action, these faculties being so completely under control, and yet so responsive, that they take on without stress or strain the quality of every changing mood and feeling. Rare as the co-ordination of these qualities may be, one is bound to accept it as the ideal of

acting that will stand the severest test.

My earliest experience on the stage brought me in contact with an actress who possessed this capacity in a high degree—the beautiful and gifted Adelaide Neilson. One night when she was appearing as Julia in "The Hunchback," an incident occurred which made a deep impression upon me. A member of the company, long indisposed, I was hurriedly called upon to take his place. His duty was to appear on the scene and deliver a letter to Julia. This message was supposed to have come from the lady's sweetheart, and I can recall distinctly the wonderful expression that came over the face of Miss Neilson—a look of great and radiant happiness. The letter, as players will recall, is seized and torn into atoms by Master Walter. Following this action, the expression on the actress's face underwent a marvellous change; all the joy and happiness faded, her lips trembled, tears welled in her eyes and rolled down her cheeks, and she became the veriest picture of misery. My instructions had been to deliver the letter and then to leave the stage; but this remarkable exhibition held me spellbound, and I was aroused only by the titters among the audience and by the prompter's voice commanding me, in a cheerful whisper, to "Come off! come off!" Afterward, in again going to the star for my apparent stupidity, I made a feeble and awkward attempt to compliment her upon her great art. She smiled and said: "My boy, don't believe too much in art. This acting business is more a question of heart," and so I have found it. Clara Morris was another actress whose powers were of a similar order. I remember well her death scene in "Miss Moulton"—a genuinely great example of what is commonly, though inaptly, termed emotional acting. In memory I see her seated in the large chair that she used, her whole being convulsed in grief, the trembling hands, the tear-stained face, the unforgettable voice telling

Music And The Opera

WAGNER AT THE METROPOLITAN

BY LAWRENCE GILMAN

IT is something over a score of years since the music-dramas of Wagner were first performed at the Metropolitan Opera House. During that time their fortunes have been as varied as they have been remarkable. It is only to say that New York is familiar with every variety of Wagner performance that it is possible to conceive; we heard him first interpreted according to the Teutonic traditions of twenty years ago, in a style that depended chiefly upon truth and vigor of dramatic characterization

and harmony of ensemble, and in which vocal excellence was created in America the part of *Tristana*; of Emil Fischer, whose *Hans Sachs* is still unequalled; of Lilli Lehmann, the greatest dramatic soprano of whose the modern world has any knowledge; of Marianne Brandt, of Theodore Reichmann, of Max Alvany,—the ideal *Siegfried*,—and of the incomparable Seidl. That was, in the history of Wagnerism in America, the golden age. With a few exceptions he was not, in those days, well sung—in many cases, he was very badly sung indeed; but the spirit that animated those early performances was so fervently and vitally dramatic, so impassioned, so finely reproductive of the essential quality of Wagner's genius, that one heard, time and again, interpretations that seemed, in no extravagant sense, inspired. Since then, as has been observed, Wagner has suffered numberless vicissitudes at the Metro-

politan stage. Yet many who have witnessed Mr. Corrad's recent production of "Der Ring des Nibelungen" must have wondered, doubtless, as to the precise artistic status of the contemporary representations of him. Is he, to-day, well or ill done? and how do the current performances bear comparison with those of other years? Without assuming to offer any overpositive judgments in the matter, it may be affirmed that, all things considered, the Wagner performances at the Metropolitan are very good indeed. No one, of course, who holds any just conception of what constitutes perfection in Wagnerian interpretation would dream of asserting that Mr. Corrad's productions of the later music-dramas are all that could be desired; that they assuredly are not. But they do, nevertheless, reach a far higher level than is attained in the majority of European operas, and in some respects they surpass the Metropolitan performances of twenty years ago. For one thing, it is well to note again, Wagner is far better sung, on the average, by Nordica, Fremstad, Homer, Walker, Knefe, Van Rooy, Gortiz, and Blase, than he was by Niemann, Alvany, Reichmann, Fischer, Brandt, Seidl, Krass, and their associates in the casts of the Stanton regime; to singer like Lehmann is outside of any such general parallel. Nor is there a lack, to-day, of brilliant individual achievement. We have known no more moving *Siegfride* than Fremstad's; no more impressively tragic *Wotan* than Van Rooy's; no more perfect

Fear than that of Knefe; and such impersonations as Gortiz's Alberich, Knefe's Walthar, Homer's Fricka, the surprising *Siegfride* of Emma Eames, Nordica's Isolda and Brunnhilde, are impersonations of indisputable vitality and importance.

To consider the reverse of the shield, it must be acknowledged that in ensemble effect, in scenic equipment, and in certain important mechanical details, the Wagner performances at the Metropolitan fall considerably short of perfection. That the stage arrangement is not infrequently faulty and inept, that certain essential scenic effects are imperfectly achieved, and that the various factors that should work together for the attainment of a smooth and effective representation fail to co-operate, must be noted and deplored.

But, nevertheless, and considering the performances *en bloc*, there remains, over and above every obvious defect, a large measure of successful and delightful achievement. In the course of the recent "Ring" cycle, for example, there were many things to remember with pleasure and satisfaction—as the last act of "Die Walküre," the first two acts of "Siegfried," the conclusion (apart from the scenic effort) of "Götterdämmerung"; there were many excellent details of characterization and of staging, and the work of the orchestra, and the work of the vocal and musical direction of Mr. Herz, was often admirable.

A recent Portrait of Marcella Sembrich

Madame Sembrich is one of the most popularly for singers at the Metropolitan Opera House, and has been heard in other roles than Wagner's, although her "Eva" was an effective performance.

was completely submerged in a wave of fervent enthusiasm for the works of the artist whom they, by all degrees, he created, and himself in the history of the human race, by the most grotesque expedients, who that witnessed them will forget, for example, those versions that were billed as performances of "I Maestri Cantori," in which the not wholly satisfactory characteristics of "Die Meistersinger" were trustfully discernible through the medium of Signor Mascini's conduct lag and the gracious impersonations of M. Jean and M. Edmond de Resch and Mrs. Eames? Then came the brief invasion of Mr. Walter Damrosch, with his authentic, dyed-in-the-wool, all-German representations; and, following that in the early winter of 1903, the notable revival of "Tristana und Isolde," with Nordica and the de Resch's singing, for the first time, the original German text, and Anton Seidl in the conductor's chair. That year Wagner came into his own again; he was superbly sung, and intelligently, though not ideally, acted, and there was evident a sincere endeavor faithfully to realize his intentions. With in the next few years came some still finer performances, in which Lehmann—not quite in her superb prime, but still unapproachable—participated to their great gain.

That was almost a decade ago; and Wagner still flour-

The New British Cabinet

(Continued from page 16.)

looked as though the issue would resolve itself into a gladiatorial combat between the two men. As a debater Mr. Asquith stands in the front rank, his clearness of argument and exposition, his soundness of mind, and his command of concise and eloquent language being surpassed by no one on either side of the House. He is not a very popular man. People admire him far more than they like him. He lacks mellowness; he is close and self-contained; he has neither humor nor imagination. But as this will not prevent him from being an admirable Chancellor of the Exchequer and a bulwark of the Liberal cause. A man of far finer mental qualities than he, Mr. Haldane, is the new Minister of War. Mr. Haldane has nourished himself on Hegelian philosophy, and his sheer powers of mind probably out-distance any of his colleagues in the new cabinet except Mr. John Morley; while the experience of men and life that he has gained as a brilliantly successful lawyer is greater than any that Mr. Morley can boast. Mr. Haldane has never yet held office, but there is no office in which he would be likely to get out of his depths. He would make an admirable Lord Chancellor, Secretary of the Navy, or Minister of Education—a subject he has profoundly studied. As it is, he goes to the War Office, and I believe he will duplicate there the wonderful success of Mr. Root in the War Department at Washington. Two other appointments have caused the greatest interest. Mr. Lloyd George, the young Welsh statesman, with the extraordinary talent for debate, goes to the Board of Trade, and Mr. Asquith leaves, the famous "sage of the House" goes to the head of the Local Government Board in such capacity the question of the unemployed will at once come before him. In Mr. Lloyd George, I am convinced, England possesses a second Chamberlain—energy, enthusiasm, courage, and versatility. From Mr. Burns I know what to expect. Labor leaders who become cabinet ministers are usually disappointments; and the people who are most disappointed in them are, as a rule, the laborers who elect them. But unless he proves a failure, Mr. Burns will be a source of strength to the new Liberal Government.

To Make Automobiling Safer

More than 300 accidents to motor-car tourists have been reported in the United States and Canada during 1906, many of them resulting fatally. It cannot be said that these accidents were wholly due to rapid speed or reckless driving, for some of the most serious ones happened to automobilists who are known to be prudent and careful in the management of their vehicles. Most of them could have been avoided by a better knowledge of the danger points, or by some warning by which the tourist could have been advised of his peril. The truth is that in many parts of the country, and especially in those sections which are most picturesque and attractive to the tourist, the highways are too narrow and winding, and are often skirted by deep, unguarded ditches and dangerous gullies, and crossed by railroad tracks at points where the tourist would have little reason to anticipate them.

To lessen these perils as much as possible the American Motor League has called upon its members, motorists and proprietors of official stations, in all the important places where touring is most popular, to take up the work of erecting danger signs and guideboards by which the tourist may be forewarned of these pitfalls. Many of these danger signs have already been put up. The league sends out circulars from which these signs can be easily made by a man of ordinary skill, and in some cases the completed signs are sent out ready to be put up.

Blanks are being sent to the automobile clubs in several States with letters requesting information as to points where the signs should be erected, and a contract has just been made with a firm in central New York for a large number of signs, which will be put in place within the next few months.

THE NORTH AMERICAN REVIEW, FRANKLIN SQUARE, NEW YORK

BOOKS BY THE AUTHOR OF

"The Martyrdom of an Empress"

THE MARTYRDOM OF AN EMPRESS

ELIZABETH OF AUSTRIA

A personal account of the Empress Elizabeth of Austria, written by a close friend, and one of the very few to whom this remarkable woman ever really opened her heart. The volume has proved to be one of the most popular biographies of our time.

Illustrated with Portraits from Prince Photographs. Crown Bro. Ornamented Cloth, Docket Edges, Gilt Top. \$2.50

A KEYSTONE OF EMPIRE

The intimate association of this anonymous writer with the Austrian court enables her to continue in this volume the entertaining recital of events known only to her. The Empress is made the subject of the book, but incidents and incidents concerning the late Empress are related, as in the author's former volume.

Illustrated from Prince Drawings and Photographs. Crown Bro. Ornamented Cloth, Docket Edges, Gilt Top. \$2.25 net (postage extra).

THE TRIBULATIONS OF A PRINCESS

The anonymous biography of the author of *The Martyrdom of an Empress*. Its charm lies in the way in which it is told; its grace, its good-tempered naturalness, make it as fascinating as a romance, yet it is a volume of reminiscences of true facts in the life of a woman of the great world, the friend of royalty.

Illustrated. Crown Bro. Ornamented Cloth, Docket Edges, Gilt Top. \$2.25 net.

A DOFFED CORONET

The volume includes peeps into the princely haunts of Cairo, and a portrayal of the Khedive Court written in a manner worthy of Pierre Loti himself. The opening scenes of the book are laid in Egypt after the Anshu Pasha rebellion, when Cairo was a hotbed of international intrigue.

Illustrated. Crown Bro. Ornamented Cloth, Docket Edges, Gilt Top. \$2.25 net.

HARPER & BROTHERS, PUBLISHERS, NEW YORK CITY

The Evolution of a Vast Industry

By Charles Winans

Chapter IX.

NE of the most important results of the colossal-scale packing-house of to-day is the development of cleanliness in the handling of meats. This is a point which vitally concerns the meat-consuming public, for the meat-consuming public's health depends upon it.

G. F. Swift had two fundamental maxims in his operations as a merchant dealing in meat and meat products, one of these was that it was vitally essential to success to keep all his wares up to precisely the standards they were

represented to be; the other was that all the packing-house operations be done under the limelight, especially as those operations grew in magnitude and complexity.

The charge of dark dealings with suspicious animals and with suspicious scraps of animals was too obvious a possibility to escape the attention of so sagacious a merchant as was G. F. Swift. Without advancing high standards of quality in his wares on lofty principles of morality or philanthropy, he stood for them with more the less in-shakable insistence. He took the plain business ground that, in the face of the strong competition he had to meet, there was no better way to hold his customers and his market.

On the same sound business principle he insisted in eliminating everything even suggestive of a veil of secrecy from all that was done in the packing-house in the way of preparing the food products for the consumer. Of course, certain formulae in the preparation of certain products—*as* beef-extract, for instance—are valuable property, and depend upon secrecy for that value. These formulae, naturally, are jealously guarded by all the packing-houses. They are assets perishable under publicity. But these formulae are only details. They affect in no manner the question of cleanliness and sanitary vigilance in the handling and preparation of things for market which the market purchaser is going to eat.

In all that pertains to this, G. F. Swift ever insisted on the widest publicity. He was always one of the strongest advocates of thorough government inspection of live animals, for one thing, as well as of animals after they were turned into dressed meat. In this, to be sure, he was not alone by any means. All of the wiser, and hence more formidable, of his competitors knew as well as he did that there was no better advertisement for their products than throwing the door wide open and keeping a standing invitation to the public to come in and witness the preparation of those products down to the smallest detail in their manipulation. On the other hand, they knew equally well that a well-grounded, or even a partially well-grounded, charge of uncleanliness or negligence of sanitary precautions would work more harm to their businesses than they could repair in many months, or in many years, perhaps. Such charges, indeed, if sustained, were potent with possibilities of permanent injury.

So the big packing-houses, from the days they first began to be big, have jealously encouraged visitors to their works, and have taken care that those visitors have every opportunity to see what was going on; have their questions patiently answered, and their comments and suggestions duly noted. That has become a fixed policy with Swift & Company, at least.

Now, in order to keep open house in this way, with the full glare of light searching out every nook and corner, leaving no place obscure and mysterious, it was necessary that the house be kept in apple-pie order. Of course an abattoir is not a drawing-room, and cannot be kept

up to the drawing-room, pink-tea standard of nicety. An abattoir conducted on ideal lines of cleanliness and sanitation is, at the best, anything but an inviting place for the person making his first visit to it to lounge in. Such a person is sure to undergo a good many shocks, proportionate in violence to his particular degree of sensitiveness.

But, so far as is humanly possible, Swift & Company—which may be taken as representing as high a standard as any in this respect—has made the transit from animals on the hoof to dressed meat in the market place substantially free from dirt contamination and disease-conveying chances. In this respect the great packing-houses have an advantage which the smaller concerns—which are running in considerable numbers in the great packing-house vicinities—as well as the local abattoirs in cities and towns scattered all over the country, cannot meet. They have not the capital, the plant, nor the equipment to meet it, for one thing. It would cost too much into their narrow border of profits to attempt to meet it, for another.

That is only another instance of the exigencies of modern public demand making the conduct of many forms of modern industry on a small scale more and more difficult. The day of small things, moved her small capital, in the industrial world of America many economical philosophers regard as drawing to a close, because of precisely such changes, among other reasons, is the character of the purchasing public's demands. If the small packing-house could make the same proportional economies in operation, could turn off into valuable commodities, so exhaustively as do the larger concerns, then the smaller establishments could compete more successfully. As it is, even now many of them are doing good businesses and making money. But they do it by skilfully adjusting themselves as far as possible to the new order of things. There are numbers of such concerns out in the stock yard districts of Chicago, Omaha, Kansas City, and other large packing centres. But they seldom attempt to work continuously. They jump in and buy live stock when prices are low, transform their purchases into non-perishable food products, for the most part, close down for a while, and wait for a good market to sell in. The field of competition in the packing-house business is as wide open as it ever was. But its openness applies more and more to competition based on large capitalization. Large capitalization, however, is the order of the day. Capital as large as Swift & Company's can be very readily raised when it can be demonstrated that it can be applied to an enterprise that has promise of a paying basis. This fact applies to the packing-house business as well as to every other. It is a fact that is one of the potent forces operating to prevent abnormal

Trimming Scumple Meat

Examining Throat Glands

and arbitrary elevations of meat prices irrespective of the cost of meat raw material. Let it be established that extravagant profits are being made in the meat business, or in any other business where the sources of raw material supply are open to everybody—as is the case with the packing-house industry—and the field will be quickly invaded from all quarters with plenty of capital back of the invasion.

And in no way are the advantages of the large scale on which the packing-house industry is now conducted more apparent to the general public than in the elaborate system of sanitation and cleanliness which has grown up about that industry and become a part of it. A good percentage of the output of the great packing-house of today goes abroad. Foreign countries have their own particular standards, which must be met before foodstuffs will be admitted to them. As evidence that those standards, in the matter of sanitary regulations especially, have been met, these foreign countries require the certification of the government of the countries in which the commodities in question originate.

The only way the large packing-houses like Swift & Company can meet these varying and exacting foreign conditions is to have a rigid government inspection of all their output. It is impossible to tell what particular beef or what particular mutton, for instance, is going to this or that foreign country, or what is going to our own home market. The inspection must be broad enough and minute enough in its character to cover all countries.

All the meat, therefore, which passes through such an establishment as Swift & Company is subjected to rigid United States government inspection. Stock that, in the form of meat, is going to Germany, or Great Britain, or France, or the countries of the antipodes, or the Orient, bear the government stamp, just as does stock that, in the form of meat, is going to the markets of Maine, Louisiana, or the Pacific coast. At the government Bureau of Animal Industry out at the Chicago Stock Yards there is a force of over 300 people engaged in the inspection of animals and meat in the packing-houses of the Swift & Company type. There are 150 inspectors of animals on the hoof and of the animals transformed into dressed meat and on their way to the cooling-rooms. It is only those animals on the hoof, of course, which have passed this inspection that are permitted to pass to the abattoir. When a steer or a hog or a sheep with no superficial indications of being defective gets by the inspector on the hoof, it has to pass a still more minute and more thorough inspection after it has been transformed into meat and is on its way to the cooling-room. If, in that ordeal, it is thrown out, it goes into the "tank," and is converted into fertilizer.

Nor is that all, by any means. The packing company itself has its own corps of expert inspectors. This force attends minutely

to the enforcement of very rigid rules of cleanliness and sanitation in the handling of the meat from the time it passes the government inspector until it is actually laid down in the marketplace. A constant watchfulness over employees is maintained, clearly expressed rules governing the habits of such employees and their methods of work are exposed on every hand. Any violation of these rules is met with the sharp word of reproof or with the still sharper zest of discipline. All this, of course, is an item of heavy expense in its totality, covering the whole of the enormous plant. It is an item which smaller concerns would find embarrassing to carry, but which in concerns of the Swift & Company dimensions is woven in as only a detail in the vast mechanism.

As for the work of the government inspectors out at the Chicago Stock Yards, it is of the most exacting nature. This fact is fully recognized by the chief of the Animal Industry Bureau. He fully appreciates that to meet the high standard of thoroughness of inspection demanded there must be no overworking of the inspectors. There are 150 of these inspectors on the government stock-yards force. Each inspector only works three hours at a stretch, and ten of these three-hour "turns"—six hours in all—constitute a day's work. The strain of attention and the character of the surroundings in which the most critical portion of the work is done would make short hours an absolute necessity. The post of the government inspector of the meat proper is in the thick of the rapid-transit procession, from the hammer-stroke to the cooling-room. Clad in his long frock, reaching from his head to his heels, he has to stand in the storm-centre of the turmoil, ever alert, his judgments quick, sure, and irrevocable.

The loss incident to rejection of an animal on the hoof by the inspectors falls upon the farmer or feeder, Swift & Company and the other great packing concerns will not touch a dead or fatally injured animal. They will not have the trail of such material cross their thresholds. The animal lies where it is in the stock yards until it is taken away by a concern that makes a business of turning material of this kind into fertilizer.

Absolute thoroughness of inspection, cleanliness in the handling of the passed and accepted dressed meat and in the manufacture of all the great number of food products that come from the meat—so one can see the operations of a typical concern like that of Swift & Company and not be convinced that these two characteristics of the modern packing-house are fixed, incontrovertible facts. The glare of light thrown on even the innermost workings of the vast machines of commerce these concerns have grown to be is too strong and clear to leave any room for doubt.

To Be Continued.

The Northwest Under Three Flags

By CHARLES MOORE

With Illustrations by Howard Pyle, Fred-
eric Remington, and others. Maps, etc.

The early story of the Northwest—the French ex-
pulsions and occupation, the Indian war, the Eng-
lish conquest, and later acquisition by the United
States.

In the preparation of this account of the pioneers
of civilization, the author has had access to the famous
Pakenham Collection of MSS and government sources.
The work is of historical importance, containing a
number of errors and misapprehensions sanctioned by
previous writers, and is written in an entertaining
style.

Crown Size, \$2.50

HARPER & BROTHERS, Publishers, NEW YORK

Treachery

An officer of the army was one day re-
ferring in a humorous vein to the large
body of "professional heroes" produced by
our war with Spain, when he related the
case of a Western politician who endeavored
to make capital of his "war" record in
Cuba.

This politician, shortly after his return
to the United States after being mustered
out, became a candidate for a minor office
in the gift of the State of Indiana. He made
many blundering speeches, in which frequent
references were injected to the fact that
he had always "been in the forefront of
the fight." Furthermore, he dwelt with
emphasis upon his own bravery in two bat-
tles in Cuba that were fought the same day.
At this point some unfeeling and sceptical
person arose and asked the speaker how
such a feat could have been possible, seeing
that the battles referred to had been fought
at places some ninety-five miles apart.

The "hero" immediately replied: "My
friends, there is a traitor in the hall! Put
him out!"

Our Trade in Jewels

More than 36 million dollars' worth of
diamonds and other precious stones have
been imported into the United States during
the past calendar year. This importation
of diamonds and precious stones is by far
the largest in the history of the United
States, the high-water mark in earlier years
having been 28½ millions in 1903, while
1904 showed but 27½ millions. In the ten
months of 1905 ending with the month of
October the total was over 31 million dol-
lars, or more than in any full year prior
to 1903. The importation of these ten
months, amounting to \$31,459,157, gives an
average of over 3 million dollars per month,
so that it may reasonably be assumed that
the figures for the two following months
will bring the total up to 36 million dollars,
or against 27½ millions in 1904 and 28½
millions in 1903.

The \$20,000,000 Mark

It was not until the year 1901 that im-
ports of diamonds and other precious stones
ever passed the 20-million-dollar mark. In
the period from 1888 to 1902 the importations
of diamonds and other precious stones
averaged about 12 million dollars per an-
num. With the depression which followed,
however, the importation dropped to about
7½ million dollars in 1904 and a little less
than 5 millions in 1905, but began to increase
in 1906, when it reached nearly 11 millions,
and was by 1909 16½ million dollars in
value, in 1901 more than 23 millions, in
1903 28½ millions, in 1904 27½ millions,
and in 1905, as already indicated, seems
likely to be fully 36 millions.

The Boom in Diamonds

This group, "diamonds and other pre-
cious stones," which will aggregate 30
million dollars in the imports of the year,
is composed chiefly of diamonds, the "other
precious stones" forming about one-fifth of
the total value of the group and diamonds
forming about four-fifths. It is probable
that the value of diamonds alone brought
into this country during the past year
will be nearly or quite 30 million dollars
and the "other precious stones" approxi-
mately 7 million dollars. The diamond im-
portations of the past year will be about
three times as much as those of 1890 and
nearly six times as much as the average
during the period 1894-1897.

Diamond-cutting in America

One interesting feature of the record
of diamond importations, shown by the Depart-
ment of Commerce and later through its
Bureau of Statistics, is the rapid growth
which has occurred in that group of di-
amonds classified as "diamond cut in Amer-
ica." This was made a few years ago to estab-
lish a diamond cutting industry in the United
States, and this has apparently been ex-
tremely successful, since the value of uncut

diamonds imported has greatly increased
during the last decade. In 1890 the value
of uncut diamonds imported into the United
States was \$7,875,115, in 1902 practically 11½
million dollars, in 1903 about 27½ millions,
in 1904 over 4½ millions, in 1905 about 6½
millions, in 1906 over 8 millions, in 1907
over 10 millions, and in 1905 will also ex-
ceed 10 millions.

The growth of the diamond-cutting in-
dustry in the United States is evident not
only by the increase in the importation of
uncut diamonds, but also by the census fig-
ures, showing that the number of persons
engaged in "lapidary work" increased from
92 in 1890 to 408 in 1900, and the value of
the material used increased from \$124,832
in 1890 to \$4,655,705 in 1900, and the value
of products grew from \$315,004 in 1890 to
\$5,786,281 in 1900. The value of uncut
diamonds imported in the decade ending with
1905 will aggregate about 60 million dollars
and of cut diamonds about 100 million
dollars, while the value of other precious
stones imported in the same period amounts
to considerably more than 30 million dollars,
making the grand total for the decade for
diamonds and other precious stones ap-
proximately 200 million dollars.

When Irving was Turned Down

IRVING STOKER, who for many years was
connected with the management of the late
Sir Henry Irving, tells of an amusing inci-
dent which occurred during the play of a tour
of the Middle West.

It appears that on the way to break
a "long jump" on the next day, the
city, was devoted to an evening of the
theatre of a drama in the evening. In-
terestingly, Stoker, who had been
both proprietor and manager of the
night's entertainment, was asked to
make a speech in connection with the
play.

In a short while Mr. Stoker received the
following: "Does Irving parade?" When
shown this, the distinguished Briton was
much amused. He directed Stoker to reply
that if Irving was a tragedian, not a mis-
tress."

The further reply came, "Don't want
Irving unless he parades."

Science and Superstition

THANK is a young woman in Washington
who is a graduate of a university that makes
a specialty of the course in domestic hygiene.

One day a friend was talking with this
young woman, and their conversation turned
to the discussion of some rather absurd
questions which the graduate intended to
present in a paper before a women's club
at the capital. The graduate was holding
forth in approved university style on various
scholarly themes, when she suddenly stopped
and picked up a pin on the sidewalk.

"I am surprised," she happily observed by
company, "at the glowing of the rusty pin as
the graduate stuck it under the heel of her
coat."

"It is a little superstition I have never
been able to conquer," said the graduate,
"but," she hastened to explain, "I shall
sterilize this as soon as I get home."

A Veteran

A member of the bar of Baltimore relates
how a witness in a trial suit in that city
once "got back" at the lawyer who had
been endeavoring to "rattle" the witness by
a severe cross-examination.

At a certain point in the proceedings the
witness, suddenly interrupted the cross-
examining lawyer by exclaiming:

"Look here! You needn't think you kin
rattle me by askin' all these questions."

"No, sir," said the attorney, "you kin."

"No, sir," came in explanation from the
refractory witness. "Your questions
don't bother me at all. The raised three
sons and two grandsons, and I've been in
training a good many years."

Notable Deaths of 1905

THE year just closed has not been as notable as some previous years for its record of the deaths of famous people. The only death which had an international significance was that of John Hay. Other men in the same field of human action who have passed on were Delyannis, the Greek publicist; Myrion Gomez, the veteran fighter for Cuban liberty; Senator O. R. Platt, of Connecticut; and George S. Bowdoin, whose career as an independent getter of votes and holder of offices under a variety of party affiliations has not often been equaled.

The musical and dramatic world will miss Theodore Thomas and Joseph Jefferson, and American art circles will miss the work of Mowra, George H. Boughton and R. Numin Gifford. Germany will miss von Menzel, and in France Henner and Bouguereau will be missed.

In the realm of creative literature there is a strikingly low rate of mortality to chronicle—Julius Verne in France, de Hérédia in Spain, and Len Wallace in this country, being the most prominent figures.

The American bar will miss Mr. James C. Carter, of New York, and Mr. Wheeler H. Peckham; and of notable financiers on an earlier day Mr. Jay Cooke leaves behind him a noteworthy record. F. Norton, Goddard and William H. Baldwin, of New York, will be greatly missed. Mrs. Josephine Shaw Lowell, with Mrs. Mary A. Livermore, seem to have been the most prominent figures among American women who died during the year.

The international Y. M. C. A. movement has lost the founder of that striking development of Protestant activity throughout the world, Sir George Williams, of London. Of Roman Catholic prelates the most eminent to pass on have been Cardinal Langenieux, of Rheims, France; Archbishop Chappelle, prominent in American Catholic circles as a diplomat, and mediator between the United States and the Catholics of Porto Rico, Cuba, and the Philippines during negotiations following our taking title to these former insular possessions; and Mgr. George Duane, of Newark, New Jersey. The Methodist Episcopal Board of Bishops has lost Bishop Joyce, and the Protestant Episcopal Church in this country Bishop McLaughlin, of Chicago—a leader in the "Catholic" wing of that Church; while Universalists miss their ablest Biblical scholar, Dr. Orelli Case; and Lutherans, Rev. Dr. E. J. Wolf; and Congregationalists, Professor Day of Yale University.

Where He Got It

A NUMBER of politicians in Washington were discussing the tendency of a certain well-known political speaker invariably to allude to his party's successes as having been "dictated by the hand of Providence."

"It's most extraordinary," said Representative John Sharp Williams, "but he really seems sincere in that conviction. At the same time, gentlemen, while I haven't the least objection to the Senator's having an ace up his sleeve occasionally, I do wish he would not always insist that Providence put it there!"

Particular

"ANY man with a sense of humor," once observed Frank Daniels, the comedian, "can always find something to his entertainment if he will stand near the box-office window of the 'opry-house' in any small town and listen to the Rules as they make known their wants to the man who peddles the tickets."

"But in Ohio one afternoon I was standing near the box-office window a few minutes before the beginning of a matinee given by a friend's combination. A few old boys from the country—one of the kind that were about one show in two years—approached the window, his roll in hand, and delivered himself of the following:

"'Pecy, young feller!' (In a voice loud enough to be heard a block away.) 'Gimme a good seat! I want it right down the middle lane and close up to the exercises!'"

Gasoline Cars for 1906

ARE built of the best materials in the world under methods and processes more advanced than those employed in any automobile factory other than our own. No consideration of the cost of production has been permitted to interfere with making perfect every part and piece of each model, whether pertaining to mechanism, bodywork or general equipment. The expense of making the crankshafts, for instance, is six times greater than that of any previously made in this country. We guarantee that these cars, each according to its power and place, will yield the greatest things possible in motor service.

MARK XLVII

40 H.P. 4-cylinder motor under forward hood; sliding gear transmission, low speeds and low reverse; jump start, capable from storage battery; new pattern automatic clutch; special chassis steel spring, axle, crankshaft and jackshaft; crankshaft mounted cold out of solid block; double chain drive; 5 beam front axle forged in one piece; pressed steel frame; 100 lock wheel base; seat mounting; new pattern body. Price, with standard body, \$4,500.

With 112 inch wheel base, Imperial Victoria, Double Victoria, Limousine or Landaulet body, \$5,000 to \$5,500.

MARK XLVI

An entirely new model. 24 H.P. 4-cylinder, vertical water-cooled motor; shaft drive, sliding gear transmission, three speeds and reverse; low traction make and break magnets; current limitation; special chrome-plated steel axles and shafts; crankshaft mounted cold out of solid block; 5 beam front axle forged in one piece; rotary pump oil lubrication; pressed steel frame, 96 inch wheel base; double side entrance body; seating five passengers. Price, \$3,500.

MARK XLIV-2

Perpetuating Mark XLIV, one of the most successful of medium-weight 1906 cars. 18 H.P. 4-cylinder opposed horizontal motor under forward hood; frame length increased eight inches, giving ample room forward of each seat; wheel base increased to 90 inches. First seat widened to 16 inches; door-to-door entrance body. An ideal family car, which will give any mile and maintain a speed of 35 miles per hour on the level. Price, \$2,150.

Columbia Electric Carriages

Victoria-Phaetons, Runabouts, Broughams, Landaulets
Hansoms, Surreys, Delivery Wagons, Trucks

Separate catalogues of Columbia Gasoline Cars, Columbia Electric Carriages and Columbia Electric Commercial Vehicles will be sent on request.

At New York we shall exhibit at Madison Square Garden only, January 12-20.

ABBOTT'S ANGOSTURA
BITTERS

Make the best cocktail. A delightful aperitif for all wine, beer and soda drinkers. A safeguard to the stomach. A tonic, a nerve tonic and a sleep inducer.

Important to see that it is Abbott's.

The Jumping Frog

By MARK TWAIN

This story first brought Mark Twain into prominence as a humorist. It had instant recognition as a notable piece of humorous fiction, and has remained a general favorite amid all the author's later work. The story of the "Jumping Frog" is now published as a book, with translation from the French and new addition by the author written in November of 1903.

COMMENT

MR. ROOSEVELT, like most college graduates, was an idealist when he began his political career, but at later stages of his public life he has more than once adverted, with some show of impatience, to the folly of repudiating a second-best boon because one cannot get the best boon. Perfection, of course, is one thing, and an approach to perfection another; but not at that account does the latter merit scorn. That this homely but useful wisdom is missing from the intellectual outfit of Governor COMINGS, of Iowa, is evident from the ground on which he endorses the rate-making bill lately introduced by Senator DALLAGER, of his own State, in the Upper House of the Federal legislature. This bill the Governor denounces as a subterfuge because it does not empower the Interstate Commerce Commission to fix a minimum as well as a maximum rate. Now, there is no doubt that the President and his Attorney-General would like to authorize the commission to fix a minimum as well as a maximum rate in order to avert discrimination between localities. They and their friends are not framing bills, however, for the fun of the thing; they want bills to become laws. For a bill to become a law it will not suffice that it has the approval of the House of Representatives and is certain to be signed by the Executive, if it reaches him. It is also indispensable that the measure shall be, first, reported—favorably, if possible, but at all events reported—from a committee of the Senate; and then, after debate, accepted by a majority of Senators. Nobody knows better than Mr. ROOSEVELT that he can procure for the administration's rate-making bill the support not only of the Democratic members of the Senate's Interstate Commerce Committee, but also of three Republican members, to wit, Messrs. CYLLEM, CLAPP, and DALLAGER, provided the bill does not go too far. He could scarcely hope to obtain the assistance of the two Senators first named if he insisted upon inserting in the government rate-making project a minimum-rate provision which is vehemently opposed by Chicago, St. Paul, and other great commercial centres.

As it is of moment that the bill framed by Mr. DALLAGER, in conference, it is said with the President and the Attorney-General, should be reported favorably by a majority of the committee, the framer has naturally been careful to conciliate the Senators from Illinois and Minnesota. It is not to be inferred that the Iowa Senator would not like to give the Interstate Commerce Commission the power to fix a minimum rate, or that he will not strive to confer it in another session of Congress. What he wants to do at this session is to take the first step toward a redress of grievances complained of by simply authorizing the commission to fix what it deems a just and reasonable, or, in other words, a maximum, rate in any particular case where it regards the rate charged by

a railway to a given shipper as unreasonable. For the moment the advocates of government rate-making are endeavoring to prevent discrimination between individual shippers from the same locality. There will be time enough hereafter for grappling with the difficult and complicated question of discrimination between localities.

The Speaker of the House of Representatives is popularly supposed to be clothed with autocratic powers within the sphere of his jurisdiction, and to him has often been attributed the exercise of much more influence on Federal legislation than can be exerted even by a President of the United States. Credited with a giant's strength, he has sometimes also been accused of using it like a giant. The accusation was heard less frequently before the civil war, but during the last quarter of a century a dominating and oppressive employment of despotic authority has been imputed to SAMUEL J. RANBALL, to THOMAS B. REED, and even by some disgruntled ones to C. F. CRISP and D. B. HENNINGSEN. Good-natured as he is by nature and by habit, we should not be surprised if Speaker CANNON had a similar charge brought against him. It was pointed out the other day, however, by the Washington correspondent of the New York Sun that the Speaker's autocracy, like the autocracy of the ROMANS or the ROMANOVs, though theoretically limitless, is qualified in practice by tradition. When the Federal House of Representatives met for the first time in the spring of 1789 and proceeded to elect a Speaker, that officer no doubt had absolute power to assign what members he chose to the several committees. He had, in other words, a clean slate; but his successors in the Speaker's chair have never had such entire liberty of action. Custom and precedent constrain a Speaker to keep his predecessor's slate before him and to permit members to keep the places once attained on desirable committees, or, if transferred at all, to go to committees equally important. Even THOMAS B. REED, when he became Speaker of the Fifty-first Congress in 1889, and again of the Fifty-fourth Congress in 1895, though he was much freer than either Speaker HENNINGSEN or Speaker CANNON to select his own chairman of committees, because in those cases the majority had changed from Democratic to Republican, promoted, as a rule, nevertheless, to the chairmanship those Republicans who had stood at the head of the minorities in the committees of the preceding Democratic Congress. Speaker CANNON showed himself equally unwilling to disturb the *status quo* when he organized the House in the Fifty-eighth Congress, two years ago. He left in their places most of the chairmen appointed by Speaker HENNINGSEN, and he has again shown respect for precedent in his distribution of chairmanships in the present House, though there have been transfers from one important committee to another. Thus we see that it is unreasonable to call a Speaker a Caesar, unless we bear in mind that, although in theory nothing can control the will of an autocrat, yet in practice the exercise of it is regulated by tradition and usage.

The flight of Señor MORALES, President of Santo Domingo, from his capital, and his consequent suppression in the office of Dominican Chief Magistrate by Vice-President CARRERA do not really affect the principle exemplified in the treaty with the Dominican Republic now pending in our Senate. Nor would it have pleased Mr. ROOSEVELT in a somewhat ludicrous predicament had he not happened, in his last message, to describe MORALES, who, as a matter of fact, seems to have been always a bit of a rogue, as a Heaven-sent savior of society. After pointing out, what is true enough, that the conditions in Santo Domingo have for a number of years grown from bad to worse, until, a year ago, the whole social structure seemed to be on the brink of dissolution, Mr. ROOSEVELT went on to say that, fortunately, just at that time a ruler sprang up in Santo Domingo who, with his colleagues, saw the dangers threatening the country, and appealed to the friendship of the only neighbor who possessed the power and, as they hoped, also the will to help them. No doubt the words "with his colleagues" qualify what otherwise would be the delirious assumption that MORALES was the once-cured man among the blind. As a matter of fact, MORALES has held office simply by the tolerance of HENRI VIGIER, and not only Vice-President CARRERA, but, since the displacement of SANCHEZ, formerly the Minister for Foreign Affairs, all the members of the cabinet have been appointees of the same

influential citizen or, in other words, Horacistas. Now, under the Dominican Constitution, cabinet ministers share with the President the executive power, precisely as they do in the Swiss Confederation, and the treaty with the United States would not and could not have been signed unless they, as well as MORALES, had approved of it. The only change desired by them in the document is one acceptable to our Senate, namely, that the request for the interposition of the United States for the maintenance of order shall come, not from the Dominican President, but from the Dominican Congress.

So it is manifest that the question as to the expediency of ratifying the Dominican treaty by which, to avert the occupation of the Santo Domingo custom-houses by European creditor powers, we are ourselves to undertake the revenue collecting and distributing function, is not affected an iota by the flight of MORALES from the capital, a flight prompted by the impression, probably well founded, that his patron Vaquez was growing tired of him, and that, consequently, the city would soon become too hot for him. The arguments advanced in Mr. ROOSEVELT'S message on behalf of the intervention for which the Dominican Treaty provides are as cogent to-day as they ever were. We need not repeat them here, for we have often discussed them, and pointed out that the remedy proposed by the President and advocated by Secretary Root presents the only alternative to acceptance of the dangerous precedent set in 1902 by our acquiescence in the blockade of Venezuelan exports by European creditor powers and the subsequent sequestration of certain Venezuelan customs revenues for the payment of debts arising out of contract. We say that these two are the only practicable courses, because we take for granted that our government would not now assert, what without inconsistency it might have asserted four years ago, that it could not permit European powers to compel by force our American people to discharge contractual obligations but must relegate them, if they seek redress for default on their part, to the tribunals of the imbedded commonwealth.

There is not the grave loss of life and of the widespread and prolonged summer in a section of the Union by the outbreak of yellow fever, it is of obvious importance that Congress should consider during its present session the desirability of providing a national maritime quarantine system for our Southern coast-line. There is no subject in which a deeper interest is felt by our fellow countrymen who dwell in the yellow-fever belt, and if any Federal legislation can be framed which would be calculated to avert a visitation of the epidemic next year, it ought to be enacted without delay. This is urgent business, and we invite the attention of Congress to a discussion of it in an article recently contributed to the *Memphis Commercial Appeal* by Hon. FRANK JOHNSTON, of Jackson, Mississippi, formerly Attorney-General of that State. Mr. JOHNSTON points out that whenever there has been an extensive epidemic of yellow fever in Havana, or in any of the ports in or near the Caribbean Sea, the infection has spread to the Southern States. To ward off at such times the pestilence it is indisputable that marine quarantines shall be maintained rigorously on our Southern coast-line, from the mouth of the Rio Grande to Charleston, a distance of more than two thousand miles, within which are comprehended innumerable ports of entry, besides small harbors and inlets. Under such circumstances the establishment of an effective quarantine is a colossal undertaking, and although the seven States directly concerned have applied themselves to the work with more or less intelligence and energy, efficient cooperation between their health authorities has proved impracticable.

Manifestly, the chain of State quarantines is no stronger than its weakest link, and no State has the power to make good the shortcomings of a neighbor State. This being indubitably the fact, as was demonstrated in a startling way last summer, the people of the seven States immediately interested naturally, logically, and rightly look to the general government for protection. Has the Federal government the constitutional power to establish and maintain a national quarantine system? Mr. JOHNSTON shows that concerning this point no doubt is tenable. In the early case of *GIMMONS vs. Oakes*, the United States Supreme Court decided that the

Federal government had such power, and in the later case of *BULETT vs. LOCKWOOD*, decided in 1896, the same court held that, under the power to regulate foreign and interstate commerce, Congress has authority to establish quarantine regulations, and thus protect commerce from contagious or infectious disease. Mr. JOHNSTON contends that there would be nothing in the exercise of such authority by the national government to alarm the strictest and most sensitive constructionist of Federal power. Each State would retain the power to enforce its own rules and regulations with regard to interstate quarantines in cooperation with the Federal authorities. There would be no infringement upon the constitutional rights of the several States, nor could there be any impairment of State dignity or prestige because of the exclusive exercise by the national government of power and authority over maritime quarantines, enforced against vessels coming from foreign ports, which exercise unquestionably is a prerogative of the federation, as distinguished from the constituent commonwealths. As for the expediency of establishing a national maritime quarantine system on our Southern coast-line, it is too patent to need much exposition. Such a system would be independent of local influences and interests; it would assure uniformity of marine quarantine rules and regulations; and it would give the Southern people, when threatened with an epidemic, the bracing sense of security that would come from the confidence reposed by them in the Federal officers employed in the public health and marine hospital service. We concur with Mr. JOHNSTON in deeming it almost superfluous to assert that the Federal government, with its fleets of revenue-cutters equipped with all necessary appliances and possessing unlimited financial resources, and with one of the best-trained marine and hospital services in the world, can perform the vast and complicated work of marine quarantine on our far-stretching Southern coast-line incomparably more effectively than it could possibly be done by local and independent boards of health.

We have before us the manifesto issued not long ago in the Philippines by the so-called Federal party, in which its present and its prospective attitude toward the government of the United States is interestingly set forth. If the reader asks why we consider the views and aims of such an organization worthy of careful attention, we reply by recalling the statement made on August 20, 1904, at Montpelier, Vermont, by Secretary TART, who had been Governor-General of the Philippine Archipelago. Judge TART testified that the Federal party had been formed among the Filipinos for the express purpose of bringing about peace, and that all the good elements of the insular population had joined this party, and had so efficiently aided the commission to establish civil government in all parts of the islands that, as early as July 4, 1901, it had been deemed safe and wise to appoint a civil governor to act as the executive in conjunction with the commission which would serve as a legislative council. Fortified with such credentials, the Federal party has a claim to be heard that will scarcely be disputed. Its declaration of convictions and aspirations reflects not a little credit on the good sense and moderation of its framers. The relations of the Philippines to the United States are conceived in the document under our eye as properly adjustable to two periods, the second of which will not begin until order shall have been thoroughly established throughout the archipelago, and until a large part of the population shall have received the benefit of a primary education. During the preliminary period the leaders of the Federal party have not asked for an elective legislature. They have been content with the concession of most of such civil rights, liberties, and guarantees as non-voters possess in the United States, and with the equivalent of municipal and county self-governments, the acts of which have been subject to review by the central authority vested in the Philippine Commission. All they now ask is that, during the remainder of the preparatory term, primary education shall be, not only gratuitous, but compulsory, for the children of both sexes.

It is when we come to the second, or constitutional, period, which now is not distant, that we find the proclaimed opinions and wishes of the Federal party particularly worthy of notice. As regards the ultimate relation of their country to the United States, its views have manifestly undergone a

change since the original platform of the party was formulated in December, 1906. The party then declared that the territory of the Philippine Islands might be considered as one of the States of the American Union, but that it never should be ceded, wholly or partially, to any foreign power. Now it takes firm ground in favor of ultimate separation. It is at present the judgment of the Federal party that while immediate or premature independence, instead of being a benefit, might prove a calamity, exposing the Philippines to foreign interference, independence, on the other hand, if deferred indefinitely, would also be a hurtful extreme, the annihilation of a sacred hope. The early establishment of a representative form of government, or, in other words, such an installment of home rule as would permit the Filipinos to take an active and efficient part in the management of their affairs, is pronounced the right mean between the two extremes. It is further pointed out that such a concession would furnish the best possible chronometer for measuring the length of time during which the islands should remain under American tutelage. For these reasons the manifesto urges upon Congress the expediency of convening a Filipino popular assembly in July, 1906. Meanwhile, it earnestly pleads that the duties leviable upon Philippine sugar and tobacco imported into the United States may be reduced to twenty-five per cent, of the DINGLEY rates; and that, pending such reduction, the FAYE act, requiring all inter-isular commerce to be transacted in American bottoms may be suspended. This petition is based on the ground that it is illogical and unjust to treat the islands by the DINGLEY act as foreign territory, and by the FAYE act as American territory. Congress is also requested to substitute for the provision that in 1906 English shall become the official language of the islands a law that for at least a decade after the current year the official language shall continue to be Spanish; for the reason that, as yet, English is spoken or read by only a very small number of Filipinos. We are glad to hear that a copy of the manifesto embodying the views which we have just summed up has been laid on the desk of every Senator and Representative at Washington. We hope that its appeals and its suggestions will be heeded.

The revolutionary uprising in Moscow, after maintaining for upwards of a week a desperate struggle with the civil and military authorities, was finally put down on December 30, and there now prevails in Russia's ancient capital the dismal species of order which was once said to reign in Warsaw. We are told that commanding went on for many hours before the last stronghold of the striking workmen could be taken, and that the soldiers, infuriated by the prolonged resistance, avenged themselves with wholesale massacres. So far as that quarter of Moscow is concerned, it may be fairly said of the victors that *solitudinem faciunt, pacem appellant* (they make a solitude and call it peace). It will be observed that we speak of the frightful affair in Moscow as an "uprising"; for the original intention of the revolutionary leaders to restrict their followers to a "general strike" was quickly set aside. The engine of passive resistance raised to the highest power, as it would be if it were generally national and could be rigorously maintained for an indefinite period, would indeed be a force almost impossible to cope with. In practice, however, a strike, though its organizers may wish it to be general, is not converted in respect of time; is local, sporadic, or, at the widest, sectional rather than universal; and is entered upon by the strikers without food-supplies or preliminary resources adequate to their support for more than a brief term. The result is that, instead of tying out and starving out the regular authorities, the strikers themselves succumb to exhaustion and starvation. Such, at least, has been the case in Russia, where this new and theoretically irresistible weapon has been tried for the first time. There is always, too, as we have said, the danger that the resistance intended to be passive will, through friction and collisions, become active, and from that moment the moral weight of the demonstration is impaired, if not destroyed.

In a word, though a general strike would, theoretically, be invincible, the conditions needed for its application would never in practice be forthcoming. If Russia were inhabited exclusively by Quakers who obeyed indoxibly the

teachings of the Sermon on the Mount, it would be manifestly impossible for the Czar's government to coerce them by brute force. Human nature being what it is, however, a strike meant to be general and impassive drifts quickly toward discouragement and disintegration on the one hand, or toward violent assaults upon constituted authority on the other. We observe that, according to a telegram from St. Petersburg, the Workmen's Central Council, when calling off the general strike which brought about the Moscow upheaval, have announced that they will not again resort to that method of remonstrance, believing that the time for agitation for economical reforms has gone by, and that the era of political and social revolution has begun. The truth, of course, is that, owing to the fidelity of the bulk of the soldiers, the Russian proletariat has failed in its effort to upset the government, and that now—unless the reactionists can persuade the Czar to restore the autocratic government in its former rigor—the Moderate Liberals will have an opportunity to bring about a peaceful and an orderly transformation of a despotism into a constitutional realm.

The Naval Academy at Annapolis seems to be going through very much such a course of discipline ancient hazing as overtook the Military Academy at West Point several years ago. It seems that about one hundred upper-class midshipmen are liable to court martial for unofficial training of their younger comrades, and though it is not likely that so many as that will be brought to trial, some of the most conspicuous offenders are likely to be dismissed. That will be painful to them and a tribulation to the government, which wants all the capable young trained naval officers it can get, and can ill afford to lose the services of picked young men who have been carefully trained and instructed at the public cost. The trouble with hazing at such places as Annapolis or West Point is that, once it gets a foothold, there is nothing to restrain individuals from carrying it to a mischievous excess. The discretion of young men of twenty in giving secret instruction in department to young men of eighteen is not very trustworthy at best, but if all the hazing were done by the midshipmen of best discretion there might not be trouble. The rule is in these cases that the youths of best discretion do the most hazing. It is a pity that the Naval Academy needs to be overhauled on the hazing issue, but it does seem to need it, and we do not doubt that the overhauling will be thoroughly done.

It is interesting to notice that Lieutenant TAYLOR of the artillery, who is in trouble at this writing for inviting an enlisted man to change his seat at a New London theatre, is not a graduate of West Point. Mr. TAYLOR, if current reports are true, does not think enlisted men of our army look well in the best seats of theatres. This is not a popular American opinion. Recent reports of the action of Washington theatres in refusing to sell good seats to private soldiers in uniform have been received with indignation. Average people don't seem to think there is any cause or propriety in regarding our soldiers as inferior in social standing to the rest of the population. Ours is no German army, as an officer is quoted as saying. Soldiers of duty rank as American citizens; officers the same; and both are entitled during good behavior to all the privileges of that condition. Judging by the promptness with which charges were preferred against Lieutenant TAYLOR, that seems to be the ruling sentiment in our army.

Any excuse is a good excuse to write and talk about BRYAN FRANKLIN. He was born January 17, 1796, and the coming of the two-hundredth anniversary of that day has killed the periodicals with literature about him. One excellent discourse about him printed in the January *Critic* is an address delivered by Mr. JOSEPH H. CHOATE in Birmingham, England, in 1903. Mr. CHOATE might have been expected to deal admirably with such a subject, and he fulfilled expectations. But his speech is only one of innumerable FRANKLIN deliverances that have appeared during the last month, and so far as we have noticed they were all interesting. They could not help being so, FRANKLIN was such an inordinately interesting human creature. No other American

rivals him as the subject of a biographical story, unless it is LINCOLN, and of the two, FRANKLIN had the advantage in having had his experiences extended into Europe, and in having lived twenty-eight years longer than LINCOLN. Those twenty-eight years were the most useful and splendid of his life—full, every one of them, of sagacious and invaluable labors in the service of the American people. There is nothing in human beings that is quite so interesting to other human beings as their humanity. FRANKLIN and LINCOLN were both cheek full of humanity. They both had, for one thing, first-rate bodies. FRANKLIN's powers as a swimmer will be recalled, and LINCOLN's reputation as a wrestler. In their youth they were both athletes, and built to endure great toils, physical and mental, and to carry heavy responsibilities. Each of them began life for himself with a meagre preliminary education and no advantages of position or opportunity. Both of them had the precious gift of humor, and both of them employed it as an aid to persuasion and to facilitate transactions of momentous importance. Both of them were untiring friends of peace, and ready to make extreme concessions to avoid war. Both were men of profound resolution, untiring to prosecute an unavoidable war once undertaken. They are heroes of romance and of letters—these two—as well as of history. Writers will delight to write about them as long as the triumph of genius over circumstances continues to be an engaging theme.

It was given to FRANKLIN to be known to the world in his own lifetime for what he was. That was due to the extreme protraction of his public services, the length of his life, the remarkable scope of his talents and his studies, and his long residence in Europe. Not since FRANKLIN's time has Europe known any American statesman as it knew him. Not for a hundred and fifteen years did any American achieve a European reputation comparable to his. Since the events of last year President ROOSEVELT has had a European reputation that has wounded many commentators of FRANKLIN's. It is as yet something of a bill-board reputation, of very rapid growth, and based on report rather than acquaintance. It may not last as well as FRANKLIN's has lasted, but it has got a great start, and seems a sturdy plant. It would be a rash prophet who would set metrics to it, and who would suggest that there will be any diminution in it when Dr. ROOSEVELT goes over to chase the German Emperor's stag and Europe has a chance to see and hear him. WASHINGTON Europe did not see, nor LINCOLN. What it would have thought of WASHINGTON can be easily enough conjectured, for it knew the type; but nothing like LINCOLN ever got its growth in Europe, and nothing much like FRANKLIN, either.

What Dr. PRUDENT of Groton School has to say in this issue of the WEEKLY about Football is entitled to the consideration that is accorded to the opinion of an expert. For twenty years Dr. PRUDENT has had football under close first-hand inspection in his own school and elsewhere. He knows the game, and recognizes its faults as it is played, but continues to have a very high opinion of its value in the training of youth. He deprecates the singling out of football to be the scapegoat for all the sins of college athletics. The game, he says, has come to be too dangerous, and the rules must be amended; but the chief fault to be remedied he finds to be in the spirit in which the game is taught and played. That fault, he says, pervades practically all contemporary American college sports. He would not prohibit sports—not even football—because of it. He would cure the fault. He thinks it largely due to professional coaches, who are hired to teach teams to win, and in their zeal teach them to win by unfair methods and dishonest tricks. He would have the colleges discharge the professional coaches, as the first step towards getting an honest spirit into the game.

That the spirit of the game is even more in need of reformation than the rules is now the general opinion of observers. In a recent issue of the Springfield *Republican* there was a letter from a correspondent who described himself as having been intimately associated with modern football "from the time when we chose sides and kicked the ball as often at least as we did the heads of the other side, down to these days of an

armed eleven, twenty substitutes, surgeons, a brass band, and a field-telegraph." This observer of mature experience is of Dr. PRUDENT's mind about professional coaches. Boys will get hurt in games, he says, however you change the rules. The venturesome spirit which makes them take risks and play hard is too valuable to change even if one could change it. "At the same time," he adds, "it is the misdirection of that spirit which bursts the manhood of the players, and I freely contend that in the allowing of professional handlers and coaches and trainers in our college athletics the college is permitting and generally encouraging the spirit in athletics which is their worst evil." He goes on to disclose wherefore and wherein the professional coach is objectionable. Describing the methods of an unnamed coach who, "while he knew the game, knew also every possible unfair trick of using hands and feet, and taught them to his team," he says: "And why not? This coach and others are making a living by coaching. His business is more remunerative than that of a college professor and most legislators, and he is not going to do good advertising with a team that can't win. They may win by fair play if they can, but win they must."

Of course all professional coaches are not alike, as the *Republican's* correspondent goes on to say, and he adds that he knows some whose influence is for fair play, but it is not strong enough to help much. We do not doubt that there are amateur coaches whose influence is as bad as any professional's, and professionals whose influence is good, but the situation of the amateur is favorable to a prejudice in favor of fair play, and the situation of a professional tends to breed in him the desire to win anyhow. Representatives of eighty-eight colleges discussed football a fortnight ago in New York, and appointed a rules committee to meet the old rules committee and work with them. What will come of this effort is not yet disclosed, but the effort has been earnest enough to deserve results. The short way to cut the nerve of professionalism in sports would seem to be to abolish gate receipts, but the whole existing apparatus of college sports rests on gate receipts, and to withdraw the underpinning would involve a harder fall than the athletic interests are game to sustain. The kindness and importance of the intercollegiate sporting apparatus, and the gravity of the interests vested in it, make it difficult to deal with. That, no doubt, is one reason for President ELIOT's opinion that the best plan is to suspend intercollegiate football for a year, and then, perhaps, take a fresh start.

Just as the year went out the papers reported that CHAS. OTT JOHNSON was diving on a farm in Pennsylvania, in possession of the necessities of life, but no more, and with his faithful wife at his bedside as his only companion. Everybody knows about CHAS. OTT JOHNSON. He had the misfortune to grow up in the Pennsylvania oil region before persons of superior discernment had protected the folks of that locality from the hazard of sudden subjection to the trials of fortunes wealth. JOHNSON was never taught so much as to read and write. At twenty-one, in 1862, he came in, most unexpectedly, to a petroleum fortune of about three million dollars. How he spent it all in seven months is part of the recorded history of the American people. His last forty years, the papers say, have been spent in regret because of his earlier folly. Poor JOHNSON! He knew no better. Worse men than he, since his day, have spent more money in worse ways. And he had still, at last news, the companionship of a faithful wife! That could hardly have happened to him, except by a miracle, unless he had got rid of those millions. Poverty is a severe strain on the matrimonial prosperity of persons not used to poverty, and sudden riches are very apt to upset the domestic equilibrium of persons who are not used to money. Whatever turns one's habits of life inside down strains all established relations. Strong characters will keep staunch through all vicissitudes, and disciplined and resourceful folk will adapt themselves to changes better than people of less training. But as far as concerns domestic happiness the most fortunate adjustment seems to be a moderate and steady progress as years increase towards easier pecuniary conditions. It is probably pleasant to have money to spend in one's old age. In youth there are many other available forms of entertainment.

Recent Notable Speeches in South Carolina

Two speeches were made in the Palmetto State during the latter weeks of the year just closed that deserved the attention which they have commanded outside the borders of that commonwealth, because one of them depicted with clearness and force the extraordinary industrial development which the South has undergone during the last two decades, while the other discussed the character and work of a man whose name was once anathema in South Carolina—we refer to WILLIAM LLOYD GARDNER—in a candid, dispassionate, and equitable way. It was at a banquet given to commemorate the 175th anniversary of the St. Andrew's Society of Charleston that the powers and achievements of the New South were described by the Hon. ALFRED P. THOM, general counsel in the Southern Railway, a native of a Southern man by birth, and a graduate of the University of Virginia. Mr. Thom began by recalling that, during the reconstruction period, a time when all of the South's energies were needed to build up her waste places, and when all her resources should have been taxed to adjust the country to totally changed economic conditions, the grievous fact is that her white citizens never felt free to cast a vote upon any issue except one, in wit, the overshadowing domestic question of the safety of the white man's civilization, and the purity of his race. Intelligent and patriotic Southerners longed for an opportunity to think and act upon the great national questions which concerned the whole commonwealth. They desired to bring up their children amid surroundings conducive to the evolution of a national, rather than a sectional, spirit. They wanted to aid in the solution of the republic's problems, uninfluenced and untrammelled by circumstances differentiating them from their fellow citizens of other sections. In the presence of the race problem, however, by which they were beset, such freedom of thought and action on national questions was denied them. Even after the menace of negro domination had vanished before the indelible opposition of the Anglo-Saxons, the real or supposed necessity of remaining politically solid for the sake of racial self-preservation continued to stifle the freedom of the South's political thought and action.

Thus shut out by circumstances from the old-time activity in the political field, the South's intellect and energy found vent in the industrial domain. Some figures marshalled by Mr. Thom bear witness to the South's amazing progress between 1880 and 1903. In the former year the value of her agricultural products in general was computed at \$600,000,000; twenty-three years later, that aggregate value had mounted to \$1,700,000,000. The value of the cotton crop in 1903 fell short of \$314,000,000; in 1902, it was \$660,000,000. The amount of capital invested in cotton-mills at the South in 1880 was only \$21,000,000, and of a number of spinners was but 667,000. In 1903 the capital invested had grown to \$200,000,000, and the number of spinners to 8,250,000. In the former year the Southern mills consumed but 225,000 bales of cotton; in the latter the consumption had increased to two millions. In 1880 the amount of pig-iron produced in the South was only 397,000 tons; in 1903 it was 3,300,000. The amount of coal mined in the same period expanded from 6,000,000 to 62,000,000 tons, and the value of the South's lumber products had risen from \$37,000,000 to \$200,000,000. We observe, lastly, that the aggregate of the South's manufacturing products, which was but \$435,000,000 in 1880, had become \$1,600,000,000 in 1903.

Such an astonishing expansion of a country's output would inevitably bring with it a new economical problem, that of transportation. It became the duty of the Southern railways to move to market the immensely increased products of Southern energy and industry. Additional lines, better roadbeds, increased supplies of rolling-stock, and, finally, double-tracking, became indispensable. It was no slight achievement for a country which for upwards of two hundred years had remained in commercial seclusion to other sections to convey the output of her cotton-mills to New York and other world-markets on terms that would permit them to compete with the mills of New England. Such was the knotty transportation problem with which the new South had to deal, and that it should have been solved so effectively within less than a quarter of a century is one of the most remarkable facts in railway history. But how, asks Mr. Thom, is railway extension to keep pace with the vast and continual expansion of the products that have to be moved? The money needed for railway extension has to be obtained on credit. How is credit to be secured, if wages are constantly increased? If the verdicts for damages rendered by juries are excessive and unjust? If the roads run hope for no sympathetic consideration on the part of the people amongst whom they run; and, above all, if their rates are to be set down by an arbitrary Federal law which will also in itself the operation of the ordinary laws of trade? Mr. Thom submitted that Southern industry could hardly look for the fulfillment of its just aspirations, should a system of government rate-making be adopted, which would tend to deprive transportation companies of the credit essential to their ability to keep pace with the expanding needs of the people's commerce.

The other speech to which we refer was made on another occasion by Mr. J. C. HEMPHILL, of the Charleston News and Courier,

when, strange to say, took for his theme the career of WILLIAM LLOYD GARDNER. That the protagonist of the abolition movement should have been singled out for portrayal at a South Carolina banquet is of itself a striking incident, but, as we have said, the calm and philosophic spirit with which the theme was treated here even more largely testified to the change that has come over the South. WILLIAM LLOYD GARDNER was recognized by Mr. HEMPHILL as having been the most potential personality in the history of the New England press. It was not DANIEL WEBSTER the statesman, or WENDELL PHILLIPS the orator, or RALPH WALDO EMERSON the dreamer, who did most to shape New England's thought and purpose in the supreme trial of the republic, but WILLIAM LLOYD GARDNER, the patient, plodding journalist. In him, Mr. HEMPHILL, was a man with a purpose, a wicked purpose, indeed, from a Southerner's point of view, but a purpose to which, whether wicked or benevolent, he devoted every energy of an intense nature with a fidelity unshaken by the frequent prospect of failure, a fidelity which braved him to face contempt, humiliation, and danger to the bitter end. Mr. HEMPHILL, in one of those who know that, before the civil war the dominant, presumably more enlightened sentiment of New England was firmly, nay, angrily, antagonistic to GARDNER. The churches were closed against him; the clergy denounced him. A mob in the streets of Boston destroyed his property and threatened his life. Not once was he forgiven for his course, however, and, eventually, he was for himself and for his cause, through the damnable iteration of his unimpeachable press, the sympathy and respect of preachers, statesmen, politicians, and business interests at the North, and finally achieved the overthrow of slavery and of the Constitution, which he had branded as a covenant with hell. It follows, in Mr. HEMPHILL's judgment, that, however censured Southern people may be that the crusade of the so-called Liberator was justified neither in law nor in morals, they must admit that the greatest of all New England newspaper leaders was WILLIAM LLOYD GARDNER. They may doubt his work, but they cannot withhold admiration from his courage and his consistency. Mr. HEMPHILL, in this part, expressed the wish that the South had newspaper men of like courage to meet some of the terrible losses forced by him upon them; to meet them, not, indeed, in GARDNER's spirit, which set law at defiance, but in a spirit of obedience to constituted authority and of unrelenting hostility to mob rule, which would tend to brutalize the conscience of the South, and to sap the life of her institutions.

The Prosperity of American Railways

Some striking statistics bearing on the condition of American railways in 1903 have been published by Mr. EDWARD A. MORELEY, Secretary of the Interstate Commerce Commission. Before directing attention to his surprising facts and figures, we should, in order to obtain the right standard of comparison, recall some corresponding data relating to the railroad traffic of the rest of the world. According to estimates made in 1900, the whole of Europe then possessed but 175,000 miles of railroad, exclusive of sidings and double tracks. The quantity of freight transported in a year was 1,145,000,000 tons, and the number of passengers carried was 2,700,000,000. The annual receipts from all sources amounted to \$1,800,000,000, and the annual expenditure to \$1,000,000,000. In Asia, Australia, and Africa there were at the same date 65,000 miles of railroad, which transported 66,500,000 tons of freight, and carried 346,000,000 passengers. The annual receipts were \$240,000,000, and the yearly expenditures, \$127,500,000.

Now let us turn to the record of the United States, as this has been brought down close to date by Mr. MORELEY. There are today, in our republic, 215,000 miles of track (second tracks or sidings not being counted), eighty per cent. of which has been constructed since the close of the civil war. If second, third, and fourth tracks and sidings were to be included, we should now be able to add to 200,000 miles of track. It is noteworthy that, of our entire railway mileage, sixty-five per cent. is embraced in seven great systems, to wit, the Vanderbilt system, the Pennsylvania system, the Gould system, the Harriman system, the Hill system, the Rock Island system, and the Southern Railway system, the latter controlling nearly all the important railways of the South. The railways constituting the remaining thirty-five per cent. of our railroad mileage are, for the profitable conduct of their business, absolutely dependent upon the seven great consolidations named. We shall still better appreciate the extent to which centralization has been carried when we add that about a hundred persons control the boards of directors of railroads, the commercial value of which equals ninety per cent. of the total, and the earnings of which amount to ninety per cent. of the aggregate gross earnings of the railways of the United States.

We turn to the volume of traffic transported. In 1884 the number of tons carried by all the railways of the United States was 628,000,000. In 1904, only two years later, it had more than doubled, having reached the astounding figure of 1,300,000,000 tons. The date for the whole of 1905 are not yet accessible, but it

is known that the volume of freight traffic has significantly increased during the twentieth century. The number of passengers carried in 1902 was 227,421,000; it had risen in 1904 to 715,410,000 and has mounted considerably higher during 1905. If we pass to earnings, we learn that the total gross earnings of the railroads of the United States for the fiscal year ending June 30, 1905, from operations (income from investments not being included, though many railways, it should be remembered, are large owners of mines and other property) were, in round numbers, \$2,160,000,000. The figure shows an increase of one hundred per cent. during the last decade, and of about \$600,000,000 during the last quinquennium. From sources other than the earnings which accrued from operation, the railroads received during the last fiscal year nearly \$115,000,000. There was in 1904 a surplus of earnings and income over operating expenses amounting to \$683,200,000, which should be compared with the \$400,000,000 attained in 1898. The surplus left in 1904 for dividends and improvements after payment of operating expenses, of interest on bonds, and of taxes, was nearly \$324,000,000, whereas in 1898, after similar deductions had been made, only \$120,000,000 remained.

As regards dividends, interest, and taxes, we should mention that the disbursement on the last-named account has come than doubled since 1985, having risen from \$25,000,000 to \$50,000,000. The aggregate amount of railway stock outstanding on June 30, 1994, was, in round numbers, \$6,510,000,000. The amount of money paid to the holders of this stock in dividends has doubled in five years. The aggregate funded debts of American railways were computed in 1994 at \$6,873,000,000, but, of the outstanding bonds, the railways themselves to their corporate capacity owned upwards of \$328,000,000.

One of us appreciates how many men are needed to transact such a colossal business. As a matter of fact, there are in the service of American railways to-day more than a million and a quarter of men. Of this multitude of employees, 32,451 are engine men, 55,000 are firemen, 40,000 are conductors, and other trainmen comprise 108,734. The number of engines in active use is 47,000, the number of passenger-cars 40,000, and of freight-cars 1,570,000. These cars and engines, if placed in line, would encircle the globe.

It is obvious that the greater part of the stupendous earnings of the railways of the United States goes back to the people through the expenditure for labor, service, and supplies, for taxes, for interest on bonds, and for dividends on stock. When we consider the incessant flow of rapid to and from our huge railway system, we must recognize that Mr. Mowbray is justified in asserting that the operations of these vast corporations affect the interest of every community and of every individual in the Union.

Personal and Pertinent

A FRESHED cattle show is to be the next novelty in Massachusetts agriculture, the Marshfield agricultural society having recently elected THOMAS W. LAWSON as its president.—*New England Farmer*.
Tom cannot keep away from the bulls.

There is a singular appropriateness in the new navy order assigning Captain HENRY WINSLOW to the command of the battle-ship *Kearsarge*, as it was his father, JOHN A. WINSLOW, who commanded the original *Kearsarge* in her memorable engagement with the *Albatross*.

The Grand-Duke CYRIL and Father GIRON were seen sitting at the same roulette-table at Monte Carlo a short time ago. They were, according to report, at opposite sides of the table, which was quite as it should be. They were engaged in a game of chance, which was an obvious comcometary.

EMERY GIBSON, ten years old, the son of a white man who married an Ojage maiden, has been chosen "baby chief" of the Ojage Indians, in accordance with an ancient tribal custom of the tribe. The lad's Indian name, conferred upon him by TOM TALL CHIEF, is SINK-KAH-NAH HE HE—seriously a laughing matter.

To criminologists and comic-opera comedians we commend this brief paragraph. A woman was brought before the Mayor of Falkweller, a small town in Alsace, on a trivial charge, and during the cross-examination the mayor himself was detected in the act of pilfering from the pockets of the prisoner. He was sentenced to imprisonment for a month.

The distinction of wearing the most expensive overcoat in the United States is reported to rest upon ex-Judge WILLIAM H. MONAG, of New York and Chicago, who has such a garment lined with Russian sable fur which cost \$19,000. In Europe, however, we know, by sight at least, one Nemoi an who has a Russian coat, as old hand-me-down affair at that, which has already cost millions of dollars, and yet he scarcely dares call it his own.

Let all those who consider themselves unlucky harken to the tale of Colonel H. H. MAYOR, of Miami, Nevada. During the last three years he has fallen down a mining shaft, breaking both legs; been knocked across a Los Angeles street by an automobile; has been in three railroad wrecks; participated in an automobile smash up in Salt Lake City; and two months ago was trampled nearly to death by horses.

We have familiar Scripture for it that it profits a man nothing yet if he gain the whole world and lose his own soul. In view of the circumstances attending the recent death of Mr. YEMAS, and of other recent incidents that concern notable money-makers who are still with us, is it not time that our statisticians, or our philosophers, or some one, should expound to us the precise point between profit and loss which is occupied by the man who gathers in unnecessary millions and loses his own wife?

Not long ago a Roman nobleman advertised in newspapers in Chicago and New York offering his hand (empty) and heart in exchange for no American bribe. He has thus far received two hundred and fifty-four replies. Several correspondents wanted to know whether, in view of the prospective husband's title, they would be asked, father and mother included, to all the balls and dinners given by the King and Queen of Italy.

The fossilized remains of a mammoth have been discovered in Alaska. Describing them, the San Francisco *Chronicle* says:

The skull is nearly three feet through and weighs nearly 150 pounds. Both tusks have been broken or have disintegrated, but even now one of them is seven feet and three inches long, while the other is four feet two inches. When the animal was alive they must have measured about nine feet in length.

What a "loss" it must have required to ride a "tusk" like that!

To an encouraging paragraph directing attention to the agricultural progress the Comanches are making in the West, the *Kansas City Journal* adds:

There are a number of the Comanches trying to follow the white farmer's footsteps, and many of the cotton-fields were dotted with the redskins this fall.

The facts conveyed in this addition were true long before the Comanches took to tilling the soil.

There is an exchange in Paris where one may purchase locks of

hair which have adorned the heads of celebrities. Two dozen grown by Lord NELSON recently sold for \$625, and this was considered a rare bargain, since a much smaller number went for \$330. Nobody seems to care much for the hair of the Duke of Wellington, since his hairate product is quoted at only \$7.50 per lock. N. ROBERTS, who had some that hang right in the middle of his forehead, is rated at from \$3 to \$100, according to demand, and Lord BLYNN's rules fairly steady at \$97.50. J. D. ROCKEFELLER's name does not appear in the list.

The original letter from Lord KNOLLYS to Rear-Admiral KENNEDY, of the British Navy, on the subject of drinking the King's health in other liquids than wine, has now been made public. Dated October 17, 1902, it runs:

His Majesty is afraid that it will be difficult to make any public announcement that he considers his health can be as loyally drunk in water as in wine. . . . The King commands me, however, to say that you are authorized to make it known privately and in any way that you think best, and that you are authorized to state that total abstainers can always drink his health in some non-alcoholic drink to his entire satisfaction. Now, wasn't that nice of him?

The visit of the Prince and the Princess to Wales, in India has, aside from the splendor of the welcome accorded them, been attended with many events of unusual interest which have escaped the general chronicler. One of these was the forty-mile drive of their Royal Highnesses through the famed and bossy Khyber Pass. To insure their safety a truce was proclaimed throughout the district, so that the Afridis would not be at the business of taking pot-shots at their old enemies. The natives were warned not to approach within three miles of the road, all feuds were happily suspended, and the hills were picketed with 1700 Khyber Rifles, a detachment of British troops as well as the native levies. As a precaution against the Indian chieftains being willing, during the visit at least, to let bygones be bygones at Peshawar, among those who did homage to the Prince of Wales were the Khan of Dille and the Nawab of Naurang, who have been at war with each other morning, noon, and night for years. As soon as the Prince is well out of the way they promise themselves to go back to their raiding and fighting across the border. But they looked like good old friends as they met together to present the hills of their swords to the Prince. In the long line of those who came forward to signify their allegiance to the son of his Emperor was the prince of the Pothohar, a Sikh, a Hindu, a Mohammedan, a Jaina, a Christian, a Parsi, a Sora, a Santal, a Mahratta, and a Nizam. Among the latter was NAWAB SAHIB PANTAP NAWAB BAHADUR, C.I.E. His son once described him to the visitor as "a tough old bird who can be out in the sun all day."

The Annual Automobile Parade in New York

The Automobilst and the Law

By Dave H. Morris

President of the Automobile Club of America.

I FEAR that I may be thought to have extremely radical views concerning the relation of the motor-car driver and his machine to the laws which are supposed to govern them and to the general safety of streets and highways.

But my views are the result of a number of years of experience with high-power motor-cars and a knowledge that present conditions may be so changed and improved that the man who drives a motor-car will not be looked upon as one who wilfully and persistently violates the law for the excitement of the thing. It is a great pity that a certain class of automobilists has done so much to injure the sport in this country, and it is against this class that I would like to see drastic legislation directed. A change in existing laws, making them more severe in certain provisions and more liberal in others, would reach these individuals, teach them a much-desired lesson, and at the same time work to the best interests of those who run their cars in reasonable fashion.

In the first place, I would make it impossible for the man who is persistent in his disregard of the law to operate his or any other car.

Under certain conditions I would have his license either suspended or revoked, and should the latter course be pursued in regard to him, he would have to content himself with taking his automobile trips with a chauffeur instead of himself at the wheel. Incidentally, I could have the laws so changed that the chauffeur would be the last man to court arrest for disregard of the speed regulations, since it would mean a cancellation of his certificate and license as a motor-car driver and throw him out of work.

As the laws now stand, every man in New York city, however

decent or respectable he may be, breaks the law whenever he goes out into the streets with his motor-car. The reason is that the ten-mile-per-hour limit is a restriction incompatible with what under certain conditions would be not only impossible, but likely to prove disastrous. Take this case for example: The law permits a motor-car driver to maintain a speed of ten miles an hour in the streets of New York city; suppose he should undertake to go at that speed down Fifth Avenue at four o'clock in the afternoon. There is not the slightest doubt that not only would he endanger life, but stand an excellent chance of wrecking some fine property in the shape of vehicles and horse-dish. The normal speed of an automobile, based upon the normal gait of the horse, which in the city is from seven to eight miles an hour, is from fifteen to seventeen miles an hour. Now, an automobile going at that speed is, beyond question, under far better control than a horse travelling at its normal gait. The law, however, limits the automobilists to ten miles an hour, so I consider the law to be wrong at both ends, giving too much speed under one condition and not enough under the other. I would like to see a law enacted which would give the automobilist untrammelled reasonable liberty in the management of his motor vehicle and restrain him who is not. Suppose a man runs his machine at a rate of ten and one-tenth miles an hour, then he is certainly guilty of violating the law, and I consider this restriction absurd, unreasonable, and unjust.

As to convictions for over-speeding, I would wish to see none unless the evidence clearly showed that the defendant knowingly exceeded the prescribed speed limit, or that the rate of speed he was maintaining at the time of his arrest was excessive and dan-

Dave H. Morris, President of the Automobile Club of America, in his thirty-horse-power Touring car

gerous with reference to traffic and the use of the highway by others. Under that elastic provision I say that a man could and should be arrested for going down Fifth Avenue at even a speed of five or six miles an hour during the crowded period of the day, and also that at other times he might drive his car down the Avenue at even twice or three that speed without in any way violating the rules of common sense or the unswerving rights of his fellow creatures.

I would recommend that the same tactics be employed with regard to automobiles as have been employed for the control of race-horses—that is, the creation of a State commission of three members to be appointed by the Governor, whose duty it would be to issue licenses and institute an examination into the capabilities of chauffeurs. The owners of automobiles, particularly those who have wives and children, are entirely dependent upon the skill, caution, and general efficiency of their chauffeurs, and it is my view that, with such trust reposed in them, they should be compelled to pass a comprehensive and adequate State examination. Also, chauffeurs should be made amenable to the criminal code for all their acts which involve moral turpitude, such as, for instance, acting without a license, or with a false license when they have suffered suspension or revocation; when they get rebates or commissions on supplies, repairs, or the original purchase price of a machine; or when they take a car out without an owner's consent. The extent to which this last thing is done is truly remarkable. I am told that there is a place in New York where any one may go and find the finest private machines for rent. Motor-cars are difficult of identification, and it is very easy for a dishonest chauffeur to hang a false number upon the back of his employer's machine when he takes it out surreptitiously.

I think, too, that automobiles should be made to pay for the upkeep of the State roads, and to this end I would advocate an automobile tax to be devoted exclusively to it. I would take off the personal tax on automobiles, which, by the way, owners seldom pay, and replace it with a definite tax upon each machine. It has been suggested to vary this tax according to the weight and horse-power of the motor-car, the tax not to exceed in any

The Condition under which High Speed is allowed

case \$15 annually. The State commission to which I referred could fix the amount of this tax by consideration of the amount of roadway to be repaired. In New York there are, in round numbers, 30,000 registered automobiles. Now, it is estimated that the maintenance of roads should not cost more than \$100 a mile, and on the basis of a tax even as low as \$10, the State of New York would find the sum of \$300,000 available every year for the work of maintenance. In New York there are only seven hundred miles of State roads, so the tax would not have to

be anywhere near \$10 the first year to insure an ample sum for repair and upkeep. Commercial vehicles should not reasonably be compelled to pay so high a tax as pleasure-cars.

In the best interest of those engaged in automobilism I think that every court having jurisdiction should keep a thorough record of all convictions under the speed-limitation laws, these to be accessible in business hours to any one interested. Further, I would suggest that the convictions which have belittled a motorist should be endorsed upon the back of his certificate or license, and a copy thereof be sent to the State commission with a court recommendation as to what action, if any, the commission should take, whether of revocation or of temporary suspension. A commission of broad-minded men who understand the automobile could handle these questions with accuracy, and bring about the desired results, since its power would be absolute.

As to bail for an infraction of the law, an automobilist should not be hampered in this matter; he should be permitted to give any security which is satisfactory to the peace officer—a valuable watch or some piece of jewelry, for example.

The laws of New Jersey governing automobiles are, I believe, somewhat better than those of New York. The distinct advantage of the New Jersey laws is that they embody an elastic speed provision. They say that the automobilist may not exceed a speed of one mile in three minutes, but that in any public street or road he must go at a reasonable speed, so that the safety and comfort of those using either may not be jeopardized.

The inclusion of skyline lamps on automobiles in the city streets is a hobby of mine, and I want to do all I can to dis-

An Accident averted; the Steering gear worked this time

A Halt by the Ruin—car of the dangers of tearing without a chauffeur

courage their use. They blind pedestrians and frighten horses, and serve no good purpose whatever. The original object of these lights was to show the driver of a motor-car dangerous spots in the roadway, but they have come to be used as part of a car's city equipment. In New York city no such dangerous spots are supposed to exist; so there is no real reason for their use. I believe that a great many night accidents are due to them.

One constantly hears of objections to the noise and smell of automobiles. There is no reason in the world for either of these objectionable features, and with proper care they would not exist. It is bad motoring for any driver to permit noxious vapors to escape from the exhaust of his machine, and in France motorists run more risk of arrest for this than for speeding.

As a last word I wish to say that, generally speaking, I do not believe in the French chauffeur. Of course there are in this country a number of French chauffeurs who have not their equal in the world, but it is my belief that, save in rare instances, a good French chauffeur will not leave France, and, as a rule, those who are em-

ployed here have left France because they have found the atmosphere of their native country too rarefied for enjoyment. The average French chauffeur who comes to this country speaks French, smokes cigarettes, and looks wise, and that is all there is to him, but those who employ him give him their entire confidence. For myself, I would be chary of employing any chauffeur, particularly a French one.

A deplorable automobile accident has recently occurred which resulted in the death of Mr. James E. Martin, and it seems to have been the result of skidding and putting on the brake of the machine suddenly, thereby throwing the car into a ditch. From the news paper accounts it would appear that two cars were racing on a public highway, a pastime always fraught with danger, inasmuch as highways were not constructed for competitions of this character. It is to be hoped that this dreadful accident will again fully demonstrate the danger of imprudent racing on public roadways, which are usually narrow and frequently in unsafe motoring condition, owing to rains or thaw, and make it most hazardous for one driver to attempt to pass another at high speed.

The Rise of the Motor-Car

By Henry Jay Case

IN 1886 the only mechanically moved vehicle was the cumbersome traction-engine that broke down country bridges and scared horses out of their harness. Since then the development to the light powerful car has been sure and rapid. More than 100,000 motor vehicles, of both foreign and American make, are now owned in the States, representing an energy of 2,000,000 horse-power and a sales value of \$200,000,000. Last

year 30,000 cars were sold here, and it is now predicted that the coming year will see 35,000 more pass into owners' hands. So fast do the new cars appear that it is difficult to keep track of them. In order to trace them most of the States have passed laws requiring owners to register their cars and receive a number before they take the road, and it is through this registration that the automobile trade, the newspapers, clubs, and police have

Testing a Car's Hill-climbing Ability on a Forty-per-cent. Grade.

New Fifth Avenue Motor-bus, New York

"Steering New York" from a Motor-car Deck

been able to connect each car with its owner. Even with the aid of the law, a trained force of statisticians is necessary to keep pace with the registration.

According to the Auto Directories Company, New York has a larger number of registered cars than any other State, 23,848 being registered to date. Utah, with 130, has the smallest registration. Good roads keep pace with the automobile, and vice versa, but it does not necessarily follow that the State with the best roads has the highest registration. In New Jersey, for instance, where the roads are masterpieces of construction, 14,500 cars are licensed, or only a few more than half of the number in New York. The bulk of New York cars, however, are owned in New York city, where their owners may easily reach the five marks across the River. New Jersey is second only to New York, and leads Massachusetts, which is third, with 12,000, and Ohio, fourth, with 5000. Connecticut has 4000 cars registered; Illinois, 3000; California, 2500; Indiana, 2000; Michigan, Maryland, Wisconsin, and Iowa, 1500 each; Minnesota and Rhode Island, 1200; Missouri, 1000, and so on down to Utah, Alabama, and Tennessee, which range between 100 and 150.

In New York one sees both extremes of the sport of automobilism, but undoubtedly most often the extravagant end. On streets and parkways it is the big powerful touring-cars, the racing-machines, and the lavishly fitted vehicles which catch our eye rather than the modest little family conveyances which represent so adequately the business of the future. Owners of cars in the city probably spend more money and can show the largest and most powerful group of machines of any section of the country. If not of the world. The more enthusiastic build their own garages, and keep them full of cars. There are more than 200 persons in New York who have from five to ten cars apiece. John Jacob Astor alone is credited with thirty-two. The string of vehicles owned by an enthusiast of this class will include two or three touring cars, a pair of racers, a couple of broughams, a runabout,

station-car, and a work-car. To house safely so much valuable machinery the owner must build a garage. There are rightly private garages in the city, each supporting a good-sized force of skilled workmen. One of these buildings will when completed have the greatest floor space of any such establishment in the world.

There will be all the comforts and conveniences at hand, and to rescue any unfortunate who is arrested for speeding, the club erecting the building will keep constantly on hand an attorney-at-law and a property-owner to appear for and bail the driver in case he is apprehended. Garages as built in New York are not very inexpensive. The value of the lease terms of four of the new ones now building is said to be more than \$1,000,000 apiece, and it will cost proportionately for maintenance.

Automobilism in such proportions is expensive, and will always remain so. In view of the excesses in New York, it is perhaps not strange that the word has come to be synonymous with extravagance. It is the shattering of this illusion that makes the quiet man of domestic tastes become an automobile "crack" and invest in a car that will carry the whole family. When he can cut the time between his office and his house in half, make a 200-mile tour in a week, and take no added health and spirits in the doing, he begins to see something else in the owning of a car besides extravagance. The price of a standard car will probably never come down so low or so rapidly as to equal the run on the bicycle. Rather will it stick to a mean high level, as it has done in the carriage trade. It will always take skilled labor and expense to turn out serviceable automobiles. The racketing which high-power machines have to stand and the strain on the different pieces of mechanism are an exceedingly great that low-priced cars are not practicable. American cars now sell from \$1000 to \$12,000, but prices are not always to hang at this elevation. They will move down materially. It was only at the close of last season that American dealers received a commercial "jolt" through the

New Type of Electric Taxis

Cab operated from the Inside

announcement that 10,000 runabouts of a well-known make would be put on the market this spring at \$500 apiece.

Up to show week each year the automobile world is all agog trying to find out the special features of the new year's cars. According to trade experts, makers know absolutely nothing about their rivals' machines until they are shown on the floor of an exhibition. This year all are agreed that the new cars are practically alike in engine, running gear, and body. A composite of the new models is shown in the picture. The only new feature of distinction was reached some time ago, and the energy of American builders, which in other years has been put to producing new features, will this year be devoted solely to strengthening the parts and turning out a car to stand the wear and tear of several seasons. Thus the new car shows a marked departure from the trend of the last few years, which has been to make the car more nimble. Another retained is the "suck and brak" system of ignition, and here and there in the 1906 cars appear devices economizing on spare and weight, one of them, for instance, using its dashboard for a storage tank for extra gasoline. The bodies are so much alike that it is fairly difficult to distinguish them apart. The old-fashioned carriage-top, however, remains. Rear doors are still on the inside door, a change which cost the builders thousands of dollars.

The speed limit for touring-cars has been reached when builders on average level roads can get sixty miles an hour from a machine of a ton weight. They will continue, however, to add to the comfort and convenience of the passenger, and the day is not far distant when the tourist will be able to eat and sleep well housed while travelling.

No industry has come so rapidly to the front in America as the manufacture of automobiles, and none is so full of failures. One authority said this week that recently the beginning of each year has seen as many as seventy-five new concerns start bravely in the business, and September of the same year all save perhaps a dozen have gone to the wall. Each week scores of patents are

applied for. High prizes are offered for inventions that solve the "salesmen's" problem. With so many concerns manufacturing automobiles, it is not surprising that much of an inventor's head is bent to a gang of engineers to work out the details of a patent together for a completed vehicle. That is "manufacturing" automobiles. Selling such products, however, is another matter in this commercial age, where the buyer knows about as much of the seller's business, if not more than the salesman himself.

The buyer will pay \$250 in a touring-car is likely to be particular, and he wants to know just how, and of just what, all the material that enters into his car is made. The majority of men who own automobiles to-day are capable of driving and repairing their own cars, if they do not actually perform the labor. Cities and the suburbs of the country are becoming more and more equipped with electric fire-engines. Here in New York City Croker has discarded his horse and buggy for a big red touring-car of maximum speed. The Commissioner of Street Cleaning has a car of his own use, the Health Department has two, and the other departments use them in their work. In the big cities the large cities in the English colonies steam-propelled fire-engines are used. These can run at a speed of thirty miles an hour, if necessary, and pump 500 gallons of water a minute. Recently the War Department has been experimenting in the use of automobiles for military purposes. The motor mail bus is a common sight in London, Berlin and Paris, and in the Isle of Wight motor-omnibuses connect the principal villages. Ranches on the Western prairies have brought close together by the automobile, and signal rails, and the like, and the automobile has become a part of the life of the hour. One of the odder uses to which an automobile has been put is furnished here in New York, where a touring-car has been converted into a sleeping-car for an invalid, whose treatment demands plenty of fresh air. The car is so arranged that a nurse can attend to the patient, and the patient can see the scenery. A portion plays the latest popular air from opera and concert hall.

The "Poor Man" and the Motor-Car

By Allen Sangree

THE first man I talked to on this subject was an importer of French motor-cars. He was very businesslike, he worked at high gear, and stabbed me with cold, steely four-cylinder eyes. "This machine I'm trading on sells for \$16,000," he snapped. "That one over there is for _____," naming a millionaire. "It's \$12,000. He has just ordered two more—a racing-car and one for his family. That red machine is only \$8,000, but the helical groove—advance motion—cost of signature—advance quadrant—"

He rattled off three or four sentences of this sort of thing, and I was finally bored out by a ten-year-old page in a gold-embroidered uniform. Afterwards probably half a dozen other manufacturers were visited. Some of the managers regarded me benignly; others with raised brows, but none showed enthusiasm. The association of the men of moderate means with the automobile unquestionably had no inbred for them.

This was both disappointing and unexpected, since I thoroughly remember being told a few years ago that by this time the horse would be extinct. In those days our attention was directed to an Arriadian future. The humble peasant would bow up hill and down dale, propelled by electricity, steam, or gasoline. Twenty years more and little children would peep through the zoo fence, asking their parents if that was "a horse."

In fact, I was beginning to think that the only thing a poor man may get acquainted with the motor-car is in crossing the street, when he usually wakes up to find a sweet-faced nurse heading over him. Police Commissioner McAdoo had just declared, too, that he would ostracize those seeing the town vehicles, because they lumber the streets. That seemed to be the poor man's last chance.

Eventually, however, I happened upon a nest of veterans who began life by trying to stick on the old-fashioned bicycle—high wheel in front, little one behind. The names

of these motor experts are familiar to every manufacturer, owner, and driver in America. They have followed the business from its birth, and here is related precisely what they believe.

...and many are indeed proven to have been used. Automobiles will never be as cheap as they are now, because of the expense of manufacture. Only ten companies in America make money this year. One firm employs 1000 men, and pays on an average \$3 per day to each workman. New dies and tools cost them from \$20,000 to \$50,000 a year. They have cut the price down to its minimum, and there is no hope of ever buying a really serviceable machine for less than \$500.

"I'm fly serviceable," he added, "I mean something that will satisfy. Now, you know, one must consider the human interest features of an automobile. There are vehicles selling for \$350. Single-cylinder motor; they will make twenty miles an hour, and run by gasoline. That vehicle is a backboard. It will seat two persons. If the tires would not puncture, you might make three or four thousand miles a year with such a backboard. After that she would be in distress."

"Sounds pretty well for the poor man, doesn't it?" he inquired, with a note of sarcastic triumph, and then wheeled upon me. "But who the Sam Hill wants to rule on a huckboard?" he asked. "Or, for that matter, who wants a 8000 rhinal?"

I told him I didn't know. "Of course you don't," he rejoined, "nor do I, either. That raincoat is a smart little wagon. The firm is arranging to make 10,000 this year. It has a bonnet in front, is guaranteed to speed forty miles an hour, and seats two comfortably. But right here comes the human interest. The man who buys one of these \$300 raincoats will play with it for two or three months, and then begin to make eyes at a touring-car. That's what all of them want—men, women, and children. I will say this: If a husband brings home a good raincoat, he can buy a \$200 or \$750 raincoat, and treat it respectfully, he

Fording a Stream in an Automobile

might get very decent service. It costs about \$15 a month to store such a machine, maybe \$6 for gasoline, and perhaps \$5 a week for repairs. You can figure out what that would amount to in a year. Lots of physicians use them in preference to a horse. And then a lot give them a trial, and go back to the nag. Usually the doctor who discards his machine was not much of a mechanic, and did not hire a chauffeur. You see, if every poor man was an A-1 mechanic and had a stable or workshop where he could replace belts, nuts, mend his tire, or anything else, he would find the runabout a cheap means of transportation. But even at that, his wife would worry him if somebody in town had a touring-car."

All this while we had in a way shied from precisely defining "a poor man." After some minutes my informants agreed that an annual income of \$2500 marked the "poor man," though the peasant cracked a wry smile. "Let it go," he said, shrugging his shoulders. "but, you know, a wife and children cost something. Take \$300 off that income, and you've got to figure a bit."

At this point the other expert silenced the peasant with an avalanche of words. "This is the kind of fellow that is forever throwing cold water on the automobile business," he exclaimed, bitterly, "although he gets his living by it. Now what are the facts?"

He then proceeded to draw a picture of a day close at hand when this country would be clogged with perfect roads, so that it would no longer be necessary for tourists to carry block and tackle to pull them out of mud-holes. "Given good roads," he said, "what will happen? What is happening? Simply this, that the American citizen is rapidly becoming a mechanic. Last year one firm alone sold 50,000 gasoline-engines to farmers. Another firm sold 500,000 wagons. Put two and two together! The farmer learns all about gasoline, and pretty soon he'll want it in his wagon. Realizing this, one of the biggest manufacturers of wind-mills has ceased to make them, and taken up the gasoline-engine industry. This is no dream. Give the public a little more time to study gasoline, and the poor man will have his motor. The horseless age is calling."

As we bent close to the floor to hear the call, there entered a prosperous-looking person, whom I was immediately advised to interview, he being one of the "king-pins in the business." I assailed him with the "poor-man" idea, but he did not seem to understand. "Oh yes," he admitted, "they are making some runabouts, but"—here he warmed up a little—"the favorite car for 1906 will be the use of four cylinders, supplying from twenty to thirty-five horse-power. There will be some cars sold of greater horse-power than thirty-five, but comparatively few four-cylinder motors will furnish less than twenty."

"Can a man with an income of \$2500 to \$3000—" I began.

"Oh yes, price is going to be an important factor," he went on, blandly, "although it should be of secondary importance. First let the buyer get a car with reputation, and have the price come later. Nevertheless, with so many good American cars on the market there is sure to be a little competition in price, and in this respect I can't just see where the foreign productions are going to figure."

"Poor man—Income—\$2500 to \$3000—" I cried.

"Quite right," he hurried along; "\$2500 to \$3000 will be the popular price, and the four-cylinder car will have the pull. There must be perfect compression

Electric United States Mail Truck, which when empty weighs Four Tons

burners, with the throttle on the steering wheel, along with the ignition lever, will predominate in the 1906 type. Shaft drives go."

"But," I cried, "how's a poor man to get all this? What I want to know is about the poor man and the automobile!"

The "king-pin" gazed at me dully, then winking at the others, he moved slowly away. "By-by," he said, hastily. "My new forty-five is waiting outside. We're going to make a run to Atlantic City. Telegraph you if we do it under three hours."

My investigation and inquiries resulted in but one really definite thing—automobiles will never be cheap until tires are less expensive. The price of raw rubber has risen in the last year twenty-five to forty-five per cent. The trust has had things pretty much its own way, though competition threatens. Tires cost anywhere from \$25 to \$100. The average is \$60. Foreign tires are beginning to sell quite briskly in this country, but they are handicapped with a twenty-five-per-cent duty. In spite of the fact that some cars have as many as 7000 separate pieces in their mechanism, the steel manufacturer is comparatively cheap. To keep a machine well tired is the rub.

Passing on from that, the likelihood of poor folks enjoying the automobile seems to be mostly a question of if. If roads improve; if we all turn mechanics; if manufacturers can afford to put good steel in cheap machines; and if one is satisfied with a runabout when his neighbor owns a touring-car—then there is a chance. At present the popular machine costs about \$2500, and the expense of maintaining it is, perhaps, two-thirds that amount. Motor-cars to be seen in Madison Square Garden this year have a few refinements and perfections, but practically no improvements, on those of last year.

It is these refinements and perfections which are doing a great share in keeping the automobile out of the grasp of the "poor man." All of them are marked additions to the initial cost of the machine, because probably the finest carriage upholstery work in the world is being put into motor-cars. It has to be of the best material and of the most expert workmanship to fulfill the task required of it.

In the matter of fittings, too, the apparently minor devices, but those which contribute to the sum total of a perfect car, are far from being the least expensive of their kind. The best springs which men can devise and fashion from tramped steel must be used in the motor-car, which has all sorts of roads to negotiate in its tour about the country. Then, too, the lamps, the dazzling baillistik eyes of the machine, cost a pretty penny, and the present-day motorist dricks out his car with as many of them as it can carry. At this rate the poor man will have to worry along with the horse,

Buchanan's Wife

By Justus Miles Forman

SYNOPSIS OF PICKERING CHAPTERS

The opening scenes introduce the reader to Herbert Buchanan, a man of selfish and cynical nature, and his beautiful wife Beatriz, who has been forced into a mistaken marriage with him because of his money. Beatriz has had, previous to her marriage, a love affair with a young explorer, Harry Faring. Her husband, realizing that she is unhappy with him, and anxious to see his wife happy, sends her to Faring to join a household at their country place, Buchanan Lodge. Faring arrives before dinner, and, during a brief moment together, he and Beatriz discover that in spite of her marriage they are still as deeply in love with each other as they were before. At dinner that night Buchanan, in the presence of his guests, tamely refers to the former attachment between his wife and Faring. Shortly after, it is made apparent to Faring that his presence in the house is ill-advised, and he determines to leave on the following day. Late in the evening Buchanan retires to his study to read.

CHAPTER IV

IN THE ROOM WHERE THE OLD GODS SAT

THE room which Buchanan called his "study" was an out-house, a square, fire-proof, brick structure detached from the house and connected with it only by a narrow passage with double doors made like the doors of a safe. The place had been built by the former owner of Buchanan Lodge, who was a famous Orientalist, to contain his extremely valuable library and his collection of Chinese and Japanese porcelain, jade, armor and carved woods—a collection which, at his death, went to the Metropolitan Museum in New York. Inside, the structure was a single room sixty feet square and a story and a half high, with a narrow balcony running round three sides of it, and small three-story windows to admit light, as well as the larger ones below which had been heavily barred like the windows of a prison.

When Buchanan took the place he had these bars torn away, because, he said, they were a standing dare to thieves, and he fitted the huge room—one could not say filled it—with a very heterogeneous assortment of treasures which his father had bequeathed to him. From the gallery, whose balustrade was a series of Japanese temple rams of carved wood (dragons and elephants and all manner of grinning monsters), he hung Persian and Turkish rugs and a set of very fine fifteenth-century Flemish tapestries. From the high ceiling he suspended Spanish altar-lamps and Chinese lanterns of potted brass. Below Venetian thrones and unstained marble tables struggled with crimson-upholstered chairs out of a Japanese temple; and the effigy of a Florentine knight in armor glared across the shadows at a Samurai in his exquisite gold-wrought fighting gear.

To a parlor in artistic antithesis the great room must have seemed a chamber of horrors, but in spite of all it undoubtedly had a certain uncouth and bizarre impressiveness, a sort of barbaric majesty. Entering it for the first time, one did not laugh, one gasped. It was like entering the great treasure-hall of some barbaric conqueror, full of the spoil of temples and cities. It was a dim place, shadowy even by day, full of gloom-enfolded spaces by night—corners where, as the eye slowly accustomed itself to the darkness, strange gods and demons and contorted symbolic beasts glared and leered.

Walls of stone and brass stained with the dark smudge of centuries, gods of dead creeds and forgotten cities loomed strangely solemn from their niches and pedestals. A vaporous, blue mist hung over the world was young, helms that shone like steel from royal brows bore a certain austere sanctity even when, after in this age of dynamite and democracy, Alcazars and castles were glancingly for their mangled antiques out of other nations. The borders of both are more secure forgiveness. There is no such thing as an ancient thing which must command respect—quite the opposite. The fiercest

it fetches a good price in the auction room.

Buchanan went through the little narrow passage which connected his museum with the house, and ranged the iron door behind him. It did not lock automatically as it had been built to do, for the mechanism had long been out of order. He turned two or three of the keys on the switchboard near by, and from the hanging-lamps five beams of yellow light burst suddenly into flower against the gloom and fell althwart

dull gold and steel and yellowed marble, in an effect somber and grotesque and weirdly impressive. He turned another key, and the one big railing lamp which stood on its broad table—a Byzantine table of cracked marble inlaid with colored stones—glowed like a full yellow moon among stars.

"At last!" said Buchanan, with a great sigh of relief, and he drew his shoulders together and shook them as if he would physically shake off that which pressed upon him.

"Another day gone, thank God!" he said. "And what a day! what a day!" He spoke aloud, as men who live very much alone are apt to do. "A few hours more of it," said he, "and I should have raved—gibbered." In truth the evening had shaken him—that is, he awoke at table especially—and his nerves were in a bad way. Without his realizing it at all they had been, for a long time, going on bad to worse—Stanislof was right, there; his wife was a little too good for him. The solitary life he led, the hardly breeding glass, the bodily exercise, had told. He had been favoring himself with strong, as gloomy men nearly always do, and now, quite as usual, in an uncontrollable burst of that bitter malice of life he found himself, on the contrary, very weak, and it tightened his throat. His sneering little speech of dinner had not been deliberate; it had blazed up out of a moment's jangle of nerves—a moment in which his control of himself had entirely, astonishingly given way. With a man of another, franker type exactly the same inward condition would have resulted in a furious outburst of violence.

The thing had left him frightened and unstrung and much depressed. As he sat down beside the Byzantine table there in his great chamber, and poured himself a measure of whiskey from the nearby decanter, he found his hands trembling, and scowled over them.

"A few hours more of it," he repeated, gulping the liquor thirstily, "and I should have gibbered. Why the devil did I make her ask the man here? Why didn't I let it alone? It was a mistake."

He said that over and over again. "It was a mistake—a mistake!" And he frowned sulkily out across the shadows, clapping and unclapping the hands that lay upon his knees. "I shall have to be civil to him," he said, "and to all the rest of them. I shall have to grin and squint and fawn and listen to their silly speeches by the hour and hour together. Oh, it's damnable! The whole wretched aristocratic class is damnable! Shall I never have done with it?" The fire within him flared suddenly up to a weak outburst, and he sprang to his feet and began to walk up and down the room among his gods and warriors and his carved oak.

"One thing's sure!" he said, angrily. "This ends the house-party giving. I'll have no more of it. I'll be quiet at that at least. I'll have some sort of peace in my own home—some sort of quiet. Who is there that has yonder that cares whether I'm in the room or out of it—cares whether I'm alive or dead? Why should I have them about me? I'm better rid of them."

From that his mind went to Stanislof and Stanislof's refusal to come and sit with him, and at the thought his face twisted to a grin of bitterness. The thing had hurt him badly. It had seemed to him, in his abnormal sensitiveness, a rebuff that was almost an affront.

"Even Stambouli!" he said, aloud, with his wry, twisted grin, and his voice trailed away into mutterings, only to rise again presently.

"To be rid of it all!" he cried, tramping the floor, "clear of the whole tangle, out of it for good and forever!" And at that his face jerked up suddenly, and he halted in midstride beside the marble table.

"That?" he said, in an odd, startled tone. "That? I wonder." He went slowly across the room to a certain ancient cabinet of carved Venetian walnut, and he opened a door in this and took something into his hand and came as slowly back to the table where the lamplight glowed. He dropped into the armchair where he had been sitting before and laid a pistol—a revolver—on the table beside him. The light glittered evilly along its polished barrel and upon the foolish mother-of-pearl which examined its butt.

[illegible]

Thereafter, such as his great armchair, huddled, stretched on its seat, fell into a sort of sullen silence staring before him, and he sat there a long time saying nothing more. Only from time to time his eyebrows wrinkled, or his lips moved noiselessly. It chanced that, as he was turned, he caught sight of the ancient gods who sat near against the walls of the room—a pair of graven, gilded bronze, the dull gold gone in patches from the worn surface;—they looked upon a lotus cup, head bent forward a little, faintly smiling. He turned to the marble. The figure was not above a foot high, but it was a thing so tawny and naive from its shadows, as he knew all things. He turned to the bed, and had discovered the great secret—that neither of the things were in the least. It smiled serene and untroubled, neither amused nor offended by the masking and the wreck of empires. It saw actions come and actions go, and a hundred years ago and presently—uttering again. It saw an infinite swarming of humanity, coming and flowing and robbed about its will. It saw the evil faiths die and the good faiths abused, but the

smile neither widened nor disappeared, for the new faiths would presently die too. It looked out over the mountains and beyond the horizon's rim down the halls of eternity, and there there must have been some great peace and reward, for Buddha smiled—serene, sphinxlike, enigmatic.

The man stirred uneasily in his chair.

[illegible]

No again he dipped into a moody frowning silence and another long time passed. But at its end, sunk in abstraction though he was, he dulled to outer impressions, something called him to himself. That unnamed sense which gives warning of danger, which makes felt the unseen, unheard presence of another being in the room, all at once waked him, brought him to attention, and a moment after he was conscious that a current of air was entering the place. He felt it cool and fresh, against the back of his head.

[illegible]

Richman sat quite still for a long instant after he felt the intruding presence. He was thinking very

© 2000 Blackwell Science Ltd

"I have you covered! Come A."

fast and, a bit to his own surprise, very coolly. In particular, he was trying to discover the exact direction from which that current of air came. Then, slowly—with more care than was really necessary—he put out his right arm under the shadow of the table. Neither his head nor his body moved.

In an instant the great room was in absolute black darkness, a darkness which stung the eyes like a sudden glare of light. In another instant Buchanan was out of his chair and crouching to the floor on the farther side of the marble table. The massive base of the thing was an absolute protection against any assault less than that of artillery.

Then, out of the gloom, a light shot down at the far side of the chamber, and the man standing there beside an open window dropped something which fell with a crash on the floor, and covered his eyes with his hands. As he did so he said, "God!" in a shaking voice which was almost a sob. The trick with the lights had, at least for the moment, unnerved him.

"Stand just where you are, please!" said Buchanan, safe in his darkness. His voice, he found, was not quite steady, and he forced a little laugh into it to lend it countenance.

"I have you covered with my pistol," he explained. "Not don't pick yours up. You won't need it." He touched two or three more keys of the switchboard and lights burst into flame about the room, and above more the reading-lamp on the table behind which he stood glowed like a moon among stars.

"You see that I tell the truth," he said. "I have you covered. Come here!"

The man wavered for an instant. The open window was close behind, and a single leap would have made it. Then he came slowly across the room towards the pistol-barrel which faced him.

"Aha!" said Buchanan, in a half-whisper. "It's you!" Down one side of the man's face from cheek-bone nearly to jaw ran a scar, white across the color of the cheek—albeit that was, seemingly by nature, pallid rather than sanguine. Otherwise the man was a lean man with a narrow face, smooth-shaven, and hard blue eyes. There were two short deep creases just beyond the corner of his mouth, and this mouth had a cruel look. He was dressed in serge neither new nor so old as to be badly worn.

The hard blue eyes did not blink or shift from Buchanan's eyes, and they expressed neither fear nor any other emotion whatever. If for a moment, while those lights were playing tricks, the man had been unnerved, he had certainly made a swift and entire recovery. The pistol in Buchanan's hand he seemed not to regard at all.

"It's you, is it?" said Buchanan again, and the man said, "Yes," and relapsed into silence. The tone, like the eyes, was without expression.

"I knew you were still about," Buchanan went on. "One of my—my guests saw you skulking among the trees down near the gate this afternoon, and told me. I meant to have the gardeners put on watch to-night, but I forgot it."

"Oh, they're on watch!" said the man. "Somebody set them at it. That is," he corrected, carefully, "they're more or less on watch."

Drawn by Will Gould

"Chuck it!" said the man in the armchair, stifling a yawn

towards himself the half-emptied glass which he had prepared earlier in the evening. Then he filled a pipe from the tobacco-jar at his elbow.

"That is Scotch," he said, hospitably, as he lighted his pipe. "I am sorry to say that I have no rye whiskey. I detect it."

"Thank you!" said the man in the armchair. "I never drink anything but water, and I am not thirsty." His habit, however, eyes met Buchanan's sceptical smile and a little flush came across his face. It made the ear stand out with almost startling whiteness.

"That is quite true," he insisted. "I seldom tell lies." The other gave a brief nod.

"I beg your pardon!" he said. "I was severely civil." He turned a bit in his chair, making himself more comfortable, settling himself, as it were, and his face had altered marvelously from its former expression of gloom and bitterness. There was color under the cheek-bones—where color no seldom showed—and a light in his eyes. He gave a little laugh which bespoke interest and a hint of excitement.

"I am truly glad that you came in," he said, puffing at his pipe. "I was dull—drammily dull. There are no words for how dull I was. Do you in your—in the exercise of your profession ever feel dull? Do you chance to know what it is like to feel that, unless an absolute change takes place in your life—a complete *hauté-croissance*—you will cut your throat or blow your brains out from sheer weariness of spirit, sheer intolerable abrasion of the nerves?"

The man in the armchair, finger-tips fixed gravely together, appeared to ponder this.

"No," he said at last. "No, I cannot say that I have ever felt that. You see three circumstances are so different," he explained. "Quite so!" agreed Buchanan with a generous wave. "Quite so!"

"There is," pursued the man in the armchair, "a certain variety of experience in my existence which I take it, yours does not possess. And variety lends spice enough to my life to make it

"But not quite enough, it would seem!"

"No, not quite enough."

Buchanan gave a little amused laugh.

"Won't you sit down?" he said, waving a hand towards the big armchair which he himself had been occupying earlier.

"Sit down and we'll talk it over! I enjoyed your little call yesterday. I found you entertaining. I have no reason to think your powers have gone off since. To be sure, the hour is late, but I am not in the least sleepy and I take it you're not, either, or you wouldn't be climbing in at my window." He pulled up a chair for himself and sat down.

"Ah, now we shall be very comfortable," I think," said he across the marble table. "With all due apologies, I call your attention to the fact that this pistol is ready in my hand. I am sure you will not force me to use it." The man said "No." He was a discouraging man to talk to. He seemed to have no conversation.

Each a man pushed the drainer across the table and drew

quite endurable." He had spoken throughout with an odd covertness of diction, a sort of conscious care, as if he were venturing, for present use, a mode of speech perhaps not alien to him, but long disused. The effect was curiously dry and pedantic.

"You see," he said, slowly, picking his words, "this world is a very interesting place—if you look about you. You can't never—ever—tell what may turn up just around the next turn of the road. It may be good or it may be bad, but that does not matter, it will be different, and that's what a man wants."

"Yes!" cried Buchanan, leaning eagerly over the table. His eyes were very bright. "Yes, by Jove! You're got it! You've got it! That's what a man wants! What you're after is to turn 'em all."

"Turn 'em all!" said the other man.

"It was a certain poem I was thinking of," Buchanan apologized. "The 'Sestina' of the Trump Royal! Somewhere in it the Trump Royal says:

"It's like a look, I think, this bloom'n' world,
Which you can read and care for just so long,
But presently you feel that you will die.
Unless you get the page you're reading done,
An' turn another—likely not so good!
But what you're after is to turn 'em all!"

The man in the armchair had turned his hard eyes upon Buchanan's face, but they were narrowed a little and frowning, as if he strove to remember something. He nodded.

"Yes," he said, abstractedly, "that's me. That's how I feel! He passed a hand across his brow, still with that air of memory searching thought.

"'Speakin' in general," he said, slowly—

"'Speakin' in general, I 'ave tried 'em all,
The appy roads that takes you o'er the world.
'Speakin' in general, I 'ave found 'em good
For muth as cannot see one led too long.
But must get 'ere, the same as I 'ave done,
An' go o'ber'n' matters till they die."

Buchanan gave a sudden amazed laugh.

"Where the devil did you get that?" he cried. "Why that—that's the beginning of the 'Sestina'! That's Kipling's 'Sestina'!" But the man in the armchair shook his head a little wearily.

"I don't know," he said. "I expect I must 'a—must have read it somewhere—but somebody told it to me. I forget. Anyhow, that's how it is." And Buchanan nodded, sinking back again in his chair. The old bitterness began to come over him.

"Yes, that's how it is. That's how you lucky ones can live, as for me—"

He touched the silly nickle'd and pearl-garnished pistol which lay beside him.

"About an hour before you came in," he said, "I got this thing out of its case, with some vague notion of making an end to a life which has become intolerable to me. I dare say I shouldn't have managed it. I dare say I'm too much of a coward. Of one thing I'm certain. If my ruler rose hither, I have not the courage to go back there to-morrow morning—back to say—to my friends and live out this damned masquerade to its finish. I'm too much of a coward for that, if you like. I'm smothered here!"

He cried, "I'm a prisoner in chains! I want to 'try 'em all—the 'appy roads that takes you o'er the world. I want to 'get 'ere' and 'go o'ber'n' matters,' but I can't. My responsibilities won't let me, and my wife won't let me, and my friends—if I have a friend—won't let me. I can't do that because I'm what I am, and I can't do it all because I'm what I am—a coward. You couldn't do it, too cowardly to die. What remedy can you offer for that case, my house-breaking friend?"

The man in the armchair allowed himself a moment of grim humor, though the masklike face remained devoid of expression.

"Look away long enough for me to get that resolver," said he. "I'll see that you don't have any more—any more—troubles. I had intended to do that, anyhow. I knew you were in here, and I was going to do for you, so that I could take my time working."

Buchanan drew back with a little shivering intake of the breath.

"By the Lord, you're a—cold-blooded fish!" he said, in a half whisper. Then he leaned forward again with sudden interest.

"Tell me!" said he, "have you ever killed a man?—in cold blood, I mean, just because you wanted to get him out of the way. Have you?"

"What if I have?" said the man in the armchair.

"Oh, nothing, nothing!" said Buchanan. "Of course I'm not your judge."

"No," said the other, indifferently. "No, you're not." And then, as Buchanan dropped back into his listless silence, gloomy still the hard blue eyes watched him intently. They did not brighten or show excitement or show anything else—they only watched, steady and unflinching. Once the man's hand began to steal out across the table towards that which lay glittering in the lamplight, but there were glasses and books and the decanter and other objects in the way. Also the table was broad, and on the hand withdrew ever more.

"I want to lie on the earth!" said Buchanan, after a long time. It is probable that he did not know he spoke aloud. "I want to be wet with the dew and soaked with the rain and dried again with the sun. I want to wake with the sun in my eyes. I want to go unwarded and unarmored. I want to be free, free! I want not to feel that next week or next month I've got to stop it all and come back to jail, back to the marionette show. That's what I want. And I can't—I can't!" he said, after another silence. He beat his hands feebly upon the arms of the chair. "I can't!" he whispered.

"What?" said the man across the table, calmly.

Buchanan sat up with a jerk and frowned at him.

"The world's out there," pursued the man in the armchair. "The 'appy roads is out there, and the sun and the rain. They're free to everybody." Buchanan waved a hand. The gesture seemed to include the magnificence about him and the house behind with its sleeping inmates.

"And this?" said he.

"Chuck it!" said the man in the armchair, stifling a yawn.

Buchanan stared at him.

"Chuck it?" said the man again.

"My God!" said Buchanan, in a faint whisper.

To be Continued.

After Football—What?

By Endicott Peabody, D.D.

Master of Groton School

SO much has been said of late upon the subject of football, and enough of it to lead one to believe that the matter is no further upon the patience of a long-suffering public.

But in these times of moral awakening in regard to leanness, to politics, and, finally, in regard to athletics, one who is keenly interested in the success of any one or all of the sportsmen can hardly refrain from taking part in a discussion which has so important a bearing upon the life of our American youth.

The first suggestion that I have to make is that the attack should be made against athletics generally, and not against football alone. Secondly, I would submit that the final assault should not be made against athletic sports, but against the spirit displayed in them.

"The fault, dear Brutus, is not in our stars,
But in ourselves, that we are underlings."

In all branches of organized athletics, so far as my knowledge goes, unfair play is common. In regard to track athletics I have not sufficient knowledge to form a judgment. In basketball I am told by friends familiar with the game that underhand tricks are frequent. To-day I have read an account of an intercollegiate basketball match in which one side was reported to have been penalized many times for foul play. Of the three long sports—rowing, baseball, and football—the first alone is clean in competition. Yet even here one hears complaints from time to time of "jockeying," and the custom of rowing light in order to give a false impression of the pace of the crew, and that of giving out false information in regard to the weights of the men, are well known.

Any one reading the rules of baseball—their name is legion—would think that the game was sufficiently guarded to insure against all possible unfairness; but whoever has kept in touch

with baseball and watched the matches is well aware that "padding" of the bats, the use of cork in the center of the bat, looking, stopping the runner at third by the coach, waving the bat at home plate in order to prevent the catcher's throwing accurately, are all of them indulged in freely. Equally bad are the exhibitions of this kind in football. Men hold in the center, where they cannot be seen by the umpire; they strike their opponents with a view to laying them out; the defensive center kicks the ball before it has been snapped back.

These acts, and many others, perhaps a score, of a similar nature are well known to all who have followed college football. They are done of malice aforethought. The men play in this way because the coaches teach them to play so. It is with the reluctance of the coaches that "swallow signals" are surreptitiously displayed at the side lines.

Here is a manifestation of the spirit of dishonesty shown by the players and the coaches, and to cap it all the public sit on opposite sides of the field and sing:

"You do your best, boys;
We'll do the rest, boys."

which, in the final analysis, means, "we will each of us cheer for our side at a time when the cheering will be most useful to preserve the game from hearing their slanders, or will so excite them that they will go up into the air, and lose the game to us."

It is this sort of dishonesty which I take it was what upon by President Roosevelt at the time when he met the coaches from some of our universities for the purpose of discussing football. He knew that that conference there was published in the public journals an agreement whereby these representative men entered into what was well called an "honorable obligation" to instruct the men being trained by them to play the game in a fair and

A Scene from Barrie's new Play, "Alice-Sit-by-the-Fire"

J. M. Barrie's new play, "Alice-Sit-by-the-Fire," which had a successful run in London, is now being played at the Empire Theatre, New York, with a cast including Miss Ethel Barrymore and her brothers, John and Lionel Barrymore. The play, which is a satire on the conventional French drama of intrigue, concerns the efforts of a young English girl, whose Aunt is filled with romantic ideas, to save her mother from what she supposes is a compromising situation. To do so, she makes what she considers a sacrifice of her own honor, only to find herself in the position of a blundering mischief-maker. In the end, she marries the young man with whom she had imagined that her mother was carrying on an affair.

Miss Fritz Schiff, who is appearing at the Knickerbocker Theatre in a new operetta by Victor Herbert and Henry Blosson entitled "Mlle. Modiste."

Miss Fay Templeton in the new farce at the New Amsterdam Theatre, "Forty-five Minutes from Broadway."

NEW PLAYS AT NEW YORK THEATRES

Correspondence

ADIEU, "CHAUFFEUR"!

New York December 22 1905

To the Editor of Harper's Weekly. Sir:

Scarcely had Watchman Fowler taken his post at the gate when a procession of strange creatures appeared.

But! What can this mean? Is the watchman when a fat negro approached, laboriously feeding a thin, long-legged gnat.

"His best beast is (in French), the 'ch' explained this gnat's misanthrope. —From "Don't the Building," by the "Tues."

When I read it I recognized, with a thrill, that the right word had been found at last—mashout. The 'mobile, that majestic devil, that impressive devil, is our elephant, he is in a class by himself, like the jungle monarch; to be his master, pilot, and compeller is a post of solemn and awful dignity and danger, and it does seem to me that that merely word "chauffeur" does not properly fit the occupant of it. Chauffeur is a good enough word when strictly confined to its modest and rightful place—as you will see by what Littre says about it. I translate: "A chauffeur is the first-up on the street-car's post-humane; in English, ashore." A good enough word, you see, in its own place; but when we come to apply it to the admiral of the thunderous 'mobile or of the mighty elephant, we realize that it is inadequate. No, driver is not a thing, driver is not the thing, mashout in the thing—mashout is the word we need. Besides, there is only one way of saying mashout, whereas there are nine ways of saying chauffeur, and none of them right. With ever-increasing respect, dear sir, as the negro roll on, I am yours.

MARK TWAIN.

IS IT A LAUGHING MATTER?

St. Louis Mo. December 21 1905

To the Editor of Harper's Weekly:

Sir.—If a mob were to catch a laughing but temporarily unpopular citizen and string him up by the neck to a lamp-post in the alleged interest of the "square deal," and if one were to object to the performance on the ground that it tended to restrict the victim's breathing power and thus make him socially insignificant—forgetting the danger to the poor devil's life—the American sense of humor would surely respond to the occasion.

But when economists like Professor Laughlin soberly protest against the violence of trade-unions on the ground that their action is in conflict with "sound economic principles," no one cracks a smile.

Even if the methodology and terminology of science were applicable to the art of business—i. e., even if there really were "economic principles" (and of course, there are), there are none and never can be any! It would still be very funny.

Why do you suppose no one laughs?

I am, sir,

S. M. DODD.

VISIT THE WEST

Pasadena Colo. December 21 1905

To the Editor of Harper's Weekly:

Sir.—Friends of mine in Spokane and Butte are not pleased with your reference to their cities in a recent editorial in HARPER'S WEEKLY upon Western travel. "The traveller cannot be sure he will like Butte. He can go to Butte or Spokane or Louisville; but could he go to these places for pleasure? Would he be edified? Would he get anything to eat? It would be an awful thing to be lured on a pleasure trip." The American citizen that a visit to Spokane or Butte would have should follow the advice of Nolen to the Athenians and travel not at all. Those who think the larger the city the nearer the new Jerusalem would not care to live in any small city, no longer as there is a flat or a hotel in New York, Boston, or Chicago; but, fortunately, there are millions who prefer the individuality and home life that the small city and village give; indeed, they are the balance-wheel and hope of the republic. Spokane is almost a model city. Its great river and falls, its beautiful homes, hotels, trees, utility the love of scenic beauty. Its churches, schools, art and library clubs promote the moral and intellectual side. Its business men are young, enterprising, and patriotic. Not satisfied to sit and wait for tribute, their capital and enterprise go out into tributary territory, where they plough virgin fields, dig canals, build railroads, transform the desert, mine gold, silver, copper, and lead in the mountains. They are builders, creators, developers.

"Would he get anything to eat?" If willing to pay for his meals, as he must do in New York, he would be a fiscal epicure to find fault. The average traveller can get as good meals in the West as he is accustomed to get in his home land, and restaurants; but it is not fair to compare a fifty-cent Western meal with a five-dollar Delmonico riot. The fifteen-cent meals are no more a nightmare in Montana and Washington than in Massachusetts or New York. There is a restaurant in Spokane that even the patrons of the Waldorf and Sherry, would find satisfactory, while the hotels of Spokane and Butte are as good, or better, than the hotels in towns of their size in New England or the Middle States. So much for Spokane. As to Butte, it is not a pretty city. It does not advertise itself as a place of

beauty or a health resort, but there is something wanting in the make-up of the American who does a visit to Butte a mere or uninteresting. When all is told it is the material resources of our country that have given power. Butte has produced and is producing more dollars than any like territory. The Buttes, Leadvilles, Cripple Creeks, are important factors in national development, and as such should be of intense interest to all citizens. The town gorges, the improved surroundings, of these mining-camps have a picturesque all their own. Butte is a striking type of these camps. It is today an active prosperous city. Its newspapers are the most enterprising of any city of its population. No other city on earth pays as high wages to the working class. She has no paupers. She has more college graduates than Boston in ratio of population.

On the letterhead of Harper & Brothers I note that Boston and Butte are side by side. It is not an ill association, as in culture Butte and Boston are nearer akin than our Eastern friends imagine. If I were seeking the highest average of character and unselfish patriotism I would go West rather than East. The West is made up of the most active, enterprising, and daring of the older States and nations. After all, the Western man is but the Eastern man with whiter experience and a broader horizon. The Eastern man is more provincial, his Western brother more national. The average well-to-do citizen of Boston or New York is satisfied to know his own city and Europe. The Western man must know New York and Boston and Europe, and by force of circumstances be acquainted with his own country as well. Not the least benefit of a trip to Spokane and Butte is that provincialism cannot survive the journey. No intelligent man can cross the continent without having a nobler idea of his country and a higher conception of national destiny. It will be his own fault if he is not edified, if he gets nothing to eat, if he is bored; but Western travel will enlarge his vision and help make him a Roosevelt American. Therefore visit Spokane, visit Butte. Europe is well enough, but save your own country first.

I am, sir,

ALVA ADAMS.

[We mentioned Butte and Spokane at random as notable Western towns, and did not intend to single them out as places where food was doubtful or where there was dearth of entertainment. We quite agree with Mr. Adams about the great value of a sight of the great far West to Eastern people.—EDITOR.]

SINGLE STATEHOOD FOR NEW MEXICO

Las Vegas New Mexico, December 11, 1905.

To the Editor of Harper's Weekly:

Sir.—I rise to a point of order—to inform the press of New England, through the agency of your most excellent and widely read "Journal of civilization," that New Mexico is not a foreign country. I have before me a clipping from a Boston daily newspaper, under the "funny" column—which, under date of November 13, gave a table showing the number of graduates of Johns Hopkins Medical School practicing in "foreign countries," listed with China (four), India (two), and Bolivia (one), the Territory of New Mexico is credited with one graduate!

In calling attention to the erroneous impression prevalent in the East, that New Mexico is a foreign country, I am actuated only by the most friendly motives. I simply wish to spare our Eastern friends the unnecessary expense of using five-cent postage stamps, which they so often do when travelling through New Mexico, whether least on pleasure or searching for evidences of our unfitness for Statehood.

Some people would kick if they were about to be hung; and the people of New Mexico, as well as those of Arizona, most vigorously "kick" against the injustice which you so sedulously advocate. In a lengthy article, published several weeks ago, you held up to censure the contempt for the selfish and corrupt interests which you asserted, alone opposed joint Statehood. You evidently did not know that the Methodist Conference of New Mexico and Arizona recently passed a memorial against jointure. You evidently did not know that the very small percentage in New Mexico favoring the jointure is made up almost entirely of Democrats; that we are now out of power, and expect, in case of jointure with Arizona, to be in the majority.

You were able, in showing the status of joint-Statehood sentiment in New Mexico, to cite twelve newspapers who favored it out of a total of over sixty in the Territory. You apparently did not know that out of those twelve seven are Democratic and actuated by the selfish motives indicated above; while of the five remaining three are Alliance papers, and are influenced by a purely selfish consideration—namely, that Alliance is so situated geographically that within a few years it would almost certainly become the capital of the joint State.

I might continue to call your attention to facts and conditions of which you are seemingly ignorant. Your readers out here would not resent your occasional comments on the question if you would oppose us fairly and state the facts as they are.

The people of New Mexico, by a vast majority, believe that every consideration of right and justice entitles them to separate Statehood. We are Americans, and our Americanism leads us at the attempt to force us, for purely political reasons, into an obnoxious and unhappy union. It is an outrageous display of political despotism.

I am, sir,

JAMES GRAHAM DE NERY,
Editor, *Optic*, Las Vegas, N. M.

Music And The Opera

MAETERLINCK IN MUSIC

BY LAWRENCE GILMAN

CHARLES M. LOEFFLER'S symphonic poem, "La Mort de Tintagiles," inspired by the drama of Maeterlinck, was performed in New York a few days ago by the New York Symphony Orchestra, and the occasion moved not a few of those who heard it to reflect upon the peculiar value of M. Maeterlinck's work as a stimulus for musical expression, and upon the comparative infrequency with which it has been made to serve such an end. One recalls, for example,—besides Mr. Loeff-

ler's extraordinarily beautiful and impressive tone-poem,—Pierre de Bréville's overture, "La Princesse Maline," and his prelude and incidental music to "Les Sept Princesses"; Claude Debussy's exquisite and luminous score, "Pelléas et Mélisande"—the most authentically inspired music that has come out of contemporary France; there is the stage music composed for "La Mort de Tintagiles" by A. von Arn Gern, and by Léon Dabolet; Fauré and by William Wallace, and an overture by Garnet Wesley Cox; an opera based upon "Ariane et Barbe Bleue," by Paul Dukas; incidental music to "Aglaraine et Sélysette" by Donald Tovey; and there is the extraordinary tone-poem by Henry F. Gilbert suggested by "The Seven Daughters of Uckanade." That, surely, is not a particularly impressive showing, when one considers the extent and potency of the influence which Maeterlinck has exerted upon modern art and thought. The reason, it may be, is not far to seek.

Consider the aspects of Maeterlinck's art which have permeated the imaginations of those two musicians who have most eloquently reflected him: Loeffler in his "La Mort de Tintagiles," and Debussy in his "Pelléas." For Mr. Loeffler, the voice of Maeterlinck has been as the voice of one habituated to the accents of tragic beauty and tragic fate—one whose imagination is thrall to those "silent arrivals of destiny" which yield, for any kindred instinct, so unique and poignant an emotion. Mr. Loeffler has sensed with a peculiar intensity this phase of Maeterlinck's thought. He himself, as I have elsewhere observed of him, has a singular power of realizing moods charged with fateful suggestion; he is, indeed, disposed to lay overmuch stress upon those phases of imaginative experience which find issue in symbols of tragedy and terror; often with Mr. Loeffler, it was said, one finds oneself in a remote and ghastly world, where sinister omens and the echoes of forgotten sorrows are borne upon every air. What could have been more natural and more inevitable than that the drama of Maeterlinck's which most completely embodies his impulse toward the creation of images of tragic destiny should have evoked in Mr. Loeffler a desire to seek some tonal correspondence for it? With what astonishing felicity and vividness he has succeeded in

transmuting the essential substance of the drama into a tonal fabric of rich and profound suggestiveness is not now observed for the first time. Its power of communication is great and memorable; its justness of representation is as continually surprising as it is compelling. It is music of sombre and piercing beauty, one of those subtler masterpieces of modern art which exert an increasing spell.

In "Pelléas et Mélisande," on the other hand, Claude Debussy has perceived and endorsed a quite different aspect of Maeterlinck's genius—that side of his art which pervades through the disclosure of elemental forces working in silence and indirection, and in which a secret and haunting beauty inhabits the shadowy figures who move dimly, with a kind of shy and wistful pathos, through a so less shadowy pageant of griefs and restlessness and fatalities; where nothing that is accessory is without significance, and in which even that which is merely contrived has possession of an influential beauty and meaning within itself. In no other of his plays are these qualities so signal as in "Pelléas et Mélisande"—the most haunting and pathetic of modern dramas; and in Debussy's opera,—in which Maeterlinck's work becomes a "drame lyrique" in five acts and twelve tableaux,—one cannot but recognize a paraphrase—partial though it may be—which is virtually ideal. Here is the very edge of Maeterlinck, in one of his authentic moods, his very tinker and atmosphere; and throughout one realizes how peremptory is the need for music in any such poetic endeavor as Maeterlinck's original,—despite his well-remembered and singular disapproval of the process to which Debussy subjected his play.

One has, of course, no intention of implying that for these two highly typical masters of musical modernity, the possible appeal of Maeterlinck the dramatist and poet is wholly comprised in the characteristics which have been hinted at in the foregoing estimate.

The point which it is desired to make is that there is another and finer Maeterlinck who has so far, as it seems, not been apprehended by those music-makers whose legitimate quest is for a fertile and significant subject-matter. Even in those two works of his which have been mentioned—"La Mort de Tintagiles" and "Pelléas et Mélisande"—it is possible to discern in Maeterlinck's intention a more validly spiritual content than has been commonly perceived; and elsewhere it is even more clearly evident.

Perhaps the intended point may best be enforced by the suggestion that this ultimate element of which one thinks is not wholly to be commended save by those who are able to ignore, in a measure, the subtle and engendering insensibility of beauty and emotion in which Maeterlinck encourages his conceptions, for the sake of penetrating to the luminous, serene, and essentially subtle spirit within.

Shah Jehan's Elephant

It is probable that few architectural novelties have travelled so much as the stone elephant which stands in a commanding attitude in front of the town hall, Delhi. It was the great Mogul Emperor, Shah Jehan, who first caused the elephant to be set up at the gate of his new palace at Delhi after having it conveyed all the way from Gwalior. As it must weigh several tons, the transport of it could have been no light matter. This potentate's son, Aurengzeb, took a dislike to the monument and had it buried in the Queen's garden. Delhi, after it had been smashed to pieces. The fragments lay undisturbed for more than a century and a half until they were found by an enterprising spirit, who had them put together in an out-of-the-way part of the garden. This was in 1868, and a quarter of a century later the animal was set up in front of the town hall.

Infant Diversions

Two ladies, one of whom carried a baby, entered a well-known furnisher's one day last summer, and signified their desire to look at some carpets. It was very warm, but the salesman cheerfully showed roll after roll until the perspiration streamed from his face. Finally one of the ladies asked the other if she did not think it was time to go. "Not quite," was the answer of her companion; and then in an undertone added, "Baby likes to see him roll them out, and we've plenty of time to catch the train."

A Likely Reason

A MILKMAN in a country town ran far from New York was brought before the local court to answer a charge of adulteration of milk. "You are charged," said the judge, "with a most serious offense, of selling adulterated milk. Have you anything to say in answer to the charge?" "Well, your worship," replied the milkman, "the night before it was raining very hard, and the only cause I can give is the cow must have got wet through."

AVOID TOBACCO.—Mr. Winslow's Southern Breeze should always be used for children's teething. It soothes the child without the gums when all pain, fever, wind, colic, and is the best remedy for colic.—[Ad.]

DESSERTS.—Are easily and quickly prepared when Bonquet's **ESCAPE BREAD** is used. Always have a supply on hand and be ready for the unexpected guest. Send for Recipe Book, 108 Madison Street, New York.—[Ad.]

INCIPIENT CONSUMPTION

Haw Food Headed Off the Insidious Disease.

The happy wife of a good old-fashioned Mich. farmer says:

"In the spring of 1902 I was taken sick—a general breaking down, as it were. I was excessively nervous, could not sleep well at night, my head seemed to do me no good, and I was so weak I could scarcely walk across the room."

"The doctor said my condition was due to overwork and close confinement, and that he very much feared that consumption would set in. For several months I took one kind of medicine after another, but with no good effect—in fact, I seemed to grow worse."

"Then I determined to quit all medicines, give up coffee, and see what Grape-Nuts food would do for me. I began to eat Grape-Nuts with sugar and cream and bread and butter three times a day."

"The effect was surprising! I began to gain flesh and strength forthwith, my nerves quieted down and grew normally steady and sound, sweet sleep came back to me. In six weeks' time I discharged the hired girl and resumed to do my own housework for a family of six. This was two years ago, and I am doing it still, and enjoy it." Name given by Postum Co., Battle Creek, Mich. There's a reason. Read the little book, "The Road to Wellville," in page.

POPE-HARTFORD MODEL F

is the result of our 28 years of experience in making and marketing mechanical vehicles and is the latest product of our famous Hartford factories. MOTOR: consists of 4-cylinder, vertical, water-cooled engine with cylinders cast in pairs; all gears enclosed; brake test 28-30 H.P. TRANSMISSION: sliding gear, 3 speeds forward and reverse. CARBURETOR: specially designed, insuring economy in fuel consumption and maximum power. CONTROL: throttle and ignition levers on single sector that does not revolve with wheel. DRIVE: bevel gear through propeller shaft to the rear axle. TONNEAU: non-removable, dust-proof, double side entrance. DESIGN: artistic in conception and execution.

While great attention has been given the essentials of construction it will be found that no detail has been overlooked. Everything that will contribute to the user's comfort and convenience has been embodied in this up-to-date car. (Extension top \$125 extra). **Price, \$2,500**

Pope-Hartford Model G

is our 2-cylinder, opposed, 18 H.P., touring car. The engine is under the hood and all parts are accessible for inspection and repair. This is our dependable 2-cylinder machine of last year with such minor changes as have been suggested by a season's use. **Price, \$1,600**

Persuasive.

A farmer was standing at his gate when an Irish boy came up to him and requested employment. "Go away," said the farmer; the last Irishman I employed died on my hands and I was forced to bury him at my own expense." "Yes, your honor," came the reply, "you need not fear that of me, for I can get a certificate that I never died in the employment of any master I ever served."

English News.

The following items are quoted from English papers:

The first one is a report of a lecture on the siege of Port Arthur delivered by Mr. Frederick Villiers, and reads as follows:

"In conclusion, Mr. Villiers quoted General Nogi's opinion that General Stoenef's strategy was very good, and said that the defense of Port Arthur was worthy of the unstinted admiration of the whole world.—Mrs. B. Smith had charge of the local arrangements."

The second item concerns a young woman who had become prominent as an authoress:

"Her father (we are told) was Mr. ———, who died some years ago, his widow having previously died of a broken heart."

Russian Art Treasures.

There is little doubt that in recent disturbances in Russia a good many fine specimens of furniture and probably a great many pictures have been destroyed. For many years the leading fine-art dealers of Europe have had agents in Russia searching for old French furniture and for pictures which have lain unappreciated in noblemen's mansions. The war with Japan and the concomitant internal state of the country led many of the more patriotic nobles to part with their heirlooms,

BUFFALO LITHIA WATER

"All the Argument Necessary."

The International Journal of Surgery, August, 1905, under the heading "CYSTITIS," says: "In the treatment of Cystitis water is the great aid to all forms of medication. Moreover, it is the ideal form in which to administer it to the cystic patient, as it is not only a pure solvent, but has the additional virtue of containing substantial quantities of the alkaline Lithates. Patients should be encouraged to take from two to four quarts per day if they can, and the relief they will obtain will be all the argument necessary after the first day or so."

"IN URIC ACID DIATHESIS, GOUT, RHEUMATISM, LITHAEMIA, and the like" ITS ACTION IS PROMPT AND LASTING."

Dr. Geo. Ben. Johnston, M.D., L.L.D., Richmond, Va., Ex-President Southern Surgical and Gynecological Assn., Ex-President Virginia Medical Society, and Prof. of Gynecology and Abdominal Surgery, Medical College of Virginia: "If I were asked what mineral water has the widest range of usefulness, I would unhesitatingly answer, **BUFFALO LITHIA WATER**. In Uric Acid, Gout, Rheumatism, Lithaemia, and the like, its action is prompt and lasting. * * * Almost any case of Pyelitis and Cystitis will be alleviated by it, and many cured. I have had evidence of the undoubted Disintegrating, Solvent, and Eliminating power of this water in Renal Calculus, and have known its long-continued use to permanently break up the gravel-forming habit."

Voluminous medical testimony on request. For sale by the general drug and mineral-water trade.

The Evolution of a Vast Industry

By Charles Winans

Chapter X

there are some men who would hirst narrow, restrictive bonds and bounds anywhere. When such men get out West young enough they grow to be giants.

G. F. Swift was this kind of man. The raw material of tremendous expansive possibilities was in him from the start. He would have burst any ordinary cramping and restricting bonds wherever he was. But when he got out to Chicago thirty years ago, just when Chicago was in the tremendous throes of growth, immediately following the great fire of 1871, Swift found occasion to draw upon all his reserve forces to keep up with the pace. He did keep up the pace—set the pace in many ways, as a matter of fact, after he had got fully lumbered up. But it took all there was in him to do it. Cape-Colders are very apt to do this wherever they are when they get away from the Cape. But when the pace is a Chicago pace, even Cape-Colders find that they cannot doze over the job. They find that they must keep their running-gear oiled and tuned up to its highest speed-producing power, or get laid behind somewhere.

Swift, for instance, very soon discovered that it was not sufficient to be a great cattle buyer and shipper only. He must be a great merchant as well. And it was not sufficient, either, to be a great merchant in the staid, cut-and-dried way of the conservative East. He must be a merchant with dash and initiative, with broad creative output. New trails leading to vast commercial fields were dimly outlined in all directions. He had to get on the trails betimes and follow them quickly to where they led or somebody else would be on them before him, or else pressing closely on him from behind, with the danger ever imminent of their cutting past him and giving him the dust on his own road. More than that, he had to blaze out new trails for himself in directions where no guiding path was in sight, and in territory where dangers of commercial disaster lurked. Boldness, quick initiative, a terrific pace ahead—all these were essential equipments for the man who proposed to take front rank in the roaring tumult of the great West's expansion—in other words, of our great, bewildering country's expansion. But Gustavus Franklin never for a moment had a shade of lack of confidence in himself. That, of course, would have been fatal. He simply knew he was going to "get there," because no calculations that did not involve "getting there" ever entered his mind.

Thus, from a big cattle-buyer pure and simple, Swift had to develop into a big merchant, and from a big merchant into a financier and commercial diplomat. But even there the demand upon his resources did not stop. The manufacturing and trading machine he had built up had grown to colossal dimensions. Its ramifications and structure were far-reaching and intricate. His one-horse meat-eat of the Barnstable days had grown, first, to himself and two clerks, then to a good-sized business office, to a bustling business village, to a business community representing in its working and dependent population a city of over a hundred thousand inhabitants. In addition to the responsibilities of big merchandising and big financing, Swift had put upon him a demand for a high order of executive and administrative ability. Nor did the demands upon him for ability of the broad-gauge order stop even there. It was not sufficient that he be a great merchant and a great executive. It was necessary that he have diplomatic gifts of a high order. And that G. F. Swift had these gifts he demonstrated many times at home, but never more effectively than in England.

The prejudice which had to be beaten down before Western dressed beef could be sold in the markets of the East was as nothing compared with the prejudice that had to be beaten down before it could be sold in the markets of Great Britain. And it was through the tact and the skill and the persistence of Swift, as much as through any other cause, that this English prejudice at length was broken down. It is not difficult to understand how deep-rooted this English prejudice was.

It went to the very marrow of things. It was all but in the nature of high treason, to begin with, to engage in any practices calculated to shake the allegiance of loyal Britons to that long-established, bedrock British institution, "The Royal Beef of Old England." Patriotism, hoary tradition, a faith that was not the less rock-ribbed because it supported a myth, prejudice against

anything foreign in general, and at least a chemical trace of prejudice against anything American in particular—all this and much more G. F. Swift had to overcome before he got his Chicago dressed beef firmly established on British soil.

And he did overcome it. Year after year he kept buttering at it and undermining it until at last nearly the last vestige of it was gone. He made trip after trip to England. All told, he probably crossed the Atlantic twenty times before he accomplished his object. He could not always count upon the wholly single-hearted devotion of even his own English agents over there. While working assiduously to promote the consumption of American meat, they were working actually to keep American meat in the background. They had their own British prejudices, perhaps, to overcome, and then there were powerful interests at work to keep out the invader.

Swift had to see personally that his orders were carried out; that his meat was kept up to the front in the market-stalls, where it would have at least an even show with the other meat, and not shooed back out of sight, where it would remain overlooked and unknown.

For weeks while in London Swift put up every morning at three o'clock, and went to the Smithfield Market, where he kept personal supervision over the handling of his beef. And all the time this was going on he was carrying on a campaign of diplomacy with the great beef barons of England, winning one over to his side here and inducing another to look into the matter there. Eventually he won signal triumphs. Some of them verged upon the sensational. A great London guild was to give a prodigiously big and important dinner. One of the great features of the dinner was to be a mighty roast of beef. The order went forth that the finest roast of beef to be had in all England was to be served at that dinner, and the order for the dinner reached a certain great dealer with whom Swift had established himself on a diplomatic basis of a persona particularly grata. Furthermore, the dealer believed in American beef. He sent the required roast to the great guild dinner. There was a mighty waggling of wise heads and snarking of appreciative lips over the beef. As to the quality of the beef there was but one opinion. Better beef no man had ever eaten. But the question was as to its place of origin. Was it English beef or was it Scotch beef? The Scotchman claimed it for Scotland; the Englishmen for England. The dispute waxed warm. The dealer himself was sent for.

"You asked me for the best roast of beef to be had in England, didn't you?" asked the dealer, when he stood in the presence of the guild.

Parking-house Rogers and Viscountess Debenham

"We did."

"And you are satisfied with the beef? Are you convinced that I filled your order for the best beef in England?"

"Of course we are. Nobody ever saw any better beef. There couldn't be any better beef. But that isn't the question. The question we want you to settle is whether that beef is English beef or Scotch beef."

"Well, gentlemen," said the dealer, "that beef isn't English, nor yet again is it Scotch. That beef is American dressed beef dressed in Chicago, and sent here by refrigerator-car and refrigerator steamer."

It was a long campaign which G. F. Swift conducted to get his meat introduced and established on a firm basis in England, a campaign which called for all the patience, persistence, and tact—the three great requisites in a diplomat—there was in him. But, like everything else that he seriously set himself about doing, he carried it to a successful, brilliant conclusion. His tack in Great Britain was only one of many other formidable undertakings with which he had been confronted from the moment he set his paw to keep step with that of the country's expansion.

T. H. Ingervsen, Buyer for Swift & Company, making a Purchase

At every stage of his evolution and of the evolution of the enormous American industry with which he had become so conspicuously identified, he had larger and larger orders, and orders more and more varied, upon his own personal stock of force, sagacity, and adaptability to conditions that were expanding and changing with bewildering rapidity. To be the head of Swift & Company became like being at the head of a sort of bustling, aggressive province surrounded on all sides by provinces of the same type, all straining constantly to encroach upon one another's territory, and with their chief executives living awake nights trying to study out how to do it. And all this was not an affair of generations, of accumulated wealth and experience and commercial power handed down from father to son for half or three quarters of a century. It was nothing of this sort. It was the sole individual work of one man starting with a money capital of nothing whatever, and working it all out to its last consummation in the course of a comparatively short lifetime.

There is so much that is distinctly American in the creation of this great Meat Industry with its now world-embracing dimensions, so much in the motive power behind it all, from its beginning all the way through, that rings with that true self-reliant, courageous American spirit, that it has claims of its own upon American pride of achievement. This feature of the modern-splendid Meat Industry is not to be lost sight of in attempting to grasp just what that industry is. It is too interesting a factor to be overlooked. Not one of the many concerns engaged in it better illustrates this characteristic of the business than does Swift & Company. No one man of the many who were the great forces in this industry's evolution is a more distinct type of that same American spirit and of the surprising force and adaptability to every condition that may arise, no matter how new and how broad it may be than is T. H. Swift himself.

One of the reasons why beef and mutton are high in because the American people have got the steak and chop habit. It is a peculiarity of the American public, which has been noted in many other instances, that all that the American people want is the best of everything that there is to be had. This applies with especial force to what American people eat. In the matter of food, just as they insist on steak and chops. Nine steaks are cut from ribs and loins. Ribs and loins comprise 20 per cent. of the total meat of the beef. Naturally this kind of food is expensive. Its exclusive use eliminates from the diet 74 per cent. of the beef. This 74 per cent. consists of "rounds," the "chuck," and the "plate." It is just as nutritious as the more expensive cuts, and it can be prepared in just as many ways as the very palatable.

An increased consumption of these cheaper cuts from the 74 per cent. portion of the animal would be a remedy for the wide spread between the rich and the poor and the prices of the now neglected cheaper portions. It is a matter of a little more consideration, on the part of the public, of the fact that there is cheaper meat than that which, from the nature of things, must be the most expensive, and consideration also of the further fact that this cheaper meat is excellent meat; that it is of equal value as nutriment with the meat which costs the most money, and that it only needs a little attention to make it palatable enough for anybody.

The literature that has been written descriptive of the Meat Industry's operations in the production and distribution of meat would make a small library of itself, yet all of it combined reflects but feebly the bewildering vastness, the complexity, the wonderful systematization, the minute attention to detail, which the actual workings of the great meat-producing machine involve. Division of labor reduced to its ultimate possible perfection may be taken as describing in a general way the operations of the packing house. The stiver, the plig, the chump, through the operation of this wonderfully systematized method, go quickly through the same process—a painless laying down of the burden of life and then the journey through that busy whirl of machinery and men, each machine and each man doing an allotted task, and all so rapidly and so smoothly, that the steady stream of transit from animal life to animal food is without a ripple to the dark,

quiet seclusion of the cooling and refrigerating rooms—vast reservoirs where the inviting-looking beef, pork, and mutton hang in long rows, with passageways like streets and alleys between them, the government stamp of inspection on every suspended unit of the food, units that will soon be scattering away to all parts of the country or swinging with the heave of the waves in the refrigerating-room of some great transatlantic steamship. In ten or twelve days some of it will be served in juicy steaks and roasts on dining-tables in far-off England or Scotland; some will be likewise so served in Maine or Florida or Oregon.

It is quite in vain to try to grasp the stupendousness of even this one Swift & Company unit of this great industry of the country—an industry hardly matched, in its gigantic proportions and far-reaching activities, by that of any other country in the world. It is still more vain to attempt to convey any adequate conception of it all by word of mouth or pen. To attempt to describe, in written words, the varieties of output, their modes of production, and the machinery of their distribution, would require the making of volumes. The utmost, perhaps, that can be done is to give a few facts and figures about this Swift & Company concern alone, and then, maybe, some faint conception of what the industry as a whole is, of which Swift & Company is only a unit, may be had.

Take, for instance, some of the Swift & Company statistics for the year 1904, and try to imagine what a bewildering magnitude of activity they represent. During 1904, for example, the total shipments of Swift's products averaged 350 carloads for each working-day. G. F. Swift's first equipment of refrigerator rolling stock consisted of ten cars. The daily shipments now would make thirty-five trains of ten cars to the track. Put it in another way, and the stupendous fact is that in the year 1904 Swift & Company put out on an average over 350 car-loads of product for each working day, irrespective of the immense local sales of the company's wares in such cities as Chicago, Kansas City, Omaha, St. Paul, St. Joseph, and Fort Worth, where its great packing-house plants are, and where there is a very heavy trade. In Chicago, one of the standard sights for visitors to the plant is the Packing-house Market—the market to which local retail dealers go for their supplies. In this market, which, when the additions now in progress and planned are completed, will be one of the largest and best-appointed markets of its kind in the world, all the endless variety of the packing-house products are sold. It is conducted as a department by itself, with a superintendent and a small army of salesmen. The enormous quantity of food-stuffs and by-product articles sold here are, of course, not to be rounded in the car-load output above mentioned, any more than are the sales of a similar nature in the cities where are the other large plants. All the 350 or more similar markets, or agencies, scattered all over this country, Great Britain, Continental Europe, Asia, Africa, South America, Australia, and New Zealand are similar distribution centres, only it is through these that 350 car-loads per day reach the retail dealer.

The general offices accommodate the entire administration force, with its armies of clerks, typewriters, heads and subheads of departments, as well as the chief executive officers of the corporation. This building is modern in all its appointments, with a ventilating plant that cools the atmosphere and keeps a constant flow of pure air sweeping all through it. It is equipped with a vast dining-room on the top floor, and with a barber shop, reading-rooms, and smoking-rooms.

As to the number of animals that pass to the cooling rooms every day, the figures are too great to be grasped with anything like an adequate conception of what, in magnitude of work done, they really mean. The total every day is something like 8,250,000 head of cattle, sheep, and hogs alone, to say nothing of the hundreds of thousands of chickens which the separate poultry plants turn out. As many as 11,875 cattle, 16,352 sheep, and 34,562 hogs have been transformed into dressed meat in all the seven great Swift plants in a single day, a grand total of 62,990.

And so on the astonishing figures which represent this great concern's operations might be prolonged almost indefinitely. It consumed, for instance, in 1904, 340,000 tons of coal; it burned 6900 cords of hickory wood in its smoke-houses; the engine house—power in use in all its plants was 63,000; it ran 30,000 electric lights; it sent and received 1,368,109 telegrams; it received and sent 4,270,980 letters.

All this, taken in its stupendous entirety, is only a detail in the total expense of running the concern. One is lost in the contemplation of what these figures stand for. And then it is to be always borne in mind that Swift & Company is only an individual unit in the whole vast American Meat Industry.

And, for instance, the Swift & Company to-day had its beginning, that solitary farm boy down on Cape Cod, who started his business only a little over forty years ago with one heifer and a pair of strong Yankee arms and an inexhaustible fund of American energy!

TWO BOOKS BY GEORGE ADE

(Imprint of R. H. RUSSELL.)

THE GIRL PEOPLE PROPOSITION YOU KNOW

A Bunch of He-and-She Fables

George Ade's fables are read the world over. The present volume is, as its title indicates, a series of extraordinarily clever sketches on a theme that is very dear to the author's heart, and which is vastly interesting to most people.

The *Girl Proposition* is packed with sense and wit and entertainment, all in the inimitable Ade vein. Profusely illustrated by Holme and McCutcheon \$1.00.

No living writer could duplicate the work done here by this keen and humorous observer of American life. Among the twenty-six "people you know" are The Patient Toller, The True Friend, the Self-Made Hezekiah, The Married Couple, The Samaritan, The Work Horse, and The Two Young People.

Over fifty quaint illustrations by McCutcheon and others \$1.00.

After Football—What?

(Continued from page 56.)

sportsmanlike spirit. This is the foundation stone of true reform. If this agreement is carried out, and we may be sure that it will be fully carried out by the gentlemen who signed it, we have already eliminated the evil tradition under which we have lived so long, and we are living in the dawn of a better day.

It is the one thing which is needed. All other considerations are secondary to this. As a corollary to it comes the necessity of eliminating the professional as a coach.

There are, undoubtedly, among professional individuals who believe in fair play, but taking it by and large, the professional leans upon himself as a man who is hired to turn out a winning team. His livelihood depends upon his success, and the temptation to introduce crooked methods is generally as strong for him.

To prohibit football because men have been dishonest in it is no more likely to make men honest than to give up the teaching of political economy because students have cheated in examinations in that subject.

There is good reason for the widespread demand that there shall be such a change in the rules of football as will make it a less hazardous sport. College football is too dangerous a game as it is played to-day. The danger is not that legs or arms may be broken, or that occasionally a man may be killed; these are, indeed, risks which are common to all kinds of football and many other games.

But in our college football to-day the chances are that a man may have the ligaments of his leg or of his back so badly wrecked that they will hinder him through life.

The remedy for this has already been suggested by Mr. Walter Cassel. If this instance to be gained in three downs is ten yards, instead of five yards, the game will be opened, and more plays will be practically done away with. Other modifications are desirable. These we must refer to the rules committee, who have already a great promulgation of suggestions from which to make selection.

There is little hope of establishing the game of Rugby football. An exhibition of that game, given by the Canadians on Soldiers' Field in Cambridge, called out the same kind of ridicule with which the English learned received baseball when American players showed them our national game in London.

Our men do not want it. There would be just as little hope of benefit if we could persuade them to play it. We started with Rugby football twenty-five years ago, and we have developed a game which in many of us seems to require a higher quality of intelligence, and to develop a finer kind of team-play.

Now can we afford to lose football from our college life. A former dean of one of our universities has stated that in his time the first term of the college year was a season of great anxiety to those in authority. Men of redundant energy would return from town to their colleges, a riotous frame of mind, and there were frequent collisions between the students and the faculty. To-day men of this kind work off their superfluous energy in football, and go quietly and early to their rooms and to their beds.

To any one who doubts whether the condition of our young men is superior to that of thirty or forty years ago I would commend the description of American life at that time given by Mr. Rhodes in the third volume of his history, pages 60-63. Especially significant is a note which begins: "Contrast the life of the American with that of the English student. Look at that pale-faced, dirty-complexioned youth, fitting like a ghost of a monk from his college cell to chapel or dining-hall. . . . Follow him to his room where he lives, almost unconscious of earth, air, or sky."

When we compare this kind of college life with the men who are found in our colleges to-day we realize the improvement that has taken place. This is due, in large measure, to athletic sports.

We are constantly informed that the English are better sportsmen than we are. Those who have watched games on both sides

of the Atlantic are unanimously of this opinion; but we are not prepared to admit that the English are a more honest people than we are. I have lived among school-boys on one side of the ocean or the other all my life, and I have found American boys as truthful and as honest as English boys. The standards of honesty in work are quite as high in our colleges as they are at Oxford or Cambridge. It is in athletics alone that we show an inferior spirit.

It is not possible within the limits of an article of this character to explain the reasons for this spirit. We all acknowledge it—we are looking for something better. The emphasis must be placed on the character of the coach, and kept there. It is less harmful for a young man to study under a dishonest professor of history, to whom he listens for an hour four times a week, than to be instructed by a dishonest coach, with whom he associates four hours every day of the week, and whose word to him is law.

No, it is not less football, but more football that we need; not less athletics, but more athletics—of the right kind. We are better off to-day than we were thirty years ago, when a handful of men who were practically sure of making the team came out to play.

We have a dozen players now where we had one then. We should have at least a score where we have a dozen.

There are not suggestions for an experiment in athletics. They simply describe what has been effective in England and equally suitable in America. In this country there are schools where all the boys—except those who are physically unfit—take part in football and in baseball and rowing; where the coaches are not sportsmen, but masters; and where there are required the same standard of conduct on the playground and in the school as in the arena.

The boys like it. There is nothing taught which would be to their discredit, and they have to keep an unmerciful conscience at bay, and to keep a good strength. Give the athletic side of athletics. There are no positive factors in the establishment of a new tradition for our colleges.

If we had adopted it may well be that we should have gained a spirit which prompts us to "play the game" in business, and to "play the game" in national life.

Our Enormous Trade with England

TRADE of the United States with the United Kingdom in the fiscal year 1905 aggregated practically 700 million dollars and formed more than one-fourth of our total foreign commerce. Estimates recently made by the Department of Commerce and Labor show that the exports from the United States to the United Kingdom in 1905 aggregated 523 million dollars out of a total of 1,548 millions, and thus formed thirty-four per cent., or practically one-third, of our total exports; imports from the United Kingdom aggregated 176 millions out of a total importation of 1,117 millions, and thus formed about sixteen per cent., or practically one-sixth, of our total imports.

On both the import and export sides of the account our trade with the United Kingdom is larger than with any other country. The imports from that country, as already indicated, were 176 millions, against 118 millions from Germany, 108 millions from Brazil, 90 millions from France, 86 millions from Cuba, 62 millions from Canada, 52 millions from Japan, and 46 millions from Mexico. The exports to the United Kingdom were 523 millions, against 194 millions to Germany, 141 millions to Canada, 76 millions to France, 73 millions to Netherlands, 53 millions to China, 52 millions to Japan, and 46 millions to Mexico.

Comparing conditions of our trade with the United Kingdom in 1905 with those of 1903, the imports from that country have grown from 150 million dollars in 1903 to 176 millions in 1905, an increase of 17 millions, or a little over ten per cent.

THE INCOMPARABLE WHITE THE CAR FOR SERVICE

WHITE CATALOG

Every one interested in automobiles, whether steam, gasoline or electric, should write to us for the new catalog of the Model "F" White steam car. It contains, first of all, a brief historical sketch, tracing the gradual perfection of the steam engine by the labors of many generations of engineers. Then is related how Rollin H. White, by the invention of an entirely new system of steam generation, whereby the boiler was eliminated, devised the first successful steam machine. This car was first offered to the public in 1901.

Brief references are made throughout the catalog to the success of this first model and to the constant victories and notable achievements which every model of the White steamer has each year placed to its credit. There is also included a concise and lucid description of the White system. Finally, there are shown the various Model "F" cars—touring cars, limousines, landaulets, victorias, runabouts, extension landaulets—which we are now delivering.

THE AUTOBIOGRAPHY OF MARK TWAIN

will be published serially in The
NORTH AMERICAN REVIEW
during the coming year

MARK TWAIN

DURING the ninety-one years of its existence, THE NORTH AMERICAN REVIEW has changed its form several times in the direction of more frequent publication. For sixty years it was a quarterly; it then became a bimonthly, and it has been known as a monthly to a generation of readers.

Now, beginning with the issue of September 7th, it becomes a fortnightly, to be published on the first and third Fridays of each month

Coincidentally with this new departure, the service it renders to the American public will be signally broadened. It will continue, more earnestly than ever, not only to permit, but to seek, expression of the best thought upon subjects of vital importance from every conceivable point of view. But, in addition, it will hold and utter frank, unbiassed, independent, and, it is hoped, intelligent opinions of its own. Simultaneously will be incorporated a department charged with consideration of serious current literature. The writer will receive, for the same sum that he now pays, two REVIEWS instead of one.

SPECIAL FEATURES

Among the leading features of the September 7th number of THE NORTH AMERICAN REVIEW will be a chapter of

Mark Twain's Autobiography

Mr. Clemens has been engaged for years in the preparation of this notable work. Each day has added to it something of interest. No biography has ever been so eagerly awaited. It is one of the most remarkable human documents ever written, unique in its interest and filled with the striking personality of the author.

A discussion of

Mr. Roosevelt's Moral Right to be a Candidate for the Presidency

in which one of the most eminent publicists of the day, writing over the pseudonym "Q," analyzes the President's promise, and contends that it cannot, and ought not to, debar him from succeeding himself in the Executive chair. A powerful article on

Great Fortunes and the Community

By W. H. MALLOCK

who controverts the fundamental propositions put forward by "X" in his famous "Appeal to Our Millions," published in the June number of the Review.

A consideration of the history and character of

British Empire in India

By GOLDWIN SMITH

with a forecast of the manner in which Britain's position in the Orient may be eventually affected by the rising power of Japan.

Single Copies, 25 Cts. Annual Subscription (24 Nos.), \$5

FOR SALE ON ALL NEWS-STANDS

THE NORTH AMERICAN REVIEW,

PACIFIC MAIL S. S. CO.

It follows the Sunshine Belt
via beautiful Hawaii, where
twelve daylight hours may be
enchantingly spent in sight seeing

From the New York Herald, January 7th, 1906

Stretching completely across the Pacific is what may be termed the "Sunshine Belt." Here the sun shines regularly, the trade winds blow gently, there is very little rain and the seas are never high. It is within this belt that the Hawaiian Islands are located, with their equable climate and subtropical verdure.

North of this the Pacific presents much the same aspect as the Atlantic, with its cold winds, fog and blows, except that the icebergs of the North Atlantic are lacking.

SERVICE NOT AFFECTED BY THE SAN FRANCISCO DISASTER

Travellers can find Hotel accommodations convenient to San Francisco, or may occupy their rooms aboard the steamers while in port, from which may be visited the greatest ruins of the age.

COMMENT

WHY should the New York Legislature call upon Senators PLATT and DEWEY to resign? The qualified citizens of this State went into the voting-booth, communed with their consciences and their God, as the law directs, and requested them to serve as their representatives in Washington for six years. They, in turn, with right hands upraised, solemnly promised to do so. Why now should they be asked to break faith? If they had changed in character, purposes, methods, or any other way, there might be some excuse for the proposed action. But they haven't. They are the same old sinners. Absolutely nothing new has developed respecting Senator PLATT. The voters knew, as well when they elected him as when he had finished testifying the other day, that he made a practice of taking money from corporations and using it to perpetuate his own and his party's power. True, they were not aware that Senator DEWEY was in the employ of the Equitable; but they did know that he was drawing a salary from the New York Central and had represented it for years in the Albany lobby. Why haggle over extra pay from a second corporation after having confirmed, endorsed, and approved acceptance of a retainer from one? No, the Senators haven't changed. It is the people who behold a new light. But with their eyes wide open, with full knowledge of the kind of men they were choosing, they themselves beared the juice which they now find so disagreeable. Let 'em stew in it, we say.

We guess they will, anyway. That most delightful of crimes, Mr. PLATT, is utterly impervious to criticism or assault of any kind whatsoever. He likes his club, and is going to continue to hobble in and out at his own sweet will. Mr. DEWEY is more sensitive. It was not the public alone that he deceived in him. He fooled himself along with the others. He thought he was good enough to be President once, and got a lot of votes in a Republican convention, too. Probably he won't be a candidate again, but he knows he is just as good now as he ever was. Moreover, he is going to be even better. After seven years of nominal service in Washington, he announces that he is about to begin his "real work" in the Senate. This is well. When one gets to be as weary-tired and has had a preliminary center of seven years presumably of relaxation at the expense of his constituents, it is time to get ready to begin to commence real work. Bless the man! Like some of the others whom we might designate by name, he does not even yet realize that anything really serious has happened to him. It will blow over. He can live it down still. That is his feeling. Of course he can't, but there is no harm in his trying. He will be disappointed, though,

when he gets down to "real work." There will be nothing doing. He has been so busy with his corporate work for seven years that he has never amounted to as much as a bill of beans in the Senate. And he never will. But he won't resign. Not much! Neither will PLATT. Where would they go? What could they do? No, brethren, true patriots, especially those elected by the people for the corporations, sometimes die, often marry, but never resign.

Every day that passes increases the anxiety of politicians with regard to the outcome of the general election in November of the current year. It is the general impression at the South, as well as at the North, that if Mr. ROOSEVELT were to be a candidate for the Presidency next autumn, it would be useless to put up any one against him. But 1908 is two years farther off, and nobody doubts the sincerity of Mr. ROOSEVELT's declaration that under no circumstances will he then be a candidate to succeed himself. In the ancient and medieval world it seldom happened that a great man or wonderfully successful man was able to transmit undiminished his power to a desired successor. The so-called "Dinoherb," or successors of ALEXANDER, are the classic examples of decadence and disintegration. The death of JULIUS CAESAR was followed by anarchy, and many years elapsed before his grandnephew and adopted son AUGUSTUS managed to succeed him. CHARLEMAGNE's descendants disgraced their ancestors. For some ninety years, on the other hand, the Roman Empire prospered under the working of the adoptive system, which began when NERVA adopted TRAJAN, and ended with the death of MARCUS AURELIUS. We have witnessed the operation of a similar adoptive process in the United States. JEFFERSON adopted MADISON, MADISON adopted MONROE, and JACKSON adopted VAN BUREN. Will the great influence acquired by Mr. ROOSEVELT prove equally irresistible in 1908?

The answer to this question depends largely, though not solely, on the outcome of next autumn's election in the State of New York. Mr. ROOSEVELT's favorite for the succession is believed to be Secretary ROOT, and those who know the ability and character of the latter statesman are glad to think that this is the case. Should, however, a Democrat be chosen Governor of New York next November, Mr. ROOT's opponents in the Republican national convention would, of course, allege that he could not carry his own State. This would not necessarily be the case; for, although a Democrat was Governor of New York in 1888, and a Democrat was elected Governor of the same State in that year, General HAMILTON carried the Empire commonwealth by a plurality of 13,000. It should also be remembered that, however uncertain might be the outcome of the Presidential election in 1908, there is no doubt about the President's ability to control the New York delegation to the Republican national convention held in the spring or summer of that year. It should, therefore, be far easier for him to give the Republican nomination to Mr. ROOT or any other favorite than it was for Mr. CLEVELAND's friends to secure for him the Democratic nomination in 1892, which, if all the facts be considered, was the most astonishing feat ever recorded in American political history. It should also be kept in view that the State of New York is no longer indispensable to the success of a Republican candidate. Mr. ROOT, if he can inherit Mr. ROOSEVELT's hold upon the people—and it will not be the President's fault if he fails to do so—can reach the White House without the aid of New York. Nevertheless, he would be strengthened morally by the support of his own State, and we believe that things may shape themselves so that he may get it.

We cannot but feel that the President's characteristic rubicund of the Panama Canal management is somewhat overdressed. It is right and fitting, of course, that he should stand up for his egoism, so long as he knows they are honestly striving for results. It is satisfactory that they are doing the best they can. But surely their present accomplishment hardly merits a paenagium. A calm, dispassionate demonstration of their earnest endeavors to overcome the insuperable difficulties would seem to have been even more appropriate, and to our mind at any rate, would have been vastly more convincing. On the other hand, we regard Mr. POLITSKY

Inglow's diatribe in the *Independent* an utterly unworthy of credence or consideration. We are not at all surprised to learn from the Hartford *Courant* that he made his thorough and painstaking investigation and unearthed his weird collection of scandals between November 29, when he walked ashore from the steamer, and December 1, when he stalked comically aboard again loaded for bear. It seems fitting, and indeed may have been necessary, that his sensation should appear in Mr. BOWEN'S semi-religious paper. The truth seems to be that the men in charge at Panama are working intelligently and patiently, making mistakes undoubtedly, but no more than must be anticipated in an undertaking of such magnitude. That is all we can expect, and there is no occasion for excitement over either intemperate attack or too zealous defence. Common sense is a good thing to apply to such cases.

The opposition to the Philippine tariff bill—which provides, it will be remembered, for the immediate reduction of the duties on Philippine sugar and tobacco to twenty-five per cent, of the DUTY rates, and for the abolition of them after the lapse of a few years—comes not only from representatives of the beet-sugar interest and of the Louisiana cane-sugar growers, but also from many "stand-patters," who, on general grounds, desire to prevent any discussion of the tariff during the present session of Congress. It is scarcely credible, however, that the opposition should be able to muster a majority of the House, for the Democrats would seem to be constrained by their political principles to vote for the Philippine tariff bill, and the administration must have friends enough on the Republican side, one would suppose, to pass the measure. Which way duty points is obvious.

It is a notable historical fact that although Maine was, up to 1820, only a district of Massachusetts, and for decades after her separation used to be stigmatized by Bostonians as "Down East," it has sent spokesmen to the Federal Senate with whom no contemporary Senators from Massachusetts, except WEBSTER and RUTLAND, could be compared. To prove our assertion we need but name FOSBROOK, BLAIR, and FAYE. FAYE is still a Senator and a man of weight, but it is nevertheless a fact that it is not he but his colleague, EUGENE HALE, who, with the general consent of his party, is now the leader of the Republican majority. Mr. HALE has never posed as an orator; his words are fit but few. He never talks to the galleries. He speaks only when he has something to say that, in his judgment, ought to be said. Then he speaks to the point, and gets it over as quickly as possible. He risked the loss of his seat in the Senate by opposing the war with Spain, but nobody doubts that his opposition was conscientious. He again parted company with the administration and the majority of this Republican colleagues by opposing the war in the Philippines. In spite, or rather, perhaps, by reason, of the independent attitude which on many an occasion he has not hesitated to assume, he has acquired to an enviable extent the respect and confidence of his fellow Senators. There is no doubt that, next to President ROOSEVELT and Speaker CANNON, the new leader of the Republican majority in the Senate is the most powerful man in public life. The manner in which he handled the request for a canal appropriation was characteristic. He told the President frankly that a certain appointment must be annulled, and Mr. ROOSEVELT accepted his advice. Precisely what Mr. HALE's position is with reference to government rate-making for railroads or to the Santo Domingo affair nobody seems to know. Perhaps he has not made up his mind. He is never in a hurry to do so. Whatever course he decides upon is likely to be supported by a majority of the Senate. He and Secretary ROOT ought to get on well together, for they are both strong men—among the very strongest now in the centre of the public stage.

It is now admitted in Washington that the dispatch of two additional regiments to the Philippines is prompted by the apprehension that our treaty rights in China may be at any hour subjected to concerted violation. The murder of American missionaries in southern China and the boycott of American goods in Shanghai and other treaty ports seem to be regarded by our State Department not as sporadic and unimportant incidents, but as signs of a general explosive movement. Not in vain, apparently, have tens of thousands

of young Chinese been educated in Western countries and in Japan. We can hardly blame them if, returning to their homes, they have raised the war-cry of "China for the Chinese," and are contemplating the expulsion of the Germans from Kiaochow and of the British from Wei-hai-wei and from their coterminous vantage on the mainland adjoining the island of Hongkong. The native reformers also purpose, we are told, to demand the release of China from the régime of exteriority, which is no longer imposed upon Japan. When we call to mind the indisputable fact that whatever civilization Japan possessed before the overthrow of the Shogunate was derived from the Middle Kingdom, we cannot be surprised that intelligent and patriotic Chinese should revolt at the subjection of their country to a treatment which the Western powers no longer dare to apply to the Mikado's empire. Apparently the time is near at hand when we must choose between treating China exactly as we treat Japan, or entering upon that process of partition which the United States, at all events, have firmly opposed. In the natural order of things, the Empress Dowager can hardly be expected to live much longer. Will she be succeeded by a Manchu, or will a native Chinese dynasty be established? Or is the Middle Kingdom destined to pass through a long period of civil war and anarchy, such as it experienced in the first half of the seventeenth century? A large fraction of the human race is interested in the answer to that question. For ourselves we deem it incontrovertible that logic, consistency, and equity require all of the Western powers to renounce whatever foothold they may have gained on the Chinese mainland, and allow the people of China to work out their own destiny. They deserve as much consideration as we have shown the Japanese. It would be an act of cowardice to treat a supposedly weak nation less generously than we have treated a strong one.

Since the collapse of the last general strike and the restoration of order in Moscow and in most of European Russia proper, only the Baltic provinces and the Caucasus remaining more or less completely in the hands of rebels, the prospect of a peaceful transition from absolutism to constitutional monarchy has been very much improved. The original plans of the revolutionary leaders for a concerted outbreak on January 22, the anniversary of the "Red Sunday," when last year an unprovoked massacre of unarmed working-men took place, seem to have been abandoned, owing mainly to a lack of pecuniary resources. According to a report, for the trustworthiness of which nobody seems able to vouch, the secret council which directs the operations of the Nihilists, as those who believe in assassination are still called, met the other day in Switzerland, and, by a majority of two-thirds, voted that the Czar NICHOLAS II. should share the fate of the Grand Duke SERGIUS and of Minister-of-the-Interior VON PLERKE. It is interesting to learn that a considerable minority earnestly opposed the decree, on the ground that NICHOLAS II. had done more than any of his predecessors of the ROMANOFF dynasty to give liberty and progress to Russia, and that it was by no means probable that as much could be hoped for from his successor, who undoubtedly would be one of the Grand Dukes selected by a family council to act as regent during the minority of the present Czar's infant son. The notion that sovereigns should be killed, *pour encourager les autres*, is one that Western onlookers find it hard to understand. The only effect of killing ALEXANDER III. on the morning of the night when he is believed to have signed a constitution, was to make his son ALEXANDER III. the most indefatigable and fanatical of reactionists. If NICHOLAS II. is not cut off, it now looks as if the State Duma, or national assembly, projected by Count WITTE, will assemble at an early date, and will be authorized to frame a constitution which the Czar will swear to observe. Meanwhile the situation presented in Siberia is extraordinary. From the Far Mountains to Lake Baikal the Trans-Siberian Railway is wholly in the hands of revolutionists. The railway encircling the southern coast of Lake Baikal is out of repair and cannot be used, and the only method of crossing that body of water, now frozen hard, is by sledges, and all of the sledges are in the hands of the rebels, who control the western shores. It is impracticable, therefore, for the huge army under General LITVINOV to leave Manchuria, and, apparently, its only means of communication with St. Petersburg is by cable from Chinese or Japanese ports.

In view of the misadventure of three American battle-ships in leaving New York which resulted in the grounding of the *Kearsarge* and the *Kearsarge*, and the ramming of the former by the *Alabama*, it is proper to point out that such mischances are not confined to our navy. The statistics of casualties in the British navy during 1904 have just been officially issued. In that year in the British service forty-three persons lost their lives and thirty-six were injured. Eleven persons were drowned when the submarine *U-1* was sunk by the *Breusick Castle*. Eighteen battle-ships, twenty-two cruisers, and sixty-seven torpedo-boats and destroyers are mentioned in the accidents of the year. One of the destroyers, the *Viper*, was exceptionally unfortunate, having four casualties. The causes of collisions are given as "inexperience of lieutenant in command" and "errors of judgment" on the part of lieutenants or sub-lieutenants. It is noteworthy that there are few records of punishment.

Mr. CHARLES T. YERKES, who died last month, left behind him much money and many rare treasures of art. By his will he provided that both—all his art collections and nearly all his fortune—should eventually come into possession of the people of the city of New York. His great house on Fifth Avenue with the art collections it contains he left to his wife during her lifetime. At her death (or before, if she so elects) the house and its contents are to pass to five trustees (one designated by the Mayor of New York and four by the Metropolitan Museum of Art), to be maintained as the Yerkes Galleries—a public museum. For its maintenance a fund of \$750,000 is provided. The residuary estate after payments of various legacies is supposed to amount to eight or ten million dollars. The testator's wife receives the income of one-half of it for life, and each of his two children the income of one-fourth of it for life. Eventually all this estate is to be devoted to the building and maintenance of a great public hospital in the Bronx, to be known as the Yerkes Hospital. So the bulk of Mr. YERKES's acquisitions are eventually to be returned to the people. The art gallery which is to bear his name is placed where the most people from the widest area of our country can enjoy it. The prospective hospital will chiefly benefit the metropolitan locality in which it will stand. It will be, however, a magnificent charity, and so placed as to be enormously useful. The Bronx, being practically a new city, is a great field, actual and prospective, for a great hospital. We trust that Mr. YERKES's will will stand and be executed.

There is to be a heartier effort than usual this year to induce Congress to abolish the tariff on art. As usual the American painters and sculptors, who are supposed to profit by the protection which the tariff gives their work, are the ones who are making the most effort to have that protection abolished. At a meeting of the League for Political Education held in New York in November the removal of the duty was urged by CARL BERRIN, the sculptor, and by CARROLL BROWN and KEVIN COX for the painters. At the January meeting of the Architectural League last week in New York the topic was the elimination of the art tariff. Mr. R. W. GLUCK, and Mr. COX again, being speakers. What is to be said on the subject is easily said. The main argument in Congress against the removal of the duty has been that pictures and objects of art are luxuries of the rich and ought certainly to pay duty as long as the necessities of the poor were taxed in that way. It can be argued on the plainest grounds that of all the luxuries brought into the country, objects of art are the ones most likely to become in time the luxuries of the poor. The jewels and fine reindeer and most other things that solvent folk import are for their own use, but the works of art that the rich collectors bring in tend to drift steadily into public galleries. The newest example of that tendency is Mr. YERKES's disposition of his art treasures. But there is also the FURBER collection waiting acceptance by the regents of the Smithsonian Institution (who are unaccountably slow to take it), and Mrs. GARDNER's famous collection in Boston, bound in the same direction unless our exasperating tariff heads it off. And other great collections are tending the same way. Their owners are eager to make them the luxuries of the poor. The truth seems to be, and Congress might as well

recognize it, that the great collectors, as a rule, would rather leave these collections in such a way that they will be kept together than have them sold and scattered, or divided up among heirs. And the only way to secure the preservation of a collection as a collection is to bequest it to the public.

A Representative from Texas of the name of SHARFMAN made a leap to the grand stand of fame last week by offering a resolution providing for the appointment of a committee of the House to investigate the "recent violent expulsion of an American mother from the White House offices and grounds by executive officials and employees while she was seeking an audience with the President of the United States." Mr. SHARFMAN made the following statement concerning the resolution:

I introduce this resolution in the name of American motherhood and American womanhood. The occurrence which is the cause of this resolution was a violation of every sentiment that glorifies American manhood and American civility. The brutal treatment of this lady, who was but acting within her rights, seems to me to be outrageous and indefensible. The American Congress ought not to permit the matter to rest without the most thorough and searching investigation. It involves the most sacred element of American life, the respect and reverence which every true American citizen accords the American woman and especially the American mother. When the President of the United States with all the glamour of his great office steps into the presence of an American mother he is in the presence of his superior.

The facts are these: A woman, whose name we are happy to have forgotten, went to the White House and demanded an audience with the President. Replying to Assistant-Secretary BARKES, she said she wished to see him about reinstating her husband, who had been discharged from one of the departmentments. Mr. BARKES told her that the President could not grant an interview respecting an individual case of that nature and suggested that she call upon the head of that department. Whereupon she plunked herself down upon a chair with an emphatic thud and vowed that she would see the President and would not leave until she had. Mr. BARKES tried to persuade her to go, but she wouldn't budge. Finally he told her that if she persisted it would be necessary to have her removed by force. Then she got mad and screamed, and the attendant policemen took her away shrieking like all possessed.

That is the American Mother to whose rescue the gallant Texan springs. Unfortunately for the establishment of a principle of executive administration by Act of Congress, the resolution is less explicit than we should like. What does the Congressman mean by "American"? Would he restrict the privilege of interruption to United States Mothers, or take in Canadians, Mexicans, Venezuelans, Porto-Ricenses, Filipinos, and colored nannies, so they brought with them evidence of their distaste for race suicide? And need they be mothers at all? How about old maids and married maidens who have only hopes? Everybody will agree with the Congressman that it is wrong to violate every sentiment that glorifies American manhood and American civility and upset the most sacred element of American life. But where, if anywhere, shall we draw the line? Are all or only a part of our females the superiors of the President of the United States, despite the glamour of his great office? It is a timely inquiry and should be included in the resolution. Otherwise the President will never know whether he must appear when called by any one of seventy millions or of only twenty millions of ladies who have relatives to look after. We commend this phase of the subject to the careful consideration of the happily named SHARFMAN. Meanwhile, he needn't worry. A great many of us, including the President himself and even the awful BARKES, have had American mothers, and will see to it that they have adequate protection while the Congressional investigation proceeds. That is, we will divide the work. The rest of us will look after the American mothers who stay at home and darn socks and spank the babies, if the flower of Texan civility will attend to those who go crowding around the White House.

At the examination of Mr. H. H. ROGERS on January 8, in the Standard Oil inquiry conducted by Attorney-General

HADLEY, of Missouri, before Commissioner SANBORN, Mr. ROGERS had barely begun his testimony when a sudden and startling explosion brought every one except the witness up-standing and filled the room with blinding smoke. Mr. ROGERS, who has asthma and cannot stand smoke, retired, and the hearing was adjourned until afternoon. The photograph taken by the flash-light was proudly published on the first page of the *New York American* the next morning. Is not this an interesting example of the power of the press? A newspaper sends its agent to a judicial proceeding. The agent insults all present and breaks up the hearing. The responsible representative of authority meekly submits, and the newspaper agent having captured the scalp he was sent to secure, carries it to his employer, who exhibits it the next morning. Nobody was hurt except Decency, but was not Decency outrageously mauled?

Major JOHN C. HEMPHILL gently chides us, in the *Charlotte News and Courier*, for printing in the *North American Review* Mr. HENRY JAMES's philosophical observations upon American customs and appearances. He regards them as too bewilderingly—shall we say bewilderingly?—yet—too bewilderingly intricate for the average understanding, and quotes as an example the following graphic picture of the interior of a New York club-house:

This diffuse vagueness of separation between apartments, between hall and room, between one room and another, between the one you are in and the one you are not in, between place of passage and place of privacy, is a provocation to despair which the public institution shares impartially with the "luxurious home." To the spirit attuned to a different practice these dispositions not only appear a strange perversion, an extravagant aberration of taste; but I may here touch on them more further than to mark their value for the characterization of manners.

"What in the world," asks Major HEMPHILL, "does this mean?" Fie upon him! He knows quite well what it means. So do we. So does everybody. It is as simple as a b—too simple, in point of fact. Futuristic complexity is what we expect from the master. Take this, for example:

The interesting point, in this connection, is moreover that this particular effect of the scale of things is the only effect that, throughout the land, is not directly adverse to joy. Extent and ordination, the multiplication of common, extraneous items and the continuity of motion are elements that cause there, in general, for fatigue and activity, prompting the earnest observer, overburdened perhaps already a little by his earnestness, to the reflection that the country is too large for any human consciousness; that it can secure in the scheme of Providence have been meant to be dealt with as we are trying, perhaps all in vain, to deal with it, and that its very possibilities of population themselves cause one to wince in the light of the question of intercourse and contact.

Major HEMPHILL may not grasp the full significance of this delicate shading at a glance, but a second or third reading will fetch out the inherent pallidness in dazzling vividness. In a word, the *Nash* hit the nail squarely on the head when it remarked the other day that every sentence from Mr. JAMES's pen is intelligible to those who understand it. The sole requisite of others is enlargement of the lump of infinite comprehension.

The Rev. Dr. PARMESTER promptly and emphatically swears General BINGHAM, the new Police Commissioner, because he uses cuss words. That is the good Doctor's privilege, and he wouldn't be the good Doctor if he failed to avail himself of it. But there are people who think it is enough to make anybody swear to be appointed Police Commissioner of this town. It is a thankless job. There are so many cooks, for one thing. To say nothing of the various argus-eyed societies for the promotion or prevention of this, that, and the other, each strenuous newspaper has its own theory of the way the department should be managed. One wants much leading of the people, another none, and they pounce away at their respective hobbies with powerful double leads and powerful potent cartoons till one's head aches. Mr. McADAMS tried to oblige them all, but succeeded only in giving an even administration—so he had to go. General BINGHAM is a new hand, and even the good Doctor should give him a chance. All the people really want is honest, intelligent management of a very trying lot of pretty fair men. Let the good Doctor furnish that and, even though in the doing he shall add a few feelings by an occasional cuss word, nobody will send a continental dam.

The General's father, the Rev. Dr. JOEL FOOTE BINGHAM, of Hartford, denies the possibility that the General swears. His son, he declares, is a man of established piety and religious deportment. He has known him a long time and intimately, and he never heard him use a bad word. Dr. BINGHAM thinks the newspaper reporters have wickedly interpolated expletives and rash language into the General's talk. Perhaps they have. Newspaper reporters occasionally take awful liberties with official speech; still, we suspect they are more reliable judges of General BINGHAM's current style of talk than his revered father is. Moreover, all that the Rev. Dr. BINGHAM knows and rehearses about his son is not necessarily incompatible with the General's use of expletives. Ministers rarely use cuss words, but a good many truly pious laymen do. Sometimes you have to swear to get results, as in the case of mules in the Welsh mines. In the great revival in Wales a year or more ago nearly all the miners were converted, but the mules remained unregenerate, and when the converted mine-drivers gave up the application of hard language to the mules, the mules quit working. How it finally came out we never heard.

Every one who has come to a reasonable maturity must have had opportunity to observe for himself how great is the loss to society when a first-rate man dies prematurely. If he leaves a family, he leaves it bereft of his care and his training and exposed to perils from which he might have shielded it. If he leaves no family, there is the incalculable loss of the children he might have had. Some fatherless families turn out well in spite of their handicap, but the unregenerate families of dead fathers are a total loss. What our country, North and South, suffered from the decimation of its very best stock in the civil war cannot be computed. It can only be lamented. The mere numerical loss of population was nothing, for it was promptly made up. The loss that counted was the loss of quality.

On this tendency of war to waste the indispensable best blood of nations President DAVID SEAR JOHNSON bases a very interesting argument in favor of peace. He has hopes that the present century will see the permanent establishment of peace for mankind. The perils of peace to nations he makes nothing of as compared with the perils of war. His argument is all biological. So-called "decadent" nations are worse off, he declares, than nations that the best stock has been killed out of, leaving the perpetuation of the race to inferior individuals. He maintains that neither adversity nor luxury destroys a race; and that generation true to the type will follow generation, unless the best individuals are killed off. Greece, he says, died because the men who made her glory had all passed away and left none of their kin, and therefore none of their kind. Rome fell because of the extinction of her best, especially by MARCUS and CINNA and by SULLA. After two hundred years of peace, in which there had been no slaughter of the brave and strong, Japan's military prowess revealed itself unimpaired. No wonder: for her best had been left alive. The peaceful struggle for existence, Dr. JOHNSON thinks, puts a premium on the virile virtues. The best men get ahead in time of peace; the idle, weak, and dissipated go to the wall. "Other things being equal," he says, "the nation which has known the best of war is the one most likely to develop 'the strong battalions' with whom victory must rest."

Dr. JOHNSON's biological reasoning is interesting. Protracted peace is a factor of enormous importance to the prosperity of any nation. No reflecting person can doubt that. Any one who does doubt it can get an expert opinion on the subject from Count WITTE. But it is not the only factor. Just as bad conditions make another. Wars can only come when the conditions that lead to wars find some other cure. So long as business is war, and is conducted on the theory that it is necessary to kill now no law except purchased legislation, the seeds of battles are being sown. The nations are getting more sane. They are very cautious already about getting into fights, and wiser than they were to realize that it is a very rare war indeed that is worth even to the winner, what it costs. But wars can end entirely only by the triumph of kind and a fair chance for all hands under the law.

Where the State Insures Against Death and Against Fire

The suggestion made by President ROOSEVELT in his last annual message, that Congress should consider whether life-insurance companies might not, and should not, be subjected to control by the Federal government, raised, of course, two questions. First, whether such a course would be constitutional, and, secondly, whether it would be expedient. The prevailing opinion among lawyers is that insurance transactions would not be adjudged by the United States Supreme Court to be interstate business, and consequently, could not be controlled by the Federal government under the Interstate Commerce clause of our Constitution. Inasmuch, however, as our highest Federal tribunal has more than once reversed itself, it, conceivably, might take a different view of the matter. Meanwhile, as regards the question of expediency, we naturally desire to learn what has been the practical outcome of a government's attempt to carry on the insurance business. It is, therefore, a timely and useful article which Mr. W. P. REEVES, High Commissioner of New Zealand in England, has contributed to the January number of the *North America Review*. In New Zealand the colonial government issues life-insurance, accident-insurance, and fire-insurance policies. It aims to establish an monopoly in any of the three fields; on the contrary, its three offices compete on equal terms in the open market with private companies engaged in similar transactions. The first experiment made was in the life-insurance business, and we shall here confine ourselves mainly to marking some of its results.

In 1869 an Israelite financier, residing in the colony, Mr. afterward Mr. JULIUS VIGOR, persuaded the New Zealand House of Representatives to vote for a resolution establishing a State Life-Insurance Office. At that time, although several English and Australian life-insurance companies had agencies in the colony, premiums were high, and the colonists were not possessed of sufficient capital to organize strong life-insurance corporations of their own. When the state institution began operations in 1870, no provision was made for the division of profits, the aim of the organizers being limited to the avoidance of losses. Nevertheless, although much lower premiums and fees were charged than those exacted by private companies, profits accrued, and in 1874 a supplemental act was passed prescribing the method of dealing with them. At the end of its first year of life the sum assured by the office slightly exceeded £100,000, and the number of policies of the total amount insured had grown to more than 85,000,000, and the policies in force numbered upwards of forty-four thousand. The government now does nearly half the life-insurance business of the colony. The assets of the life-insurance department aggregated at the date last named a little less than twenty millions of dollars. Of this sum, eighteen per cent. is lent to the New Zealand treasury; more than fifty per cent. is invested in mortgages on freehold property, and the remainder is lent to policy-holders, or on local securities. In the investment of these funds the Life-Insurance Commissioner is subject to control by a board of six persons, by whom any proposed loan must be unanimously sanctioned. It is further provided that no one loan shall exceed fifty thousand dollars, and that no sum lent on mortgage shall exceed three-fifths of the value of the mortgaged freehold. We infer that the lending has been conducted prudently, inasmuch as last year the value of the properties on which the department had to foreclose was only about five thousand dollars. Turning to the details of the insurance business proper, we observe that the New Zealand Government Office will not insure any one life for more than twenty thousand dollars, and that, under certain conditions, its policies are exempt from seizure by creditors in the event of their holders becoming bankrupt. The provision borne by expenses to premium income was in 1894 a little less than sixteen per cent. The total amount paid out since the foundation of the office for death claims and matured endowments has been about \$14,000,000. On the whole, the success of this experiment in government insurance seems to be incontestable, although it was noted in 1901-2 that the state institution's business did not increase as fast as that of two of its private competitors, the Australian Mutual Provident and the National. We have said that no monopoly is attempted, but that general statement requires a slight modification. For about twelve years ago a statute was enacted requiring most of the officers appointed to the New Zealand Civil Service to insure themselves in the government office. Three per cent. is deducted from their salaries for the purpose, in return for which they receive a policy payable at death should they die before the age of sixty. If they outlive that age, the payment takes the form of an annuity.

There is a widespread impression that when a government goes into the insurance business, the funds are apt to drift under the control of politicians. As a matter of fact, this has not proved to be the case in New Zealand. We have seen how expenditures are supervised, and we note further that, with the management of the insurance business proper, there is virtually no ministerial or political interference. The Life-insurance Commissioner is

no mere departmental secretary, with a minister over him; he performs duties strictly defined by statute, and rules his office. Apparently the business methods followed are identical with those of an ordinary private insurance association. As the act establishing an Accident Insurance Office was not passed until 1899, and the government did not go into the fire-insurance business until near the end of 1903, it is too early to say whether these two experiments should be deemed definitely successful, but, according to Mr. REEVES, the prospects of both are encouraging.

Charging What the Traffic Will Bear

THE most recent argument against government rate-making for railways is set forth by Mr. H. T. NEWCOMB in a pamphlet lately published in Washington. The author goes to the root of the matter by expounding the real significance of the phrase, "Charging what the traffic will bear," a phrase which, for no reason or another, seems to have acquired an ill repute. As President A. T. HALEY has pointed out, charging what the traffic will bear is a very different thing from charging what the traffic will not bear. Applied intelligently, the principle adjusts the rates where they can be best borne, and develops a vast amount of business which otherwise could not exist. Mr. W. M. ARWORTHY, the highest English authority on railway economics, testifies in *The Elements of Railway Economics*, a book published in 1903, that charging what the traffic will bear represents, in fact, a principle not of extortion, but of moderation and encouragement. To charge what the traffic can bear is, in other words, not to charge what the traffic cannot bear. The true meaning of the phrase is that, within certain limits—the limit of what any particular traffic can afford to pay, and the limit of what a road can afford to carry it for—railway charges for different categories of traffic are fixed, not according to an estimated cost of service, but, roughly, on the principle of equality of sacrifice on the part of the shippers. No regarded, "what the traffic will bear" is a principle not of rapacity, but of equitable concession to the weaker members of the community. Mr. ARWORTHY suggests that if railway managers in the past had declared that the principle on which they made rates was "tempering the wind to the shorn lamb," their descriptive accuracy would have been equally great, and their popularity might have been greater. Translated into railway language, the principle involved in charging what the traffic will bear means this: the total railway revenue is made up, first, of rates which, in the case of traffic unable to bear a high rate, are so low as to cover hardly more than actual out-of-pocket expenses; secondly, of rates which, in the case of medium-class traffic, cover both out-of-pocket expenses and a proportionate part of the unapportioned cost; and, finally, of rates, which, in the case of high-class traffic, after covering that traffic's own out-of-pocket expenses, leave a large and disproportionate surplus available as a contribution towards the unapportioned expenses of the low-class traffic, which such traffic itself could not afford to bear.

It is well known that government rate-making has been tried in various countries, as, for instance, England, Canada, and Georgia. In the book in which we have just referred Mr. ARWORTHY pronounces it a point of serious practical importance, to be considered in connection with the British railway legislation of 1891 and 1894 (by which Parliament itself undertook to fix railway rates), that this legislation "has done much to prevent any natural and gradual lowering of rates." Under this British legislation a railway company is still free to *hurry rates*, but has ceased to be free to *raise rates*. A manager may desire to lower a rate, hoping thereby to increase his benefit trade; but also, by increasing largely the volume of traffic, to increase his own net earnings. This is only a hope, however. In the nature of the case certainty is not attainable in advance. A prudent manager, therefore, will not, unless his hope is closely allied to certainty, lower a rate when he must face a lawsuit before he can put it up again. Still less will a conference of managers allow one of their number, more sanguine or more foresighted than the rest, to go ahead and make experiments. When Mr. ARWORTHY testified last year before the Senate Committee on Interstate Commerce, he expressed the conviction that the interference of Parliament with railway rate-making had resulted in stereotype and kept rates at an unacceptably high level. It seemed to him that the heart had been taken out of many men.

As to the Dominion government, after operating the Intercolonial Railway for years at a loss, announced last summer an increase of rates ~~and~~ of the line, to the disgust of persons who had assumed that government ownership would necessarily mean lower rates. In 1900 every dollar earned by the road had cost \$1.14 in operating and maintenance alone, nothing being left with which to pay interest on an investment of \$80,000,000. In Georgia the rates on railway traffic ~~criticized~~ by the State are fixed by the State Railroad Commission. What is the result? A merchant in Marietta, Georgia, who ships certain goods to Chattanooga for fifteen cents per hundred, to Knoxville for sixteen cents per

Commemorating the Nation's Birth

By Charles W. Tyler

The coming celebration at Jamestown of the 300th anniversary of America's first permanent white settlement

IN dramatic spectacular effects the coming Jamestown tercentennial at Norfolk, Virginia, bids fair to eclipse all other international expositions, home or foreign, that have gone before it. This is a sweeping statement entirely safe to make even now, with fifteen months still between us and the day of opening. It is a statement, however, that might lead to misconceptions. With the spectacular features of some other expositions in mind, it might give the impression that there was to be at Norfolk a vaster aggragation of higher towers, bigger wheels, more garish "pikes," "midways," prismatic fountains, and other standard exposition atomishisms than had ever been got together before.

Nothing could be further from the fact. From all present indications these usual exposition features are to be rather more anticlimactic by their absence than otherwise, at the great event for which Virginia's vigorous tide-water metropolis is preparing with so much energy. It is the Jamestown Exposition itself, not its accessories, that will be spectacular. And yet, again, that is not quite accurate. The exposition feature of the demonstration at Norfolk is to be in the nature of an adjunct, rather than the centre around which all else is to cluster. The act of Congress, passed on the 3d of March last, provides for "celebrating the birth of the American nation, the first permanent settlement of English-speaking people on the Western Hemisphere, by the holding of an international naval, military, and military celebration in the vicinity of Jamestown, on the waters of Hampton Roads in the State of Virginia." So it is to be a "celebration," not an exposition. Furthermore, it is to be a naval and military celebration. It is in an international naval and military celebration, therefore, that President Roosevelt, in his proclamation of March 20, 1902, invites all the nations of the earth to send their war-ships and their soldiers. There is to be an exposition, to be sure. It promises to be an interesting one, with features peculiar to itself. But it is the second number on the programme. The first is that remarkable assemblage in American waters of foreign war-ships and foreign soldiers.

It does not require an Oriental imagination to picture some of the spectacular possibilities there are in a gathering of this kind. Furthermore, the stage on which the spectacle is to be presented leaves little to be desired. Hampton Roads and adjacent waters

Jamestown Church Tower, built in 1619, destroyed during Bacon's Rebellion, 1675, rebuilt, and burned again in 1892

afford a setting for marine moving-pictures on a large scale, such as is hardly to be matched elsewhere in the world. Even under normal conditions on a clear night there is a suggestion of a sort of vast, widely diffused Venice in the approach, from seaward, to that group of cities on the floods of which Norfolk is the chief, and in which Old Point Comfort is the gateway. One sees a bewildering mass of longshore lights. They glitter here, there, and everywhere, blazing in groups of side-arm like constellations, twinkling in clusters, fading to broad bands of electric glow far down on the horizon. And all of them somehow seem to be a part of one vast whole in the deceptive darkness—all strung together in some curious way on an intricately tangled chain of other lights which apparently links them all together. In the group of Hampton Roads cities and towns—Old Point, Newport News, Hampton, Norfolk, Portsmouth, Berkeley, and all the rest—there are probably not more than 250,000 or 300,000 inhabitants. Yet the centres of population are so spread about, and their lights so brilliantly reflected in the broad reaches of water, that the impression conveyed by night is of some all but limitless metropolis floating on the waves.

Now if into the midst of all this some seventy-five or more hundred war-ships are thrust, all of them illuminated, their many-colored night signals flashing, the dazzling bars of their searchlights weaving checker-board effects with each other; the waters all about them seething with the lights of other ships; and, back of it all, the vast acres of brilliant electric illumination on the exposition grounds properly—try to picture this and you may get some idea of what Hampton Roads will look like by night when the tercentennial celebration of the birth of the American nation is once in full swing. It will at least be believed, with such a scene in mind, that the celebration and its accompanying international exposition will not leave to depend upon side-shows for its supply of the spectacular.

But that is only one glimpse of the great show. It is to be borne in mind that the foreign soldiery as well as the foreign war-ships have been invited to attend. Our own military will be represented by large detachments from all branches of the regular army service, as well as by militia from all the States of the Union, at least as far west as the Rocky Mountains, and probably from the Pacific coast States as well. England entered heartily into the

General View of the Executions being made on the Site of the Jamestown Settlement

spirit of the celebration from the start. The event that is commemorated in one which goes far back into the days when our history on the American continent was England's history. Over a century and a half elapsed between the settlement of Jamestown and the time when England and England's American colonies came to the parting of the ways. The history that Captain John Smith and his party made in 1607 was history of vast moment in England's colonial development. The late General Fitzhugh Lee, who did in very fact give up his life in working to make the Jamestown celebration a success, was in receipt of scores of enthusiastic letters from England promising hearty cooperation on the part of the mother country. The Honorable Harry St. George Tucker, who succeeded General Lee as President of the Association, was received in England with much cordiality. He was met more than half-way in sympathy with the cause he represented. England has not only accepted President Roosevelt's invitation to take part, but has promised to send a naval representation worthy of Great Britain's tremendous sea power. In addition to that, she has promised to send representative detachments from all branches of her military service, including, among others, the famous Gordon Highlanders regiment. France, Germany, and Italy are also pledged to send war-ships and soldiers—not merely marines, the sea soldiers, but detachments from the regular armies. Austria will send a fleet. The traditions of the empire prevent the sending

of soldiers out of the country on such an errand. Japan's splendid navy will be represented by a squadron of her finest war-ships under the personal command of the world-famous Admiral Togo. There will be a detachment of Japanese soldiers under the command of the so less famous General Oyama. There are armies not to be left out of the reckoning among the South-American republics. Brazil, Argentina, and Peru will be represented by the best of the war craft they have aboard.

But, as mentioned above, the soldiers are not alone to figure in the spectacular war pictures the celebration will present. The soldiers, as well, are to have their linings. The enthusiasm and the interest they will stir will hardly be less than the men and the ships of the armies will awaken. The spectacle of English, French, German, Italian, Japanese, American, and probably the soldiers of still other countries maneuvering on the same parade-ground will be one to be seen not more than once in a lifetime, if, indeed, its like is ever seen again.

That parade-ground is to be one of the striking features of the exposition. It covers an area of forty acres. The buildings of the States are to form a vast semicircle around it. From each one of them its ex-

tire length and breadth will be visible. Its base will be the exposition's sea approach. This is a great lagoon, or walked-in harbor, 700 feet wide by 1000 in length, opening out into Hampton Roads through the arch of a high bridge under which steamers will pass to and from the lagoon landings in the exposition enclosure. The soldiers from the different foreign countries will lead here and will be provided for in quarters about the grounds. A wide deep fringe of apple-trees, which at the opening of the exposition in the spring will be in full bloom, will form a beautiful border about this green-turfed parade. Over 300 of these trees, fully matured and healthy, have already been taken up and transplanted for this purpose. The roots and clumps of dirt that were lifted out of the earth with some of these superb trees, and transported bodily with them to the places for which they were destined, measured, in some instances, twenty and thirty feet in diameter.

Thus the kaleidoscopic colors of the military trappings, foreign and domestic, which will be flashed all over the vast parade-grounds when the international competitive drills and general polyglot soldier parades are in progress are to be fringed all about with a gay border of apple blossoms. Flowers, indeed, are to be a strong point in the decoration of the exposition grounds. The entire area of 200 acres is to be surrounded by a wire fence seven feet high, and this fence throughout all its length is to be woven

into a mass of Virginia creepers and brilliant rambling roses. The site selected for the exposition has this distinction over any other exposition site the world has known—it is upon the seashore and yet, in a way, is inland. It is at Sewell's Point. To the eastward between the wide gap that separates Cape Henry from Cape Charles there is the full sweep of the wide and wandering sea—the broad Atlantic. To the northward and westward through Chesapeake Bay and Hampton Roads the grounds command a reach of something like 100 square miles of protected harbor way. Directly opposite and across the Roads is the point where the storm-tossed Jamestown settlers found their first haven after their dreary four months' voyage, and which they named Point Comfort—old Point Comfort we call it now, and associate it with big summer and winter resort hotels, just as we do Virginia Beach, a few miles to the southward and on the open sea. The exposition grounds will have just about an even mile of frontage on this wide stretch of salt water. It is a dead-level tract, for the most part, elevated about ten feet above the water at high tide. Tall pines, water-oaks, hickory live oaks, willows, tulip, poplar, and loblolly and red gum-trees are scattered

The Point in which Pocahontas was Baptized, viewed from Jamestown to Bruton Parish Church, Williamsburg

Bruton Parish Church at Williamsburg, Virginia, where the early Colonial Governors worshipped

profusely over the grounds. They are being used to much advantage in a decorative way by the landscape engineers now at work. Trees from other lands are being brought in to heighten the effect—the flowering acacia from Asia Minor, the native cypress, magnolia, the Texas umbrella, the fig-tree, the paper-umbrella, and many others.

It is in the spring, when the Virginia foliage is at its best, that the exposition will open. The Jamestown settlers did not land on the low, dreary peninsula, thirty-five miles up the James River from Norfolk, which they selected for their home, until May 13, 1607. But there is a reason for not deferring the opening of the exposition until this time in May. While what is now the island of Jamestown, and was then the peninsula, was not occupied by the English colonists until the date mentioned, the first actual landing was made at Cape Henry. The time of this landing was April 26. On April 26 the great celebration will be officially opened. May 13 is to be made the date of the first of the long series of spectacular naval and military demonstrations which, at intervals, are to run all through the entire season of the exposition up to the time of its close in the following November.

The general spectacle of the presence in Hampton Roads of this new armada of war-vessels, representing all the great naval powers of the world, would seem to be almost enough in and of itself to guarantee the success of any international exposition. No exposition of the past has had any one attraction quite so striking. Several of the foreign nations interested have promised long stays for their respective squadrons. Our own cruisers and battle-ships will remain in strong force during all of the exposition season. In this connection it may be mentioned that, with the new cruisers, battle-ships, and torpedo-boats coming out in the interval, the strength of the American Navy will be nearly double in 1907 what it was a year ago. One of our rear-admirals recently estimated that there should be present in Hampton Roads, at all times during the exposition, United States war-vessels representing a cost of from \$130,000,000 to \$200,000,000. At no time during the exposition will any of the foreign nations taking part in the celebration be unrepresented. They will, all of them, from April until November, have at least one or two war-vessels on duty at Hampton Roads. It is going to be one of the greatest events in international military and naval festivities and festivity that there is on record. What will be the resolution of our army and navy officers, who are to bear the heat and burden of the day during all that devastating ladder campaign, after it is over? Another matter. Congress has appropriated \$250,000 for this and other features of the army and navy participation, but the government entertainment money will be only a drop in the bucket compared with the amount that will be spent in seeing to it that the officers and men of the foreign fleets and military detachments have a good time while they are on our shores. Virginia has never been accused of lack of hospitality, and Virginia hospitality will be on its mettle. The wave of entertainments will overflow the boundaries of Hampton Roads. It will reach Richmond, Washington, and Baltimore. Philadelphia and New York will get a touch of it. The cities of the whole Atlantic seaboard, from the Virginia Capes to Sandy Hook, even included, in a word, in heart into a sort of glitter of gold lace and brass buttons.

Thus far but few of the special navy and army programmes

events have been fully determined upon. In fact only two are definitely settled. Directly in front and in plain view of the exposition grounds occurred the civil-war duel between the *Monitor* and the *Verrill*. In the very water where it took place, this battle, which revolutionized naval warfare, will be repeated. Among the spectators will be scores of descendants of those two historical craft. They will see their two grim old armor-clad fighters wrapped in smoke and roaring their thunder at each other in a repetition of all the smash and crash of that deadly contest which was destined to put wooden craft as completely in the back number class of war vessels as are the ancient triremes. In the towering masses of the floating fortresses of steel that will hover all about them, the moderns themselves will hardly be able to recognize their own offspring. But the huge modern battle-ships and armored cruisers will be the literal descendants of the *Monitor* and *Verrill* just the same. Dating from that battle the age of wood in naval architecture was swept into historical twilight and the dawn of the age of iron and steel came at one stride.

The old civil-war monitors in possession of the national government were not long ago consigned to the scrap-heap. Only one was saved. This was the *Verrill*. The *Verrill* was spared in the general execution. But it was only a reprieve—a reprieve granted solely that she might take part in this reproduction of the *Monitor-Verrill* duel in Hampton Roads next year. That will be the old-time monitor's positively last appearance on any stage. At the Jamestown celebration the honored old craft will make her final bow to the world and to the country she once served so well. With the vanishing of the footlights and search-lights of the great Tercentennial spectacle the last of the civil-war monitors will vanish behind the scenes forever—vanish on those very waters where once in her presence seemed to pivot the question of a country united or a country rent in ruinous separation. It hardly seems high-flown to conceive a dramatic fitness of place and time in such an exit—a place where the waters, as gallant Pittsburgh Lee said, are deep enough to drown all nationalities a time when the people of a united country, with all the nations of the world looking on and quietly sharing in the event, are assembled to commemorate the beginning of all things in the country's history. This gathering of all the States in old Virginia, brought together in a common sentiment of patriotism to celebrate the founding of the first of the English-speaking colonies, was a feature of the Jamestown celebration that appealed strongly to General Lee. It was in that connection that he always spoke of the waters of Hampton Roads as being deep enough to drown all bitter memories of sectionalism in our country, as well as broad enough to float all the navies of the world. Upon the sentimental value of this idea in intensifying patriotism, and upon the practical value to our militia of being brought in contact with the soldiers of our own regular army and with those of the regular armies of other nations, General Lee, in all that he said and wrote about the Jamestown event, put great earnest emphasis.

Besides the *Monitor-Verrill* event, still another and more practical war spectacle has been arranged. This is to be a game in the warfare of to-day. Under the cover of all their guns, our fleet will endeavor to land men on the Sewell's Point shore, while

The old Octagon Fort Powder Magazine at Williamsburg, Virginia

The only Ruins of a Jamestown Raidecrer. The Ambler House, which was destroyed by fire in 1692, was rebuilt, and burned again in 1804

the soldiers of our regular army will endeavor to prevent their doing it. This, of course, will be purely an army and navy affair. For the public it will doubtless be a sight worth seeing. For the men of the navy and the army, and particularly of the State militia, it is hoped that it will be one not without value by way of tactical instruction. There will be many other lessons in military science during the long Hampton Roads campaign, but this at present seems to be the only one definitely formulated.

But the great lesson of all in the Jamestown celebration will be the lesson in American history. It was said above that though the exposition was the second number on the programme there was yet to be an exposition. So there is, and it will be more than anything else an historical exposition. Even the naval display will run into history. Alongside the modern arm-of-war and some of the latest types of modern transatlantic passenger-steamers there will be anchored reproductions of all craft made by man from the earliest ages—triremes, such vessels as brought the Jamestown settlers over in the seventeenth century, the caravels in which Columbus and his followers crossed the sea in the fifteenth century, and so, through the entire range of marine architecture.

American colonial history is to be illustrated in every conceivable way by collections, charts, and maps of all sorts. For that matter the country about Hampton Roads for miles around is strewn with the most impressive landmarks of our country's history to be found anywhere within an area of like size. The colonial era is represented by the old mansions of the James, by many time-stained churches going back to the very days of the Jamestown settlers. The climactic event of the Revolutionary war, the surrender of Cornwallis, occurred in Yorktown, only a few miles away, where the old houses that were there during the siege still stand. And then there is Williamsburg, the second seat of government, and Jamestown Island itself—all close at hand. An electric railroad to be constructed will link all these places up with Norfolk and make them, in a way, part of the historical exhibit of the exposition itself.

It is, in fact, straight to historic Williamsburg that the chain of events which culminated in the pending international event leads back. A high wind and a hard frost set the ball rolling. The high wind blew down the old Powhatan chimney, and the hard

(Continued on page 109.)

John Smith's Jamestown Settlement as it appears Today, with Civil-War Fortifications in the Background

The Presidential Election in France

By Ernest Dimnet

Paris, January 5, 1906.

ON November 18 the seventh and last year of M. Loubet's mandate came to an end, and conformably with the Constitution his successor will be elected on or before January 18.

The election of a President of the Republic naturally causes considerable excitement in France. The Presidency is the highest object of the politician's ambition, and the election affords the one occasion of knowing approximately which way the main political stream is flowing, as on no other are the Senate and Chamber permitted to convene in congress. Yet it must be noted that the curiosity of seeing who for seven years is to sit in state at the Elysée is the chief cause of the general excitement. In other words, it must be owned that the universal interest proceeds more from a sort of political fallacy and superstition than from a higher and really intellectual motive. A few lines will suffice to prove that there is no paradox in the statement I have just made.

It is an unfortunate fact that the President's power is very limited, and by no means to be compared with that of the President of the United States. The French President is supposed, like the head of every other country with a parliamentary constitution, to act as a counterweight to the legislative power, as well as to execute its decisions. But in reality the President never votes a law. The one instance of an attempt to do so was the refusal by President MacMahon, on May 10, 1877, to endorse an act against the descendants of the old reigning houses. It cost him his position. The Chamber vetoed his veto and the country supported the rebellious Parliament. The plain fact is that the Chamber is the one all-powerful organ of government in France. The Senate hardly ever modifies a bill drawn up by the Lower Assembly, and President after President is content with signing what is offered for his approval. It might be said that the President has indirectly some influence on the trend of politics, as he chooses the ministers. But this too is only semblance. The President does not choose the ministers; he only commissions possible Premiers to choose them from members of Parliament agreeable for the moment to their brethren.

The process is very simple. The future Prime Minister, summoned by the President, draws a list of the names to be included in his government and submits it to the leaders of the various "groups" of the Chamber. The latter give him their opinion of each minister-elect in succession, and from their decision he gathers whether his majority will be sufficient or not, and accepts or declines office in consequence. So the ministers are, after all, chosen by the Chamber and not by the President. In fact, President Loubet has known during his seven years' tenure Premiers as different as M.M. Méline, Bourgeois, Waldeck-Rousseau, Combes, and Rouvier. Consequently we do not commit ourselves very much by saying that the President's election will have little effect on the course of political events. The real interest of the election lies in the tendencies it will denote in the Chamber and Senate.

The most interesting candidature is that of M. Doumer. This gentleman is little more than fifty years old, and seems to possess in a high degree what is called the political temperament. An altogether self-made and self-taught man, he was in Parliament

before his fortieth year, and soon made his mark as a specialist on finance. Endowed with extraordinary energy, he, in a few years, thought Parliament humdrum, and got the appointment of Governor of Indochina. He remained there five years, during which time his activity had free play and he could assert his taste for responsibilities and independence. In the Chamber he had been an anti-clerical opposed to M. Méline, and a bustling freemason. In Asia his ideas on religious affairs seemed to cool down, and he was disappointed of M. Combes's violent policy that he returned in Europe on purpose to fight it. He had not resumed his seat many weeks before it was evident to all that he had come back with far-reaching views, and thought of nothing short of the highest rank. He made the most of the delation affair, seceded from the Freemasons, was excommunicated by his lodge, and almost at the same time succeeded in obtaining the presidency of the Chamber, which election soon brought the complete defeat of M. Combes. Since then M. Doumer has been regarded as the champion of the comparatively moderate views of M. Rouvier—that is to say, he is a patriot, a militarist, and an anti-socialist, and his election would mean that M. Jaurès and his socialist friends were steadily losing ground. About January 10 he will stand for the presidency of the Chamber—an election renewed every year—and his success or failure will foreshadow the issue of the more important election coming a week later.

For a long time it was thought that his chief opponent would be no less a person than M. Combes himself. But the ex-Premier has no doubt made up his mind that his failure as Prime Minister is too fresh in the memories of electors, and he now will support M. Fallières, the present president of the Senate. Whoever has seen this gentleman in the chair of the Senate cannot have thought much of his appearance. He is about sixty-five, but he looks older, and seems hardly less sleepy when he stands, big, round-shouldered, and ungainly, to read some text, than when he sits, turning a weary ear to the dreary drone of the Upper House. With no exceptional talents, M. Fallières has had a very smooth career, getting office before he was forty, and being president of the Senate for nearly ten years. He is the regular type of the old-fashioned republican and anti-clerical, and his very lack of energy may help to secure him the votes of the hesitating and timid.

M. Bourgeois seems to me, in spite of all that is heard to the contrary, a very possible President. A few years ago he lost his wife and daughter, and since then he has kept aloof from politics, indulging his passionate taste for music, and living almost in solitude. But he is a man of quite exceptional powers, a clever administrator, a good center, and despite his retirement, no change of government taken place, no difficulty—like that with Germany, for instance—arises, without his name being on all lips. He is and has always been a radical and anti-clerical, with only the programme of his group. He left the Chamber for the Senate only a few months ago, and it is difficult to account for this step without suspecting that he took it in view of the coming election.

The election of the president of the Chamber will make predictions comparatively easy for the reader of these brief notes. If M. Doumer is elected and no distinct mention of M. Bourgeois is made at the time, the chances will be for M. Doumer against M. Fallières.

M. Doumer

M. Bourgeois

M. Fallières

The Three most Prominent Presidential Possibilities in France

Bill's Ride

By Charles A. Selden

THE leading physician of Axo Handle, Idaho, was named, among other things, Bill, which, for the purposes of this chronicle, will suffice.

In the effete East he had an "old college chum," one Jim, who had garnered much of this world's goods, among them a railroad presidency and an income perilously near eight hundred dollars a minute. At about the same time that Jim bought a seat on the New York State Exchange for a paltry \$90,000, Bill blew himself to a new case sent for his office chair, having discovered a balance of seventy-five cents in his favor after ransacking up the year's accounts. Bill read about Jim's seat on the Axo Handle Handle (Bill's being duly noted also in another column, entitled, "Important Local Items"), and thereupon wrote to Jim a letter of congratulation, adding that he would like, before death should overtake him, to gaze upon any living creature who made more than \$700 per year. In a few days Jim's answer came, enclosing a railroad pass and a regular "old college chum" invitation to "trick East, freight free," and look things over.

No Bill distributed a liberal advance allowance of pills and powders, brushed his silk hat the right way, and climbed aboard the Eastern train.

The crowning feature of that trip across country came at luncheon-time an hour west of Albany. A porter came through, going from table to table, and calling the doctor by name. When the astonished Bill declared his identity the porter handed him a telegram. If it had come "collected" he would have gladly paid the toll, for the remittance it gave him to receive the message right before all these folks on a train going sixty miles an hour. "By wireless, I suppose," he remarked, trying to look unconcerned, to the man across the table.

Finally he opened it and read: "Leave train at Albany. I'll meet you there with sixty-horse-power car. We'll beat the train down."

The doctor counted the words—seventeen. The wonders of wireless were as nothing. He had grown up with the belief that ten words to a telegram was as fixed as the rule to feed a cold and starve a fever. He counted again, trying to figure how Jim could have eliminated seven words, and had got rid of six of these when the train reached Albany.

Jim was there with his touring-car, and lost no little time in shuffling his friend into it that the hand-shaking, begun in the train-shed, was not ended till the two men had settled back in the tonneau, and before the gurney knew it he was masked, goggled, and enveloped in a fur coat.

"Do we pass the Capital building?" he asked, after the manner of nightbirds, but Jim didn't catch the question.

The chauffeur, obeying instructions previously given, shored the gear-shifting lever over to the top-speed notch, pulled the spark advance around as far as it would go, and threw the throttle wide open. The car began its run down the State with all the speed that the power of sixty wild horses, crowded into four cylinders, was capable of. After a second or so Bill didn't care whether he saw the State House or not. The touring-car was eating up the road, and that was stranger than any sight the doctor had looked forward to. Trees and rocks charged right over the head of the machine, hurled above the head of the chauffeur, cleared the bonnet, and jumped down, miles behind.

"There are the Catskills on the right!" shouted Jim, in his guest's ear.

"Where?"

"Too late now; they were on the right."

At breaks in the road, when

the machine went toward the Hudson, Bill was sure he felt the river flowing right in, over them, and out again. He said so afterward.

Towns hit him in the head. He swallowed villages so fast that he couldn't really tell what they tasted like.

Somewhere ahead he saw the white spire of a country church; the meeting-house itself was, so to speak, huddled down for the instant, so he got the steeple first right through his middle, followed by the rest of the structure.

"I could feel the children of the Sunday-school infant class in the vestry," he explained afterward, "running right through my stomach to catch the trolley."

They overhauled so express-train, and Bill felt ashamed of having ridden on one.

Sugar Loaf fell over toward them, and Bill was so busy dodging the fragments of an imaginary lambside that he didn't see Storm King on the other side when Jim called his attention to it. A little later the machine shot on to a viaduct, and Bill remarked knowingly that they must have reached the famous Poughkeepsie bridge.

"Wrong again," said Jim: "you are seventy-five miles out of the way. This is the Riverside Drive extension. Look quick and you'll see Grant's Tomb."

"Hood," gasped the doctor, "I want to see some of your monuments and public buildings before I go back."

"Show you one of our court-houses, right now."

A swarm of policemen on horses and more on motor-cycles were racing like mad after the touring-car.

Jim asked his private road secretary, who was crouching in the corner, and whose identity or usefulness had not been indicated before, what court jurisdiction they were in.

"Harem, sir. West Side court district begins at 110th Street. It is much better ventilated than Harlem and Coney."

Jim told his chauffeur to keep her at it as far as 110th Street, and then to throw back to the second speed and give the cops a chase.

"I am going to let them arrest us," he explained to the physician. The formality was soon over. Half a dozen members of the automobile squad were in at the capture, and their estimates of the speed at which the offending car had been going ranged all the way from twenty-seven to ninety-three miles an hour. They finally struck an average of forty, and escorted the prisoners to the police station and then to court.

The magistrate called the reporters before him, and lectured very earnestly against fast driving. Of course he said nothing to offend Jim and Bill personally, but he talked severely till one of the reporters broke his pencil and stopped writing.

Then, after ending Jim's name in the Social Register and the Directory of Directors, the judge sharply rebuked the policeman for making an unnecessary arrest, apologized to the prisoners, and dismissed the complaint. He was even courteous enough to ask Jim and Bill to sit on the bench as his guests to study human nature at close range. But there wasn't time for that. Jim explained that he had merely slowed down to thirty-five miles an hour for the arrest, so that his friend from Idaho could get a glimpse of one of the court-houses.

"I thank you, gentlemen: I thank you for your interest in my institutions," replied the grumpy judge.

"Were we really arrested?" asked Bill as they climbed back into the tonneau. "I've never been arrested before in my life."

"If you don't mind a little untidiness"

Half a dozen members of the Automobile Squad were in at the capture

"And never indicted for anything!"

"Why, of course not."

"Well, Bill, you have lived a quiet life. I shall introduce you at the club, if you don't mind a little society, as a friend who has never been indicted."

The repeated claims were not arrested again that day, but in the course of a week of motoring Bill managed to see nearly every police court in town. And everywhere—that is, with one exception—they met with the same courteous treatment. The magistrate who was hostile to them fined Jim \$10, which the secretary paid promptly out of the touring appropriation.

"I don't care for the lot," remarked Jim, "but I'm sorry to have you get such an impression of our judiciary. Even on the bench you'll sometimes find a person who is not a gentleman."

Bill stayed ten days, and if he saw anybody with an income of less than \$7,000,000 a year he didn't know it. He did not meet him socially.

From the rising of the sun on the first day even into the going down of the same on the tenth day, Bill's visit was a multicolored whirl of doings. He missed only two things during that time, and those were the sunrises. From the moment he was permitted to climb into the car and gilded thing Jim called a Louis Case had until he was coaxed out of it toward noon of the next day. Bill was conscious of nothing. He was, however, subconscious of a great deal, and this was made manifest by sudden frenzied leaping from the bed to escape a purple and red touring-car shaped like a champagne bottle, which was driven by a red hick-go with a search-light instead of a head. Then he would say, "By Jinks!" wipe the cold drops from his furrowed brow, stagger back to the Louis Case arrangement and pray for daylight. And all the time Jim was asking him if he wasn't enjoying himself.

One day says Jim to Bill, "Come up to the Mobilignaire Club; I've got a man to see up there—and the air will do you good."

It was the fourth day, and although the amount of good Bill had been done was all-sufficient for his immediate needs, Bill said he would stay by as long as he held together, and up they went. Of course they went in Jim's 90-horse-power Buarawash car. Bill wondered why it wasn't called 90-police-power, because Jim swore it would require an entire precinct even to catch sight of him). For Jim, perhaps, the ride up town didn't amount to much as a performance, but that must have been because he was blasé about seeing people leap nimbly into the air in front of the car, make two turns (three sometimes, although this seemed to be optional), and come down after the machine had passed.

At one point of the way, where Bill thought he saw twenty streets, filled with cars, wagons, and people, coque together at all sorts of angles under a trellis of lofty elevated railway tracks, and which Jim designated as Broadway and thirty-fourth street, there was a slight diversification which caused even Jim to take notice. The car had been going along rather smoothly for a two-wheel-on-the-ground-at-a-time spin, when suddenly there was a slight jar and several bumps were seen to fly about prodigiously, one narrowly missing Bill's head. (Jim looked annoyed for a moment, and, slacking the car's pace, ran alongside a policeman who was engaged in a linguistic contest with a motorman, an impetuous fellow on a drag, and an old lady in spectacles and black bonnet who was wanted to know the latitude and longitude of the City Hall and whether it would be quicker to go this way or the other way.)

"Officer," said Jim, stopping the car so that Bill arose four inches, started forward and then came back with a jar, "if something isn't done to keep the crowds from under licensed motor-cars I'll have to report you to Major Gingham. I wish you'd both around down there and see what it is that makes the driving-chain work so hard."

Bill peered over the side and thought he saw a human hand, sticking out and waving feebly.

"Look, Jim, there's a han—"

"Oh, never mind," replied his dear old chum, with a careless gesture; "whatever it is, the officer will take it out."

The policeman called up a couple of laborers who had been playing the "Battle of Prague" with sledges on a roustabout part of the elevated structure, and with a jerk they lifted the machine and dragged out a slender man with gold rimmed spectacles and a pained beard. He was dusty and somewhat crumpled, and as they laid him on the pavement he muttered, "Maind-id—head of the Road—Rural Free Delivery—Number One," in tones which were supremely pathetic to Bill, who was for jumping out and feeling him to see how many of his bones remained unbroken. But Jim restrained him.

"Ah!" he said, with evident relief as the men let the car down, "only one of those commuters. Officer, something must be done to keep them in New Jersey, save us certain days. We can't have them running loose like this in a modern community. Send that man home and tell him to be more careful. I've lost at least fifteen minutes already." The next thing Bill knew was nothing, because he awoke. When he regained consciousness he was in the Mobilignaire Club, with Jim bending over him saying, "Pull yourself together, old fellow, we're about to start for home."

On the tenth day Jim insisted on giving him a touring-car as a souvenir of his trip.

"Don't be afraid to have one," he insisted. "You can save three

"Don't be afraid to have one"

He took them all for a ride

thousand a year in the expense of operating it by running it yourself and keeping it in the barn instead of in a garage. Think of that, Bill; think of saving \$3000 a year. It's a simple little car, too, only forty horse-power, something I used myself several years ago. Of course it shudders more, and you'll have to look out for the lever, but it doesn't shudder much."

"All right, send it along, Jim; but, I tell you, all Axe Handle will shudder, whether the car does or not."

So Bill went back to Idaho, and the car got there two days later. It was the first machine in Axe Handle, and the whole village turned out to see the doctor make his initial round of calls in it. The village council called a special session just on account of Bill to frame speed-limit laws. A deadlock between the advocates of five miles an hour and the rash members who approved of seven was broken only when the councillors compromised by voting unanimously to exclude motor-cars from the corporate limits altogether as a menace to public health. That vote wasn't rescinded till the doctor had taken every murder to ride in the machine and told them what a fair set of juries New York had.

But the easily terrible difficulty with the council was the least of the doctor's troubles. He felt the need of another practitioner in town, with whom he could be openly at war, but secretly in league. For in saving the three thousand a year by being his own chauffeur, Doctor Bill did have run-over mishaps, and so acquired patients, whose payments for professional attendance didn't match their bills for damages for personal injuries. And, of course, not being a veterinarian, he could get no discount at all after running down a cow.

That old bill against the chair-mender was wiped out completely, and the balance was in favor of the upholsterer after the touring-car became unmanageable one day and lay'd right through the front of the shop.

That thing outside began to perform

But these were trifles, just trifles. One day the touring-car shuddered and shuddered more than ever before.

Bill heard and knew what was about to happen, but could not go to the rescue. He was in a patient's house, with his fingers pressed professionally against the pulse of the richest woman in Axe Handle, the one person who enjoyed being sick more than anybody else in all Owyhee County, and who could pay for the luxury. So what could Bill do? The patient was having the time of her life that day with a new disease she had just read about, and the physician was assuring her that her condition was grave indeed, when that thing outside began to perform.

The vibration increased, the clung-chugging grew into a roar. The lever simply couldn't stand it any longer, but shuddered itself out of place and fell. The clutch caught, there was a rip and a bang, and Jim's simple little gift was off on its own hook to run amok in Axe Handle.

Bill heard the crash of lumber, their shrieks. But it was the hour in which he showed the stuff that was in him. He kept his finger on that pulse until the second-hand of his watch got round to sixty. With a forced calm he put a pink powder in one glass and a white powder in another, and told the women to take one every half-hour. Then and not till then did Bill go forth to see what was left of Axe Handle and to learn the extent of his own ruin. Half of the inhabitants cursed him, the other half yelled to him to hurry to minister to the dying.

It was his busy day. All told, he took 250 stitches in the population of Axe Handle before night; he set legs and arms till the next morning, and promised to pay for a new motor-stone as soon as he got time to attend to it.

But the village wasn't in with its physician. They worked rings for his professional services. The doctor, who had been kicked by a horse that day got free treatment by declaring himself in as a victim of the touring-car. The miller, who had been caught by a bolt in his own grist-mill and carried over the shaft, haughtily ordered Bill to set four or five ribs for him. However, the doctor loathed the deception when the miller became delirious with pain and told the truth.

The touring-car wasn't hurt, but Bill vowed that he never would ride in it again—at any rate, not while visiting the sick. He realized that it was still worth forty horses, and that fast grace and grace in the doctor's imagination till it suggested a scheme that saved him from all his troubles.

While attending the crazy miller he had noticed that the motive-power for the grist business was furnished by just one squawed horse flapping around a circle. And the miller was a rich man. Bill would have forty grist-mills and be forty times as rich. He would lead that wild, death-dealing car into the peaceful paths of commerce and industry. That's just what he did do. He transferred the power from the rear axle to the shaft of a new grist-mill. There was power to spare to saw trees into lumber, and at the harvest-time he did the threshing for all the county.

The other grist mills and sawmills and threshing outfits had to go out of business. Bill became a flouring and lumber-laden. He was the threshing trust. And Jim's next meeting with Bill was when they were both summoned to appear before a Congressional committee at Washington in a proceeding against Jim for giving rebates and against Bill for accepting them. But the evidence was sufficient to convict.

THE AUTOMOBILE SHOW AT

This year there are two automobile shows in New York, one at Madison Square Garden, the other at the effect. A scenic drop at the back represents a mountain village. The amphitheatre is divided by a Cor

Buchanan's Wife

By Justus Miles Forman

SYNOPSIS OF PRECEDING CHAPTERS

The opening scenes introduce the reader to Herbert Buchanan, a man of selfish and repellent nature, and his beautiful wife Beatrice, who has been forced into a mistaken marriage with him because of his money. Beatrice has had, previous to her marriage, a love-affair with a young explorer, Harry Farley, her husband, realizing that she is unhappy with him, and actuated by a malicious jealousy, insists upon her leaving Farley to join a house-party at their country-place, Buchanan Lodge. Farley arrives before dinner, and, during a brief moment together, he and Beatrice discover that it is still of her marriage they are still as deeply in love with each other as they were before.

At dinner that night Buchanan, in the presence of his guests, indignantly refers to the former attachment between his wife and Farley. Shortly after, it becomes apparent to Farley that his presence to the house is ill-advised, and he determines to leave on the following day. Late in the evening Buchanan retires to his study in the house. While he is there the room is entered by a stranger, whom Buchanan accedes in covering with his revolver, something him to disarm. Buchanan recognizes him as an intruder who had previously been warned from the grounds. Late in the evening Buchanan confides to his maid that he has the best of the life he leads. The burglar suggests that Buchanan throw in his lot with him, conceal his identity, and become a bandit.

CHAPTER IV.—(Continued)

IN THE ROOM WHERE THE OLD DAY

BUCHANAN stared at the lean, still figure and the cold eyes across from him for a long time. Then he turned and began to walk up and down. Something subconscious in him, something which was on the watch, warned him before he had moved away, and he took the pistol with his hand as he went. The figure across the table, which had all at once drawn itself up tense and rigid, relaxed again with a little sigh, and the blue eyes fastened themselves upon those calm, imperturbable eyes of Beatrice seated in his shadow, and became fixed there as in a trance.

Buchanan tramped the floor. At times he muttered under his breath, but the words were unintelligible, well might be said. At times his free hand—the hand which did not hold the pistol—waved or beat the air or clenched feverily in some haphazard gesture. Once he halted near the lighted table and made as if to speak, but, after a moment, moved away again to his interminable tramp up and down, and up and down. At last, after it may be, ten minutes of this, he came to a halt beside the other man. His face was white and drawn and his eyes burned strangely. He must have been under very great strain.

"But how?" he demanded, weakly. "How? I—I know nothing of such a life. I should be helpless as a child. It's all very well to dream about and long for, but practically I simply should not be able to get on."

"There," said the man in the armchair, "is where I come in." And again Buchanan stared at him in dull incomprehension.

"Ah!" he said at last, and for another turn or two took up his march.

"Look here!" he said, when he had returned. "Let us talk business for a moment. Believe me, I do not wish to trouble you or to pry into your affairs, but I should like to ask you a few questions. You are, I take it from your mode of entering this room to-night, a professional thief?"

"Yes," said the other man without emotion. He looked up at his host with cold curiosity.

"You come here," Buchanan continued, "in the hope of being able to steal money or valuables which you could convert into money. Therefore money is a consideration to you?"

"Money," said the other man, "is a necessity to me. You underestimate the case." Buchanan waved up impatient hand.

"I have in this room," he said, "safely locked in a safe—

which I fear you would never have discovered, for it is well masked—something over a thousand dollars in money—ten, twenty, and fifty dollar bills. I offer you one thousand dollars to leave this house with me to-night and spend one month in my company tramping the roads, teaching me how to beg my bread, how to live in the open, and how to behave myself when I meet others of my profession."

The hint, still face before him for the first time gave signs of feeling. The feeling appeared to be unmitigated amusement.

"Are you—serious?" demanded the man in the armchair.

Buchanan's white face whitened suddenly, and something like a sob broke from him.

"I wish! do I look as if I were joking?" he cried. "I tell you I can bear this life no longer. I shall find some miserable set-up of exchange and blow my brains out. I do not get away from it all. Don't you understand? Don't you understand? You said, did it. It was that which made me say what I have said. I thought you understood. I thought you felt what I feel."

"Oh, yes," said the other, "I know how you feel, but—but what do you want to tramp for? What do you want to beg for? You could wait until to-morrow and then get together a great deal of money—how much money could you get together—and you could slip away to the other side of the world and live like a prince under another name. For that's what, what do you want to beg for?"

Buchanan turned angrily. "That's my affair!" he said. "In time I may wish to do what you say. For the present I wish to live close down against the earth—unseen, unsmiled, as I have said. Put it that it is a mad whim, if you like. Put it anyhow you wish to. The point is, will you help me for one thousand dollars?"

The other man did not immediately answer. He had lowered his eyes once more, and they seemed to commune with Beatrice, beyond in the shadows. His face was again a mask—expressionless.

"If you require other inducements," said Buchanan, "remember that I am counseling your entrance here as a thief! Some men would have shot you down at once if they had been in my place. Remember that if I pleased I could ring an electric bell now and servants would come and take you in charge, and to-morrow you would be in jail. I do not like," he explained, half apologetically, "to make use of threats, but I am rather desperate. I am ready to use any method which presents itself."

The man in the armchair nodded.

"I am not forgetting that you don't shoot," he said. And all very well he gave a little sigh.

"When do we start?" he asked.

Buchanan's voice choked.

"Now," said the other, "now! What time is it? You differ! I must change first from my clothes. I have them under in that large wardrobe."

He crossed the hall to the wardrobe—a great thing made of solid, polished American pine. And he told the pistol to him, and he proceeded to change from his evening clothes into some worn, shabby, with heavy scuffleable boots.

"This is my sword, as you might say," he explained across the space. "This man is a good American soldier. And he told a few clothes here. It is lucky I do."

He rolled the discarded dress-clothes into a sort of packet, and after a moment's search brought out a small game bag which hung in the wardrobe. Into this he put the garments, and slung the strap over one shoulder.

"I have a fancy," he said, laughing, "to disappear, as it were

into this air, leaving nothing telltale behind me. So I shall carry these clothes away and hide them somewhere—down them."

Next he went to a very beautiful Japanese cabinet, with doors of gilded and painted wood tracery. He opened it and pulled aside a curtain and the door of a safe appeared. He opened this in turn, and took from it a small parcel which was bound with yellow bands. The parcel he put into the pocket of his coat.

"Now we're ready," said he, and came forward once more to the table where the lamp stood and where his visitor sat in the armchair. The man rose.

"How about money for yourself?" he asked. "You can't go quite penniless. At least it would be foolish."

"Oh," said Buchanan, "I have five or six hundred dollars here in my pocket besides your thousand." It is possible that this was just what the other man had wished to know, for the lids drooped over his hard blue eyes for the fraction of a second.

"And afterwards?" he persisted. "What if you should want a large sum—to do as I said, to travel, or something like that? How are you going to get it?"

"Ah!" said Buchanan. "That is worth thinking of." Then, after a moment, he nodded.

"That's all right!" he said. "I know how to manage. I shall be able to get all the money I want. I have a way. Off with us now! Good-bye! must we wait here forever? I'm sick to be gone. Everything here is hideous to me. Off with us!"

The other man regarded him from narrowed eyes.

"You're not going to leave any word?" he said, in an odd tone. "You're going like this without letting them know what has become of you?"

You said you had a wife. Aren't you going to—"

"No, I'm not!" broke in Buchanan, fiercely.

"That's my affair; I'll go as I please. Let 'em think I've died if they like—or anything else."

The blood rushed to his head in a sudden spasm of hatred and bitterness.

"Let 'em think what they like and do what they like!" he cried.

"I'm done with them." His face twisted into its grin of malice.

"For once," he said, sneering, "I shall be of interest in my friends. For the first time—"

What are you smiling about?"

"I was just remembering," said the other man,

"what you said, not long since, about my being a cold-blooded fish. I was just thinking of that."

"That's all." He turned and led the way across to the open window.

Near it he stooped for the pistol that he had dropped there, but Buchanan cried out sharply behind him, and he struggled his shoulders and went on empty-handed.

The two dropped silently out of the window to the turf below and stood there listening. There was no sound save the wind and, presently, the whistle of a train very far away. The night had turned cool, almost chill,

and a strong wind bore in from the sea, driving a rack of clouds overhead, so that the moonlight—the moon was low in the west by this time—came through intermittently in sudden floods of silver.

"There's no one about," said Buchanan, in a whisper. "The gardeners will have gone to bed long since." But as he spoke there came from the darkness beyond them a sound of pattering feet. They wheeled to face the sound, and then Buchanan broke into a nervous, gasping laugh.

"It's only a dog," he explained. "One of the dogs has been left at large."

The beast came to Buchanan's feet, peering and sniffing, and then, with a little whine of recognition, began to jump about him and to lick his hands. It was a great basset, a beautiful animal of preternatural dignity, and for some obscure reason it loved its master. Probably it was the only creature in the world upon whose knee Buchanan could count.

He spoke to it in a low tone, patting its head with his hand, and then sent it away. It went unwillingly, turning back a white head as if it realized that something was wrong.

Then the two men started down the long slope of the gardens, past the artificial pond, with its summer-house and pergola, and so gained the dark shelter of that double row of firs which hemmed the drive. Down by the gates, a full half-mile from the house, they halted and looked about them for moments of exit.

They were, of course, closed, and they were well-nigh impossible to climb, for they were made of vertical iron bars, which broke into an ornamental scroll only at top and bottom.

"This tree will do," said Buchanan, finally. "Up with you!"

A cedar grew almost against the twelve-foot wall, and its lower branches were strong enough to bear a man's weight.

The man with the blue eyes went up and over as nimbly. Buchanan heard the soft thud of his feet as he dropped on the other side, and then

himself made ready to mount. But first he turned and took one last look at Buchanan Lodge.

The great pile lay upon its bright of ground, black and squat and still against the torn sky.

There was no sign of life about it save that, even so the man turned to look, a single light, a tiny pin-point of yellow like a star, broke out in one of the windows,

high up near the rear of the house. The servants were quartered there. In another instant it was gone and the lodge was dark again—a blot of ghoul against the streaked sky.

Some vague pang of fear, of regret, of loneliness, may have awakened in Buchanan at that moment, for he drew a quick sigh, and his face, in the moonlight, was troubled. Then he turned and, as nimbly as his companion had done, mounted to the wall's top and dropped over upon the turf by the roadside.

They went

"Are you serious?" demanded the man in the armchair

along the road eastward, walking rapidly and in silence for something over a mile, then, beyond the last limits of the Buchanan estate, turned once more towards the sea, and, for another mile, traversed the wind-swept upland which is open and barren there. Fences and low stone walls they had to elude, and thickets of low shrub growth they had to make their way through, but they went silently, without an unnecessary word.

They were bound for Haverford, where they were to take the west-bound local train at five in the morning, but, on the way, they were to stop at a certain abandoned and partly demolished farm-house under the brow of a wood, and near an old stone quarry, where the man with the blue eyes had been making his headquarters. There he was to pick up his scanty kit and Buchanan was to shave off his beard and mustache.

For a long distance, as they traversed that desolate moor, they had to walk in single file along a very narrow footpath which was flanked by high growing thistle and wild raspberry and such. Buchanan, in his experience, walked ahead, it was here that the other man spoke for the first time since they had started.

"When do I get my thousand dollars?" he asked. Buchanan laughed back over his shoulder.

"At the end of the month," he said. "You see, you can trust me, but I'm not altogether sure that I can trust you. You might leave me in the lurch. Yes, I think I'll hold the money for a bit."

To that the other man made no answer. He only plodded on behind his companion. But it may be taken for granted that he was thinking. Indeed, whenever the moonlight broke through that rack of driving cloud Mr. Buchanan might have seen, had he turned his head, that those hard unsmiling eyes were very steadily fixed upon his back (just between the shoulders, and that the man's face was graver than common, grave enough to drown the statement that at last it expressed something.

One may hazard a guess at his thoughts. One may at least risk the opinion that they dwelt upon that thousand dollars. Thousand? No, fifteen hundred—sixteen! Had not Buchanan said that he had five or six hundred for his own use? Sixteen hundred dollars! A sum, that! A sum to one who lives from hand to mouth and always in terror of the law. Sixteen hundred dollars! Sixteen hundred now ready to the hand or—a thousand after a month's absurd tramping about. Which to choose?

The unsmiling eyes never stirred from Buchanan's back, the feet plodded doggedly on in the other man's tracks neither losing

Drawn by Will Gould

His body seemed to crumple into a limp mass, and he went down and lay very still

Again Buchanan laughed. "No, I shouldn't!" said he. "What a fool I'd be, eh?" Just then he stumbled and nearly fell, and said: "The devil! One of my best-hares is untied," he called out. "Wait a bit" and bent forward on one knee to tie it. He had shoved the pistol into a side pocket. Richied him, though he did not see, the other man had stepped a pace closer and both his hands were hidden.

It was just as Buchanan started to rise that the knife caught him under one shoulder-blade—an ill-driven stroke because his back was turning at the time, but deep.

Buchanan coughed and fell forward on his hands and knees. After a moment, with a great struggle he forced himself up again into a crouching posture—then to his feet. The other man stood away.

"I didn't—shoot you when—when I—could have!" said Buchanan, saying. He coughed again, a wet cough this time, and put his hands to his breast as if he suffered pain there. Then all at once his knees gave under him and all his body seemed to crumple into a limp mass and he went down and lay very still.

The other man stood apart. He hid his face with his arms and sobbed with great straining sobs. So it seems that he was capable of emotion, after all. He sobbed for some moments with his face hidden, and once or twice he spoke, but the words were hardly

nor gaining ground, but one hand slipped into the jacket pocket and withdrew a curious knife—a hunting-knife. The other hand slowly and silently opened the blade. It was a long blade—nearly six inches long. Then hand and knife settled back into the pocket together.

They were near the stone quarry by this time, and turned off away from the sea to skirt its precipitous edge. It was an old quarry and long since abandoned. Turf had crept over the ancient cuttings, wherever turf could cling, and little gay flowers and gnarled shrubs had grown up out of the earth-filled crevices. Still the weather-stained rock was for the most part clear, clean, and white under the flashes of moonlight, and down in the depths, a hundred feet or more below ground, pools of water gleamed and wickered.

"A good place for my dress-clothes!" said Buchanan, and, bowing the strap from his shoulder, threw the bag over the edge of the cliff. Some distance below it struck a ledge, for there was a rattle of loose stones, then a tiny dull splash. The pocket had found one of those mirroring pools and was safe from the eye of man.

"You wouldn't care to give me the money now to-night?" said the man who walked behind, gently.

"No, I shouldn't!" said he. "What a fool I'd be, eh?" Just then he stumbled and nearly fell, and said: "The devil! One of my best-hares is untied," he called out. "Wait a bit" and bent forward on one knee to tie it. He had shoved the pistol into a side pocket. Richied him, though he did not see, the other man had stepped a pace closer and both his hands were hidden.

It was just as Buchanan started to rise that the knife caught him under one shoulder-blade—an ill-driven stroke because his back was turning at the time, but deep.

Buchanan coughed and fell forward on his hands and knees. After a moment, with a great struggle he forced himself up again into a crouching posture—then to his feet. The other man stood away.

"I didn't—shoot you when—when I—could have!" said Buchanan, saying. He coughed again, a wet cough this time, and put his hands to his breast as if he suffered pain there. Then all at once his knees gave under him and all his body seemed to crumple into a limp mass and he went down and lay very still.

The other man stood apart. He hid his face with his arms and sobbed with great straining sobs. So it seems that he was capable of emotion, after all. He sobbed for some moments with his face hidden, and once or twice he spoke, but the words were hardly

audible, certainly not coherent. He said something about "in the back, in the back!" and "like a damned coward!" And another time he said: "Decent to me—didn't shoot me when he could have!"

Then, presently, he shook himself violently and took his arms from his face and looked before him—and he shrieked like a frightened animal, for the body of the man he had stabbed was not there.

It was the sound of pebbles and loose earth bounding down the precipice of the quarry that told him what had happened, that the overhanging, half of ground he stood upon was under the body and played with it into those far depths.

He threw himself down and crawled to the edge. There was no more danger now; firm rock was under him. He lay shaking and gasping, and stared down into blackness, waiting for a flash of moonlight. He thought he waited hours. When it came, he saw the sheer walls of rock, it lit those stagnant pools far below. It threw a ghostly silvery sheen upon the shelves near where he lay, but the silent depths were wells of inkly gloom. And they hid their prey—their prey and his.

The moon went under cloud and he waited again, prone, trembling, for he said himself that perhaps the first flash was a false one. Again he thought that he waited for hours. His eyes ached with straining in the dark. A second flash of moonlight came, longer this time, undeniably clear and bright. But those wells of blackness hid their prey. No moonlight could pierce their profundity.

They seemed to the man who lay there staring to mock at him, to defy him. Some cold, intangible horror, something damp and deadly and graveyardish seemed to rack up out of the gulf—seemed to press clamantly against his drawn face—seemed to slip its fingers about his working throat. His teeth began to chatter, and he thought that presently he screamed, but it was only a voiceless gasp.

Then, after a hour, when he had lain for a time shivering, his face flared upward, he stretched his arms toward him, and he made a mighty effort and struggled to his feet, and ran—sneaking and cursing and weeping, through the night. He was not habitually a nervous man, as may have appeared—he was almost

as far from that as a man may be—but on this night fear had him by the heart. Fear unspokenable, coming up like a deadly mist out of that black pit of horror, and he wept like a child and cursed like a madman and bubbled like both together.

He ran as far as the sea cliff, and dropped there with his face to the rushing wind. It seemed to him in his panic that no power of earth or hell could drag him back to the spot where Buchanan lay crushed, with knife wound in the back and sixteen hundred dollars in the pocket of his coat.

Night-birds declined in half an hour he was again hanging over the place—white-faced, shaking, wrestling with naked fear. Another hour and he was still there, sobbing, cursing in the moonlight. Had any watched they must have thought the man a madman.

But when at length dawn came, pallid and gray, bringing a mist of rain, it found as one on the brink of the old quarry. The place was empty and still. Had the man taken his courage between his teeth and descended—on the far side of the excavation the way was easy—or had that grisly terror drives him reviving and crumpled away?

The dawn had no answer. There was no man to be seen. Those rocky gulfs were black even by daylight, so they might still have been guarding their secret—hiding their prey. But no one seemed at all curious about it, for no man ever came there to investigate. Men shunned the place because it looked unwholesome.

In the course of time more rain fell into the pools and more grass grew, and little gray flowers, but no one can bear witness that he ever saw a small lean man with a hard scuffed face and hard blue eyes loitering in the neighborhood or acting as if the quarry interested him.

The man with the blue eyes seemed to have disappeared as effectually as did Herbert Buchanan, of Buchanan Lodge. But while Buchanan's case interested a whole countryside and, through the press, a whole nation, it might reasonably be presumed that the other case would have interested the whole of any.

However, presumptions are at best uncertain and fallible things. It is the unexpressed which works your comedy and your tragedy.

To be Continued.

Fleeting Impressions of Boston

By Sam Davis

Boston, January 10, 1905.

THERE were two things I particularly desired to see in Boston—a chance to inspect Fenell Hall and taste the quality of the baked beans that had made the old town famous throughout the world.

In sitting up the respective grades of interest occupied by these two guides of New England's history, my sensitive stomach gave the loudest call in the direction of the beans, and seeking the best hotel in the city, I found the dining-room with a heart palpitating with expectation. I scanned the elaborate menu, but could not find what I wanted. It seemed as if every dish known to the culinary world was there—all hot beans. I had supposed it would be there conspicuously displayed in bold-faced type, rearing its head proudly above its fellows, but when, after a long search, I found it, I was astonished to discover that it was tucked away in an obscure place, and then merely as a supplemental appendix of another dish. Not "Brown Beans à la Wendell Phillips," but merely "Baked pork, with beans." Even the unimpeachable lobster was linked with the name of Professor Newburg. If I recall aright, and there were "Fried clams à la Victor Hugo." It seemed to me that these great names gave the lobster and the clam a scientific and literary flavor which by all historic right belonged to the bean.

The allusion to Hugo on the menu inspired me with a desire to visit the little house where he wrote his *Les Misérables*, and I gave a colored man a quarter to tell me how to find it.

With a bright smile which reminded me of the late Professor Hermann in his political days, he transferred the coin to his pocket, and with the free hand he pointed to the east.

"Take the Norwoburg car and get off at Washington Street."

I concluded the Norwoburg route must be a sort of temporary trolley-line, and gave up the idea.

My gastronomic idol shattered. I felt back on history, and asked a messenger boy the way to Fenell Hall. He shook his head and passed on, as did several other youngsters in the same uniform. They all gave me the same brand of misinformation as they disappeared around a corner.

I soon ascertained that messenger boys not old enough to vote are not expected to learn Boston in its entirety. The apprentice messenger is only required to locate deftly the hearings in the immediate vicinity of his branch office. They then nurse him and school him along and cozy him into the higher and more complex branches of municipal geography. When he can find his way to his own home after dark without a policeman he is allowed to get out of the kindergarten class. These boys have to live in Boston long enough to get married and raise families before they really know the town. There are streets that run round blocks and overtake themselves, and thoroughfares like a letter S, no distinguishable from lanes which emulate the letter W in its sharp angles.

In looking for any particular number in a hurry you think you are within a few doors of it. A few steps more and you are clear past it. You ask somebody where the meeting-menus have gone to, and he points up a little slot in the side of the street,

which is your hurry you may have mistaken for a side entrance to a saloon, and you find the missing numbers and the houses that have strayed off the main line into that particular cul-de-sac. A tax-assessor working on a percentage would go right past those places and never realize what he was doing.

There is a sociability about the numbers of the streets seldom found outside of Boston. In most cities the odd numbers keep on their own side of the street and expect the even numbers to do the same. In Boston they mix up on even terms, and are cheek by jowl. Nothing unusual about the numbers.

The historic landmarks have the right of way here. When a street hits a historic landmark it shies off to the right and goes around it, and when it strikes another old building where Daniel Webster made a speech or looked somebody or Lloyd Garrison took his first smoke as a boy, it side-steps to the left, and leaves the old building undisturbed in all the pomp and splendor of its ancient associations and revered primordial decay.

The man who conceived the original plan of how Boston should be laid out lost it; and his grandson, finding it up from the depths of an old trunk, utilized it by submitting it to the head of one of the concession bureaus of a world's exposition. He got an exclusive concession, ran it as a labyrinth, and relined a capitalist. The loss of the original plan left the early Boston people to shift for themselves. Hence the lack of uniformity in the municipal map. When you mention this condition of affairs to a resident of Boston he merely remarks: "You should go to Marlborough. If they had the town in Marlborough they'd use it for a race-track."

I attempted to call on Thomas Lawson, and found his place after a hard tussle with the directory and hiring a guide. The door of his office was barricaded with a lot of junk in front, in the shape of iron-work twisted into fantastic shapes. The janitor said that you had to have the signals that would let you in when you tapped on the glass with a pencil. He took a quarter for his tip, and then kindly volunteered the additional information, without further charge, that the combination had been changed the night before, and he would give me the new one as soon as he got wire to it. It was the era of rhetoric, and Lawson, having gone out of politics, was sequestered from the world.

Later in the day I found a restaurant where beans were on the card and I ordered a plate. The waiter gave me a contemptuous look which meant, as plainly as words might say it, "Cheap skate." The beans were so long coming that I think they must have sat out for them.

Again came the keen disappointment. They were about as hard as buckshot and indifferently flavored. In my own home, in Carson City, back in the sage-brush, I have a domestic who doesn't know Boston when she sees the map of Massachusetts, but who could give any one in Boston curls and spasms when it comes to cooking beans.

I do not say this to plant the seeds of pride in her virgin breast, but at the same time it might not be a bad idea for you to send her a marked copy of your article, containing this article, as

Maudie Adams and Mildred Morris ("Wandy") in a Scene from "Peter Pan"

Grace Elliston and Edmund Brasse in "The Lion and the Mouse"

Edith Hackett ("W. S. Smith")

Edith Hackett ("W. S. Smith")

William Faversham in a Scene from "The Squaw Man," at Wallack's Theatre

William Faversham is playing the principal part in Edwin Milton Ross's play, "The Squaw Man," which is having a prosperous run at Wallack's Theatre. Mr. Faversham's part is that of "Captain Waverley," an Englishman who assumes the guilt of his cousin, who has embezzled regimental funds, in order to shield his cousin's wife, for whom the Captain bears an honorable love. He comes to America and begins life over as "Jim Carston," a Western ranchman. Here he meets an Indian girl, "Nant-witch," who has saved his life. Not long after, he receives word that his cousin has died, and that he has succeeded in his fight and escape. "Carston" is tempted to return, but refuses for the sake of his Indian wife. He determines to send his young son, however, to England, so that he may be properly educated; whereupon "Nant-witch" kills herself for grief, leaving "Carston" free to return to England, and assume his new title.

PLAYS AND PLAYERS IN NEW YORK

Music And The Opera

A NEW "FAUST" AND "TRISTAN"

BY LAWRENCE GILMAN

Tristan. Both endeavors were of more than ordinary interest. Mr. Caruso's mode, perhaps, the more emphatic demand upon popular attention, since it was his first essay in a non-Italian part, and, specifically, in the role of Faust in Gounod's opera. It is not, in any intrinsic sense, an important part, for it possesses, as we know it, through Gounod's amiable perversion of Goethe's original, little of essential substance or emotion; yet it is a part that lies quite beyond Mr. Caruso's powers of realization. It demands, for its adequate embodiment, capabilities in which Mr. Caruso is conspicuously lacking. Faust—especially a Faust singing the French text—must needs persuade through his distinction, his gallantry, his gracefulness of bearing, an essentially facile fervor and gentility; and he must exhibit these qualities, not in their finer corner, but as they are reflected through the medium of Gounod's artificial and tedious music. It need scarcely be insisted upon that Mr. Caruso is unfitted by temperament and experience for the embodiment of such a conception. He is nothing if not Italian, and his impulsiveness is of the most energetic and untransmuted order. He is a superb-singer, an incomparable singer, and a sincere, though extravagant, actor. In certain fundamentally Italian roles—Cassio, Rodolfo, Mario,—he is admirable; but his Faust, at least in its present period of development, is scarcely successful—there are times when it even approaches the grotesque; and although the Faust of Gounod may fail to impress one, he should assuredly not dispose one toward mirth; yet Mr. Caruso, at certain moments, was distinctly amusing. There are passages that he sings delightfully, as only he, to-day, could sing them; but his impersonation, as a whole, is unfinished, tentative, awkward; nor does his voice show, consistently, its most characteristic qualities. What the future may make of his Faust one need not attempt to prophesy; but one seems justified in wishing that Mr. Caruso would devote his energies to expanding his repertoire of purely Italian roles, and leave Faust to other, even if to generally inferior, singers.

Mr. Burgstaller's *Tristan* is a more agreeable subject for comment; yet this impersonation, too, suffers from a defect of temperament and natural capacity. Mr. Burgstaller is an artist of uncommon earnestness, vigor, and sincerity; and his *Tristan*, par-

ticularly in the first act, merits very cordial praise—as, for example, his entrance into Isolde's tent in a moment which tests the histrionic power of the most accomplished actor; the impressive incident of the proffered sword; the drinking of the poison. In the second act he was less good—there there was an overemphasis of action, an awkwardness of pose and gesture. In the tremendous passages of the third act he was extravagant quite beyond justification, and in his singing he succeeded more than once to the appalling difficulties which Wagner has set in the way of those who would interpret this exacting and arduous part. Mr. Burgstaller's impersonation, as a whole, is deficient in knightliness and in heroic stature. It lacks the necessary tragic repression in the earlier scenes of the first act, it lacks plasticity and poetic accent in the ecstatic moments of the second act, and it is still less satisfactory in those final scenes which have overtaken the art of every singer save one—the unforgettable De Reszke. If it be possible, however, for Mr. Burgstaller to learn from Van Dyck something of his histrionic subtlety, and from De Reszke something of his exquisite capacity for emotional modulation, we may some day witness in his *Tristan* an achievement of notable importance.

Mr. David Bispham, who, it is announced, is to appear in abundance on the concert stage for the sake of enriching the world of contemporary operetta, recently brought forth into public view a musical-literary production of somewhat unusual character. It was described, upon the programme of the New York Symphony concert at which Mr. Bispham performed it, as "a musical recitation with orchestra." Ernst von Wildenbruch wrote the text, and Max Schillings, of the New-German school of modernism, contributed the orchestral background. The musical recitation is a form which is capable of yielding excellent results, provided there is a harmonious alliance between literary and musical matter of artistic consequence. A similar production, Richard Strauss's "Knach Arden"—a setting for reciter and piano of Tennyson's poem—suffers from the banality of its literary element; while, on the other hand, an earlier instance, Schumann's setting of "Montfred," does suffer from a questionable service. In the case of "Das Heuziell," the work which Mr. Bispham made known the other day, one would be sorry just to it to decide upon the relative artistic status of the two elements involved. Probably one could not do better than leave it to a somewhat overrated future to say which is the unhappy—Mr. Von Wildenbruch in his musical collaboration, or Mr. Schillings in his poet. It seems a pity that, in view of the existence of a number of admirable achievements in this classic, expressive, and unsharpened form, Mr. Bispham should have been so easily satisfied.

A recent Portrait of David Bispham.
Mr. Bispham has lately been heard in New York in song recitals and with the New York Symphony Orchestra.

Correspondence

CORRECTIONS

CHATTANOOGA, TENN., December 25, 1905.

To the Editor of *Harper's Weekly*:

SIR.—In an editorial of the *WEEKLY* of December 23 you intimate that the press of the country is correct in its assertion that Representative Turner, of New York, is the only one who has been elected to Congress from one State after having been a Representative in Congress from another. I have noticed this statement in many newspapers, but the statement is far from the truth. Without taking the time to investigate, I recall two similar instances—Samuel S. (Samuel) Cox was a Representative in Congress from Ohio, 1857 to 1863, and then removed to New York, and from 1869 to 1882 was a Representative from the State of New York. Samuel Houston, who had the unprecedented distinction of being governor of two States of the Union—Tennessee and Texas—was also a Representative in Congress from Tennessee from 1823 to 1827, and then Senator from the State of Texas, 1846 to 1859. He also served as President of the Republic of Texas, but not its first President, as is sometimes published.

I am, sir,

JOE W. WILLIAMS.

NEW ORLEANS December 26, 1905.

To the Editor of *Harper's Weekly*:

SIR.—In a recent issue of your magazine you give Louisiana among the other States which have sent exactly the same delegations that represented them in the last House. In this you are mistaken so far as Louisiana is concerned, because Hon. P. Breaux, who represented the Fourth Congressional District of this State in the last Congress, is now succeeded by Judge J. T. Watkins, who was elected in 1898.

I am, sir,

W. O. HART.

HAS NOT DISCOVERED VULCAN

ANN ARBOR, January 1, 1906.

To the Editor of *Harper's Weekly*:

SIR.—An editorial in *HARPER'S WEEKLY* for October 21, and notes of like import in other periodicals, lead me to remark that the photographs taken with the Lick Observatory interstellar telescopes at Aswan, Egypt, during the recent total solar eclipse have not yet been examined with care. They were shipped from the eclipse station to the Lick Observatory, where, when they arrive, they will doubtless be carefully studied and compared with other photographs of the same region of the sky taken with the same instruments some months earlier, when the sun was in another part of the heavens. Not until such comparisons have been made will it be known whether the photograph is a most precious stock of scientific information. In the mean time I may say that the statement attributing to me the discovery of an interstellar planet—the hypothetical Vulcan—is unauthoritative.

I am, sir,

W. J. HESSART.

CONCERNING ALVARADO

MARICOPPA CITY, January 2, 1906.

To the Editor of *Harper's Weekly*:

SIR.—In a recent *WEEKLY* there appeared a most remarkable article concerning Don Pedro Alvarado, the owner of the Palmilla Mine, near Poreli, in the State of Chihuahua, Mexico. The article in question is of only about fifteen lines, and contains almost as many inaccurate statements.

In the first place, your remarks as to the condition of the labor class in this country are incorrect. The system of "peonage" to which you refer, whereby laborers are advanced sums of money by their employers and held to servitude until such sums are returned, applies only in the most isolated places where it is extremely difficult to secure and hold labor of any kind, and there principally in the southern part of the country on plantations and not in mining districts. In this rule, the Mexican miner is a most independent individual and well paid, especially in the northern states of the republic, where Mr. Alvarado's mine is located. In that particular district miners easily earn under \$1 Mexican silver per day, and wages will range from that sum to \$2.50 and \$3. When any reduction is attempted by mine managers in the rate of pay for the extraction of ore, the most of the miners promptly quit and leave for other mining camps, where they are sure to obtain remunerative employment. Work in all large mines is practically suspended for two to three days following such pay day—most companies pay twice a month and some others—so nearly all of the workmen, upon receipt of their wages, proceed at once to fill up on "tequila" and do not think of returning to work for at least two days.

Mr. Alvarado was never an ordinary "peon." His father owned the Palmilla Mine, and during his lifetime it was not a bonanza; in fact, barely paid the expenses of development work. However, he had great hopes for the future of the mine, and before his death charged young Pedro to hold the property in his possession at any cost, showing him where the rich ore body which has since made Pedro and the mine famous should be encountered. After his father's death the son toiled for years in poverty, developing the mine along the lines marked out by his worthy parent, and finally struck the rich vein in almost exactly the spot indicated by his father.

To-day Pedro Alvarado has probably \$3,000,000 Mexican silver, and the mine, which is estimated by well-informed mining men to be worth five to eight million dollars, silver. The mine has never

yielded anything like \$30,000 net profits per day. Its present production probably is greater than it ever was in the past, and the reports are that the "Palmilla" is now producing about \$75,000 a week, which very likely is a liberal estimate.

The most remarkable statement, however, in your article is that Alvarado at one time offered to pay the national debt of Mexico, amounting, you say, to \$15,000,000. The bonded debt of the Republic of Mexico is \$154,000,000, gold, and Mr. Alvarado would be pushed to pay the interest on this debt. This report started from your editorial remark made by Alvarado in conversation with some friends, and he really did not make any such offer to the Mexican government.

I take the liberty of writing you at length on this subject because I know that it is your desire to make the pages of the *WEEKLY* as trustworthy as they are brilliant and entertaining, and that you always are glad to have your attention called to any inaccuracies which through misinformation on your part may have crept into your editorials. I have the highest regard for your opinions, and therefore draw to your attention the facts about Mr. Alvarado.

I am, sir,

W. R. STEPHENS.

THE MARRIAGE CONTRACT

LAFAYETTE, IND. January 2, 1906.

To the Editor of *Harper's Weekly*:

SIR.—In a recent issue of the *WEEKLY*, a paragraph headed "Victims of the Marriage Contract" states that "Historians of the marriage ceremony show that it was not solemnized in church as a religious rite until the time of Pope Innocent III, A.D. 1193, and was not considered a sacrament until 1442."

I would call your attention to the following facts: S. Ignatius, writing to S. Polycarp not later than 115 A.D., says that "it becometh men and women, when they marry, to unite with the consent of the Bishop."

Tertullian, who flourished about 200 A.D. in North Africa, writes of the "happiness of the marriage which the Church confirms, the obligation of continence, and the benediction of priests" (ad uxorem, ii, 9), and in a later treatise (de Pallidit, iv.) speaks of connections "not first professed in the presence of the Church" as not true marriages. Indirect evidence is given to the part the Church took in the ceremony by the Canon of the Council of Laodicea, about 363, which forbids marriages at certain seasons of the Church year.

If this were not sufficient evidence the presence of a distinct service—or portions of the Mass specially appointed for marriages in the early Roman Sacramentaries of the sixth, seventh, and eighth centuries—would serve as conclusive, while the detailed account of the Western rite as compared with the Eastern given by Pope Nicholas I. in his reply to the Bulgarians in 865, certainly most remove any possible doubt of the Church's position on this most important question in the early days of Christianity.

As early as 1076 an English Canonist, in the absence of a priest a legitimate part of the marriage, seemingly prohibiting in this way any form which did not have the religious rite 122 years before the date given in the paragraph above quoted.

As to the latter statement, "it was not considered a sacrament until 1442," it is enough to show its inaccuracy to say that St. Augustine, Bishop of Hippo, who died in 430, frequently calls it a sacrament, and that it is one of the seven formally grouped as such by Peter Lombard, who died in 1164.

In view of these facts, which might readily be augmented and multiplied, the custom of blessing the contract of marriage by the Church, and in so doing giving it a new solemnity and sacredness, is of an antiquity far greater than the so-called Dark Ages, and the "institution as we know it to-day" instead of being "500 years old" goes back to the first age of the Church.

I am, sir,

CHARLES SMITH LEWIS.

SUGGESTIONS FOR FOOTBALL

PHILADELPHIA, Pa., January 12, 1906.

To the Editor of *Harper's Weekly*:

SIR.—Does not the present (thoroughly justified) agitation regarding football as now played have itself, in the last essence, upon these two propositions: That (1) the present style of play is too rough; and (2) that the evil of professionalism has grown out of this dangerous game?

Could not the first detail be met by a very heroic increasing of the present "penalties"? If off-side play, holding, etc., now cost the offending side five or ten yards, and under certain circumstances forfeiture of the ball, make these losses twenty or twenty-five yards and forfeiture of the ball. Where a player showing unnecessary roughness in not ruled off the field, increase the penalty against his side by a surrender of the ball (when they hold it) or a loss of forty yards. If such penalties should carry the ball across the goal-line let it count as a "mety" against the team offending.

With such penalties the coaches themselves will see that the evil of "unnecessary roughness" becomes a thing of the past,—and there seems no just cause for believing that officials cannot be found to carry any such rules into full effect.

As to professionalism, why not rule against any player taking part in a game during his first year's residence at any college or university? If those who make professionalism possible had to pay a man's expenses for an entire year before they could make use of him on the gridiron, there would at least be far less of that sort of thing than now prevails.

I am, sir,

WARREN JAMES PAIRIE.

Fleeing Impressions of Boston

(Continued from page 31.)

It might make her feel more contented with her environment (and possibly her wages), and give her a happy New-year (without any further unnecessary expenses to me).

I do not, recollecter the tilted English and polite conversation here that I had been led to expect. People give me ordinary American talk without frills, and baggage-masters and burgomasters use the same brand of profanity and slang that one gets in Nevada. Altogether it has a pleasant and homelike sound.

Calling at a stationery-store this morning, I made purchases amounting to twenty-four cents. To get what I wanted a lady clerk had to rummage some stock in the cellar and then climb two stairadders. Considering that her extra trouble and gymnastic exercise entitled her to something, I produced a quarter, and remarked that she wasn't bother about the change.

My action seemed to astonish a number of people who were there driving bargains at a neighboring counter, and I was soon tracked to my hotel by a man who evidently mistook me for a capitalist. He wanted me to subscribe something to help repair an old schoolhouse in which Miss Standish had made a speech on the privacy of the American ballot. I succeeded in getting rid of him by convincing him that all her surplus capital was now being devoted to dredging the Hudson River for bullet-boxes which had been missing since the last municipal election in New York.

The Devil and His Due

"See down, Miss Mary," said Miss Lucia, snipping her fat red fave with the skirt of a calico dress she was making. "I'm clean beat out. 'Twould be easier winder' the pigs myself than to git Paw tied. He's too lary to make a good target. An' the ain't nuthin' the matter with him now. Not, brestways, sence he got shut of his tumor."

Ever know any man in Chicago named Paw? No? Well, you see Paw had a tumor in his side, big as a bucket. He'd et quarts of pills for it, an' drink morn' a tubful of patent stuff, and plasters—well, my Lord! he'd stuck on enough of them to paper the hull house.

"He seen Paw's advertisement, an' nothin' he would dew but I had to give him five dollars to send to the feller for Christian Science absent treatment. An' if you believe it, that tumor began to git down. Well, then I give him three dollars for the second week. Paw wrote he was a poor man an' the feller let down on his price. Paw tied, fur he had fifty dollars in the bank an' no debts."

"Well, after the second week the wa'n't a sign of the 'tarnal tumor, an' Paw was happy as a nigger. But what do you guess Paw dew? He up an' dewed the hull thing, start 'em up'n' walkin' but the work'n' of nature. Yes, that's Paw, too sneakin' mean to let on 'twas Christian Science."

"Now I don't believe in it myself. I wouldn't hev it in doin' a cat nor a nigger. But I says to Paw, 'Paw, you know you had a tumor an' you know you ain't got one now. Give the devil his due,' says I. Not Paw he won't do it."

"It's hard on me, Paw ben' so sneakin' like 'em lyin' so. I don't dust push him too hard, fessin' the tumor 'll come back aling o' his lyin' so. There ain't a sneakin' ev'r, lazzy old man in Eccelesia County than Paw."

What England Buys

The principal articles which form our commerce trade with the United Kingdom are chiefly manufacturers' materials, and manufactures on the import side, and food-stuffs, manufacturers' materials, and manufactures on the export side. While the United Kingdom is not a large producer of raw material for use in manufacturing, at least in excess of her own requirements, she exports considerable quantities of material of this character drawn

from other parts of the world, especially from her colonies. Of our imports of raw wool, which in 1905 amounted to 46 million dollars, about 17 millions was drawn from the United Kingdom; of our imports of pig tin, which in 1905 amounted to 23 million dollars, about 12 millions was drawn from the United Kingdom; of hides and skins our imports from the United Kingdom in 1905 were nearly 7 million dollars in value; of india rubber, a little more than 7 millions; of tea, fat, and hemp, nearly 2 million dollars; of raw cotton, chiefly Egyptian, nearly a million dollars; of cabinet woods, practically a million dollars; while diamonds and other precious stones imported from that country amounted to 9 million dollars.

Millions for Tea

Among the importations of foodstuffs, about 1½ million dollars' worth of tea was from the United Kingdom, about a half million dollars' worth of coffee, and a third of a million dollars' worth of cocoa. Of finished manufactures, which form a larger share of the imports from Great Britain than do any other class, the most important are manufactures of cotton, manufactures of fibers, manufactures of iron and steel, and manufactures of wool. Even of cotton cloths, this cotton producing and manufacturing country imported in the fiscal year 1905 more than 6 million dollars' worth from the United Kingdom, which presumably bought from the United States practically all of the cotton contained therein, and after transforming it into manufactures sent the finished product back to us, while of other classes of cotton manufactures, such as lace, edgings, embroideries, threads, etc., the total imports from the United Kingdom are even greater than those of cotton cloth alone, being 8 million dollars in value.

Advice to Mothers.—Mrs. Watson's Soreness Remedy should always be used for children teething. It soothes the child, makes the gums soft, cures swell, and, in the last remedy for diarrhoea.—(A-B.)

THE NURSERY'S FRIEND

Is BROWN'S Eucalypti Balm. Scientifically prepared as an infant food, it is the nearest approach to mother's milk. Good for Baby's Sore, a valuable balm for mothers, and Hudson Street, New York.—(A-B.)

Remedy: Treaches are often perpetuated by Paw's Cure for Constipation. 40c. per bottle.—(A-B.)

THE BEST WORM LOZENGES FOR CHILDREN ARE BROWN'S VERMIFUG COMBIS. 25 cents a box.—(A-B.)

Use BROWN'S Camphorated Sassafras DENTIFRICE for the TEETH. 25 cents a jar.—(A-B.)

ADVERTISEMENTS.

Pears'
My grandmother used Pears' Soap; perhaps yours did, too. We owe them gratitude for that.

Use Pears' for the children; they soon acquire the habit.

The Prince and Princess of Wales driving through the Khyber Pass, with Armed Escort, on their way to Ali Masjid

The Arrival of the Prince and Princess of Peshawar, where the Road Carriage was driven between Two Lines of Riflebrigades

THE VISIT OF THE PRINCE OF WALES TO INDIA

The greatest splendour has marked the tour of the Prince and Princess of Wales in India, the native chieftains gathering from all parts of the empire with their brilliant retinues to do homage and present their jewelled sword-belts in token of fealty. Escorted by a strong detachment of the Akbar Rifles, 1200 of whom were picked along the hills, the Prince and Princess drove safely and in triumph through the famous Khyber Pass. All trade among the chiefs was suspended during this period, and the natives were not permitted to approach within three miles of the road.

The American Riviera

THERE is an undercurrent of misgiving in the minds of most seaports. Few go to sea without a full appreciation of "old ocean's" majesty and might. The great transatlantic liners that look so massive and powerful as they lie alongside the dock become bat toying chips in mid-

The coastwise traveller, however, has the advantage of his foreign touring brother, in that he loses sight of land seldom and for brief periods, and, therefore, feels constantly in touch—as he is in sight—of the solid earth that is humanity's habitation.

The Clyde Steamship Company, whose splendid passenger-vessels visit the Atlan-

the shores of the United States from New York and Boston to Charleston, South Carolina, and Jacksonville, Florida, offers to tourists one of the most ideal of these vacation trips. With the great metropolis of the Eastern World at one end of the route, and the romantic land where Pharoahs of Lem believed he should find the hidden fountain of youth at the other, its terminal attractions are in constant flux.

time served by any other American coastline line. Its fleet of swift, modern steamships is large in size; the vessels have been specially built and are admirably adapted to the service. The duration of the voyage is but two and a half days—half that required in crossing the Atlantic—and the passenger can view, en route, all the prominent coastal landmarks along the Atlantic boundary of the United States. *Illustrated Book*, by the Florida East Coast.

In the course of the study work in the Florida East Coast, a number of trawlers and equipment like Clyde liners are notable examples of traditional twentieth-century marine architecture. The large-scale of the trawlers, the *Joseph* and *Amphibious*, have been built with the idea of carrying large amounts of cargo, comfort, and convenience to their patrons. They are 160 and 155 feet long, respectively, and having a width of forty-two feet, the *Amphibious* even steamship-like struts. To cruise of the Clyde Line has long been a favorite, and diversity as, like with New York's unmarooned markets, and the boats and harbors of the South to draw them, there is no little shows that cannot be had at its best, upon these vessels.

The way to Charleston is short, barely two days. The entrance into Charleston Harbor is extremely interesting. The driver goes the tale of Palms, with its huge palms, and follows inland, with its hotel, its clusters of summer cottages, and its famous old Fort Moultrie. The great harbor opens in on the left of the streamer's course, land and which one sees the ruined wall of Fort Sumter, where the thundering spark of civil war was kindled first. The river

Farmers in limited hours are required for the soil from Charleston to Jacksonville, that part of the route to St. Johns River that is in full sight of the South Carolina and Georgia coasts. The bridge of the St. Johns River to Jacksonville is the connecting point of the voyage. The palms that overhang the water's edge, the unfamiliar scrubbery in its vivid green and tropical fragrance, the wide, shallow, and tortuous river, the low-lying banks, the delicate background of space-bursts of South Sea pine, combine to produce令人难忘的 pictures of natural beauty that color the lateral and expand the imagination of the beholder until the city is reached, and the true tropical disorders in this, the Porcelain metropolis, the character of its houses and streets and life.

Ormond, wrapping a picturesque location between the River and the Atlantic Ocean, is a favorite with tourists. The beautiful Ormond Hotel, the fun at Ormond Beach and the Ormond public houses annually attract many visitors to the town of Ormond, between the river and the sea.

Ormond, wrapping a picturesque location between the River and the Atlantic Ocean, is a favorite with tourists. The beautiful Ormond Hotel, the fun at Ormond Beach and the Ormond public houses annually attract many visitors to the town of Ormond, between the river and the sea.

serenic, heating, and bathing advantages. The beach at Ormond is one of the most famous in the world, with a surface as hard as that of a park boulevard. The attention of automobilists has recently been drawn to this superb surface, speed contests having been held there during the past winter and having been already announced for future seasons.

Diagonal, five mills south of Ormsd, shares the magnificent beauty of the first-described place, and has in addition the attractions of its own. There are good hotels, among which may be mentioned the Ridgeview, Colandrea, Palmetto Innor, Holly Inn, etc.; beautiful drives, shaded by century-old liveoak trees overhanging with trailing masses of graceful moss; and the most splendid facilities for hunting, bathing, and fishing.

still further south, where the visitor can indulge in sunbathing every day in the year, is famed for its spas and hotels, the Royal Geo-

Princess Steamship

Miami, the terminus of the Florida East Coast Railway, occupies charming location on Biscayne Bay at the mouth of the Miami River. The Hotel Bayside is the principal public house, and of great size and beauty. From Miami, steamers sail to Key West, Havana, and Nassau, S. F. Key West, the southernmost American city, attracts many visitors, particularly those who are interested in government structures, for here have been erected an extensive naval station, United States Marine Hospital, barracks, and an elaborate system of fortifications. The Hotel Key West is the only structure that hostesses are thought to need—any form of artificial heat for other than cooling purposes.

CARTOONS OF THE WEEK

The Farsighted Scot

As American and a Scotchman were on a high hill in Scotland and the Scotchman was looking at the extent of view. "I suppose you can see America from here on a hot day," said the American, chaffingly. "Oh yes, further than that," was the reply. "Further than that?" "Aye! on a fine day we can see the north."

Naturally

Two elderly ladies who were looking through the top of a doorway in a kitchen picked up a small hand-bag. "Are you sure," she inquired, "that this is not emerald-green?" "Absolutely certain, ma'am," replied the other. "I shot that emerald myself."

"It looks rather odd," observed his customer. "Naturally, ma'am," explained the salesman. "That is where it struck the ground when it tumbled off the tree."

Unique

A Baltimore school teacher says that she set out a question to one of her big pupils to wit: what was the distinguishing feature of the State of Texas.

"Texas," replied the lad, "is celebrated for being the only one of the United States that is the largest."

She Guessed Right

REMARKS: John Sharp Williams tells a story of a lady in Middle who recently became a convert to Christian science. It appears that, meeting a friend on the street, the convert made inquiry touching the health of the friend's aunt. "She's got de pleurisy, is she?" was the answer.

"You and she is both wrong," was the

solemn assertion of the convert. "As a matter of fact, she only thinks she got de pleurisy. Deceit! no such thing."

Nothing further was said on the subject; but a few days after the two again meeting, the convert repeated his inquiry touching the aunt's condition. "Does she still persist that she's got de pleurisy?"

"No, indeed," came the reply; "de poor woman now thinks dat she's dead. We buried her yesterday."

Born that Way

A MEMBER of the House from New England tells of a reunion when he overheard an amusing colloquy between the late Thomas B. Reed and a dandy barber.

The "barberic artist" was inclined to be talkative, but in all his efforts at conversation the big man from Maine returned only a monosyllabic or a grunt.

Finally, the barber putted the customer of the Speaker, whereon rejoined one or two stray looks, saying:

"De hair's grizzled, pretty thin, ask. Been that way long?"

"I was born that way," dully returned Reed.

What He Used It For

WISE-TAKING was his business, and he was reputed to be one of the best who followed that somewhat peculiar avenue of making a livelihood, so when the hat had been made and the money pocket, his "luckies" were sure of winning. Incidentally, they did.

The subject, blindfolded, was to test, one after another, the contents of twenty-five water-glasses, and—if he would win the stake—name correctly the liquor in each. From one to twenty-four he went down the line, never hesitating, and always right. At the last one he stopped. It was filled with water only.

He slipped it, turning it over and over

with his tongue, asked for a second mouthful, considered it with a most perplexed expression, and then had an inspiration. "Of course," he exclaimed; "it's the stuff I clean my teeth with."

Of No Importance

Two men were standing together on an East River ferryboat, when one pointed out a third man with the remark:

"I can't recall his name at this moment, but he writes for a number of the magazines."

His friend looked at the stranger with much interest.

"Oh, one of our 'frenzied fiancée' capitalists, is he?" he asked.

"No, he—"

"Writes up iron-ies and things, then?"

"No."

"Oh, then he's a prize-fighter or an actor—he is rather husky-looking."

"No, no! He's just a plain author—writes stories."

"Oh!" the friend exclaimed, the look of interest suddenly dying out of his face.

From Hungary

A WELL-KNOWN publisher has received the following entertaining epistle from a Hungarian reader. It is quoted verbatim:

"Subscribed I am so free to You apply and beg. You would be so good to my address a list of prices of Your precious shop upon my costs to send. I would English books buy and I know not any English book trade. I pray You, to me for my had English friendly to pardon. I am a native Hungarian and study the beautiful but for the Hungarians very heavy English language only the way from one and a half years—hoping you will my modest petition accomplish, I remain, Your servant, etc.

"P.S.—I beg to pay your list of prices with payment at delivery to send."

Commemorating the Nation's Birth

(Continued from page 31.)

front cracked the walls of the old Powder Horn, so that they were in danger of falling. The Powhatan chimney was a relic of the earliest colonial history. It goes back to a time shortly after the arrival of the Jamestown settlers. The Powder Horn was the colonial armory—the oldest armory on the continent. On the very day, April 19, 1775, that Captain John Parker and his squad of militiamen were facing Major Pitcairn and his British regulars on the village green in Lexington, Massachusetts, another band of American patriots was forcing Lord Dunmore to put back in the old Powder Horn, down in Williamsburg, Virginia, the ammunition he was trying hard away to keep it from falling into the hands of men already up in arms in the war for American independence.

Both the Powder Horn and the Powhatan chimney are in Williamsburg. Among the descendants of the old colonial families resident in the old town who warmly cherish the historic landmarks of the place are Miss Mary Jeffrey Galt and her sister, Miss Annie A. Galt. When the old chimney went down in the wind and the old Powder Horn walls threatened to crumble from the front, both ladies, as well as many other people in Williamsburg, were filled with regret. Miss Mary Jeffrey Galt spoke to Mr. Boston Myers, of Norfolk, about it. Mr. Myers suggested the forming of a society for the preservation of such landmarks. So, under the inspiration of Miss Galt, the Association for the Preservation of Virginia Antiquities was formed. It is now a large society with headquarters in Richmond. Mrs. J. Taylor Ellyson, Mrs. Joseph Bryan, and Mrs. J. Enders Robinson are its present chief officers. It has restored the overthrown chimney, and purchased and saved from collapse the old Powder Horn. But that was only the beginning. One of its first moves was to Jamestown. The old ruined church tower was there, the remains of one of the old settlements having been there, and there, also, was what was left of the old settlement tower house. The son of a wealthy rail builder from Dayton, Ohio, had bought the island—Mr. Edward E. Hays. He gave the association some thirty acres of land covering the site of the old settlement. The government, at the association's instance, put up a stone wall to prevent the encroachments of the James River. Under the supervision of Miss Annie A. Galt, of the subcommittee of the association's Jamestown committee, extensive excavations have been made, and much of value concerning the first English town in America revealed.

From the interest in Jamestown there naturally came interest in the coming centennial anniversary of Jamestown's founding. In 1907 there was a Jamestown celebration. In 1907 the 325th anniversary was observed, and ex-President John Taylor delivered the principal address. The Association for the Preservation of Virginia Antiquities took up the matter of the intercolonial celebration, and from the inception their efforts have given it the character that have given it the character that it now has. The association has planned for the celebration of next year in place for the celebration of the Centennial of the President, the Cabinet, the Congress, the Army, the Navy, and the American people are all now involved in a common and patriotic interest.

construction for 1906 for purposes the best work previously put into any motor car. American or European. Removing Temptation

DEACON Smith and Jones, two pillars of the church, were working in the hay-field on a Virginia farm. Suddenly Deacon Smith called out excitedly:

"What did 'dis 'din from' in 'dis hay-stack?"

"Look ter me look er 'jug ob 'liquor,"

Deacon Jones responded, his eyes rolling.

Both deacons pondered, and presently Deacon Smith said, gravely:

"Hee 'demon, den' 'ye' 'how small bettin' drink up 'dis 'liquor, 'les' 'more 'ye' 'work 'leed' er 'dis 'bit 'n' 'hall by de 'way-side'!"

Shortening Time Across the Continent

It was not long ago that a week was considered a reasonable time in which to make the trip by rail from the Atlantic to the Pacific coast. The Union Pacific Railroad outlined in December a new service which makes a passage in time from New York to Los Angeles in half that time, eighty-six hours, only two hours more than three and one-half days. The new train, made up of Pullmans, dining-cars, and combination observation and buffet, all electric lighted, and with a daily news bulletin service, runs from Chicago to Los Angeles in sixty-eight hours, four hours less than three days. It goes from Chicago to Omaha over the Chicago Northwestern Railway, from Omaha to Salt Lake City over the Oregon Short Line, and from Salt Lake to Los Angeles on the route of the San Pedro, Salt Lake, and Los Angeles road, built by United States Senator William A. Clark, at a cost of more than \$20,000,000.

The Los Angeles Limited stops only at important points, and the running schedule is so considerable that it is not slower than forty miles an hour. The speed frequently reaches seventy-two miles an hour. This is in the Death Valley in California.

A traffic arrangement between the Harriman line and the Clark road makes this new fast train possible. The time required by the Southern Pacific trains from Salt Lake to Los Angeles by way of San Francisco is eighteen hours greater than over the more direct route across Death Valley. The new train of the Los Angeles Limited service, or perhaps the most really that have ever been run to the Pacific Coast, and this fact makes an interesting contrast. For several hundred miles the Clark road stretches across the most desolate and fatal part of the Great American Desert, including the Death Valley and the famous Devil's Playground, California, where whole mountain ranges are formed of drifted sand. Every summer a score or more of men, prospectors, or even, or occasional travelers, perish here and not distant in this fearful desert. Last year in spite of all precautions that we take to guide travelers to the spots where drinking-water could be found, the number who died in this desert was thirty-five. The only irrigation of summer for hundreds of miles is the great yucca tree, the sagebrush, and the scattered shrubs. The skeletons of animals, horses or cattle, are seen occasionally from the car windows, to express in the safety of the Pullman passenger the perils of the desert. The region is the strangest, and in most respects the most marvellous, on the American continent.

Golf and Matrimony

In an illustration of the enthusiasm with which golf is pursued by its votaries, the following anecdote is told of a well-known New York golfer and a young friend of his: The two had spent the whole day on the links and had had some cold and exciting matches. As they left for home the elder was remarked:

"Is not thank ye could play again tomorrow today?"

"Well," answered the youth, "I was to be married tomorrow, but I can put it off."

His Decision

The following anecdote is told of a professor in a literary academy. One day, while talking with a friend in New Haven, the professor and his companion were involved in an argument as to which was the handsomer man of the two. Not being able to arrive at a settlement of the question, they agreed, in a spirit of good-humor, to the decision of a U. S. Senator who was then approaching the town. The matter being told before him, the Senator then considered long and carefully, then he announced in a tone of finality: "Both are handsome."

Dr. Lavendar's People

by
MARGARET DELAND

Author of "Old Chester Tales," etc.

"When first we read *Old Chester Tales*," says the *New York Times*, "it was an event, and Dr. Lavendar's People, a second volume of these stories, is well up to the high standard set by the first. Dr. Lavendar himself is one of the creations of fiction that will not willingly be allowed to die." This criticism is one of the many that have greeted the book everywhere. If unanimity of praise is any indication of success, Mrs. Deland has again achieved a triumph.

A New Novel by the Author of
"THE MASQUERADER"

Presenting the Most Unusual and Captivating Heroine of the Year

From "The Gambler"

The Gambler

by

**KATHERINE
CECIL
THURSTON**

MRS. THURSTON again gives the world a novel of striking and original achievement. In "The Gambler" she has portrayed a heroine as superbly fascinating as she is unusual in fiction. Clodagh Asshlin is a beautiful Irish girl—impetuous, eager for gayety, the soul of honor—but inheriting from her father the taint of his passion for gambling.

It is a story of life in fashionable English circles, where Clodagh finds herself the centre of attraction and attention. Love at last awakes to meet a noble response in Sir Walter Gore, but debts, intrigues, and difficulties have so closed in upon her butterfly whirl of pleasure that her romance threatens to prove her ruin.

Mrs. Thurston has worked it out superbly. It is a powerful story, as magical in its charm and as compelling in its interest as was "The Masquerader." The love-tale is most appealing, so vividly has the author portrayed her heroine, intensely human and lovable in her strength and weakness alike.

POLE BAKER

BY

WILL N. HARBEN

Author of "Abner Daniel," "The Georgians,"
"The Substitute," etc.

POLE BAKER will be remembered as a humorous character in "Abner Daniel." In this new novel he is the central character—a shrewd, kindly, shirtsleeves philosopher, with some capital yarns to tell as well as an important part to play in the love affairs of a young couple with which the narrative is chiefly concerned. Indeed, were it not for his genius for meddling in other people's affairs to their own ultimate good, the romance of the young lovers would not have ended so happily. The characters and scenes are again those of Georgia, and the same good-humored, delightful narrative winds leisurely through this story as in its popular predecessors.

COMMENT

THE Republican insurgents expected to win, so far as the Philippine tariff bill was concerned, and their leader, Representative J. W. BURROCK, of Wisconsin, asserted that he also had votes enough to beat the Statehood bill in spite of the support which the latter measure was receiving from Speaker CANNON and the President of the United States. It was an ingenious maneuver by which the beet-sugar men and tobacco men assumed that they would carry their point against the Philippine tariff bill. They knew that the 136 Democrats would, as tariff-revisionists, feel constrained to vote for the proposal to reduce the duties on Philippine sugar and tobacco to twenty-five per cent. of the DINGLEY rates, and ultimately to abolish them altogether, if a bill embodying that naked proposition came before them. On the other hand, the Democrats, or most of them, in pursuance of their traditional policy, would be willing to vote for an amendment removing the differential on refined sugar, or for an amendment declaring it to be the intention of the United States to grant independence to the Philippines on the expiration of ten years from the date when the Treaty of Paris became operative. Barring these facts in mind, the Republican insurgents threatened to cooperate with the Democrats in passing one of these amendments, and as they were able to show that the coalition would command votes enough for the purpose, Speaker CANNON and the other friends of the Philippine bill were expected to succumb. The text of the bill would then be changed so as to provide that, while the sugar and tobacco of the islands should at present be admitted on payment of twenty-five per cent. of the DINGLEY rates, the duty should gradually be raised, in proportion as the volume of those products exported to the United States should expand, until, when it should have reached a certain figure, the duty should be fixed permanently at seventy-five per cent. of the rate named in the DINGLEY act. A further concession to the insurgents was to be the surrender of the provision in the original bill which prescribed absolute free trade with the islands on and after April 11, 1909. In the amended form, the bill was to be passed by the Republican majority, and no Democratic votes would be needed. This was a very pretty device on paper. It would not work, however. The Democrats stood ready to fulfil their part of the contract, but the insurgent Republicans weakened. The bill was finally passed in the original form, except that rice, as well as sugar and tobacco, is to pay twenty-five per cent. of the DINGLEY rates up to 1909. Whether the bill will get through the Senate is a different question.

Of two measures on which the President has set his heart, to wit, government rate-making for railways and the Statehood bill, of which Mr. BURROCK has charge in the Senate,

the former will have no serious opposition to contend with in the House of Representatives. The bill, which is now known to have the approval of the Executive, is that which was introduced by Mr. HERRON, and which will have the unanimous support of the Republican majority of the committee to which it was referred. It is not impossible that the Democratic minority of the committee will also report in its favor, though, for tactical purposes, it may be deemed expedient to submit a separate report in which one or more amendments will be proposed. After such amendments shall have been rejected, however, the bill, as reported, will undoubtedly receive the votes of most of the Democratic Representatives. The HERRON bill is said to be substantially identical with that introduced by Mr. DOLLIVER in the Senate, in the framing of which Senator KNUT is supposed to have participated. The impression is current in Washington that such a bill would be reported favorably by most of the Republican members of the Senate Committee on Interstate Commerce, and that, when the measure comes to a vote, such Republican opposition as may be encountered will be more than offset by Democratic support. A definite announcement of the position to be taken with regard to government rate-making by Mr. HALE—now the leader of the Republican majority in the Senate—is awaited with lively interest.

In regard to the Statehood bill, on behalf of which the President continues to exert his influence, the Republican insurgents in the House of Representatives assert, as we have said, that with Democratic help they can defeat the measure. As we have pointed out, however, no fewer than 58 Republican votes, besides the 136 Democratic, would be needed for the purpose. Well-informed observers doubt whether Mr. BURROCK can muster anything like so many votes against the bill. The fundamental arguments against giving separate Statehood to both Arizona and New Mexico are as strong today as when they were first propounded. If those Territories want Statehood at all, they must come in as one State. Because we have made gross blunders in the cases of Nevada, Wyoming, and Idaho, it does not follow that we should make another mistake of the kind.

It is easy to account for the prevailing impression that there has been great wastefulness of expenditure up to this time by the Panama Canal Commission. By April 1, twenty-one millions of dollars will have been spent, only an insignificant fraction of which sum has been laid out for excavation. We admit that excavation could hardly be practised on a large scale until the type of the canal had been fixed upon. Apparently, the President intends to impose upon Congress the responsibility for choosing the type, though undoubtedly he will make no secret of his own opinion when he submits the report of the consulting engineers, and the decision reached thereon by the Canal Commission. He will ask Congress to confirm the decision, and this the Congress will unquestionably do, provided the commission shall report in favor of a lock canal. What ordinary people find it hard to understand is how the commission should find it necessary to spend \$21,000,000 before it had agreed upon the kind of canal to be built. Perhaps, after every item has been subjected to rigorous scrutiny, we shall be less puzzled than we are now, and shall be convinced that the preliminary work thus far performed was really indispensable. Some of the salaries paid to high officials may seem excessive from the viewpoint of those Representatives who sneered in saying the greater part of their annual stipend of \$5000. But they will not seem inordinate to those who know something about the market value of the services rendered by eminent civil engineers to great railways and industrial companies. A man's services are worth what other people are willing to pay for them. There is no other standard of measurement. If the salary of \$150,000 paid to President McCORMY of the Mutual Life Insurance Company had been awarded by a disinterested and kindly authorized committee, in view of his special familiarity with the business, it would scarcely be pronounced unreasonable by fair-minded men, who should keep in view the extraordinary magnitude of the interests involved. The objection to that particular salary was that it seemed to have been fixed by a committee the legal status of which is uncertain, and which is alleged to have been appointed directly or

indirectly by the beneficiary. The appointments made by the Canal Commission are not open to such criticism. We presume that Congress, after investigation, will make some definite suggestion as to the future method of managing the canal business. It may propose that the canal shall be built by contract; or that the commission shall be abolished, and the work of construction prosecuted by the War Department with the aid of military engineers. What President ROOSEVELT would think of the former suggestion we do not know, but we have good reason to believe that he would approve of the latter.

Mr. E. C. BENEDET is best known to the country as a personal friend of Mr. CLEVELAND. He acquired the distinction by toting the big fellow—using the Hon. TIMOTHY D. STALLAN's affectionately expressive appellation—around in his yacht. While floating over billowy waves he is a commodore; when on land he is a banker. Proximity to statesmanship naturally induced a tendency to form views on his own account, and he is not averse to expressing these occasionally, as he would put it, with some degree of self-satisfaction, "straight from the shoulder." The Commodore's latest discovery is that the American people are "the smartest race of darn fools that ever existed." They are "the laughing-stock of the civilized world," because their currency system has not yet been adapted to the needs of changed conditions. To some of us, blessed with a larger store of patience, this fact does not seem so very surprising. Just why it is so, however, and what remedy most likely to be permanent should be applied involve questions of importance which well deserve serious consideration. But all traditions would explode with a bang if an old seadog, familiar with Long Island Sound from Montauk to Hell Gate, should descend to reason. None of that for the Commodore! He just snorts. Listen:

The rank and file of the people believe that we should have a sound currency, but borrowers and lenders on time demand the word "gold" in all their contracts. Look at the schemes for issuing State, city, railroad, and other bonds, and you will find that the word "gold" is used on all their securities, for otherwise the lenders would not take them. The presence of that word is an imposition upon the ability or willingness of our government to pay gold. But the time will surely come, perhaps not in the near future, when the endless chain will again be set in motion.

Now the time was when provincial New York bankers of the type here represented betrayed symptoms of epilepsy if "gold" was left off anything bigger than a postage stamp. That the Commodore himself was as violent then as he is now we haven't a doubt. Indeed, this very interview confirms the suspicion. Speaking sagely of the political situation, he says:

I am thoroughly in sympathy with that old Kentucky colonel who was such a dyed-in-the-wool Democrat that he often said he would vote for a yellow dog if it was on the ticket. But when BRYAN made his appearance the old colonel was disgusted.

"Why, Judge," said an acquaintance, "you don't seem to like BRYAN, and yet I have heard you say over and over again that you would vote for a yellow dog if it were on the Democratic ticket."

"Well, you are right," replied the colonel; "but I can't go any further than that."

I must confess that I am somewhat in sympathy with the colonel.

Now this Mr. BRYAN so contemptuously referred to has never been widely known as a champion of "gold" or "gold contracts." Indeed, if there is anything at all in the Commodore's snarling quoted above, he is its most persistent and famous exponent. Moreover, Mr. BRYAN is not and never was a "yellow dog." Whatever be the defects in his theories, nobody can question his honesty or patriotism. Also—though this, of course, is unimportant—he is too well bred to apply a hateful and unwarranted term to a decent American citizen for the unworthy purpose of scoring a cheap smart.

But the old sea-dog does not stop with Mr. BRYAN. There are others quite as yellow on the leech. "Ranchow," continues the Commodore, with unenviedly reflective air, "our statesmen do not either appreciate our financial dangers or know how to avert them. The tinkers and tailors and lusted dominies who go to Washington to pose as statesmen are not up to their work. We seem to have no financial architects here. As there is no duty on foreign financial archi-

teets, I think it would be a good plan if we import some, so they might teach us a lesson that works everywhere over the world except with us."

Maybe so; maybe so! But before beginning the importation, might we venture to inquire who is supposed to know most about currency matters, anyway—the lusted dominies or the untasted bankers? Here we read a half page of indiscriminate and undiluted denunciation, by a presumed expert, of everybody and everything and, scraping it with a fine-tooth comb, cannot find so much as a hint of remedial suggestion. It is the old story—the abuse of the other attorney—the invariable recourse of the bullhead. Our currency system is bad enough, goodness knows. There are those even in Washington who appreciate that fact and, whether dominies or bankers, are doing their level best to solve the problem. The harder the job, the more creditable the striving, whatever the result. To criticize, to stand off at a safe distance and throw bricks, is easy. Any darn fool can do that. And one has.

There seems to be no doubt that some weeks hence we shall find ourselves in a tariff war with Germany. It is no fault of Secretary Root's that the contest cannot be averted. Recognizing the hopelessness of securing the Senate's assent to a reciprocity treaty, he tried to persuade the Berlin government to renounce or suspend its purpose of applying to American products on March 1 the maximum duties fixed by its new tariff. By way of consideration, he offered to secure from our Secretary of the Treasury instructions to our collectors of customs that would remove or abate some grievances of which German exporters have complained. Germany, on her part, has declined to consider such administrative changes an equivalent for the concessions which she is requested to make, and will accept nothing except a reciprocity treaty. Finally, Secretary Root is understood to have striven to obtain at least a *modus vivendi*, or provisional agreement, by which the existing arrangement with regard to duties on American goods may be prolonged until the close of the present session of Congress. This request also has been refused, and there is nothing, therefore, for us to do except tamely to submit after March 1 to the imposition by Germany of much higher duties on American products than are levied upon corresponding commodities coming from other countries; or else to bring Germany to a more accommodating temper by subjecting her exports to retaliatory duties. If our tariff shall discriminate against them, German manufacturers will find it impossible to compete with their French and British rivals in our market; but they will have only their own government to blame. We cannot be expected to submit to discrimination without resorting to reprisals. Measures have already been taken to that end. Mr. LOVELL has introduced in the Senate a bill providing for a minimum tariff lower than the rates of the existing law, and a maximum tariff higher than those rates. The only kind of revision, however, which seems to be contemplated by Republican leaders in the present Congress is revision upwards, and we are likely, therefore, to see placed upon the status-book the bill introduced in the Lower House by Representative McCLEARY, of Minnesota, which retains the DINGLEY rates, except in the case of a foreign country discriminating against produce of the United States, in which event duties twenty-five per cent. additional to those provided by the DINGLEY act are to be levied upon the products of the country so discriminating. From the viewpoint of "stand-patters" this is an ideal measure, but it is calculated to exasperate the Republican revisionists, of Massachusetts and Iowa.

In England the general election began in the week ending January 13, and as we go to press the signs multiply of an overwhelming victory on the part of the Liberals. Although Manchester is popularly regarded as the birthplace of the doctrine of free trade, it has long been a Conservative stronghold, and few Liberals were optimistic enough to predict that Mr. A. J. BALFOUR would lose the seat which he has occupied for one of the electoral districts of that city. Nevertheless on January 13 he lost it, and all the rest of Manchester's six seats were carried by Liberal candidates. The ex-Premier, of course, will be returned for some other constituency, the control of which by the Conservatives is unshaken. But the result which he has sustained encouraged the Liberals to hope

for similar, though scarcely equal, success in the metropolitan districts. It is well known that in the United Kingdom a Parliamentary election does not take place simultaneously on the same day, but stretches over some two weeks. Not until we hear from the counties, which vote later than the boroughs, shall we be able to define with any close approach to accuracy the dimensions of the Liberal triumph. Notwithstanding the sweeping and unexpected success gained in Lancashire, it is scarcely credible that Sir H. CAMPBELL-BANERJEE will be as fortunate as were the Liberals in 1880 and the Conservatives in 1890, for the former secured a majority of 109, and the latter a majority of more than 130 over all elements of the opposition combined. If the present Premier could be even as lucky as Mr. DISRAELI was in 1874, when the latter got a majority of 50 over Liberals and Irish Nationalists put together, he would be, of course, independent of the Irish Parliamentary party; and although he can be trusted to grant those instalments of home rule which he has promised, he would obviously wish to be untrammelled with regard to the date and extent of his concessions. Mr. JOSEPH CHAMBERLAIN'S prediction that the present ministry would prove short-lived was based on the assumption that it would find the Irish members of the House of Commons indispensable. By the time this number of the WEEKLY reaches the reader's eye, we shall probably be able to say whether the assumption was well founded. One thing we can already affirm, to wit, that free-trade is still dear to the British people, and that Mr. CHAMBERLAIN'S project of a preferential tariff is unlikely to be carried out during his lifetime.

This month French politics will be interesting. During the first week of January elections were held for one-third of the seats in the Senate. Most of the outgoing Senators, including M. FALLIERES, President of the Senate, and M. BOURGEOIS, formerly Premier, were returned. It will be remembered that the Upper House of the French Legislature consists of 300 members, of whom, by the constitutional law of 1875, just 225 were to be elected for nine years by the departments (there are eighty-six of them), while seventy-five were to be appointed for life by the same national assembly that framed the law. The Constitution has since been changed by a provision that, as fast as the life-Senators should die, their seats should be distributed among the departments, in order that, eventually, all the Senators might be chosen in the same way. The elected Senators hold office for nine years, but the law specifies that one-third of them shall retire every three years. They are apportioned among the departments according to population, and are chosen in each department by an electoral college composed of the members of the Chamber of Deputies for that department; of the members of the Council-General, which is a species of provincial legislature; of the members of the councils of the several *arrondissements* in the department; and of delegates named by the municipal councils of the communes.

Since 1884 the number of communal delegates has been made to increase with the size of the commune, and they now form a large majority of the electoral colleges. It was for this reason that the Senate was named by GAMBIETTA the Great Council of the Communes of France. During this same month of January, 1896, the two Chambers will meet in joint session at Versailles for the purpose of choosing a successor to M. LORAIN, who seems sincere and firm in his refusal to accept a re-nomination to the Presidency of the Republic. The voting will be by secret ballot, a resolution framed in the interest of M. FALLIERES, President of the Senate and the candidate of the *blanc*, that the voting should be *à viva voce*, having failed to pass the Chamber of Deputies. By *blanc* we mean, of course, the combination of Socialist and Radicals which has successively sustained the ministries headed by WILHELM ROUSSEAU, by COMBES, and by the present Premier ROUVIER. The candidate of the opponents of the *blanc* is M. DUMERIEU, formerly Governor-General of Indo-China, and now President of the Chamber of Deputies. Should there be no choice on the first ballot, it is quite possible that M. ROUVIER himself may be accepted as a compromise candidate. After the choice of a President of the Republic, who will hold office for seven years, the next event of political importance in France will be the election during the spring of a new Chamber of Deputies. The signs are, as we have formerly

pointed out, that the *blanc* will have in the new Chamber the ascendancy which for some years it has possessed.

The New York Central Railroad has discontinued its long-standing practice of issuing passes to the members of the State Legislature. The New York legislators who go home to stay from Friday until Monday must pay their fare this year. For their services from January to May the State pays them \$1500 "and mileage," but the mileage covers, we presume, only one or two trips a year to Albany and back. It costs about as much to live at a good hotel in Albany as it does to live at a good hotel in New York. The personal expenses during the session in Albany of a New York State legislator who leaves his family at home can hardly be less than \$150 a month, which leaves him \$900 for four months' work. From the \$900 must be deducted the cost of maintaining his family (if he has a family) during his absence. Moreover, except to farmers, who have leisure in the winter, an absence of four months every winter from business or professional work is exceedingly prejudicial to the legislator's efforts to earn his living while the Legislature is not sitting. Is it not true, therefore, that the enormously important legislative business of New York is entrusted to 200 men, most of whom, unless they have private means, must be under constant strain to make both ends meet?

Is it wise in the State—is it profitable to the State—to entrust its concerns to men whose salaries cannot afford them a reasonable maintenance, and who are in consequence peculiarly exposed to pecuniary temptations? It would cost New York \$300,000 a year to double the pay of its legislators. If that sum would put the Legislature in a better position to serve the people of the State with disinterested zeal, it would be a profitable investment. Of course an honest man will be as honest on \$1500 as on \$3000. Of course the pay of the Albany legislators might be raised without doing any good. Of course any man who goes to the Legislature ought to serve the State to the disinterested best of his ability whatever his salary. Of course a man who can't afford to go to the Assembly on the salary paid should refuse a nomination. Nevertheless, it behooves every employer not to expose his servants to avoidable temptations. Times have changed since the salaries of State legislators were last fixed, and the scale of living has gone up very much, and the cost of living has more than doubled. It might pay to raise these salaries. If the State owes the honest and able legislator who serves it with all his might more than \$1500, it should pay him more, and what it pays to such a one is the proper measure of what a legislator's salary should be.

A more handsome compliment more richly deserved than that paid the other evening to former Commissioner WILLIAM McADAMS has seldom been recorded in this city. It took the form of a dinner given by Messrs. DAVID McCLELLAN, JOHN D. CAMMINS, WALTER G. OAKMAN, GEORGE R. DYER, and ROBERT A. C. SMITH, who were the Commissioner's official advisers respecting promotions, and drew a truly cosmopolitan and representative gathering. Mr. McADAMS has done all of the many admirable things from regulating traffic to purging the department of graft that the speakers gave him credit for. If he had not, Mayor McCLELLAN surely would have been defeated decisively in his candidacy for reelection—a fact which the Mayor must have overlooked when subsequently he granted the demand of two newspapers for the Commissioner's retirement. In this, the Mayor did wrong, just as in turning down the Tammany organization he did right from any viewpoint—his own, his party's, or the public's. It is a pity. However efficient he may ultimately be, Mr. McADAMS cannot hope to show for at least two years the capacity developed by Mr. McADAMS'S experience. It must be a cause of satisfaction to the latter to know that his successor's chief incentive is the high standard raised by himself—a fact most heartily and properly recognized the other evening.

A cultured officer gets a salary, from eighty millions of people, \$50,000 per year. That is one-tenth of a cent from every man, woman, and child in the United States.—*Evening Journal*.

But is it? Let Mr. BUSHNELL put the slate pencil he used when a boy and see if the cultured officer wouldn't rather get

one-tenth of a cent from eighty millions persons than the \$80,000 he now receives—by about \$72,000 per annum.

Speaking of President ROOSEVELT's dinner to Speaker WADSWORTH, the *Washington Post* remarks:

It must have afforded Mr. WADSWORTH, Sr., keen delight to meet the guest of honor of the occasion, and it must have impressed the other guests as a forceful illustration of the possibilities of American politics that a worthy father and a worthy son should meet under such circumstances, each wearing the laurels of success earned by honest effort in honorable competition for pre-eminence in public life.

Of course Mr. WADSWORTH, Sr., was pleased, and had a right to be. But the statement that Mr. WADSWORTH, Jr., won the modest laurels now decorating his brow by the sweat thereof is not accurate. He simply happened to be sitting in the draught when distinction flew into the window straight from the White House. Success is not yet his—only opportunity. Everybody speaks so well of him that we sincerely hope he appreciates the fact. Illusions are not good for young men.

Extraordinary tributes of honor and respect have been paid in the newspapers to the memory of President WILLIAM R. HARPER, of the University of Chicago, who died on January 10. Nearly a year ago an operation for appendicitis discovered to Dr. HARPER's physicians that he had cancer in such a stage and place that his recovery was hopeless. Successive operations prolonged his life a little. Of the time thus won for him Dr. HARPER made the utmost use to put the work he had in charge in the best possible shape for transfer to other hands. The courageous and indomitable spirit with which he faced a painful death added appreciably to the admiration with which his enormous and important labors had caused him to be regarded. He was one of the remarkable men of his generation, and an exceedingly interesting example of the human product of what we now call the Middle West. Born in Ohio in 1856, instructed first at Muskingum College, next by three years of private study, and then by two years in the graduate department of Yale, he got his Ph.D. in 1875. He was then nineteen years old, and well equipped to begin his chosen work as an educator. His specialty was Hebrew. In the course of ten years he served five institutions, getting back in 1886 to New Haven, as professor in the Yale Divinity School. At the same time he was principal of the Chautauque College of Liberal Arts, and became later the president of the Chautauque system. In July, 1891, Mr. ROCKWELL called him to be President of the new Chicago University. Then there opened to him an opportunity the like of which had not been offered to an educator before. He was to plan and put into effectual operation a great new university in a great new city, and the money to do it with was to be provided for him. Everybody knows something of how Dr. HARPER executed the commission that Mr. ROCKWELL gave him. He has been much scoffed at, much discussed, often criticized, and frequently caricatured, but it has long been agreed that he was a wonderfully fit man for the undertaking that was intrusted to him. His energy was enormous, his executive capacity was prodigious; he was a scholar and an enthusiast, a man with astonishing power of knowing what he wanted and getting it done. He is dead at forty-nine, and the organization of the University of Chicago is his monument.

It is well known that Dr. HARPER was an enormous worker. He had surprising physical vigor, and must have formed very early in life habits of relentless industry such as only a very stout body could have supported. We read that he usually got about five hours sleep, and he most commonly have worked hard as much as sixteen hours a day. His incessant labors recall those of Dr. WILLIAM PERRY, the late president of the University of Pennsylvania. It is taken for granted that Dr. HARPER worked himself to death in that he denied himself sleep periods of rest. If that is true, even the great mass of what he accomplished can hardly warrant the claim that he made the thriftiest use of his time, since his life fell short by at least twenty years of his reasonable duration. If, however, his disease cannot be traced to his labors, and if he was fated to develop it in any case, he fairly beat Fate, since he compressed into less than fifty years labors abundant to fill a longer than

ordinary lifetime. As no man knows beforehand when his end will come, the better plan is to count on seventy years or so of labor, and so to regulate one's life as to last one in fair condition—barring accidents—for about that time! There are some things, like winning races, that can only be done in the dead run, but there are not many such things, and the periods of excessive exertion which they require are usually not protracted. Dr. HARPER's death gives new occasion to say, what was so generally said when WILLIAM H. BALDWIN died, that it especially behooves our best and useful men to serve us with moderation, that their days may be the longer in the land, and that we may not be prematurely bereaved of them.

The *World* thinks that every one will heartily second Mr. JOSEPH CHASE's ambition to live to be the oldest Harvard graduate, "except Dr. OSBORN, who may think that Mr. CHASE is already outrageously oversteering his limit, and Dr. CHARLES ELIOT NORRIS, who has his opinions about the uselessness of old age." No doubt it is too late to win fair play for Dr. OSBORN, but Dr. NORRIS is a new victim, give him a fair chance. What he said was that life had no value to "an old person whose mind has become a chaos of wild imaginings productive of constant distress not only to the sufferer, but to all who live with and attend him." It is only insane old age that he considers useless.

Governor FOLK, of Missouri, accused of commuting, for political reasons, the death sentence of labor-leader JAMES BULLEY, who killed a strike-breaking cabman in Kansas City, has made his defence. Devising that he yielded to the importunities of the American Federation of Labor, he says that the woman on whose testimony as to conspiracy BULLEY was convicted, admitted after the trial that her testimony was false. All the jurors in the case, except one who had died, begged for commutation of BULLEY's sentence. So did the prosecuting attorney; and many members of the Employees' Association, including one who raised funds for the prosecution, implored the Governor not to let BULLEY be hanged, in the face of new evidence which convinced them that the death sentence was too severe. Governor FOLK's defence seems to be pretty strong. We guess he will be acquitted. BULLEY's sentence was committed to imprisonment for life.

Harvard means business in the matter of football reform. It will have no more nonsense about it. The Harvard overseers, who control the course of the university in the matter, voted, on January 10, to forbid Harvard students to take part in intercollegiate football contests until the game is reformed acceptably. It will be noticed that the overseers do not forbid the students to play any form of football with one another, but only to play unpurged football with other colleges. This cuts out gate receipts until further notice, and leaves the way open for the thorough testing in Cambridge of proposed changes in the game, and for the working out of some sort of football that will be fit to play. The action of the overseers was based on the report of the university committee on physical training and athletic sports, which found football as at present played "essentially bad in every respect," and submitted the opinion that if changes are to be made no man now a member of the intercollegiate committee should have a hand in it. The Harvard committee's reason for thus inviting the members of the late Rules Committee to go away back and sit down was that "they are so far committed to the present system that they could not agree to such changes as are absolutely necessary to produce a decent, clean, pleasurable contest, instead of the present apology for a rough-and-tumble fight." This is not complimentary to the Rules Committee, but that body has had a fair chance to cure football of its intercollegiate moral and physical diseases, and has made a thunderous and catastrophic failure of the case. A change of doctors is fairly in order, as well as a radical change in treatment. What Harvard wants in the matter of football almost everybody now wants, and that has hurt all the college sports. An income of \$100,000 a year from gate receipts may be trusted to ruin any sport in any college, and to do grave injury to all sports. We don't believe that rules can be devised that will keep football clean and sweet at \$50,000 per game.

The United States and the Morocco Conference

THE debate which took place in the Senate on Monday, January 15, concerning the participation of our government in the conference at Algiers, was of unexpected and unusual interest, because of the declaration elicited from Senator HALE, of Maine, who is now recognized as the leader of the Republican majority. It will be remembered that some time ago Senator HAYES, of Georgia, introduced a resolution expressive of a desire to inspect the correspondence relating to the affairs of Morocco. The Senate not having acted on the resolution, Senator HAYES, on January 15, the day before that fixed for the opening of the conference, introduced another resolution to the effect that participation in any controversy between European governments relating to European international questions is a violation of the well-defined policy of this government observed for more than a century past. Mr. HAYES pointed out, what is undeniably true, that our commercial interests are not involved in the proceedings of the conference, inasmuch as they are safeguarded by the Madrid Convention, to which our government was a party, and any intention of reviving that convention at the present conference is expressly disavowed. The questions to be discussed at Algiers are political in their actual or prospective significance. One of these questions is whether Germany should be permitted to exercise temporary control of the crown domains, which were given as security for the loan of two million dollars made by German bankers to the Sultan of Morocco. This question is of prospective political significance, because, an experience has shown in the case of Egypt, such temporary control is apt to become permanent. Another question is whether the maintenance of order in the Sultan's domains shall be entrusted to France—the solution of the problem which Great Britain has agreed to face—or to an international governmental commission. It is understood that the British government does not deny that France should be permitted to police a section of Moroccan territory adjoining the Algerian frontier, but is firmly opposed to the extension of the regulative authority of France over the rest of the Sultan's realm. The political purport of this controversy is obvious. Now the only possible pretext on which the United States could take part in a settlement of either of these questions is the possibility that the Fes incident might be repeated, or, in other words, that an American citizen might be kidnapped by some of the Sultan's subjects. The unwary practice of our government has been to cede to a bridge when we have come to it, rather than have engaged to defend our citizens from wrong, or, when the wrong has been committed, to avenge them, without entangling ourselves in European complications. It should be plain enough that if our representatives at Algiers should vote with Germany in favor of an international constabulary, and that solution of the problem should be adopted, we could not, with any show of consistency, avoid contributing a contingent to the international force. Then, again, if war should result between France and Germany, as a consequence of a decision reached or defeated by the votes of our representatives, we should undoubtedly be expected to cooperate with the powers determined to uphold the judgment rendered by the conference. In either event, we should find ourselves involved in the very kind of entanglement against which we were warned by WASHINGTON'S farewell address, and which we have steadily avoided up to the present time.

The position taken by Senator HAYES was not only supported by all his Democratic colleagues, but, to the general surprise, was defended with reverence by Senator HALE, the leader of the Republican majority. He believed, he said, that negotiations which might culminate in an unwelcome treaty ought to be discussed by the Senate with open doors. The safety of the country would require such public discussion. So far as the matter before the Senate was concerned, he did not hesitate to express the wish that the President and Secretary of State had not accepted the invitation to send delegates to the conference at Algiers, which, in his opinion, was a Simon pure, outright, political conference, with which we properly could have no concern. So far as our commercial interests in Morocco are concerned—if they were threatened, which they are not—we could negotiate a treaty directly with the Sultan in sixty days that would secure all that we might desire in that direction. In the present case Mr. HALE did not believe that the President and the Secretary of State would allow our country to become involved in a European controversy. The danger was that a precedent would be set that might be abused by a future executive. The Senator from Maine went on to give a reason for his conviction that we would not get entangled at this time, a reason which was construed to mean that he had received explicit assurances from Mr. HOOVER or Mr. BLISS on the subject. He pointed out that if, at any time, a danger should arise that the delegates from this country might have to vote, if they voted at all, in a way to aggrivate either France or Germany, the Secretary of State could telegraph them to withdraw forthwith from the conference. Mr. HALE was confident, he said, that this would be done should the emergency arise. In view of this declaration from an authoritative source the American people

need not be apprehensive of unpleasant results from the presence of representatives of the United States at Algiers. It is even conceivable that, through our friendly relations with France and Great Britain on the one hand, and with Germany on the other, they may be able to exercise a conciliatory influence, and thus help to avert a European war, instead of involving our own government in one.

A New Plan for Regulating the Trusts

IN the current number of the *North American Review* a new plan for regulating the trusts is propounded by Mr. JOHN F. CROAN, a native of Boston, who has been a member of the Suffolk bar for a quarter of a century. The article deserves the widespread attention which it has received. Instead of scraping the surface, it goes to the root of the matter. It proposes, not a palliative, but a remedy; or rather it offers the cause of prevention which is probably better than a pool of cure. The author begins by inquiring, What are the evils from which the people suffer, or think they suffer, through the great agglomerations of capital to which we give the name of trusts? He enumerates them in what he believes to be the order of importance.—to wit, first, overcapitalization; secondly, the protection afforded the trusts through the tariff; thirdly, the lack of any substantial or uniform regulation by which the affairs of corporations are made known in annual or more frequent reports; lastly, the lack of any legislation affording substantial safeguards against discrimination or injustice, except by the cumbersome process provided by the SHERMAN act. The author denies the truth of the assertion that the trusts are the creators of the tariff. He concedes, of course, that trusts operating in protected articles are, no doubt, benefited by the tariff, but many of the great trusts are not affected by it in the least. He reminds us, moreover, that the people have at all times the power to compel such a revision of the tariff as will remove any difficulties arising therefrom. A revision of the tariff may be deferred, but it cannot be averted permanently by the obstructive resources of allied wealth. As for the option that the remedy for the abuses to which trusts are liable would be found in greater publicity in corporation matters, Mr. CROAN pronounces such a remedy altogether too narrow to affect substantially the conditions which are at the foundation of the trouble complained of. His points cut are these:—The hope of the recent suggestion of a Commissioner, that if corporations doing an interstate business should procure a Federal license, while it might be helpful in removing some of the difficulties incident to the control of certain trusts, could not prevent the formation of new trusts which would be creatures of the several States. To the suggestion of Mr. JAMES B. DILL, that Congress might pass a law permitting corporations doing an interstate business to be chartered by the Federal government, he opposes a constitutional objection. It is seriously to be doubted, he thinks, whether the Federal Constitution, which reserves to the several States the right to create corporate entities, does not preclude the Federal government from exercising any powers with respect to the chartering of corporations not expressly delegated to it under our Federal organic law. If, however, for the sake of argument, it be granted that under the commercial clause of the Constitution the power to control implies a right to create, and that, consequently, Congress has power to provide for Federal incorporation, Mr. CROAN considers it very clear that the several States, speaking through their representatives in Congress, would withhold approval from an act which would deprive them of the revenues now accruing to them through the taxation of corporations. If, on the other hand, it should be found that in order to provide for Federal incorporation an amendment to the Constitution would be indispensable, the hostility of the several States, prompted by the motive just mentioned, would prevent its adoption.

In Mr. CROAN'S opinion, the more drastic and effective measure would be a Federal law that would prevent overcapitalization. If overcapitalization were prohibited, the motive for the creation of trusts would be extinguished. We are sometimes told, indeed, that the trusts are an outcome of an overabundant and irresistible economic force, which itself is the result of conditions characteristic of our time. To Mr. CROAN'S eye, there is nothing so overabundant or irresistible about the force which is credited with the generation of trusts. He asserts that the only real force underlying the trusts is the desire for power and wealth, which seeks to gratify itself through ability to control the raw and finished materials whereby the market for the product is limited, while the price to the consumer is regulated. This desire could not be killed or gratified if overcapitalization were forbidden. The many business establishments which for years have flourished in this country could not be forced out of the hands of their former conservative controllers without some great and overwhelming inducement. That inducement is the power possessed by the promoters of a trust to capitalize at will. If a corporation or business which promises wealth to merge into a trust discovered that no substantial advantage beyond the initial value

Personal and Pertinent

was to be obtained by turning over the corporation or property, there would ordinarily be no temptation to do so. What would probably be the answer, asks Mr. CHESAN, of the president of a well-conducted and paying corporation, who was invited to turn over his corporation to him, in conjunction with others in like business, a trust, solely upon receiving the actual cash value thereof at the time? As a rule, there would be no answer—a refusal. Threats of destruction by competition might be made, and difficulties might arise from attempts to carry out the threats; but such things are ordinary incidents of business. Undoubtedly Mr. CHESAN is right in asserting that the promoters of a trust would meet with grief, if not insurmountable obstacles, in forcing a merger or consolidation of corporate interests, if the power to fix the capital applicable to the payment of the properties to be acquired should be taken from the individual promoting a trust, and placed in the hands of a commission invested with full power to determine the true value of the properties. Whence should come the commission clothed with such supervisory power? Our author replies that the wide differences in the corporation laws of the various States preclude any hope of relief from that source, and he maintains that the only hope of dealing with the problem lies with the Federal government. Would the solution proposed by him—namely, the appointment of such a Federal commission as we have described, be practicable and constitutional? Let us glance, first, at the question of practicability. Mr. CHESAN insists that, in defining the figures at which a given corporation might be absorbed in a trust, but little difficulty would be experienced in determining the tangible, active, or live assets of the business. The difficulty would come in determining the value of the good-will, trade-marks, patents, etc. In the absence of a supervisory power, the valuation of the latter elements of the property is left wholly to the promoters of the enterprise. The result is that, as a rule, the capital applicable to payment is inflated to a point many times in excess of the true value of the assets of the corporation to be absorbed. It follows that, to enable the artificial capital to net the promoters a substantial return, there must be manipulation of the prices at which the products can be bought and sold, operating unjustly to the producer and consumer, and the forcing of economies resulting in many instances in losses to employees who are specified to pay the way for dividends in order to give the inflated stock a market value.

The legislation proposed by Mr. CHESAN would provide for the appointment by the President of a Federal commission, or for the enlarging of the powers of the present Interstate Commerce Commission, to which all corporations, hereafter formed to do an interstate business, must first apply for a certificate of capitalization, which shall determine the value of the prospective enterprise, and fix the amount of capitalization and the method of payment for the same in the issue of capital stock or bonds. Armed with certificates of capitalization, the incorporators might apply to any State and secure a charter; but no corporation hereafter formed shall have the power to transact business without such a certificate. Neither should any increase or reduction of the capitalization of any existing corporation doing an interstate business be made hereafter without the commission's approval. Nor should any corporation have the power hereafter to lease, nor in any way acquire, the property of another corporation without the commission's approval of the terms on which the same is acquired.

Trenching the constitutionality of his plan, Mr. CHESAN has no doubt that the proposed legislation would be sustained by the Supreme Court of the United States in view of its frequent decisions defining the powers of Congress under the Constitution to deal with interstate business. We are reminded that Senator KNOX, when Attorney-General, said, not long ago, that if Congress under the power to regulate interstate commerce, may utterly destroy a combination and forfeit its property in interstate transit, as the SHREVEAT act provides, it seems reasonable to say that it can, in the exercise of the same power, deny to a combination—whose life it cannot reach, if the combination be the creature of a State—the privilege of engaging in interstate commerce, except upon such terms as Congress may prescribe to protect that commerce from restraint.

We have said that the plan here outlined for preventing future mergers contemplating an interstate business is radical in the sense that it goes to the root of the matter. The principle involved, however, is not novel; all that is novel is the application of it by Congress to interstate business. So far as an interstate business is concerned, the principle has been enforced in many States, particularly in Massachusetts, where power is vested in the boards of railroad commissioners and the gas and electric light commissioners, not only to fix the issue of capital, but also to exercise general supervision. In that State railroad commissioners have authority to recommend transportation rates, together with the right to appeal to the Legislature if such recommendations are not adopted; while the gas and electric light commissioners have authority to fix the price charged for lighting.

"TAFT is losing weight."—New York Sun.

As unimpaired testimony to the efficacy of the POULTREY BROWNE Patent Panama Excisor.

The President said that it was his present intention to visit Central Africa as soon as possible after his retirement from office on March 4, 1909, to hunt tigers and elephants.—The Sun.

The President's private fortune must have appreciated considerably in the last five or ten years. We hope so. At the same time, he is the one man alive who could probably make money out of a Central-African hunting trip.

Captain LOUIS E. JAMES, of Bloomington, Illinois, has used the estate of ABRAHAM BROOKER, a deceased plough manufacturer of that town, for \$9000 for his services in "telling the old man funny stories, reading chapters from the Bible, and in many other ways lightening his declining days during the three years that the eccentric manufacturer made his home with him. He shouldn't be permitted to collect on the Bible, but any man who can tell funny stories for three years, and not succumb with his victim, is certainly entitled to \$9000.

A story illustrating the strong democratic spirit in which equality is viewed in Norway is related in the London Mail. At the end of a play by HENRIK IBSEN, the National Theatre at Christiania, King HAARON invited the venerable dramatist with the remark: "A very beautiful play, my dear HENRIK." HENRIK, putting the King paternally on the bench, said: "Do not say 'my dear' (every), Your Majesty, but 'my dear'! That's how we pronounce it here. A man in your place must take care of these little matters, you know. King HAARON, surprised, replied with as good grace as possible, that he would be careful to follow the advice. "That's right," replied HENRIK. "If you take care to remember what I say you'll find you'll have good cause to thank me."

When WILLIAM JENNINGS BRYAN was elected a duke by the Marquis of Minsidano Island, he went to the ceremony of investiture, so the despatches say, "in a royal carriage manned by forty cowboys," and received bells, spears, and banners in addition to a salute of fifty guns." But all this was as nothing compared with what Mr. BRYAN received when he was made a fief man the other day. No sooner had the Red Men closed in on him than the Past Great Iacabone delivered himself of a "terrible, acrid, and censorious" owl," as follows:

Such men as you, Mr. President, are not the result of accident. At their salubrious diet of peace and justice, with splendid, and proud their sacred forms the robe of immortality glides, shielding and protecting them until their life's work is done, then, wrapped in the love and admiration of a grateful people, they enter the land of the dead, where their everlasting praises will be sung by the choirs of the heavenly courts.

We thought we knew the whole red man, but if this isn't JAMES JENNINGS BRYAN in a corner gasping for breath, we are very much mistaken.

Seconding the efforts of the Commercial Club of Salt Lake City to divert westward a share of the enormous annual travel from this country to Europe, we lately spoke of the assurance the average American felt that he would have fun in Europe, and the business of his information about the prospects of entertainment in our own far Western cities. His way of illustration we spoke of his uncertainty whether he would find pleasure in visiting Butte or Spokane, would be edified by those towns, and find anything to eat in them. We happened on Butte and Spokane quite at random, and would just as readily have said Helena and Yankton, or Walla Walla and Las Vegas. But the Butte and Spokane folks seem to think we have cast a slur on their resources. That is too bad. In a letter published in the WEEKLY two weeks ago Mr. ANAND of Pueblo testified to the charms and resources of Butte and Spokane; that Butte is a very interesting and prosperous mining-camp city, with more college graduates than Boston in ratio of population, and that Spokane has all sorts of charms, including a restaurant of singular merit. About this restaurant we have concurrent testimony from the Hon. JAMES HAMILTON LEWIS, of Chicago, who says, at the request of the people of Spokane, that the Davenport restaurant in that city (to say nothing of the splendid hotels) is supposed to be a restaurant without equal in the United States, and his no superior in the world. If Spokane has a restaurant of such surpassing merit it ought to be more widely known. No single piece of information about any town is of more interest to the average traveller journeying for entertainment than that the town contains an establishment which commands the services of a person with a rare and admirable talent for edifying the inner man. Wall decorations, dining-room furniture, cutlery, even fine table-linen and flowers, are much too common everywhere in these days to excite enthusiasm, and discerning diners will go far out of their way to avoid the best of restaurant music. But a cook is different. If the Davenport, of Spokane, has a great cook, that is important. We are sure that such a town will look lovely to a traveller.

The Leaders of Russian Liberty

By Charles Johnston

SINCE the law establishing the Russian Parliament, or Duma, was promulgated last August, events have followed each other so fast in the great northern land that the whole balance of moral forces is altered. The loosening of the bonds of autocracy brought many revolutions. It showed, among other things, what a store-house of explosive forces the Russian empire was; and that these explosive tendencies were by no means exclusively directed against the central government. We can see now that Turk and Armenian have only been kept from cutting each other's throats among the gorges of the Caucasus by the strong hand of the central power; and that when this was removed, when the garrisons were withdrawn and sent to Manchuria, explosion after explosion followed. The same thing is true in the Baltic provinces, where a tier-min nobility rested upon a semi-servile class of Letts, speaking another language, and with wholly different ideals and forms of life.

There again the removal of pressure from above has opened the way for explosion after explosion. The same thing is true of the great and sanguinary outbreaks in Moscow and Warsaw. The oppressed forces were liberated when the pressure was removed, and violent convulsions followed. We may expect a long period of recuperation before the storm elements are fully exhausted, and the Russian nation settles down to the task of ironing and securing a decent government.

Side by side with these explosions of compressed forces we have had a series of changes which must directly modify the character and driving force of the Russian parliament. First, the appointment of Count Witte to the post of Premier has raised a host of problems. In England, the Premier is the leader of the parliamentary majority, and, while nominated by the king, is really upheld by the parliament. Can Count Witte gain and hold a parliamentary majority? If not, will the constitutional rule of England be followed, and a new Premier be chosen from the party which dominates the Duma? A grave question, which time must answer.

Again, the complexion of the problem has been completely changed by the extension of the franchise to a wider area than was originally contemplated, and we are not yet in possession of the data necessary to illuminate this new situation, for no one can tell,

Prince Trubetskoi, a Pioneer in the Zemstvo Movement, whose recent death was the occasion of a great popular demonstration

with any approach to certainty, what sort of representatives the next elections will select. There will probably be a protracted era of trial and failure before anything like an equilibrium is reached; but that has been the path by which all nations have travelled and need cause no concern. Nations must pass through manifold trials before they come to their majority, and there is a period of growing pains which may in no way be avoided.

Though the basis of the electorate has been changed, it would seem that the form and framework of the Duma remain very much the same. As outlined in the law of August 6, the Russian Imperial Duma will have about four hundred members; much smaller than the House of Commons, which has nearly seven hundred; smaller also than the French Chamber of Deputies; most closely comparable in numbers to our own Congress. The Duma, like the House of Commons, is constitutionally subordinated to an Upper House, and the decisions of both are, in theory, subject to the veto of the sovereign. The Council of the Empire will be composed of 176 members, half of these appointed by the Emperor and half elected. The latter will include thirty-four zemstovists, eighteen members of the nobility, and twelve representatives of trade and industry, while the clergy, Poland, the Caucasus, and the border provinces would each have six representatives.

The four hundred members of the Russian Imperial Duma must have certain property qualifications. They must be able to speak Russian, and they must take the oath of allegiance, on election. They will draw \$5 a day allowance during the session of the Duma, and mileage at the rate of two and a half cents a mile to and from the capital. As first designed, these members were to be elected in rather a roundabout way. Groups of electors were first to be chosen from three great classes of Russian society: the landowners, the village communities, and the municipalities. The first extension of this scheme further admitted large numbers of the artisan class; the latest development will, it seems, admit everybody, including the army and navy. It is worth noting, as showing that Russia is still a vast, sprawling village, that of more than four hundred members to be returned to the Duma, only twenty-eight will represent cities: six for St. Petersburg; four for Moscow; and one each for the following eighteen towns: Astrakhan,

M. Boborov of the Russian Zemstvo, who is likely to be prominent in the next Duma

M. Shupov, Chief of the Zemstvo movement in the Government of Moscow

A Meeting of Students in the Mens-hall of the University of St. Petersburg, recently closed by the Police on account of the plotting there.

RUSSIA'S SOCIAL AND POLITICAL DISTRESS

Although the news despatches would indicate that the Czar's government is slowly gaining the upper hand in its sanguinary struggle with the people, violence and fear are still unabated in the empire. The most severe measures are being adopted to put down the revolution and to meet the conditions arising from the general strike of working-men in the larger cities.

Prince Shakhovskoi, of the Moscow Zemstvoists, one of the "great lines of Russian Aristocrats."

M. Petrandevitch, who may be elected first President of the Imperial Duma.

Kishineff, Vilna, Voronej, Rostoff, Ekaterinoslav, Kazan, Kieff, Kursk, Riga, Nijni Novgorod, Orel, Samara, Saratoff, Tula, Kharkoff, Odessa, and Yarensky. Compare this vast rural representation with that of England, where the city and county members exactly counterbalance each other, and we get a measure of the difference between the two nations.

Some of those who are likely to lead the Duma we know already. The old princely families are strongly represented. They are descended from the rulers of old independent states, which were gradually absorbed by the Tsars of Moscow, this process of absorption being completed long before the Romanoffs were called to the throne. It is of immense historic interest to find these scions of former independent princes coming forward to demand a share in the directing of Russia's destinies, and, such is still their prestige and wealth, that they may form a great factor in the new order, regaining some of the influence they wielded before force and fraud compelled them to bend to the Moscow government. Most representative of these old semi-princely houses are the two princes Iliorukh, whose ancestors ruled Rostov before the Romanoffs came. Prince P. D. Dolgorukh has played a leading part in the zemstvo agitation from the beginning, and was one of the deputation to the Tsar, on June 6, 1905. He is a man of the highest social and personal position, and enjoys general esteem at the Court as well as in the popular zemstvo meetings. He recently presided over a great gathering at Moscow, which drew up a list of some of the things the Duma may hope to accomplish. These included complete responsibility in the eyes of the law for all, private individuals and officials alike; the complete equality of personal rights for all citizens of the empire; recognition of the inviolability of the person and domicile, and guarantees of freedom of conscience, faith, speech, meeting, association, and the press; in other words, a thoroughly English programme.

Prince Shakhovskoi is another of the great rare of Russian aristocrats. He was one of the dominant men in the first zemstvo congress, in December, 1904, and was elected to carry its minutes before the second zemstvo congress, in June, this flanking the two in a single great movement. He also was one of the deputation which appealed to the Tsar on June 6, 1905; and it was in part due to the social prestige of men like Prince Dolgorukh and himself that the deputation was so cordially received. Associated with them was Prince Sergei Trubetskoi, who lived to view the promised land from a distance, but was not destined to enter it. His funeral, last autumn, was made the occasion of a great popular demonstration. His body lay in state in the chapel of one of the hospitals, and thousands of his admirers trooped through, to take a last look at one of the pioneers of Russian freedom. On his breast was a wreath with the inscription: "A Champion of Liberty." Prince Trubetskoi was a student, a scientist and a writer, before he came forward as a leader of the popular movement. He was a great figure in the scholarly society of Moscow, and was co-editor of Professor Grotz's journal: *Questions of Philosophy and Psychology*. He was also prominent in various social movements, such as the education of waifs, the arrangement of holiday trips for city children, the reform of hospitals, and the like. Altogether, in him the popular movement has lost one of its best men.

Another very vigorous personality is M. Petrandevitch, who is a country gentleman of the old style, a man of sturdy and knotty self-reliance, and at the same time very imaginative and explosive. While all pass smoothly, M. Petrandevitch will maintain a beautiful calm; but in the face of impetuousness he will be a firebrand. He was presiding genius of the June zemstvo congress, and is reported as saying: "We have appealed to the throne, and appealed in vain! It is time to appeal to the Russian people!" But this revolutionary profession has been glossed over and forgotten. He is exactly the type of man, depicted by Gogol, when, under Alexan-

der II., would have worked himself into a fever of excitement over the emancipation of the serfs; and would with wild enthusiasm have begged himself and his neighbors too, to restore "the land to the people." Yet he is an admirable debater, and it is quite probable that he may be elected the first President of the Imperial Duma. One of the features of the new electoral system is the weight given to the land-owning class; and thus may be expected to bring to the front many stumpy gentlemen like M. Petrandevitch, who have no chance to attract royal favor like the Dolgorukis and Trubetskis, but who are, nevertheless, a main element of strength in the Russian nation.

From the same class, the entitled country gentry, come the two Avoffs, and M. Ioslov, all of whom are likely to be prominent in the new Duma. Their future programme is probably best represented by the resolutions passed a short time ago, at a meeting of the St. Petersburg "Nobility and gentry." They have declared, first, for the separation of the legislative, judicial, and executive departments, no doubt in order that the power of the government to pursue, caprice, and ruinous persons considered obnoxious may be done away with finally. This unjust system was the ideal of the late Elvich, who was always in fact prosecutor and judge, trying his opponents under regulations passed by himself, and imprisoning them, or sending them to Siberia or the Arctic shores. No greater abuse than this common exercise of judicial and executive function can well be conceived; and the reformers have done well to set it forward prominently among the evils to be removed.

Two very weighty clauses in the same programme recommended the better training and payment of the clergy, and the better education of the masses. Both strike at the root of long-established wrongs. For centuries, the priests have been so sure that they have been driven to all kinds of expedients to keep soul and body together; and as the Russian priest must be a married man, they are compelled to make provision for their families out of a pitifully slender income. The result has been a lamentable system of petty ecclesiastical extortion, which has brought the whole clerical body into unscrupulous inequality, and any improvement of their position will react favorably on the whole nation. As to the need of reeducating the illiterate of the masses, there can be no two opinions. The sad, dense, ignorant ignorance of the peasant has been the unpardonable jungle in which lurk all kinds of abuses and dangers, and it is time that the jungle should be cleared away. This meeting of the nobles of the metropolis further insisted on greater responsibility of the ministers, and more assured freedom of speech and of the press.

To a different class belongs M. Shipoff, who bids fair to be the host of the monarchists in Russia, and is already "more royalist than the king." He came forward, some six years ago, when a proposal was made to lay certain agricultural questions before the zemstvo, and these bodies took advantage of the occasion to read the government a lecture on administrative abuses, and to demand the summoning of a zemstvo congress. The fight raged fiercely in the dark for months; but the forces of reaction prevailed, and no congress was called. M. Shipoff was then in favor of such an assembly, but seems since to have somewhat changed his mind. He took part in the representative movement fifteen months ago, but was not elected to the zemstvo congress of last summer because of his reactionary views. He was invited to be present and was asked to speak, though not a member. M. Shipoff pleaded with the assembly not to appoint for popular representation, but to leave the whole question to the Tsar, acting under Providence. He was heard with tolerance, but without accord to his views. This is not the M. Shipoff to whom Count Witte offered a portfolio.

Doubtless recent royalist upholders have named the moderate parliamentary leaders that all the forces of order must stand together, if Russia is to be saved from anarchy.

How New York Met High-Priced Meat

By F. W. Hewes

IN the second year of the twentieth century the price of meat made its memorable "push," and in the following year met its "Waterloo." Beginning with January, 1902, the price of beef was steadily advanced, and in April it was ten per cent. above the December price. Then came the great May lift, of about twenty-five per cent. more, making an increase of thirty-five per cent. in five months (see price chart).

The people—except vegetarians—were by this time grumbling hard. Other meats kept company with beef in a large advance of price, and although the cost of meat-eating had much increased, the meat-eaters had so far done nothing but grumble and buy meat. However, grumbling did not affect the market price. Dealers were pocketing their "cent per cent." right along, and the people were paying it (see cost chart).

The wholesale price halted at the May (1902) level for several months, yet the cost to the people went on increasing, for by this time the retailers were reaching out for additional profits to make up for their very small margins in the beginning of the battle.

May, June, July, August, the cost to the people crept steadily up. Then something happened. Although the price remained just as high, yet the average cost to consumers decreased over ten per cent. in a single month. The people had come to the point of action.

Month by month they "cut it out" of the bill of fare, steadily decreasing their meat cost. In December (1902) the wholesalers made another upward push (see price chart). If the people would persist in eating a small amount of meat they must pay a higher price. But the people had the game in their own hands. They held the winning cards, and they proceeded to play them. They had found out a thing or two, in a very practical way, about their own needs. There were other sorts of food, so they kept right on cutting down on the meat bill, until in February, 1903, they had brought their average meat cost back to normal again (see cost chart).

They did not, however, see fit to stop there, except for a three months' respite when they again began to "cut it out." The cost for the first six months of 1904 fairly represents the range of cost

since that date, and it is considerably below the normal range, before the "lattle royal" began.

The effect on the wholesale market is very clearly pictured in the price chart.

Beginning with February, 1903, wholesalers began to reduce the price, but it was not so far as drawing money from the pockets of the people was concerned. It will likely continue so, for the action as a whole has been gradually abandoning real meat foods for fifty years. The experience of 1902 and 1903 simply crowded ten years into two for the time being.

It took just about as many months (August, 1902, to February, 1903) to whip the meat-market as it did in 1898 to whip the Spanish, but it was done with little noise and no politics.

Not less interesting than the cutting down of the cost of meat are the records of the increased eating of other foods. As bread-stuffs were also high in price during a part of this period, the pocketbook naturally went marketing for eggs, fruits, vegetables, milk, butter, cheese, and fish. For a few months the preference went strongly to one class of foods, then to another. Finally, it seems to have apportioned a small increase to bread-stuffs and a larger one to dairy products, fruits, and vegetables.

The railroads and refrigerator-cars, the canning industry and cold storage, are more and more bringing the great growing city markets to the door, to the convenience of the fruit and vegetable grower wherever he may be between the two wonderful ocean boundaries that at once limit and expand our national activities. The table-habit of providing an increase of fruits and vegetables has made astonishing progress within twenty years, and shows no sign of decrease.

Some idea of the stupendous progress of this country, not only in grain production but in consuming power, can be got when it is said that whereas we raised in 1913, 2,223,648,312 bushels of corn, and consumed 2,447,640,470 bushels; in the same year we raised 670,000,000 bushels of wheat and consumed 466,975,913 bushels.

Both production and consumption have tripled in thirty years.

Authority:—Monthly Summary of Commerce and Finance, Apr 1905—U.S. Dept. of Commerce and Labor

The Fluctuations in the Value of Meat in New York during Four Years

William Rainey Harper

By Charles F. Thwing, LL.D.

President of Western Reserve University and Adelbert College

IN a report made to the National Council of Education at Minneapolis in July, 1902, on the educational progress of the year of 1901-1902, President Harper, speaking of Colonel Francis W. Parker, who had recently died, said: "That he should be taken away at the very moment when he was about to enjoy the fruition of a lifetime's work, and that he should not be permitted to enter the buildings on whose plans he had spent so much time and energy, was indeed pathetic; but that he had built foundations broad and strong for future work in the field of elementary education; that he had made noteworthy contributions to the cause of public-school education; that, indeed, he was one of the great leaders of the last quarter of a century—in everywhere acknowledged." With certain obvious and simple changes, the words which President Harper wrote of his colleague could be applied to himself. For he has "built foundations broad and strong for future work"; he has "made noteworthy contributions" to the cause of education; he has come to be acknowledged as one of "the great leaders" in education; and that he has not been permitted to enter into the full fruition of the work of a lifetime is "indeed pathetic."

William Rainey Harper was known as president of the University of Chicago. Yet, he was not an executive by his own choice. Years ago he made to me the remark, with much emphasis, that he would gladly lay down his office as president if it were possible. He would vastly prefer, he said, the work of a teacher. This remark is of great significance. For the evidence indicates that, great as he was as a college president, he was yet greater as a teacher. In him apparently lay the cause of a great educational result. But there were put into his hand magnificent materials, and he was surrounded by conditions which made the era-time, under his guidance, natural and inevitable. For, several years previous to the foundation of the University of Chicago in 1880, members of the Baptist Church had discussed with much thoroughness the question of the foundation of a university. At one time it seemed that the foundation would be laid in, or near, New York city. Suggestions were offered respecting the removal of the University of Rochester and making this most honorable and historic school the cornerstone of a great foundation. It was finally decided to make the beginning in Chicago. In these preliminary investigations, Mr. John D. Rockefeller bore, either actively or through others standing for him, an important part. The conditions inevitably pointed to William Rainey Harper as the active administrator of the undertaking.

In this undertaking, he and Mr. Rockefeller have worked together from the beginning. The personal respect which each has had for the other was, apparently, exceeded only by the effectiveness of their official relationship. On the tenth anniversary of the university, Mr. Rockefeller said, in an address, "The University of Chicago would not be in existence today had it not been for our honored president, William Rainey Harper. The friends of the university gave him their confidence and highest regard from the first. It is needless to say that he has shown himself entirely worthy of it, and that he has always proved himself eminently fitted for his high position. No words of mine can give you a more favorable impression of President Harper in respect in every quality that goes to make him what he is—one of the foremost leaders and founders of our time. Indeed, I do not know where we could have found another so well qualified for this important work. I am sure I express the wish of all present here today, and a multitude of friends throughout our land and other lands, that his life and health may long be spared to continue this great work which he has in this very brief period brought to such a high state of perfection, and which already ranks with the leading universities of our country and

the world. We, the friends of the university, assure President Harper of our continued cooperation and support." It is added that the founder of a university, in a material sense, is able to offer words so enthusiastic regarding his cofounder in a special intellectual and executive sense. At the same decennial, President Harper said of Mr. Rockefeller: "I shall therefore not say all that comes to my mind in acknowledging here on behalf of the board of trustees the special debt of gratitude which we owe to the founder of the university, Mr. John D. Rockefeller. We feel it deeply; the events of these last few days and all that has been said must have made this evident. We trust that it is equally evident to him that his great benefactions are doing the good which he hoped for them. I desire, however, to lay stress upon the fact that this is not merely a recognition of the original impulses given to our work; it does not confine itself to the material and so generously provided; it is inspired also by the moral encouragement which he has given at every onward step, and by the feeling that Mr. Rockefeller is not only the founder of the University of Chicago and its greatest benefactor, but also an earnest sympathizer with its highest aspirations."

It is also added that the president of a university is able to use words so enthusiastic of a founder and donor with whom he had been privileged to cooperate for a decade.

The result of the cooperation of President Harper with Mr. Rockefeller, and the result of the labors of the trustees and members of the faculty of the University of Chicago, are embodied in a great consummation. This consummation is the beginning of what is to be a very great university. As President Harper himself said, in a report made at the conclusion of the first decennial: "The first ten years have seen the foundations laid and the superstructure erected in the rough. The second ten years will witness the development of the æsthetic side of life and thought." In the ten years and five which have now practically elapsed, the university has proved to be an illustration of what, as President George H. Palmer's phrase, is "the glory of the imperfect." The development has been irregular, many methods of administration have been unwise, the general conditions of administration are distinguished by their complexity, elaborateness, and pecuniary expensiveness. If the value of the instruction, of both graduate and undergraduate, given in the various departments, represents extremes of worthlessness and of unworthiness. But, taken all in all, the consummate result is noble. In his decennial report, President Harper devoted a paragraph to the more important experiments, of which he assumed not less than ten. The most important of these experiments is, without doubt, the establishment of the summer quarter as an integral part of the university year. This experiment represents a useful addition and a wise method of the higher education. The instruction offered in it is usually better articulated and more academic than is found in most summer schools. A spirit of hard and persistent work prevails. The enrolment is largely made up of those who appreciate the advantages offered and who are denied them in the more ordinary terms. The consequent enrichment to American life made through the better education of teachers is great. The nine other experiments, as alluded to in the tenth annual report, do not approach in value the worth offered through the formal establishment of a fourth term.

It therefore seems to me evident that President Harper was greater as a teacher than as an executive. He was an interpreter, an expositor. In his special field of Semitics he was recognized by his colleagues not as a great scholar, but as a most impressive and inspiring teacher. Of the value of this profession of teaching he had a high estimate. I am sure that, great as he was as a president, he would prefer to be regarded as yet greater as a teacher.

The late William Rainey Harper, President of Chicago University

DEFECTS IN THE POSTAL SYSTEM

By HENRY A. CASTLE

Former Auditor for the Post-office Department

The long experience of the author as Auditor of the Post-office Department at Washington qualifies him to speak with authority and from intimate knowledge of the defects to the equipment and management of the greatest business organization under Federal control. On this topic Mr. Castle has written five articles, of which this is the first; the others will appear in the next four issues of the "Weekly"

I.—Money-order Frauds, Forgeries, and Embezzlements

THE issue and payment of postal money-orders involve each transaction aggregating nearly \$1,000,000,000 per annum. This almost inconceivable sum is received and paid out by the postmasters of the country in amounts averaging less than eight dollars for each transaction. Innumerable mistakes necessarily occur in the performance of these operations. And human nature being weak, temptations strong, and opportunities numerous, a wide field is offered for the exercise of criminal propensities. Forgeries, false impersonations, thefts, and many other varieties of fraud are constantly perpetrated; defalcations and embezzlements of money-order funds by postmasters are of daily occurrence. It is believed that no other function undertaken by the national government opens so wide an avenue for pecuniary risks and losses.

Stealing money-order blanks from post-offices, filling them out and collecting them rapidly before detection, have been successfully tried by many adepts. Some years ago the assistant postmaster of a town in South Dakota, a man highly respected in the community, obtained a short leave of absence and failed to return. Reports soon came in that numerous money-orders of large denominations, purporting to be issued at that office, had been paid along a line of travel reaching to Chicago and eastward. No such orders had been regularly issued, but an examination disclosed that the absconding assistant had removed blank orders from the book, properly filled them out for the maximum sum (\$100 each), forwarded the advices marked "identification waived," stopped off at towns en route, and collected in all about \$25,000 without question. Inspectors sought the culprit in vain. All trace of him vanished, until, many months later, his remains were identified in the victim of an accident in Kansas—and that "jacketed case" was closed forever. His methods have been frequently followed by others, with less success in eluding pursuit.

Much more recently a swindler at Lima, Ohio, was captured by inspectors after an extended night vigil near his home. He had seduced merchants of Terre Haute, New Albany, Fort Wayne, South Bend, Elkhart, Shakapere, and other Indiana cities by means of money-orders which he raised from their original amounts to sums much larger. This man's peculiar game was to buy orders for twenty-five or thirty cents, or similar small amount, and so raise the figures as to make the orders read for \$50, \$75, or \$100. He was clever at this work of changing the amounts of the orders, using some chemical solutions to erase the original figures and give space for the fraudulent ones that he would put in their place.

He would not attempt, as a rule, to cash these money-orders at the post-offices, but would call at stores, saloons, or shops, where he would make some small purchase and then tender the orders in payment. This was always done after the post-office had closed for the day, and the persons getting the orders did not have them examined until next day. This allowed him time to get out of town and pass on to fresh victims in new postures. Very often he resorted to the sympathy dodge in order to get the fraudulent orders cashed, telling a piteous tale of distress, such as that some member of his family was dying or dead, that the money-order had been sent to him to pay his way home, and that it was important that he get to the bedside of the dying or dead by that night's train. His ruseful story secured victims counted by hundreds.

In August, 1903, Mrs. Annie E. Shurpaley, a criminal of similar propensities living in Philadelphia, was arrested by the general post-office at New York, charged with systematically "raising" postal orders. Numerous complaints had been made of the woman's operations during the preceding months, her method being, it is said, to purchase small orders, usually for twenty-five cents, erase the figures with acids, raising them from 50¢ to \$100, and inducing keepers or tradesmen to cash them. When arrested half a dozen such "raised" notes were found on her. Post-office inspectors who arrested the woman say she is the cleverest "raiser" of notes that the department has ever had to deal with. She is now five years old, and previously conducted an express business in Philadelphia.

Temptations to defalcation and embezzlement on the part of postmasters are enormously increased by the considerable amounts of money handled by them in connection with the money-order service. Postmasters are entitled to carry a reserve sufficient to meet any reasonable call for payment of orders drawn on them. This reserve is a sacred trust fund and should always be kept

intact and held ready for inspection. But among the 30,000 postmasters who sell orders are, of course, a due proportion of dishonest, improvident, or careless persons who, notwithstanding the watchfulness of the department, dissipate these funds, and when confronted with their fault must take the consequences. Here, again, comes almost certain loss to the government. If the bondsmen are insolvent the loss is total. If they are solvent, Congress is usually appealed to for relief, and seldom in vain.

The business of the money-order system is vastly swollen, and responsibilities of postmasters correspondingly increased, with the re-selling chances for embezzlement, by its employment in a channel widely divergent from its original purpose. This is the use of money-orders as a savings-bank. Of course, the patrons receive no interest on the deposits, but the investment is safe. The process is to purchase no order payable to one's self and hold until the money is wanted. Among those who use this method of saving funds are many theatrical people. The savings-bank does not appeal to those who leave New York, and do not expect to return for many weeks. Good companies get stranded, and it serves an actor or actress much better to write to a friend at home, enclosing a money-order, and ask the friend to get the money from the post-office, than to write to the same friend and ask to cash a sum of money.

At the New York post-office a short time since \$1200 was paid to Maggie Cline on orders drawn on herself while out on the road. Not long ago a juggler who had been out with Barnum's Circus presented orders payable to himself aggregating \$2700. He secured identification and said he could not prove his identity except by lithographs. He unveiled a poster, representing himself between two bull-dogs and endeavoring to look as fierce as possible. The clerk told him that if he could make himself look as he did in the lithographs he could have the money. The performer took off his hat, massed up his hair, and made a face. The clerk immediately counted out the money.

Congress and the Treasury Department are not always helpless in permitting an open door to fraud. There have been abuses sanctioned by law not long practiced by the accounting office, which gave facile opportunity for wholesale swindling by postmasters as some of those herein described give for operations against them. During several years the accounts of postmasters issuing money-orders were settled by checking their statements, not against the orders, but against the stub or coupon attached therefrom. Accounts aggregating probably, \$600,000,000 were passed upon by this free and easy process. It was the pleasant privilege of the writer to abolish this amazing procedure, hence a statement of its inception and operation will be specially appropriate here.

The so-called "Docket Act" of 1893, which reorganized the departmental service, materially changed the system of checking money-orders in the Auditor's office. This change was an incident of the bill, which provided that thereafter money-orders should be so printed that by detaching a coupon the amount of the order should appear automatically on said coupon, and though the requirement to use the coupon for checking purposes followed only by implication, it was plainly intended, and the coupon could serve no other possible purpose. In fact, the report accompanying the bill stated that the checking of money-order statements would be enormously expedited by using the coupon instead of voucher for that purpose. The auditor then in office adopted the system, and in more than one report claimed great saving of time by its use. Time, for more than three years the money-order accounts of the issuing postmasters were audited on the "stub" or coupon, and not on the money-order themselves, as had previously been done, and has been done since January 1, 1908. This process was equivalent to settling a customer's account at bank on his own list of checks used, verified only by the stubs of his check-book, and without scrutiny of the checks themselves.

The issuing postmaster sent in with his weekly or monthly report of money-orders sold what purported to be the coupon cut from each order, which coupon was supposed to represent by the process of cutting the exact amount of the order from which it had been detached. If the postmaster's account corresponded with what he claimed it was assumed to be correct, accepted and closed. The money-order itself was not checked by the issuing postmaster's

(Continued on page 137.)

In the Moon's Shadow

By Mabel Loomis Todd

The author who, as writer and investigator, holds a position of first rank among authorities on astronomical subjects, was sent to Tripoli last summer as a special representative of "Harpers" to view and record the results of the total eclipse of the sun. In the following article is given an account of the expedition, with a summary of the results based upon a long and careful study of the data, and photographic negatives obtained

TWICE in five years northern Africa has been traversed by shadow-paths. And, even more remarkable, both included Tripoli. Such repetition is rare in any city. The only one ever observed in New York city occurred in 1866, and London, in 1715, had not been visited by a total eclipse for six hundred years. It is safe to say that any astronomer, watching quietly beneath his domestic dome, and having the good fortune to witness a single total eclipse from his convenient shelter, would, speaking generally, sit there for more than three hundred years before another would darken the same landscape.

In general direction these two eclipse-tracks were not the same. That of 1866 beginning near New Orleans, passing northwesterly over Georgia, Alabama, and North Carolina, leaving Asia at Norfolk for its rush across the Atlantic to Portugal and Spain.

Starting near Hudson Bay and Labrador, traversing ocean spaces southeasterly across Spain, the 1905 track followed its predecessor quite closely only from the Balearic Islands over the Mediterranean to Algeria, becoming almost identical in Tunisia and Tripoli. But where the former shadow-path swept somewhat out in the endless sands towards Cyrenaica, so dreaded of old, last August's darkening continued to Egypt and Arabia. Africa offered fifty-one seconds of totality in 1905; its latest darkening, one hundred and eighty-six, for which many nationalities dispatched expeditions and instruments. But more terror resulted from the first, if fewer photographs.

As his official residence the British consul-general has a fine old masonry pile, capable in days of primitive warfare of withstanding siege and assault, with thick walls, entrances full of safe angles and turns guarded by many resting convalescents, placed under white banners until a footstep approaches. Then, instantly erect, they usher in the entering visitor with much ceremony, or his business is challenged forthwith.

Within, an ample courtyard gives access to servants' rooms, kitchen, household offices; in the centre a low old stone rises far above galleries and roof-terrace into airy casbahs. A staircase of Maltese stone with wrought-iron railing leads at once, beneath the insignia of Great Britain, to a wide gallery, from which open the family apartments. Still above, the fine terrace overlooks city, sea, and desert; and here, as before, Arabent eclipse-expedition telescopes were mounted by courteous invitation, to await once more the moon's rushing shadow, as on August 30 it should pass over the gleaming city in westward flight.

A more nearly ideal eclipse station could hardly be imagined. Higher than most surrounding houses, the consulate commands a wide horizon; its telescopes swept the sky. Swifter monasteries rising into upper casbahs close by form background, five times a day, for white-robed muraizins, who faithfully emerge when their hour comes; and calls, monotonous if penetrating, nasal yet dignified, echo and reecho over the city, leading those who will to remember Allah.

Certain reasons make it highly desirable to multiply photographs of the corona during a single eclipse. Many must still be studied before coronal nature can be fully known, its problems entirely unsolved. When that day comes the whole story of the sun can perhaps be told. Moreover not only is it well to compare representations of many coronas of different years, which vary greatly in shape and size and evidences of solar activity, but to collect all these photographs taken during the swift progress of any one totality. Time for no change in this delicate halo of ethereal light has been detected during its few moments of visibility at any given locality, nor even between the observable beginning and the end of the track, separated by more than two hours of actual time.

How rapidly, then, do alterations in the corona take place which, from one eclipse to another, modify its whole appearance—once a smooth circle, again a broken and irregular ring; sometimes showing long and immensely extended streamers, at the next coronal a quiet petal-like development, without emphasis in any direction? No one has yet discovered.

A connection between sunspot epochs and coronal streamers has been hinted. Sometimes, as we know, rapid

changes occur in the spots, and probably the corona, likewise, may undergo similar fluctuations. If a hundred photographs of a single totality could be taken, extending from its first to its last second, not hopelessly changes might be detected, undeniably faint and slight, but no less significant, beginning the ripple's answer. But the one, two, or three minutes of most totalities are not enough for a single astronomer to take even twenty or thirty photographs by hand. Some mechanical means must be used to multiply them. This has been done successfully during several of our expeditions. Continuous chains of photographic plates, first used in our West African expedition of 1893, and again in Japan in 1896, are arranged in pass before each telescope camera; and in 1900 the motive power was gravity only, buckets of desert sand descending from terraces to counteract their speed regulated to expose the plates in succession at well-timed intervals.

For the eclipse of August last, preparatory weeks being fewer, all arrangements were simpler. The lenses employed were adapted to photographic use, optician and astronomer sacrificing their visual possibilities. The largest was of twelve inches diameter, with a chain of more than forty plates; the smallest—over four inches in length of but three inches diameter, suited to photographing all the stars surrounding the sun, to detect, if possible, the intra-Mercurian planet.

While automatic devices of previous expeditions were employed in changing plates, they were themselves operated by hand in the case of these ten main instruments; but in third and smaller was loaded with a multitude of plates, 200 or more, and taking entire care of itself during totality, simply gravity providing the power.

Practically the entire English colony as well as friends of other nationalities became volunteer assistants to the astronomer—an organized amateur force. Shortly before eclipse-day, rehearsals were inaugurated, and daily at totality-hour, out on the blindingly white roof-terrace, an armed company copied artificial coronas; watched for shadow-bands, to indicate their speed, with direction; looked for the moon's approaching shadow; made careful observation of sunlight disks (filtering through heavy foliage on the courtyard wall) to become crescents during partial eclipse; waited for Bully's Beards; while every fifteen seconds time was called and struck off on an ancient Arab bell. In other lines minor phenomena were anticipated, which thus should not find observers unfamiliar or unprepared.

Telescopes were adjusted, photographic plates in place, preliminary observations made, assistants trained, and the sun of August came, clear and hot. Sea winds did not, but in quite unusual; convulsive fits of several nations hung limply on their masts, then fluttered gently off—in the wrong direction. All night, in skies of limpid clearness, stars were observed and lost tests made, and eclipse morning dawned, dry and hot, with a light breeze, but that still from the south. At the consulate, in dark room, workshop, and courtyard, all was activity, with terrace and balcony ready for their observers. A disk on the flagpole was waiting to peer the bright inner corona, that the artist seated behind might be able to see whatever long extensions should appear; plumblers were hung to help in locating coronal rays for those who drew its entire circle, telescopes set for larger and more detailed drawings, lines painted on the shade "rain-catch" in a small shadow-band observers in devising the direction of these elusive appearances, and still the south wind blew.

By eleven o'clock the slight south wind had fallen flat. Flags were still, sea was still, and presently a faint breeze came from the north. Feebly, hesitatingly, they fluttered—away from the sea. Then more strongly. By noon each stood straight off from its mast, pointing proudly toward the land. A thousand sparkling ripples tossed a dark sea. White caps, speckled, gibbly was conquered.

In less than another hour the rising and falling back into its desert hills and ridges, once more the splendid sea was free of stain, horizons retreated clean cut, afternoon came on. Gradually all surrounding roofs filled. A few wise people had provided tentlike shelters from the blinding glare and heat, and all seemed to have acquired smolder

Photograph of the Corona of the Sun taken in Tripoli during the Total Eclipse of August 30, 1905

glass. Five years before an entire city watched us at eclipse-time, apparently oblivious of anything happening in the sky, but quite certain that any anticipated spectacle would take place on the Consulate terrace. They knew better this time. Arlio, Ferzani, Bedouins—all colors and conditions were gazing intently skyward.

Promptly at 1:21 first contact was announced. Already out of the shining disk a tiny section was sharply cut. Rapidly it enlarged. A stout crescent was sending down unaltered heat and brilliancy. The attention of natives and animals about the streets on both occasions were made by Mr. Reed, and showed, especially in 1903, that news of the eclipse was very general. In the open seat, or market, groups of men were sitting beside their camels in grave and serious, somewhat doubtful, expectation as the partial eclipse proceeded. At the open-air cafés men would speak quietly of its progress, their companions answering, "May God be gracious," when all lapsed into silence and a certain awe.

Minarets began to be encased. White-draped figures thronged on every minaret. Much more than half the disk was covered before the slightest change in light or temperature could be detected. Then suddenly, one found it comfortable to gaze abroad upon the curiously dulling landscape; the same drearily trose always seizing the world in its grasp during total eclipses seemed

One of the Minarets in Tripoli Photographed by Coronet Light

booming in air, ready to descend.

As from second to second, daylight grew more and more lifeless, a mountain emerged upon the nearest minaret, and fitfully, but with unusual resonance, gave insistent call to prayer. Darkness increasing, he left no intermission, and continuously for fifteen minutes a weird, minor exhortation flowed over a silent city. Sky and sea lost color—blue seemed merely to have been absorbed, leaving palely nameless tints. Enthusiasm vanished. Everything waited, expectant.

Ten minutes before the narrowing crescent vanished, strangely wavering lines of light and shade flitted across the white roofs, parallel to the direction of the wind, but moving rapidly at right angles to it. Five distinct times their intensity rose and fell. In waves of progress these narrow shadow-bands travelled, and the specially detailed observers made careful note of each circumstance.

A mere thread, the sunlight crescent now, breaking up for a second into glimmers of brightness, the last ray of real sunshine flashed away, but not for less than twenty seconds the corona had already begun to gleam tentatively forth, nearly around the dark moon to the falling east of light. Actually struggling to emerge it seemed to get into sight and man's knowledge even before totality. Frightful with some new message from the sun, mysterious, ever invisible save at these potent

Interior of the Dark Room, showing the endless Chain of Plates for Photographing the Eclipse at frequent intervals

yet dying moments, gladly would it tell the cosmic secret, could we but interpret.

As the pair, round, yet many-pointed halo grew softly to its full perfection of beauty in the limpid African firmament, one irresistible burst of applause, instantly hushed, rolled over the city and out to the silent desert like a single surge of astonished joy; then the utter stillness of awe, except for the uninterrupted cull to prayer, while the oriental flower hung above domes and minaret, its petals white with the vivid fire of moons, the struggle of unimaginable configurations, its centre the black moon-ball held by mighty forces to show for one brief instant its pregnant blossoming.

Where ostriches were gathered in numbers about markets and plazas (the moment of totality produced an immense impression. Nearly all stood up, while ejaculation and prayer arose from hundreds, even thousands, of voices. Many spread their hands to heaven, toward the sun, saying, "God is great," "What God willed came to pass," "May God be gracious to His servants," while calls to prayer arose from every minaret.

Considerable detail of letter-worn finements was evident, as my hurrying pencil drew, while I looked and drew again, and took one moment to glance off at the far Yarbuh mountains, nearly appearing into almost transparent relief and prominence; against the warm yellow of their background, at Venus emerging as if newly created from sky, not sea, depths; at the silent, gazing crowds, the waiting world. Inexorably the old bell in charge of Mr. Jannopoulos, of the *Crete*, struck its fifteen-second warnings. For three minutes and four seconds totality lasted; then a ray of startling sunshine struck the city, which turned white again, the sea blue. But still the fair corona gleamed, fading reluctantly into returning brilliance, while still hastening pearls, innocent cameras, eager telescopes, followed its disappearing beauty. And below in the dark room plate-chains accumulated records for development.

Crescents in shadows during the Eclipse—one of the best Photographs ever taken of this Phenomenon

Swiftly the crescent grew, the moon began to move about in streets and on terrace as if a spell had been raised to release them, common daylight returned.

And perfectly apparatus had worked, long days and nights of sleepless devotion were rewarded, the corona was caught for all time. Next day development began to appear. From the small instrument scores of fine negatives exhibit a wealth of detail in the intricate mazes of this complex corona.

Quite evenly developed all around, it was Sir George Alry who first described this type of full sun-spot corona in 1851, likening it to the compass-rose. There were startlingly long extensions, but all of nearly the same length, and astronomers guessed that the corona had to do with the sun, but with the moon. Already the next eclipse, in 1860, began to prove that they must guess again; and by 1849 not only was it certain that the moon had nothing whatever to do with the shape of the corona, but that this filmy radiance seemed to have a figure even more pronounced when sun-spots were fewest than when they were most abundant. Professor Langley in 1878 had first discovered these vast extensions from the sun's equator, and an old sketch of 1867 seemed to point in the same direction. The eclipse of 1890 rendered these oscillations almost sure, and the photographs of 1900 made the coincidence certain.

So, too, the splendid coronas of 1882, 1885, and 1903, at the maximum of sun-spots, now receive the necessary verification from the newest eclipse of 1905, and the law of fluctuation of the corona is fully established for epochs of abundant spots as firmly as for those when spots are not seen at all. Especially were all predictions taken at this eclipse to see the faintest outlying streamers—and none were detected, though watched for in the purest of air. But why this mysterious expansion of the corona at one season of the sun's activity and its drawing in at

Group of Eclipse Observers and Assistants on the Roof of the British Consulate at Tripoli

another, with a consequent ample development of short filaments all around, many of them straight and spinelike, and not at all radial to the sun!

Significant questions these, which it will take many a completely observed eclipse to answer, a word at a time. Even yet all scientific aspects of the new material garnered in August have not been fully discussed or digested. But it was a noble eclipse, giving freely of its riches to waiting astronomers under varied skies.

Eclipses only rarely bring discoveries of a sensational nature. Exceptions may be made in remembrance of 1808, when Janssen and Leckey found, independently, that the blood-red protuberances heretofore seen only during the moments of totality could be followed by a properly adjusted spectroscope after the eclipse was over, manifestly a revelation in research upon these impressive flames. Still, it has been shown that they exhibit marked differences when viewed at totality and in full sunlight, so that their study is still a part of complete eclipse programmes. Other marked results of these pragmatic but fleeting moments have been Professor Young's discovery in 1849 of a material termed coronium; of the same astronomer's discovery of the "reversing layer" in 1870 of enormously extended coronal streamers in 1878 by Professor Langley, and of the supposed finding of Valz at the same eclipse; the comet in 1882, and Professor Deslaur's announcement in 1893 that the coronal rotates with the sun—all these were in a way spectacular discoveries, made possible by the happening of eclipses. But, generally, expeditions return, bringing but a little more light on some large solar problem, the whole to be solved only after repeated attacks through many eagerly seized moments of eclipse.

To a truly scientific mind even a fraction of actual fact learned is to be held, debated, cherished; and if numberless expeditions should be required to complete the whole, astronomers would still feel well repaid. For what is so valuable, after all, as truth? And truth lies largely in fact, often painfully dug out by years of toil and devotion. The astronomer deals in cycles, and rarely expresses his periods in terms of years. As the practically inconceivable distance of the sun from earth is the foot-rule for one part of the universe, as the measure of astronomical time is groups of centuries—persistent patience the astronomer's first characteristic. So specialized has eclipse research of the present day become that no single party any longer attempts investigation in all lines. While all are not of equal significance, the instruments requisite for some forms of inquiry are especially bulky and difficult to carry to remote quarters of the globe.

Usually, however, if the eclipse path is in considerable part accessible, no department of research will fail of competent representation by some one or two or three of the companies that swarm the narrow belt from all the leading nations.

This last eclipse was no exception. Americans there always are, and English and French. But in August, Canada and Spain, Germany and Italy, even Russia, sent their astronomers. All the older methods of research, and some novel ones were attempted. Few eclipses have been more carefully watched or more successfully.

The Canadians, at the morning end of the track in Labrador,

had perhaps most misfortune, while the English and Americans in Tripoli and Egypt, toward the sunset regions of totality, were most favored. Tunisia and Algeria were next in importance, in point of clear skies, and Spain was intermediate in character, some of its stations being hampered by cloud, while others escaped disaster. First the lunar tables and concerns of the navigator were not lost sight of, and the contacts of the edges, or limbs of sun and moon, were carefully noted. Only a half century ago this simple observation was thought to be all that was worth recording. And it is as well worthy of attention to-day as ever, only its relative value seems reduced because of other things crowding to the front.

Among these are many by ways of eclipse investigation only remotely related to things astronomical—the minute attention in variations in electric conditions of the air; fluctuations in the magnetic currents of the earth, caused by the immediate interposition of the moon between us and the sun; a close watch upon the barometer and thermometer, to see what changes the temporary withdrawal of the sun's heat may have, especially on changes in the wind. All these were fully cared for at our Tripoli station.

This veering of the wind, too, is related to another curious phenomenon that a careful modern eclipse observer, and still more of the meteorologist who corroborates the observations—the oddly irresponsible shadow-bands already described.

Mr. Lawrence Kotich, Director of the Blue Hill Observatory, is making an exhaustive study of these elusive phenomena from data furnished by our Tripoli observations as well as from those obtained at other stations. We again attempted to photograph this singular appearance, but without success.

Quite different, however, was our fortune with photographing the dimly and beautiful crescents of the partial eclipse, as projected on the interior wall of the Conzuleta court through the foliage-intertices of the ancient tree rising in its midst. Here we had the advantage of precise beforehand on the days preceding the eclipse; and the opportunity of testing a lens of new and improved design, in the hands of our very efficient expedition photographer, M. Nemes-Vais, used in connection with specially manufactured plates of extra-sensitiveness. Earlier failures to get these crescents photographically has probably been due to overlooking the exceedingly weakened

actinic effect of the light near the sun's limb, caused by absorption of the violet rays in the sun's own atmosphere.

Of the strictly astronomical results of the eclipse, first in popular interest would be those relating to the search by photography for a suspected planet within the orbit of Mercury—a veritable Vulcan, that is. For this we had two specially constructed lenses, three inches in diameter, but with huge cameras twelve feet long. The action of these lenses is such that, even with very long exposures, the background of sky is not horrendously fogged on the plate until very faint stars have also impressed themselves upon it. Abundance of such stars we find on the plates, but no suspected planet; so the negative evidence of the 1905 eclipse is added to that of its predecessors, and the existence of such a planet is coming to be highly improbable. Few future expeditions are likely to search for it.

Coming to the corona itself, most significant of all the revelations

(Continued on page 137.)

Instrument projecting from the Dark Room on the Roof of the British Consulate for Observing and Photographically Recording the Eclipse

white sitting-room, it was with an anxious eye and an unsteady hand that he proffered his menus and asked the orders for the day. Mrs. Buchanan herself, heavy-eyed and pale, as if she had slept ill, took notice of nothing. She despatched the day's business quickly, with some impatience, and after that was finished she hesitated a moment.

"Tell Patterson to ask Mr. Buchanan if it will be convenient for him to come to me here presently," she said.

The butler drew a quick breath.

"Beg pardon, m'am!" said he, "I—I—!" He had bent a little towards his mistress and lowered his voice, but at just that moment the housekeeper came into the room. Mr. Powers made a little sign with his head, and the woman, who stood in terror of him, slipped out again, closing the door after her.

"Beg pardon, m'am!" said the butler once more, in a cautiously lowered tone. "Mr. Buchanan can't be found, m'am. The lights is 'on'—in 'other 'ome is ageing, but 's not there, m'am, nor yet in 'is bedroom, nor yet in the stables or gardens. We 'ave searched the place. 'E 'as gone in 'is evening clothes an' leavin' the lights on."

Mr. Powers delivered his final sentence in a thrilling and dramatic whisper. Then, dramatic still—very appreciative of the theatrical value of the moment—he drew back a step, leaving himself, as it were, and waited for the resultant outbreak.

But there was no outbreak. He had expected blank incredulity, even perhaps, perhaps tears—hysterics. None was forthcoming. His mistress sat perfectly still at her writing-table, her hands outstretched idly before her, for a rather long time. The butler began to wonder if she had heard him. Then, as he described it afterwards to the housekeeper, she turned her face up to him, "slow-like," not in astonishment, not even in surprise.

It would seem, but white, very white, and still, uncomfortably, and hollow-eyed.

"Dwibly," Mr. Powers said, searching for a word. And she said, "Yes—yes, I know," in a sort of whisper.

"Now 'ow in Gawd's name did she know? I ask you!" Thus the bewildered Powers.

And after another rather long time, during which she had stared fixedly across the room, she said,

"Send Horton!"

Horton was her maid.

Mr. Powers tipped out of the room, his pendulous cheeks puffing, his eyes protruding. These hysterics were beyond him. Entered, at his beck, the excellent Horton, inwardly aboil with curiosity, outwardly calm as a balm.

"Mrs. Crowley!" said the woman by the table, not looking up. "Ask her if she will be good enough to come to me here—at once!" The maid went on her errand, and Mrs. Buchanan sat by the table, still, her hands idly before her—"d'awbly," as Mr. Powers had it.

Old Arabella, thinking, in a dressing-gown, haled from her

bed and from the very midst of that last delicious hour of morning sleep, huddled in, rickling, after her fashion, resentment at this outrage upon her well-being, affection, curiosity, all in one incoherent and interrupted stream, Beatrice lifted her arms from the table in a strange outward gesture. Her great eyes burned from that white face, which was no longer still, and at the sight old Mrs. Crowley's chatter ceased with an audible click.

"Oh, dear child!" she cried. "What is it? Oh, what is it?"

"He's—gone!" said Beatrice Buchanan. "Herbert's gone—and he won't come back." Mrs. Crowley dropped into a chair, staring. It was some little time before words came to her.

"Dead?" she said, finally, in a whisper. But the other woman shook her head.

"No," she said. "I—think not. Just gone—disappeared during the night. They can find no trace of him. He went in his evening clothes, leaving the lights on. His 'saxan's toured. But, oh, Aunt Arabella, I knew it before they told me! I knew it all!" She hid her face, sobbing. "I had a terrible dream," she said.

"A hideous dream! I had it over and over again. I saw Herbert standing beside the big moonlit table down in his study. He was just starting away—I don't know how I knew that—but he looked at me with a—sneering grin, a nasty, sneering, malicious grin, and he said: 'I'm done with you and with all of them. Let them think what they like and do what they like. I'm done with them!'"

He said, "For once I shall be of interest to my friends—for the first time." Then he laughed, and went away.

That's what I dreamed—over and over again, and when I awoke this morning I knew it was true. I knew he had gone before Powers told me. Oh, Aunt Arabella, what shall I do?"

Another woman than Mrs. Crowley—one who had seen her and had suffered less, and, in consequence, believed less—would have laughed all this for the first time.

Then she would have said: "My dear child, you have had a bad night. Your nerves are all wrong. This is hysteria. Your husband has gone out for a stroll, or, at the most, he has left the house in a fit of temper, and will turn up, rather ashamed of himself, later in the day."

But old Arabella sat silent. There were very strange things abroad, and she knew it. They had touched her life before. So she sat silent, and allowed Beatrice Buchanan to weep for a little uncheckered. It was the best thing she could have done. But after a time, when the younger woman's fit of weakness had somewhat passed, she said:

"Dearest, I shall not waste time with explaining and protesting and such. I shall not try to soothe you. It seems not to be a time for that. So something strange has happened, evidently, and we must, as calmly as we may, get to the bottom of it. I have no doubt that it will prove simpler than you think, and that everything will right

Mr. Powers delivered his final sentence in a thrilling and dramatic whisper.

itself." To this small extent old Arabella allowed herself a gentle lie. In point of fact, she felt great doubt. "Now who," said she, "brought you the news of Herbert's disappearance?"

"Powers," said Beatrice Buchanan. And the old woman's sane practical bearing seemed to quiet her, for the fear went out of her eyes, slowly, and the trembling went from her hands.

"Read for Powers!" said Mrs. Crowley.

They had him up, and after his first violent, and the two men told what they knew—little enough. Mrs. Crowley heard them through in silence, but at the end she drew a sigh.

"The child's right!" she said in her soul. And her soul stood against. "She's right. He has gone—God knows how!—and he won't come back." She was given to premonitions. Mrs. Crowley, like most old women, she had an odd prophetic tendency. Sometimes her premonitions were wrong, but not often.

"Find out if M. Stambold and Mr. Faring are down," she said to the valet. "And if they are, ask them to come here."

They came at once, looking surprised and grave, and again the strange little story was gone over. It was characteristic of both men that they took it with perfect calm, without outcry or show of astonishment. Young Faring said nothing at all. Stambold made a single half-audible exclamation and nodded his head. He was thinking of the tired, dependent drop of Buchanan's shoulders as he had gone, alone, out of the drawing-room, on the night before, rebuffed by the only man he had counted upon to bear him company, and, it may be, sympathy, alone to his lonely vigil and—what?

It was also characteristic that, after the first little silence, it was Faring who squared his shoulders and proceeded to take command of the situation. Old Arabella Crowley, sitting by, nodded her white head, and had been there, Colonel Kervelay would have nodded too with satisfaction over a judgment proved sound. Faring was the one to lead a race. Stambold had been too long out of action. His armor was rusty and his hand had lost its quickness.

Young Faring turned to where Beatrice Buchanan sat still and white.

"It was I had been meaning to go away to-day, Beatrice," he said, "up to town, but, if you don't mind, I think I'll stay here to be of service." And the woman gave him a little smile, imploring glance.

"Oh yes, yes, Harry!" she said, under her breath. "Yes, you must stay on. I need you. I—You mustn't go now. You must help me."

"Right!" said he. "I stay." There was in his voice and in his manner no hint of the strain, the ill-hidden passion which had been there the evening before. There was something for him to do now, and action took possession of him, thrusting all else out of the way. He addressed to the butler, who was waiting just inside the door of the room.

"I want to have a look down below," he said, and, as he moved away, touched Stambold's arm, so that the older man followed him out and down the stairs.

He spoke again as they crossed the lower hall.

"Has the man done for himself?" he asked Stambold. "I've been thinking of last night and of what you said about his being near his rope's end. Has he gone beyond and done for himself?"

"Very much stranger things have happened," said the Russian. "Yes, if you ask me, I think he has. Of course it's first thoughts must be that he has simply gone off in a rage and will come back during the day or during the week, but—Eve as old saying that he won't. He was in a bad way, seriously, last night. Eh, poor old Buchanan! He was none too happy."

They reached the narrow passage which led to the outbuilding. Mr. Powers was ahead, opening doors.

"Have you also thought," said Stambold, gravely, "how singularly fortunate it would be for every one concerned if it should turn out to be true—that the man has done for himself?"

"Oh, for God's sake!" cried young Faring, and began to tremble. "For God's sake, don't talk about that! I don't want to think of it. Now, I mustn't think of it!"

So began that long and wholly futile search for Herbert Buchanan, dead or alive. None caring for it, and he never tired. No man could have done more. The staff of the household he set to work searching. The police of the neighboring town, pledged to secrecy, scoured the neighborhood. Picked men of a certain very famous detective agency came from far away to help. No stone was left unturned, no slightest clue neglected. At last, after a week of keen effort, when no trace of the missing man could be found, the race was publicly turned over to the police, and it was then that, over your morning coffee, the Buchanan mystery frowned you in his black letters, with a bad portrait of Buchanan, and behind him, one of an obscure theatrical lady—this purporting to represent the actress wife.

Of course early in the investigation the question of the man with the scarred face arose, and for a long time Faring's efforts were almost wholly directed to tracing this person's movements. But, after all, there seemed no good reason for believing that he had had anything to do with Buchanan's vanishing. After all, a tramp, a vagabond, even a possible misfactor, cannot pick out another human being, and, with his burden, disappear from the earth. Beyond that what motive could the man have had? The gardeners who in the first place had been set on watch testified to have seen the wanderer loitering along the highroad outside the gates. They said that they had warned him away, and he had gone, apparently without malice or resentment, stealing a lift upon the tail of a farmer's wagon bound for the nearest town. In explanation of the matter the gardeners had told the gardeners that on the day before the master had given him a

five-dollar bill. This, he said, was somewhat unique in his experience, so unique that he had wondered if the phenomenon might not, upon request, repeat itself—the lightning strike twice in the same spot.

Could the man have returned during the night and effected an entrance into Buchanan's outhouse? The gardeners as one man said, "Perish the thought!" It was quite impossible. The place and he were guarded, as it were a military camp well into the morning. Exit then, as a player in the tragedy, the man with the scar.

Remained what? It would seem nothing. Never was a disappearance so puzzling, so absolute.

CHAPTER VI

THE TWO WAYS OF LOVING

THIS day passed—wreck—a month dragged by, and the Buchanan mystery remained unsolved. You who knew of it only through the daily press had long ago tired and forgotten. A score of equally exciting sensations had thrilled your jaded ears since—and had been forgotten, too; but the little faithful circle which clung about Buchanan's wife—because it loved her—remembered still, only its last resources seemed to be exhausted, its last bolts shot.

The Kervelay had, of course, gone some time before this. Their many engagements had called them, and they had departed, breathing—good souls!—sympathy and sorrow; but old Arabella Crowley remained. Stambold, the man of secrets, remained, and little Almon, Trevor, and Harry Faring.

Faring and Beatrice Buchanan sat, one morning at the end of that month, in a certain open pavilion, a Japanese summer-house which perched upon a knoll beyond the gardens, looking seaward over a slope of moss to the broken cliffs where the tide sucked and pashed, and met its eternal noon. And they talked of what had been done during the past weeks, and—rather hopelessly—of what still must be done towards finding the man who was lost.

"And so, Harry," said Mrs. Buchanan, "so here we are—at a whole month's end, after all the work that has been done, all the skill that has been expended, not one step nearer to our goal. We know no more than we knew on that first dreadful morning. I suppose—if one could quite put aside one's personal feeling, if one could look at it all quite from the outside, as a— a case, a mystery, one would call it almost unparalleled. I suppose there have been very few mysteries so baffling."

"Oh," said young Faring, a bit doubtfully—"oh, hardly that. I should think. People disappear very often, really. Only, one seldom has any immediate interest in the case, and so one forgets. Oh, no, disappearances—complete ones—are not so rare, after all. He brooded on them so seriously at the woman's feet as she sat staring before her out to sea, for he was a bit surprised at her speech. It sounded to him almost railous, almost unfeeling. And as if she read his thought she turned her eyes at once and a bit of color came into her white cheeks.

"I—I expect that would almost hard, didn't it, Harry?" she said. "Well, somehow, all this horror has managed to make me hard—rather. It's as if I had been through all the feeling that one is capable of and had come into a sort of torpor. Now and then—just as a moment ago—I find myself thinking of what has happened in the most cold, impersonal fashion. Yes, it has dulled me a little." She looked away again for a little space, and when she spoke her face averted, as if she wished not to meet the man's eyes.

"There's no use in pretending, I suppose," she said. "Not to you, anyhow, Harry. I—don't love him, you know. I almost hated him. And now I should be a hypocrite to pretend that in loving him I have lost something that was dear to me, Harry!" She faced him, and her eyes burned with a strange, sudden fierceness. "Harry, he went away of his own accord. Wherever he went—wherever he has happened to him since he went deliberately. I'm as certain of that as that I'm alive and talking to you here. I feel it all through and through me. I'm as sure as if I had seen him. Indeed, I did see him in that awful dream. It came again and again and again all through that night, and I believe possibly that that led me to let me tell you of it. I was so sure of it, so sure, so sure that I should suffer less afterwards, as I do suffer less now—less, I swear, than as if I thought Herbert had been—had had something terrible happen to him, had been taken away against his will. He went of his own volition, Harry, as a bit stroke of malice. It was the cruelest thing he could do, and so he did it. Oh, I know him better than you did—better than any one. He has been nothing but malice for a long time—malice personified!"

"Betty! Betty!" cried young Faring, and laid a hand on her arm. "I know that. You—Harry, I don't like to think of you thinking things like that, even if they're true. It's—too much like reviling a dead man. You know, Betty, he—Buchanan may be—dead, you know."

The woman gave a quick sob.

"I know," she said after a while. "Don't—don't say any more, Harry. You—shame me!" She looked up into his eyes, and because her own eyes were wet and very full of pain and suffering and—much else, Faring looked quickly away. He had unusual powers of self-restraint, but he needed them all. "You are a better woman than I am," he said. "You are, and gave a little broken laugh at her words. "You're snare and juster and infinitely more generous. That's because you're a man. I expect. Women aren't fair—or generous either. And beyond that I fancy I'm not a very good woman as women go. Oh, I'm sure you are. I'm sure I am. I'm sure I am. I'm sure I am a bit strong, and—and steadfast and coloring like some women I

know. I'm rebellious, horribly, and I resent things. I resent them until I'd do almost anything to end my suffering. No, I'm not very good, but I haven't been very happy, either. You can't blame a woman for feeling bitter and resentful—for feeling that she's been cheated out of her life, when she has had to endure what I've endured. Oh! she cried, almost in anger, "a man's such a god! such a passionless judge! And you're such a man, Harry! sitting there with your lips shut tight and your brows down over your eyes! You're disapproving of me altogether. Aren't you? You're thinking that I'm nothing but a bundle of nerves and weakness and spite. Maybe I am. If so I can't help it. I'm a woman, you see, and—I wanted so to be happy! Harry, I want my happiness! They took it from me long ago and said, 'You mustn't have it any more!' and now it's farther and further away from me than ever, but I want it. I want to be happy!"

"I would to God, Betty," said the man who loved her—tooth and nail together, hands clenched, eyes turned steadfastly away—"I would to God you might have it. I would give all my life and any small hope I may have of a life to come if only I might bring your happiness back to you, for it seems to me the thing most worth doing of all the things there are."

Mrs. Buchanan wept for a moment with her hands over her face, but the man did not stir or turn towards her. He was a strong man.

"I want to be happy!" she said again, after a little time, but the vigor, the strength of feeling, was gone from her voice, leaving it very hopeless and weak. "And now," she said, "I never shall be. I never can be by any possibility. I'm chained, and the other end of the chain is lost somewhere in the dark. I can never be—"

She raised her head suddenly, and a change came over her face, an odd, startled look.

"Unless—" she said. "Unless," and stopped. She turned a swift glance at

"The love's not very kind. It takes no heed of tears"

Drawn by W.H. Good

chair with a tired sigh, and she shook her head, watching the man beside her with a certain miserable, unwilling admiration. He had wholly misunderstood, wholly lost the point of her thought, and, grudgingly, she loved him the better for it. As she had said in her poor little jest, he was a better man than she. That sudden blinding flash of hope and joy which had burst upon her had seemingly passed him quite by, even though he loved her. Watching his square face with a sort of dull, despairing curiosity, she wondered if it really had passed him quite by, or if that unreasonable sense of humor, that angel with the flaming sword which stood at the gate of his mind, had first recognized it, and then, untouched by temptation, had driven it away. Something which was almost like anger woke in her that she should be so frail, so torn with grief and bitterness and love, and be so coolly, unshakably sure of himself, so untouched by the storm which assailed her. Womanlike, she had a mad impulse to break him down, to drag him to the torment which she withheld, to make him like herself; but even as she thought of this she knew that one broken, once shown of his strength, she must spare him, and her last hope he gave. It was his great strength he loved, though she beat angry words against its bulwarks.

And his bitter things as she sat there watching. She said, "I said she said that he was a prig, but she knew that for young Faring was as far from a prig as any man had loved her more than most men ever loved her more than she had, up to this time, loved him. It will be summed up, she said to herself, and should turn suddenly and beg her to go on—

ended on page 121.

Music And The Opera

"PARSIFAL" AGAIN

BY LAWRENCE GILMAN

WAGNER'S "Parsifal" is again an active factor in the repertoire of the Metropolitan Opera House, for the second time since its successful introduction to America in the season of 1903-4. Its fortunes at the Metropolitan have been of singular interest. The conditions attending its first performances here made it impossible to form any just estimate regarding its possibilities of intrinsic appeal to the opera-going public of New York. These were gals,

occasions, and the Metropolitan found itself harboring, for a time, a popular sensation of the first magnitude. During the next season the work occupied, naturally, a less artificial position in the repertoire; and this year there is abundant evidence to show that the music drama has attained to a normal level in the activities of the house. It is possible now for the public to regard it without hysteria; it is not likely that we shall hear in future any of the intemperate denunciation or the equally intemperate enthusiasm that marked its early appearances upon the Metropolitan stage. The average music-lover may now appraise its artistic value from a reasonably sane and unbiassed standpoint, and there seems little doubt that its unique excellences will make themselves felt with increasing persuasiveness.

As a production, it is the most admirable that the Metropolitan affords. Mr. Conrad has, on the whole, done nothing better. It would be difficult to imagine performances finer, in their essential, than those that may now be witnessed at the Metropolitan. There are, it is true, palpable deficiencies in the scenic and choral features—deficiencies that should not be permitted to exist; but in other respects the representations are satisfying and delightful. Miss Fremont is a superb Kundry—in the second act an ideal one; and Madame Nordica, also, is at her best in this part. Mr. Van Looy's *Isolde* is an impressive as is everything that this remarkable artist attempts; both Mr. Engelstaller and Mr. Dipoli make effective *Parsifals*, and Mr. Goritz as *Klingsor* and Mr. Bliss as the gnomes and somewhat trying *Gurnemanz* are very good indeed. In Mr. Heert's conducting one still misses, in the passages of elevation and solemnity, something of the requisite deliberation and repose; but elsewhere, as in most of the second act, he communicates the essential substance of this wonderful score with intense conviction and power of effect; no one that has heard, for example, his reading of the magnificent passage that accompanies the changing scene in the last act—some of the most overwhelming pages in all music—can doubt that he has listened to it precisely as it sounded in the imagination of Wagner. After "Tristan," "Parsifal" is Mr. Heert's finest achievement. One should not fail, moreover, to praise the beauty and atmosphere of many of the stage-pictures that Mr. Conrad has contrived for this production, notably that of the second act, scarcely a detail of which we

would wish to see altered, and the impressive tableau which ends the work.

That the new and the unfamiliar in music make a definite appeal to New York audiences seems to be proven by the continued good fortune which has fallen to the lot of the Russian Symphony Society. Its conductor, Mr. Modest Altschuler, offered at the society's last concert a programme composed, with but two exceptions, of music wholly unfamiliar to New York; yet a large audience attended, and displayed responsive and eager interest. The fact was due in no small part, doubtless, to the inspiring and communicative readings of the conductor; for Mr. Altschuler continues to impress himself upon these musicians and music-lovers who best know his work as a leader of insight and magnetism. His conducting of Tchaikovsky's Fourth Symphony at the society's first concert of the present season is remembered as an interpretation that has not been surpassed here in power and intensity. Mr. Altschuler seems particularly fitted, by temperament and natural capacity, for the expression of those qualities which are dominant in the characteristic utterances of the contemporary Russian school of music-making; for one thinks of them as being disposed toward the voicing of moods and emotions of elemental force and passion rather than toward, for example, the expression of those elusive and subtle imaginings that particularly influence the thought of the modern Frenchman. Mr. Altschuler is aided secondarily by the orchestra at his command. It is a large band, including almost

a hundred players, and it has given some highly effective performances. The music which is played at these concerts is not always of equal importance; but it is scarcely to be expected that Russia is more capable than any other artistically creative country of yielding an inexhaustible supply of the best music. That it has produced in the past, and continues to produce, so much that is excellent and distinguished, is, it would seem, sufficiently noteworthy.

Mr. Felix Weingartner, considered by some to be the most admirable of these "Latin prima donnas" who hail from Germany, marked the beginning of his third visit to this country by his appearance at Carnegie Hall last week with the New York Symphony Orchestra. Mr. Weingartner chose for his *pièce de résistance* upon this occasion Brahms's "Symphonie Fantastique"—a work which he has zealously championed in print, and which he interprets with all the risks and completeness of insight of which he is capable. Yet it is not within the power even of such a master as Mr. Weingartner to persuade one of the alleged excellence of this score. For many the work seems more barren, more futile and hemdramatic, with every bearing. If (as has before been described in this place) it were a living organism, instead of a cold and empty husk, Mr. Weingartner's exposition of it would have been irresistible.

Lillian Nordica

Madame Nordica has recently been heard at the Metropolitan in two of her best rôles, "*Isolde*" and "*Lohengrin*."

Books and Bookmen

TO speak of the detective story is inevitably to call up the name of Sherlock Holmes, which possibly need no general more to us in the days of a study in *Scarlet* than since Dr. A. Conan Doyle resurrected his hero, but which still holds its magic for lovers of fiction. In "Raffles," who in a sort of Robin Hood in modern life, Mr. Hornung gave us the other side of the story just as successfully, proving, perhaps, that the general significance of a tale is not always a matter of so deep concern as has been supposed. The popularity of Mr. Hornung's book simply shows that burglary may be as exciting a game as detection, and whether such a story be told from the standpoint of the criminal or of the law, it has the attraction of a close and exciting contest. The truth is that in these days, when men do not seek adventure on the highroad, the amateur detective and the gentleman cracksmen are among the few characters left to us to whom strange and stirring experiences may be attributed with a show of reason. Consequently they satisfy that love for adventure which is inherent in most of us, and which has been the spring of many great enterprises. The detective of fiction replaces the picturesque valor of the medieval knight with the modern virtues of nerve, self-possession, and executive ability, and we are all willing to concede him the possession of extraordinary powers, for the sake of the good use he makes of them in affording us entertainment.

Among the writers who have turned their attention to the detective story must now be classed Mr. Samuel M. Gardeshaire, who wrote *The Riddle of Mrs. Harrold*, a "mystery" novel of ingenious plot. In that story, it will be remembered, was a certain Le Droit Comers, who, by playing the detective in an original manner, maintained greatly in the outcome. It sometimes happens to an author that a character at first conceived as subsidiary develops unexpectedly and dominates an entire story. It has often been observed that Scott's minor characters are superior to his heroes. It cannot be said that in *The Riddle of Mrs. Harrold* there is any noticeable disparity between the characters and the parts assigned them, yet Le Droit Comers attracted more attention than any other person of the story, and it seems likely that he grew in Mr. Gardeshaire's imagination to such an extent that it became necessary to put him in a book by himself. At any rate, he is the leading figure in *The Long Arm*, Mr. Gardeshaire's latest story, and the author has made him a thoroughly distinctive and fascinating sort of hero.

Since Comers is a detective, the comparison with Sherlock Holmes is unavoidable, and it may be noted as the chief difference that Comers is more instinctive, and for that reason perhaps more natural, than Holmes. He makes no claim of having reduced detection to a microscopic science, and the general features of a case rather than its minute details suggest to him its explanation. This does not mean that he fails to reason neatly upon particulars, for he is quite as adept in this as it is reasonable to suppose that any man, always excepting a Sherlock Holmes, could be. It is the triumph of Conan Doyle that he made the reasonings of his great detective plausible, and the microscopic method probably attained its highest development in his hands. But Comers is largely helped in his problem by that instinct as to motives and as to the proper steps to be taken in an emergency which makes up so large a part of what we call shrewdness. In this respect I think him to be the more credible and the more human character of the two.

Indeed, there is a strong human appeal in all the adventures of Le Droit Comers, apart from their interest as problems, and in this book of Mr. Gardeshaire the hand of the novelist as well as the story-writer is plainly to be seen. The mystery which envelops the life of Comers himself gives a fascination to his personality quite distinct from his character as a detective. Moreover, no ingenious construction can the episodes in which he figures that the reader is invariably surprised in the conclusion, and it may be said that Mr. Gardeshaire has admirably succeeded in a form of fiction which makes the utmost demand upon the inventive powers.

The literary movement called the Gaelic Revival is an interesting experiment which can hardly fail to be beneficial in its results so

Samuel M. Gardeshaire, whose new novel, "The Long Arm," has just been published.

far as it may succeed. There is so close a connection between language and thought that the use or even the study of a native language cannot but make for individuality. It is a question of some interest whether the close study of Latin and Greek in our own schools does not tend to a certain formality of ideas and a backwardness of construction. There are neatness and despatch in certain phrases of Shakespeare's prose, where he was merely writing the spoken language of his time, which our modern style often lacks. Still, the languages of Greece and Rome are large elements in our own speech, and may be regarded to a certain extent as native tongues. If Latin and Greek had not been revived in the time of the Renaissance, the loss to English would have been incalculable. Only it is a pity that we do not really know how to pronounce them, and may only catch the music of Homer and Virgil in a substitutive way. We have heard less that the study of Gaelic pronunciation may be preserved, for pronunciation is the life-blood of a language.

Mr. Justin McCarthy, in his *History of Our Irish Times*, declares that "the genuine literature of Ireland seems to breathe the very atmosphere of the island, and to be informed by the spirit of its national tradition and temperament," and in the Welsh tales of the Mabinion there is a downright vigor that makes them more acceptable than the later spiced and discolored English romances of King Arthur. We would be glad to think that the Gaelic tongue and the Gaelic race would grow stronger, and that there is every hope of the rescue and restoration of its literature within our day in at least encouraging an coming from a keen and appreciative observer.

The pursuit of literature need to go under the general term of "the humanities," and though there is no very close connection between the words, still it is true that great writers are not a rare human. It is, therefore, not surprising that eminent writers, such as Swinburne, Thomas Hardy, and Theodore Watts-Dunton could respond fully to the spirit of the *Christmas Carol*—a poem edited by the Queen of England, to which these and other writers have contributed some of their best work. The names given above are perhaps the most famous upon the list of contributors, and it is a matter for congratulation that these men, who have done so much for literature in the past, are still able to delight in with the full power of their art.

What with William Dean Howells's *London Pilgrims* and Henry James's *Gaelic Hours*, people in England have had plenty of opportunity of late to see themselves as others see them, and in all appearances they are well satisfied with the view. Probably nothing that Mr. James would be esteemed an arrantly American, for his point of view is that of a cosmopolitan, nor could the truth of his impressions possibly hurt one's national feelings. Mr. Howells, on the other hand, who is always and everywhere American, is so proud that one almost wishes himself an American for the time being, in order to get the benefit of such a delightful foreign point of view upon one's native land. As for people at home, preference for one book or the other will be divided on the lines of temperament, for in the matter of art there is little to choose. In reading Mr. James one mentally exclaims, "Would that my mind were as delicately adjusted as his, that I might have the like of these impressions for myself." In reading Mr. Howells, one sighs, "Would that I could have been in London with Howells." Neither book is presumably intended to be polemical, but both are something better than that—they are enlightening. Each author throws a different light upon his subject, but that of Mr. Howells is perhaps nearer daylight to the average reader, and has rather more of the pleasing smoothness of the sun in it. It is testimony to the wonderful intellectual resources of both authors that, each treating of the familiar things of London, neither has written like the other or as any one else would write. Both avoid the commonplace, but by different methods. Mr. James refuses to look upon anything as prosaic. Mr. Howells quietly evades the commonplace as such, and then he has his art give it a charm which somehow cannot be separated from its everyday character. The two books are in a manner supplementary, and one will not satisfy his literary conscience without reading both.

Buchanan's Wife

(Continued from page 127.)

away with him, leaving all the wretched tangle to right itself as best it might—or remain forever a tangle, she would go, for his suffering and her long resentment had made her very weak; but afterwards she would despise him and herself so long as she lived, and she would die at last ashamed and miserable. If, on the other hand, she herself were to propose such a thing to Faring he would refuse outright to allow her to ruin her life, but he would understand and would go on loving her exactly the same as before, knowing that, for a moment, she had been tempted beyond the limits of her self-control.

That was how they lived each other, she said, sitting in the little Japanese summer-house and staring across at the square face of the man who would not sleep. And she admitted that his love was indefinitely the better, as well as the greater, and she knew that presently she would be very glad that it was what it was, but for the moment she thought she almost hated him. And that was very like a woman.

"Oh yes, yes," she said, and Faring looked up in surprise at the childish resentment of her tone. "Of course," she said, "it is easy for you to take that cheerful tone and to speak of such an existence as 'freedom'; I don't see you'll go to bed every night of these five years in despite and spite, in the morning with terror—terror that the day may bring—bring—oh, can't you see how unbearably horrible it must be? Of course you can't, though!"

"No, of course," said young Faring, quietly, but at that she turned, sobbing, and sought at his arm.

"Oh, Harry!" she cried, "don't flatter me, don't pay any heed to me! I'm not responsible for any mad thing I may say, don't despise me if you can help. I hate me! I'm very, very wretched. I didn't mean that, truly, truly. I'm not so hard and ungrateful as I seem. I'm only unhappy and—a woman. Forgive me, Harry. You must, because you're all I've got now. I love you, yes. If you desert me when I'm horrid to you I shall die."

Young Faring's cheeks flushed, and he gave a little nervous laugh.

"There's no question of desertion, Betty," said he. "You know that. I think, I don't desert the colors I've enlisted under. I shall see it through."

"Yes," she said, whispering, and a sort of peace came, as it were, visibly over her. "Yes," she said, "you'll see it through, Harry. I know. Thank God for that. I don't have to fear your deserting, shall I? After all, I'm not so badly off. I don't despair."

"And now," she said, after a little pensive silence, "now no more of this sweeping and rebellion. Have done with that! Let us talk very soberly. Tell me exactly what you think of it all. Do you think he—he went away of his own accord? I cannot help thinking that. Do you think he is alive somewhere now, and that he will one day come back, or—do you think he has—is dead, that something terrible has happened to him? You've had your thoughts, your theories—however little evidence there may be for them. What do you think?"

Young Faring hesitated, frowning down upon his clasped hands as he not knowing looked.

"Theories," he said at last. "Oh yes, theories! What are theories worth? I've nothing to prove them by. Oh yes, I've had plenty of theories. We all have had, but the more the go, the more they disappear, and still, Betty," he said, after another little frowning silence, "still, with little or nothing to go on, I'm somehow as certain as you are that he—"

"That he went of his own accord!" she cried, faintly.

"Yes," said young Faring. "He went of his own accord. The dress-clothes and the light left on and all that were a hind, I think, left to puzzle us. There's our new theory, I didn't discover it until last week. It seems that he had a fairly large sum of money—nearly two thousand dollars, in bills—presumably in the safe that stands in his study. I found it out from his bankers. He drew it only two or three days before he dis-

appeared. That was not extraordinary, because that he was in the habit of keeping such a sum by him. Only—this time he had had no chance to spend it before he went away. He took it with him. The safe is empty, and it has been forced or broken into. The lock is in order. You see he must have taken the money with him. Now, here's an important point! He'll need more presently. That sum won't last long, for he is not in the habit of making a little money. He wouldn't know how, one day, before long, he must come back, or else in some fashion draw upon his bankers. If he does, that we shall know he's alive somewhere."

"And," said Mrs. Buchanan, "and if—"

"Why, if not, Betty," said the man, "I not, then—it's no proof, of course, it's only evidence—then we shall have to think some thing has happened to him. So it seems to me."

"Yes," she said, quietly. "Yes," and fell to staring away, out over the sea where the little waves curled, crisply blue, and the gulls whirled and dipped white over the line, and beyond, the white sails of yachts dipped like the gulls, wheeling also, and here away towards the far horizon and the single trail of smoke which lay in a motionless dim streak across the sky."

"And," said Mrs. Buchanan, "it resolves itself again, does it not, into waiting—just waiting. I wonder how long I shall be able to bear it—the strain, the uncertainty. I wonder. Oh, what a world, Harry! What a world!"

To be Continued.

Marshall Field

MARSHALL FIELD, the richest merchant in the world, who died in New York last week of pneumonia, was born at Conway, Massachusetts, in 1833. His early days were spent on his brother's farm and at the local academy. At seventeen he began work as a clerk in a Pittsfield store. When, at twenty-one he moved to Chicago, and secured employment there as a clerk in a wholesale drygoods house. In 1860, when he was twenty-five years old, he was made a partner in the firm. In 1865 the firm name became Field, Palmer, & Lester. Mr. Potter Palmer withdrew from it two years later, and Mr. Lester in 1881.

At the time of his Chicago fire, in 1871, Mr. Field's enterprises were damaged to the extent of \$23,000,000. His firm was then doing a business of \$8,000,000 a year. A new building was erected, and within twenty years the business had increased to \$35,000,000 a year. Its present value is said to be almost twice that amount. Mr. Field's fortune is estimated to have been \$150,000,000 at the time of his death.

A Mammoth Chain Cable

A connection with the many improvements and innovations which have been introduced into the new United express-steamers, it is interesting to consider one feature where all aspects save size it was necessary to use an old method which has done duty for many years on sea-going vessels. This is the chain cable, or ordinary chain to which is attached the anchor. The new British steamship *Great Eastern* has just finished one for the new United turbine-steamers in course of construction. The links of the former chain were 2½ inches in diameter, but the new one is 3½ inches in diameter at its smallest part, and is about 22½ inches in length, weighing, with its steel shed and, some 300 pounds. In order to ascertain the strength of such a cable a test was recently made with three links in a testing machine where official tests are made of the heaviest chains and anchors. At the first test, when a strain of 100,8 tons was applied, there was an elongation of about one-quarter inch. With a strain of 263.7 tons, at which time the chain should be able to resist breakage, this elongation was increased to three quarters of an inch, while with all the strain that could be given in the machine, amounting to some 370 tons, was not sufficient to break the links,

which gave no evidence of any damage after a test practically ninety per cent. greater than was required by the Admiralty.

The Fastest Vessel in the World

During the past year the British Navy has been augmented by eight remarkable vessels known as Fleet Scouts, which have practically the speed of torpedo-destroyers, but have sufficient length and coal capacity to go considerable distances, and not only gain information, but prey upon an enemy's merchant shipping. The *Attentive*, the latest of these scouts, when recently tested, made a record of 22.88 knots on a sustained run of six and a half hours, during which a maximum speed of 26½ knots was reached, this being reached on the last hour of the trial trip. If destroyers, and high-speed gunboats are excepted, this probably makes the *Attentive* the fastest vessel in the world, and the representative of a type which soon may spread beyond the British navy.

Eligible

A SOUTHERN Senator says that he of the best and selectest of speeches that he ever heard in the Upper House of Congress was one of four words delivered by Senator Proctor, of Vermont. This speech, it appears, was a retort to a sarcastic fling by a colleague from Massachusetts. He said: "No man in Vermont is allowed to vote unless he has made two thousand dollars trading with Massachusetts people."

Whereupon Proctor arose deliberately and observed: "And we all vote."

ADVICE TO MOTHERS.—Mrs. WINGHAM'S SOUTHERN SCOUT should always be used for children's medicine. It soothes the child, soothes the mother, gives all pain, cures wind colic, and is the best remedy for diarrhoea.

FRESH MILK

It always obtains. Borden's Eagle Brand Condensed Milk is absolutely pure cream with condensed with the finest grade of granulated milk. For sale at your grocer. Avoid unknown brands.—(Ad.)

UNCONSCIOUS POISONING

How it Often Happens From Coffee.

"I had no idea," writes a Duluth man, "that it was the coffee I had been drinking all my life that was responsible for the headaches which were growing more and more frequent. The dyspepsia and nervousness would relieve, and for the acute nervousness which afflicted me not only for work, but also for the most ordinary social functions."

"But at last the truth dawned upon me; I forthwith made the harmful beverage a prompt farewell, ordered in some Postum, and began to use it. The good effects of the new food drink were apparent within a very few days. My headaches grew less frequent and decreased in violence, my stomach grew stronger, and I began to digest food without destruction of any kind, my nervousness has gone, and I am able to enjoy life with my neighbors and sleep soundly at nights. My physical strength and nerve power have increased so much that I can do double the work I used to do, and feel no undue fatigue afterwards."

"This improvement can be in just as much as the coffee person had so worked out of my system as to allow the food elements in the Postum to get a hold to build up the system and establish itself, that it was Postum alone that Postum alone that did all this, for when I began to drink it I threw phrase to the doctors." Name given by Postum Co., Battle Creek, Mich.

There's a reason. Read the famous Little Book, "The Road to Wellville," in place.

England and Drink

By Sydney Brooks

Lancet, January 20, 1906

THESE are loud complaints that England is growing sober. The complaints come from hotel-keepers, saloon-keepers, the managers of restaurants, the directors and shareholders of brewery companies, the secretaries of the great clubs, and finally and in greatest anguish, from the Chancellor of the Exchequer. All these find their receipts diminishing, and all are inclined to ascribe it to the fact that "a wave of sobriety is passing over the country." Looked at quite literally, the description is probably a true one. It is a thing that presents a merely temporary phenomenon, that may be succeeded by other waves of greater or less volume. But that is not what the Chancellor of the Exchequer wants to imply when in his last budget speech he spoke of the wave of sobriety passing over the country. He was hinting at a real and permanent change in the habits of the people, a change he would welcome as a sociologist and deplore as a financier; and it is a matter of the greatest interest to determine whether any such change is taking place. Mr. Austen Chamberlain based his conclusions on the statistics of the last five years. Comparing the year 1899-1900 with the year 1904-1905 he found that the consumption of spirits had decreased 21 per cent., of wine 32 per cent., and of beer 13 per cent. But five years is too short a term on which to found any trustworthy deductions as a matter to which so many varying factors contribute. Mr. Whitaker, M.P., a very careful, but very unaided, opponent of the liquor traffic, declared in a recent letter to the Times that the question whether a diminution in the consumption of alcohol is due to a change in popular desires and customs or to a decrease in the purchasing power of the people can only be settled, even approximately, by a survey of at least fifty years. Here are the statistics he gives for the useful comparison of consumption per head in 1852, and in quinquennial periods from 1855 to 1904:

	Spirits, Gallons	Wine, Gallons	Beer, Gallons
1852	1.10	0.21	22.0
1855-59	1.09	0.21	23.1
1860-64	0.89	0.23	24.9
1865-69	0.95	0.45	29.0
1870-74	1.13	0.52	31.8
1875-79	1.19	0.56	31.9
1880-84	1.04	0.62	37.5
1885-89	0.94	0.77	37.5
1890-94	1.01	0.58	29.8
1895-99	1.04	0.49	31.2
1900-04	1.04	0.34	30.2

These figures, which are those of the official excise, like all figures, are not to be taken as final criteria. They represent no more than the actual number of gallons of spirits, wine, and beer on which duty was paid. They make no allowance for dilution. But, on the whole, they may be accepted as a sound reasoning basis, and the conclusions to which they point may also be accepted as well established. These conclusions are, briefly, that for thirty years prior to 1873-76 there was a steady and very large increase in the consumption of intoxicants; that a downward movement then set in and reached its lowest point in 1898; that it was succeeded by an upward movement which culminated, with a slight check in 1893 and 1894, in 1900-1902; that since then there has been a somewhat rapid falling off, but that the consumption is still greater than it was in 1898. For the last thirty years the general tendency has been slightly downward, the record figures of 1873-76 having never since been reached, not even during the "boom" years of 1890-1901. Furthermore, it is clear that years of heavy drinking are also years of good trade, and vice versa; and that a "wave of sobriety" is really a "wave of commercial depression." Mr. Whitaker does not think the fact, "When trade is brisk and employment and money are plentiful, the drink bill goes up. When trade is depressed and money is scarce, the drink bill goes down," is a fact to be able to be a useful comment on the theory of some people that drinking is mainly due to poverty, and that the true remedy is to improve the condition of the people. The brewers, at any rate, have no doubt that it is not distress, but prosperity, that sends up their sales. The chairman of one of the largest companies recently said that the only increasing cause of the falling off in sales is the diminished spending-power of our customer—the wage-earner. The working man whose club is the public house is the real backbone of the brewer. If his earnings are less the brewer suffers.

That is undoubtedly true. But it suggests the inquiry, Who is it saying that the people have to-day more money to spend than they had thirty years ago, and that their conditions have vastly improved, that they have not spent more on drink? Mr. Whitaker answers the inquiry by pointing out that it is precisely here that the temperance movement has made itself felt. During the last thirty years, he says, the consumption of tobacco has risen one-third, of sugar one-half, and of tea 40 per cent. "That the consumption of intoxicants has not gone up at a similar rate is due to the efforts and labours which have been fighting against the drink evil in our midst." The largest drink bill of the last twenty-five years was that of 1899. But had the expenditure on drink in 1899 been as large in proportion to the population as it was in 1874, the drink bill of 1899 would have been £100,000,000 higher than it actually was. Again, had the consumption of drink increased pari passu with the consumption of tobacco, the drink bill of 1899 would have been £100,000,000 higher than it actually was. From 1853 to 1873 drink and tobacco maintained an equal rate of increase. Since 1873 tobacco has advanced and even out-

striated its rate of increase, while the growth in the consumption of intoxicants has been checked. "It is something," says Mr. Whitaker, "to have accomplished that." His summary conclusion of the whole matter is that "what is perfectly clear from this glance at the latest figures of the last fifty years of the nation's drinking is that a little something, for which we ought to be devoutly thankful, has been done in checking the growth of this 'gigantic evil,' but little progress has been made in the direction of substantially and permanently reducing it."

That, I believe, fairly represents the facts of the case. Though there are tokens of a gradual improvement, drink is still the great curse of England. It always has been, and one rather suspects, it always will be. For the past seven or eight hundred years the questions to which it gives rise have been the preoccupation of the people, the clergy, and the legislature. There was a distinct temperance movement in the sixteenth century, some early closing enactments in the thirteenth, a regular licensing system in the fifteenth, and a whole series of penalties imposed on drunkards and inkeepers by legislation in 1603. The eighteenth century saw some of the harshest drinking and the widest liquor laws in all human experience. From the beginning to the end of the nineteenth century hardly five years went by without the drink problem coming up before Parliament.

The countries that drink the most are not necessarily the most drunken, and statistics of consumption are a poor guide to the degree of national intoxication. In the temperance movement in the world are the French, yet France is a notoriously temperate country. Her statistics of police drunkards are less than one-fourth the English record. Before the phylloxera ravaged the vines and led to spirit-drinking, the French probably held the palm for intemperance among European nations. Portugal, being an ever-growing and wine-drinking country, have large statistics of consumption, but are, as a matter of fact, exceedingly temperate. Northern Russia, Scandinavia, and Scotland are the most drunken parts of Europe, though the consumption of alcohol per head is comparatively low. The most temperate and least drunk in the world are the Chinese. The vigorous, predominant races of Europe, if not of the world, seem to have been always given to strong drink; and I have read many disquisitions that sought to prove that energy, enterprise, and drink go necessarily together in the sum total of national character. But I do not suppose that any one will be inclined to accept the English drink bill as a proof of national vitality. For the past few years this country has spent on drink from \$875,000,000 to \$950,000,000 a year. Its average annual expenditure on drink amounts, therefore, to a sum that is more than the entire annual revenue, that is equal in all the years of all the empires and kingdoms and States and Kingdoms in a little less than the cost of the South-African war. Nearly five-eighths of this goes in beer, about a third in spirits, and one-thirtieth in wine. The expenditure per head, on the basis of the whole population, works out at a little over \$21 per annum; but it is reckoned that there are in the United Kingdom nearly 3,000,000 abstainers and about 14,000,000 children under the age of fifteen. Deducting these, the number of actual consumers is estimated at 24,000,000, whose annual expenditure per head thus comes to over \$45. It is also calculated that the English working-class family spends almost one-sixth of its income on liquor. This sounds and, in all conscience, is appalling enough. But, imply, it is as nothing compared with conditions in the past. In 1688, for instance, the English were drinking 90 gallons per head of alcohol; they now only drink about 30. In 1729 there was one saloon to every six houses, and every 45 people; there is now but one saloon to every 77 houses and every 385 people. In no society drunkness has been utterly died out. On the whole, and comparing the country to-day with what it used to be thirty, fifty, eighty, and a hundred years ago, the fact seems to be well established that drinking has been steadily decreasing. The people are not the least intemperate in give up drink, but they take it in moderate doses; there is less excessive indulgence, a growing preference for the lighter kinds of liquor, more moderate drinking and less drunkenness—more as well as less.

It is certainly true that we have seen it with our own eyes as the nation has grown richer and more powerful, but many of the bestiality, crime, and hopelessness of the English poor stems from it, how terrible and unending is its drain on the physical and mental vigor of the masses. There are moments when one can forgive an English temperance reformer anything and everything. He may exaggerate, he may be stupid, he may be defeating his own ends by his unmerciful violence, but the prosecution he meets with whenever he sets foot out of doors is something of which Americans have no conception. I believe, however, that the temperance party has in great part learned its lesson. It has learned that the movement is the political ally of England and Englishmen, and that side by side with the middle, infatuated lines, and by being content to advance a step at a time, can it hope to succeed. The difficulties in its way are colossal. There is an industry so wealthy, so splendidly organized in and out of Parliament, and so influential in the press, in the law, in trade, and whenever it is attacked it puts up the shield of Rights. Add to this its political alliance with the Conservatives, and its consequent hold over the Church, and further the English aversion to social blunts, and the apprehensions of the cry that "the abolition of drink is being taken as a step to the abolition of God," and you will imagine that there is hardly any reason to the sphere of social politics more difficult to effect than that of temperance.

CARTOONS OF THE WEEK

In the Moon's Shadow

(Continued from page 124.)

of totality, the thing at first significant was determining was whether its long eclipse streamers were present or not; if they were, the recognized law of periodicity of the corona must be duly applied. If they were not, then this law reserves the full corroboration which this eclipse alone could give, ruling as it did at a time when the sun's surface was blenched with an exceptional number of spots. Not only did we prepare to get even the faintest photographic trace of these filmy filaments, but visual observations of them as well, from behind a large occulting disk set high upon the flag-staff of the Consulate. I have described the corona in a previous paragraph as appearing evenly developed all around, circular in general effect, yet pointed. And although the sky was of clearest crystal transparency, not a trace of those possible extensions has appeared upon any of our negatives, though most carefully searched for; so we may now regard as fully established the law that this type of corona is inseparably related to a very spotted sun (as in 1905, 1902, 1892, and 1871), while the times of forest spots (1847, 1878, 1889, 1900) are equally coincident with the strongly curved and finely filamentous streamers of the sun's magnetic poles, and the broad, hazy, and prodigiously long streamers from the sun's equator. But if we try to ask why this variation and why this connection the answer must be—astronomers cannot yet tell; it is a question for future relapses, especially for a new magnetic theory of the distribution of the sun's radiant energy.

And this well-known change in form of the corona—how rapidly does it take place? No one has ever caught it in the act of changing, and only photographs can ultimately decide this important matter.

To make sure that there should be no unrecorded variations in the minutes fly, one of our automatic instruments at Tripoli took photographs with great regularity, somewhat as the graph shows. Though the eclipses during totality, but no changes can be detected between any of these negatives. The interval is too brief between first and last.

The Lick astronomers attempted a solution of this problem by means of stations in Labrador and Egypt, some hours removed, but despite the clear Assuan skies, the cloudy Labrador station precluded any real test of this new and important fact about the corona matter.

When fifty or a hundred more expeditions shall have accumulated a hundred times sixty three separate negatives of the corona as it appears from one eclipse to another, then astronomers of those fortunate generations will possess a wealth of material upon which to generalize; and will at last be able to answer the waiting riddle—what is the corona? And what are the hues of its form and its change?

It is rather to the eclipses happening in years intermediate between the times of most sunspots and the least, that we should expect to find most rapid coronal changes taking place. But whether these fluctuations happen in hours or days or weeks is at present a dangerous surmise. Data is insufficient. The Pacific eclipses of 1908 and 1911 are the next occasions when we can hope for more light on this question.

It is really fine relapse for America happens till June, 1918, with a track cutting across the continent from Vancouver, to Georgia. Its duration is but a brief two and a half minutes. The following year is much more auspicious; in May, 1919, the future shows sweeps over Brazil and West Africa with a splendid totality exceeding seven minutes in length—longer, in fact, than any total eclipse known to have been observed within historic times.

It is possible, though not likely, that in 1936 the sun may rise eclipsed at Tripoli; but no corona will really shine again upon the desert city until 2027.

In leaving its portals one June morning in 1906 I not only stepped but actually slipped a bit on the loose plate at the sea gate, barring many generations of departing visit was this happy accident meant assured return—true prophecy, as we had hoped, but since improvement in its devastating march

has intruded even this ennobling region, paying with prosaic stone its dear, delightful holes and rats, what did, poetic superstition, what legend of joy was now make certain our seeing once again this white dream-city of happy memory?

Defects in the Postal System

(Continued from page 119.)

recounts. The coupon came in with the report and could be immediately checked, whereas if the account must remain open until the real voucher could be compared with it much time must elapse. Money orders go to all parts of the country, and weeks or months intervene before they can be gathered in at the Auditor's Office, checked with the accounts of this paying postmaster who sends them, then assorted by winter, towns, and numbers, and compared with the issuing postmaster's account.

The opportunities for fraud must seem to be too apparent to escape immediate attention. A dishonest postmaster or employee could issue a money order for \$100, cut the coupon for \$1, debit himself with \$1 in his statement, and pocket the \$99 difference with no risk whatever of detection. In 1897 a new Auditor was appointed who speedily discovered the loophole in this fearful and wonderful system of audit, and realized his responsibility for the losses that were certain to ensue. He figured out theoretically nine distinct species of fraud which could be perpetrated through the chaotic and lawless impunity, and felt it a duty to promptly change the system.

On January 1, 1898, in pursuance of previous arrangements, but without notice, the Auditor's office abandoned the coupon entirely and resumed the practice of checking both sides of every postmaster's account by the money-order itself. This involved much additional labor and considerable delay, but was absolutely the only safe method. The first day's experience fully demonstrated its necessity. Several cases were uncovered in which orders had been issued for large amounts such as \$50 and \$100 each, which had been reported by the issuing postmaster at one or two dollars each, with coupon to correspond. The process of rechecking went back six months and involved accounts which had already been issued and closed under the old method, but must now be repeated in order that the postmaster implicated could be dealt with the amounts which the vouchers proved they had actually received. In some cases the postmasters had gone out of the service and had made their final settlements with the government. These settlements were also reopened and corrected. It became evident that some dishonest postmasters had learned the defective auditing practice and had taken advantage of it. In some cases our own auditors lost to the amount of hundreds of dollars had been covered up in this manner, which were now revealed and the delinquents were criminally prosecuted. A careful re-audit of the accounts for the six preceding months disclosed more than three thousand cases of fraud and error, ninety per cent. of which in amount were against the government, and none of which would have been detected under the coupon system.

It was impossible with the force at hand to reopen all the statements for the three previous years during which the defective auditing system had been in operation. How many thousands or hundreds of thousands of dollars it was lost by its failure was never known. The plan was adopted in defiance of the plainest dictates of business prudence, but was established by direct authority of Congress, operated by a careful and painstaking auditor, and was abandoned when a change in administration occurred. There is little danger that this particular time-saving scheme will ever be reintroduced, but the fact that it was ever seriously considered, much less carried out for more than three years, is a splendid endorsement of accounting methods, and the existence of a same expeditious settlement of postmaster's accounts may at any time lead to the invention of some other scheme equally or more defective and dangerous.

MARK TWAIN'S Complete Works

MESSRS. HARPER & BROTHERS take pleasure in announcing that, having acquired the exclusive rights of publication of all present and future books by Mark Twain, they have prepared a splendid edition of Mark Twain's works complete in twenty-three volumes, uniformly and beautifully bound. Now, in view of this exclusive arrangement, they are able for the first time to offer Mark Twain's Complete Works at a **lower price** than ever before permitted.

The twenty-three volumes are beautifully bound in a handsome olive-green cloth with leather labels, and in half-leather with uncut edges and gilt tops. There are photogravure frontispieces and many other illustrations in each volume. The staff of illustrators engaged in this work includes such artists as Smedley, Du Mond, Kemble, Fogarty, Beard, Newell, Brown, and De Thulstrup. The edition is in every respect a model of artistic book-making. The volumes—twenty-three in all—make a handsome appearance upon the shelves of any library. This is the first time that the complete works of this great author have been offered at a moderate price

FREE—A photogravure portrait of Mark Twain

Cut out the attached coupon and mail it to us, and we will send you a photogravure portrait of Mark Twain, specimen pages, and full information concerning our special offer and the easy terms on which this set of books can be secured. Address

THE BUSY SHOWMAN.—III.

Ladies and Gentlemen: I have the great pleasure this week of submitting to your perusal, and showing you before my latest Foreign Exhibit, certain various and diverse men at the other end of Pyramptown Avenue relative this Exhibit on the ground that it is without precedent. But periculate don't concern me. Besides, my predecessors, although worthy enough in a way, were not enterprising. You need participate in so-called "stagnationists" as the result of this Exhibit. It is my business to give a good and careful show, and I know my business. Therefore, I should not expect your distinguished patronage and universal approval. I want you around all sides about. This is the only to and from Exhibit. Trusting to see you promptly in your seats next week, and thanking you for your kind attention, I am Very Truly Yours

COMMENT

THE politicians in the Federal capital have lately had a good deal to say, though seldom for publication, about an interview with Mr. JAMES RUS, the President's intimate friend, which was published in the *New York Herald*. It will be remembered that on the evening of the day in November, 1904, when Mr. ROOSEVELT was elected President, he announced publicly that not only would he not be a candidate for another term of the Presidency, but under no circumstances would he accept the office. Mr. RUS evidently thinks that fidelity to a high purpose may require Mr. ROOSEVELT to retract that declaration. The President has undertaken to lead the mass of the people in their fight against the money power, the latest of the three great struggles that have been witnessed in this country. If that fight shall not result in decisive victory before 1908, the President, according to Mr. RUS, may deem it his duty to reconsider his intention not to become a candidate for another term. He would hold Congress responsible for his change of plan. That is to say, if Congress should fail to enact what he thinks adequate rate-making legislation, and in other ways to erect effective barriers against apprehended oppression by the trusts, he might consider himself bound to lead the masses of the people in another Presidential campaign. Not because he doubts the willingness or the intellectual ability of more than one member of the cabinet to carry out his policy, but because he may question whether any one of them is sufficiently popular to render his election in 1908 a certainty. It is no disparagement of Secretary ROOT or of Secretary TAYLOR to say that neither, even in his own State, would be likely to command as many votes as President ROOSEVELT would be able to secure but for the widespread sentiment against a third term. Evidently Mr. RUS is one of those who believe that the sentiment would not prevail against a popular conviction that Mr. ROOSEVELT'S leadership is indispensable.

It is at least open to argument whether it would not have been better for the country—as it certainly would for the Federalist party—if WASHINGTON had accepted a third term. Had THOMAS JEFFERSON consented to remain four more years in the White House, it is possible that we should not have witnessed the war of 1812, which brought upon us so much humiliation, and drove New England to the brink of secession. Had ANDREW JACKSON consented to be a candidate for the Presidency in 1836, he would in all likelihood have been elected, and in that event the Democratic party might have escaped shipwreck four years later. It is, of course, a historical fact that JOHN ADAMS, MADISON, VAN BUREN, and GARFIELD, the four men who have profited by the anti-third-term feeling, lacked the firm hold upon the confidence and affection of their fellow countrymen which WASHINGTON, JEFFERSON, JACKSON, and GRANT possessed. Mr. RUS is probably

not the only man who, remembering these things, may contend that the anti-third-term principle has done more harm than good. Nor is any one likely to assert that the United States would have received any detriment if WASHINGTON, JEFFERSON, JACKSON, or GRANT had held the Presidency for a third term. The real objection to a third term, however, is not that it would have proved hurtful in the past, but that it might prove hurtful in the future. So long as we adhere inflexibly to the anti-third-term precedent the establishment of Caesarism on the ruins of this republic will scarcely be a possibility. It may have been this view of the matter which prompted Mr. ROOSEVELT to make his self-denying declaration.

Mr. RUS is not the only man who expects that in 1908, although outwardly party lines will be maintained, partisanship will be even more signally disregarded at the ballot-box than it was in Missouri in 1904, or than it was in Pennsylvania and Ohio last year. Among those who made interesting speeches at a dinner given in Boston on January 20 by the Merchants' Association of that city, were Governor JOSEPH W. FOLK, of Missouri, and Mayor JOHN WEAVER, of Philadelphia. Governor FOLK directed attention to the indisputable fact that reform showed signs of becoming universal and durable instead of local and transitory. The revolt against political oppression is rearing its head in city after city and State after State. A civic regeneration is going on all over the land, and its influence has stretched from delinquencies in the domain of public interests to the misdeeds of the private wrong-doer. In the Governor's opinion the substitution of patriotism for partisanship does not require the destruction of existing political parties, but simply the putting of these parties on a higher plane. The destruction of the old political organizations Governor FOLK deems impossible, and the formation of a new one superfluous. All that is needed, he says, is to eradicate the corrupt elements in the existing organization. There were Democratic as well as Republican grafters, he avowed, and Democratic grafters should be prosecuted first, because they ought to know better. Mayor WEAVER, who spoke later, thought that the Republican grafter should be railroaded to jail first, because he did know better, and when he sinned, did it with malice aforethought. That certainly has been the course pursued by him in Philadelphia.

One of the indications that reform has come to stay is the bright prospect for the passage of the bills intended to prevent corrupt practices at elections which have been introduced in the New York Legislature and in the Federal Congress by representatives of the committee organized by Mr. FRANK BROWDER. The purpose of these bills, as we have formerly pointed out, is twofold: first, to prohibit, under severe penalties, corporations from making any contributions to campaign committees, and, secondly, to compel the publication by such committees of an itemized and sworn statement of all sums received and of the uses to which they have been applied, and also of the donors' names. The bill introduced in the House of Representatives by Mr. S. W. McCALL, of Massachusetts, has the hearty support of President ROOSEVELT and ex-President CLEVELAND, both of whom ought to know something about the use of money in elections, if there is any foundation for the statement made by a Washington newspaper that it cost \$1,900,000 to elect the former in 1904, and \$4,100,000 to elect the latter in 1892. Mr. McCALL was the right man to introduce the measure, for in 1889 he was the author of or the sponsor for the first anticorruption act passed by any State Legislature. At the time he was a member of the Lower House of the Massachusetts Legislature. He succeeded in carrying his bill through that Chamber, but it was killed by the State Senate, and not until 1892 did it become a law. The working of the act is exemplified in the returns made by campaign committees with regard to the election for Mayor of Boston which took place on the 12th of last December. The Democratic City Committee of Boston has filed a statement to the effect that it spent \$209,000 to elect Mayor FITZGERALD. The report of the FROTHINGHAM campaign committee shows that the unsuccessful attempt to elect the Republican candidate cost \$12,242 71. A full list of all contributions and expenditures is filed, even to two dollars, together with the names of the donors. In Massachusetts each candidate for the Mayoralty has a com-

paign committee of his own in addition to the city committee of his party. The Republican City Committee has not yet filed a report. There is a defect in the Massachusetts statute, which doubtless will be corrected in the bills introduced at Albany and Washington. We refer to the fact that although the Massachusetts law imposes the penalty of a fine or imprisonment for a failure to file an account of expenses, the Attorney-General has never prosecuted anybody, on the ground that no specific provision is made by the statute as to the method of prosecution. Inasmuch, however, as sworn statements, if false, would subject their author to the prescribed penalties for perjury, the Massachusetts law seems to work pretty well.

It is well known that our legation at Tokio has been raised to an embassy, and it was expected that Mr. JAMES D. A. LEISHMAN, now minister to Turkey, would be the first American ambassador to Japan. The appointment has been conferred, however, on General LEWIS E. WAGNER, formerly of the Confederate army, and lately Governor-General of the Philippines. According to a telegram from Memphis, where the new ambassador lives, a member of the Senate Foreign Relations Committee is responsible for the assertion that General WAGNER was appointed for the purpose of reporting on a proposal, said to have been made by Japan, to acquire the Philippines, and—provided the terms offered should be such as might honorably be accepted—of carrying forward negotiations for a sale to a point at which a definite plan could be submitted to the President and to Congress. That the Tokio government is willing, not to say eager, to take over the islands may be taken for granted, but that Mr. ROOSEVELT has ever entertained the notion of selling them is denied at Washington. The debate, however, in the House of Representatives on the Philippine tariff bill made it evident that many of the very persons who a few years ago insisted upon holding the islands at any cost would now gladly get rid of them sooner than admit the sugar and tobacco of the archipelago to the American market free of duty. There is reason to expect an exhibition of the same feeling in the Senate, which is the stronghold of the "stand-patners," and may prevent the Philippine bill from becoming a law.

It is difficult for a fair-minded man to avoid the conclusion that if we are unwilling to give the Philippines just and generous treatment, we had better let them go. Whether public sentiment would sanction the sale to a heathen power of islands, most of whose inhabitants have been converted to Christianity, is a different question. It is true that absolute religious toleration exists in Japan, and that under Japanese rule the labor problem would be solved by the encouragement of immigration from Japan and China. There is, in a word, but little doubt that a transfer of the islands to Japan would assure to them great material prosperity. It is, nevertheless, certain that vehement protests against the transaction would be heard from the Catholic Church and from all Protestant denominations. Under the circumstances, the President and Congress might decide to treat the Philippines precisely as we have treated Cuba—that is to say, grant to the archipelago political independence, comply with an agreement to protect it against foreign aggression. Cooling stations we should need to reserve, and they would doubtless be conceded as freely as they were by the Cubans. The discussion of this question, however, would become purely academic if the Senate should pass the Philippine tariff bill, and thus give the islands a chance of developing their natural resources.

The record of the life of M. FALLERIES, President-elect of the French Republic, shows how thoroughly the present political structure of France is based upon the theory that a career should be open to talent. Genius nobody would ascribe to him. He is not a brilliant orator, nor in any sense a spectacular person. Talent of a homely, pedestrian kind he must have, or he could not be recognized by statesmen as one of the greatest experts in the history of French education, nor would he be known as one of the most successful wine-growers in France. He is sometimes described as of peasant origin, but the description is not precisely accurate. His grandfather was a blacksmith, who had a forge which had been built against one wall of the cathedral in the small

town of Mezin, and which had been occupied by his family for a century. The father of the President-elect was a clerk in a minor court. Young FALLERIES did not distinguish himself at school, college, or university, but he managed to obtain a law degree in Paris, after which he returned to Nerve, where he was admitted to the bar. He did not emerge from obscurity until 1876, when he was sent to represent his arrondissement in the Chamber of Deputies. Thenceforth, although there was nothing about him to suggest a meteor, his advance was meteoric. In 1880 he obtained a seat in a cabinet. Three years later he was Premier for a short time, and during the following nine years was a member of several ministries. In 1890 he was elected a Senator, and since 1899 has been president of the Senate. His career culminated in the week ending January 30, when by the Chambers in joint session he was made President of the French Republic. His experience indicates that it is as easy in the Third French Republic as it is in the United States for a poor boy to become Chief Magistrate.

Replying to a good man who does not want his letter printed, we say this: Yes, we were glad to see DAVID B. HILL ask the State Bar Association to investigate and report upon his professional relationship with the Equitable Assurance Society. We were not enthusiastic because of the natural suspicion attaching to illness that has been known to befall one at a time most convenient to the afflicted. But we hope, and have no reason to doubt that an honest inquiry will be made, and that justice will be done. Probably it will be found that Mr. HILL accepted his pitiful retainer while serving as Senator of the United States, but that for he has in a sense the justification of precedence. Even Mr. EDMUNDS practised his profession while Senator from Vermont. The difference—somewhat marked—is that Mr. EDMUNDS took particular pains to inform everybody just what he was doing and why he was doing it, namely, to get money enough to live on. Mr. HILL was less frank, but perhaps, considering his lights and environment, no less honest. In common with the good man who wrote us, we sincerely hope that Mr. HILL's previous reputation for personal integrity will be not only sustained, but given into and clasped upon the rocks of unlying history as firmly and irreversibly as his record of political depravity.

The *World* solemnly and loudly prints upon its editorial pages certain questions propounded by a contemporary illuminatingly designated by the reproducers as the *Insurance Press*. Just what, who, or where the *Insurance Press* is, is not stated. Frankly, we had never heard of it, and we doubt if the *World* had, until it got a marked copy of the edition containing the article supposed to fit, supplement, and confirm its own views. Far be it from us to attempt complete answers to searching inquiries from a source so obviously equipped with the irresistible logic born of universal knowledge. But yet a few tentative responses might not be wholly disregarded. Says the *Insurance Press*, calmly yet firmly, upon the editorial page of the *World*:

If it should happen that the Hon. GEORGE CLEVELAND, serving as a referee to try relations of life-insurance companies, should draw \$12,000 the first year and find that he had not given forty hours to the work, what would the Hon. GEORGE CLEVELAND think of himself?

Probably Mr. CLEVELAND's opinion of himself, if he has ever taken the trouble to form one, would not be changed by the circumstance.

If he should draw \$60,000 in five years, or \$120,000 in ten years, could he justify in his conscience the acceptance of this large income if the service actually rendered was conspicuously and abnormally meagre?

If GEORGE CLEVELAND, or any other decent man, for that matter, should draw "\$60,000 in five years" or "\$120,000 in ten years" for "service conspicuously and abnormally meagre," he would have no occasion to "justify to his conscience." There wouldn't be any conscience left.

If a specious argument should be made to convince Mr. CLEVELAND that the deterrent effect of his distinguished name would restrain rebelling, would he accept such talk as sensible and just without reviewing the work of the relate referees of the past?

He might or he might not.

Furthermore, the question arises whether Mr. CLEVELAND will

desire to sell his name at any price in order to secure prospective law-breakers.

The question does not arise.

The *Insurance Press* would respectfully remind Mr. CLEVELAND, now a tremendously honored citizen and the only living ex-President, that there is only one step between the sublime and the ridiculous.

We hope he will maintain his sublimity.

Doubtless Mr. CLEVELAND will feel duly grateful for the "respectful" reminder. But the *Insurance Press* needn't worry. The "now tremendously honored citizen" will never make "the one step between the sublime and the ridiculous"—by which we suppose is meant from the sublime to the ridiculous—for the quite simple reasons: first, that "sublimity" is not the basis of Mr. CLEVELAND's character, and, second, that all the scribbling noses now breathing cannot convince the people of the remotest possibility of his becoming "ridiculous."

In New York newspapers we read this:

CHICAGO, January 11.—Chicago society was extended today when the recent kindness was denounced by the Rev. NICHOLAS STANLEY at the Second Congregational Church as the most improper social gathering ever held in Chicago.

In an address that bristled with invective the clergyman stigmatized the society women as "half-witted, painted, scandalized creatures; full sisters to the bewigged feticular dancers of South Africa."

Among those he signalled out for attack were Mrs. J. DENNIS ARMOUR, and Mrs. STANLEY FIELD.

That "Chicago society"—whatever that may be—was "grounded" we can readily believe, but why have we no report of anything happening since? Did the Reverend STANLEY STANLEY speak truths so hurtful as to be even human resentment? Or have Mrs. J. DENNIS ARMOUR and Mrs. STANLEY FIELD no relatives of the masculine persuasion?

It has been interesting to see the eagerness with which all the moulders of public opinion have taken advantage of the opportunity offered by the death of MARSHALL FIELD to praise a rich man who was worthy to be praised. Mr. FIELD was very rich, even as fortunes go now. His estate is estimated at \$150,000,000, and there are really only three or four men in the country who have got together more than that. He was an active man of business for more than fifty years, and was successful enough to have excited all the envy and reprobation that pecuniary success is sometimes thought to earn. But nobody has seemed to envy him in any hostile sense. Nobody has denounced him because of his accumulations. On the contrary, there has been a lifting up of the public voice in rejoicing at the example Mr. FIELD afforded of a great fortune honestly won by methods which benefited commercial morality, and of a personal reputation which kept step with an increasing fortune. A fortune so large as Mr. FIELD's is of no proportionate benefit to a man while he is alive, and is an awkward thing for him to leave behind him, but at least, if honestly gained, it does not seem to smirch his character or make him obnoxious to his fellows. Mr. FIELD was a shrewd, able man, and an exceedingly efficient and admirable man of business. Much the larger part of his fortune, however, must have been due to the appreciation of properties in which he had invested. He got rich in trade by his own efforts, but what piled up such a mound of money for him in half a century was the growth of the country and the enormous increase of the country's wealth. His judgment in investments and in all large concerns was exceedingly good, and he had the money to back it. But his fortune never swamped him nor overshadowed his personality. One thinks of him, not as the owner of so much real estate and such and such securities, but as MARSHALL FIELD, man of brains, of probity, of public spirit, an eminent and useful citizen, an American to be proud of.

The trustees of the Boston Museum of Fine Arts at their meeting last month adopted new by-laws which define and change the powers of the director, and abolish the office of assistant director, thereby providing against such a clash of authority as contributed to the wilderness of the late director, Mr. BARNES. The president, Mr. S. D. WARREN, was re-elected, and the ideas of museum management which he represents seem to control in the board of trustees. One of the trustees, Mr. J. R. COLLIER, Jr., was appointed tem-

porary director until a permanent successor to Mr. BARNES shall be found. It will be recalled that the disparity of conviction about museum management which has transpired in Boston concerns the question whether to give pleasure or to give instruction should be an art museum's paramount function. Of course a good museum will do both, and cannot do one and not the other, and is likely to be instructive in direct proportion to the pleasure it gives. Nevertheless, if the so-called didactic purpose governs, many details of management, and especially of the housing, arrangement, and exhibition of collections, will be different from the provisions made if the so-called æsthetic purpose governs. As the Boston Museum is on the point of putting up a new museum building, the plans of which must be affected by the prevailing conception of a museum's ruling purpose, differences which in ordinary times might not have been fatal to a workable harmony have come to an issue and been decided. Abstract questions when disputed earnestly by men are apt to become personal questions, and that seems to have happened in the Boston Museum controversy. Professor EDWARD S. MANS, Mr. ARTHUR BATES, and Mrs. CLARA ERIKSSON CLEMENT WATERS are among those who have communicated to the newspapers their dissatisfaction with the course pursued in Boston. But so far as appears the museum trustees are pretty well united, and though they have the power and could, if they thought it wise, pursue an unpopular course, the course they are pursuing is the one that is adopted to give most satisfaction to the general public. At any rate, their doings and discussions will be of much interest to managers of art museums and collections everywhere.

"Police stop Sunday opera!" This was in New York—Manhattan borough, just south of Bronx. It was a sensation well-deserving large headlines and column stories in the Monday newspapers. Three thousand Italians, Italo-Americans or American-Italians, whatever you see fit to call them, gathered in front of the old Academy of Music, prepared to pay their fifty cents apiece for the privilege of listening to the music they loved to hear. They had no reason to doubt that it would be played and sung. It had been, before. Moreover, on that very afternoon, across the street and around the corner, any number of continuous and disconnected vaudeville performances were going on, while up-town, to a certainty, in the evening the great Open House would be filled by an unduly appreciative audience. Surely, if, on the Sabbath day, FASCINO could swing into rhythm the big band at the Metropolitan, and the artists and artists of the Devere and Atlantic could wait the gushing of truth, there could be no objection to "I Pagliacci" and "Cavalleria" at the Academy. But there was. The police came, and with their clubs drove the music-loving dafties away. Naturally, they didn't understand why they were being driven away, but they went because they had to.

What they thought doesn't matter, anyway. We Americans are the greatest people on earth, and those who don't like our style can return to Italy or any old place. Just as a matter of casual interest, however, between ourselves, of course, what was the objection to the music, and who raised it? "I had nothing to do with it," declared the renowned Inspector SCHMITZBERGER. "I presume Captain HUSSEY did it on his own initiative." Neither Inspector SCHMITZBERGER nor Captain HUSSEY, he it is noted in passing, is of Italian descent; each, therefore, is free from suspicion of prejudice. But Captain HUSSEY denied the inspector's accusation of a personal initiative. "I received notice," he said, "through the inspector's office that the performance was in violation of Sec. 184 of the City Charter. I notified the manager I was prepared to stop the performance. I understood that Deputy Commissioner MACK was responsible for the order." Deputy Commissioner MACK then spoke up and said (all these utterances to various interviewers of various papers):

Some time ago an organization, of which former District Attorney PHILLIPS is head, made complaints about the Sunday performances at this theatre because the players wore costumes in violation of the Sunday censoring law. Firstly, I received a typewritten letter from a woman making practically the same complaint. I placed the letter in the hands of Inspector CONWAY, and told him to take whatever action he thought proper.

That final statement makes it perfectly clear. PHILLIPS was the man. But, no! Although "former district attorney," it

was not he, but his "organization," which had made complaints about performances of the past. Apparently, upon serious consideration, this seemed slightly vague even to the deputy commissioner. So—this is a clincher—"on Friday I received a typewritten letter from a woman making practically the same complaint." That settled it, of course. If it had come from a man, a child, or twins, all might have been well. But it was from a woman. And it was typewritten.

The chain of incriminating evidence was complete. "I placed the letter in the hands of Inspector CORNWALL," added Deputy-Commissioner MACK, "and told him to take whatever action he thought proper." Inspector CORNWALL is an old hand. He followed suit. He told Captain HIRSH to take such action as he thought proper. When Captain HIRSH told—barring, of course, the harassed manager—to take such action as seemed to him proper does not appear. In any case, the great moral city was spared the unspeakable disgrace of "I Pagliacci" and "Cavalleria Rusticana" on the holy Sabbath day. The Italo-Americans necessarily returned to their haunts and liquors, and doubtless before morning afforded ample occasion for sermons, roundsmen, and the like to sternly direct their subordinates to take such action as they might think proper.

We would not be understood as complaining in respect to this incident. We are not a dago. But, really, why was it? The official responsibility is, of course, clearly established. The various transfers of authority and necessities of action from the inspiring female typewriter to the patrolman who bore the fateful message have been traced with painstaking accuracy. But—reverting to our first query—what was the objection to the music, anyway? The answer seems difficult. Fortunately a shamblering instigator suddenly accused by Mr. GAMMANSKY's volume of detective stories enables us to solve the problem. Captain HIRSH furnishes the key. It is Sec. 1481 of the City Charter, originating in the organization of which former District-Attorney PULITZ is the head, starting from the woman typewriter and percolating through Deputy-Commissioner MACK and Inspector CORNWALL to the HIRSH on the spot. We might now quote Sec. 1481, but doing so would serve no purpose. The mere words of a Sec. are of no account. It is the interpretation that cuts ice. And Deputy-Commissioner MACK has appointed that Delphic Philhellenic organization official interpreter. It "made complaints because the players wore costumes," and the woman with the typewriter "made practically the same complaint." Why does the Deputy Commissioner say "practically"? Does he mean to convey the impression that the Philhellenians objected to any costumes whatsoever, as plainly intimated, and that the typewriting lady insisted upon at least leaves of the fig? We cannot guess further. We are tired. But may we not ask as patiently as may be: (1) Why shouldn't an inspector tell a captain what to do instead of hinting and dodging responsibility? (2) Why shouldn't a Deputy Commissioner of Police order an inspector to tell a captain what to do instead of sneaking out from under by telling him to take such action as he (the inspector) might think proper? And, (3) is a matter concerning the pleasure, happiness, contentment, and peaceableness of thousands of residents, well known to and surely considered by the police authorities days before the incident, why did not our brand-new, gold-leaved, military-branded Commissioner himself speak up and take whatever of blame or praise might come his way?

Are those boys at Annapolis getting a fair deal? An Interested Observer from Vermont, who writes a letter about them to the New York *Evening Post*, has doubts about it. "I don't know," he says, "how it strikes the general public, but to me there is something savouring of the ridiculous in the sight of a disfigured court martial sitting for weeks to try a lot of boys for offences for which they ought to be spanked and sent to bed. And then, after all this bother, they may not get the worst offenders, but only those unfortunate enough to get caught. Might it not be an easier way to invite a general confession? They are mostly honorable young men, if they are given a chance." There must be a large measure of sympathy with these sentiments in the public mind. There seems to have been some hazing at Annapolis which was brutal and belittled qualities in the

perpetrators that are not to be desired in officers of the navy. Some dismissals will doubtless benefit the service. But presumably the general run of the culprits are decent young fellows who have been foolish with the foolishness which is incidental to youth, and the bulk of the hazing has doubtless been harmless. We recall the testimony of a young officer in the West Point investigation some years ago who testified that he had put a certain plobe through certain exercises, because the plobe seemed to be neglected and he feared he might feel slighted if an attention was paid to him. It would be preposterous to punish hazing of that sort with dismissal, yet dismissal is apparently the only punishment for hazing at Annapolis that the present laws provide. The young men now at the Naval School did not invent the system in use there. They found it ready made, and conformed to it. We don't like the system, and think it needs thorough overhauling. But let us hope that the overhauling will be done and punishment meted out to those who deserve it without violence to common sense, and with that discriminating and further sagacity which should always lighten the dealings of maturity with youth. We have faith to believe that both Secretary BEXAPART and the officers who have the investigation and the trials by court martial in hand are wise men and fit for their present duty, but the system of discipline which they have to work with seems to lack flexibility.

HARPER'S WEEKLY remarks that "We are all gamblers when we buy or sell on a margin, anticipating a rise or fall, and the brokers are the gentlemen conquirers who assist us in getting up our money, and in getting hands on our gains when we are winners." Is not that the case with all trade and commerce? Does anybody in trade say anything that he expects will go down or sell that which he expects will advance in price? Where does plain trade begin and speculation have off? Does not every man in such transactions act, and win or lose, on his judgment?—*Bridgport Standard*.

The element of speculation pervades all trade and all agriculture, lawfully and usefully ameliorating the monotony of human existence. Trade and speculation—industry and speculation—are natural partners and good ones. The trouble comes when trade or industry leaves off and speculation continues. Most Wall Street transactions are pure speculation, the winner contributing nothing of value in exchange for his gains. We suspect that such transactions have an unfavorable influence on character and conduct, and are therefore sinful. So long, however, as the defects in human nature continue to create so urgent a demand for opportunities for sinful conduct we ought perhaps to be thankful that there are some sins left which are not illegal. Wall Street gambling games are legal. That is something. The man who participates in them with his own money does not have to conceal his misconduct, and when he loses or repents he can flout his repentance before the world. That is one reason why the Stock Exchange ought not to be abolished. It is a mistake to make so many laws that a man cannot gain due experience of life without becoming a lawbreaker. A man can afford to spend some money, if necessary, in convincing himself that it is more profitable to work for his living than to gamble for it.

Life has a cartoon that shows a repulsive person driving an ill-assorted couple under a heavy yoke before a Roman chariot, while Love, Divorce, and Justice, all lovely figures, are dragged behind in chains. Another person follows with a banner marked "No Remarriages," and clerical spectators on the benches applaud with vociferous glee. It is hard to generalize about divorce, and therefore hard to contrive a picture which will carry just the idea a cartoonist-preacher ought to have in mind and no more. *Life's* picture conveys clearly that it thinks the clergy are too wretched in their fight against divorce. Some of them are, though the desecrated divorced people who marry should not come to church for their try-again marriage is not unreasonable, and involves no serious hardship so long as marriage can be easily incurred by aid of any justice of the peace. The antidivorce movement in the Churches is a movement to make divorce unpopular. It is unpopular with conscientious people, and ought to be. To have it gain in public esteem would be a serious evil. It is like a poison used as a medicine. It may cure a patient who is in a bad way, but the habit of using it, if once formed, is a disease in itself. To abolish it would be a great injustice and a great evil. To regulate it, and discourage it enough to make folks wary of taking to it, is right.

Senator Foraker on Government Rate-making for Railways

SENATOR J. B. FORAKER, of Ohio, is generally looked upon as the most indefatigable, and certainly he is the most eloquent, opponent of the President's railway policy in the Upper House of the Federal Legislature. His views on the subject have been expounded in various ways and at divers times, but, perhaps, they have never been more clearly and cogently expressed than in a pamphlet which, doubtless, Senators and Representatives are familiar, but which is relatively unknown to the community at large. Consisting among the documents brought together in this pamphlet are an open letter addressed to Mr. FORAKER by the Receivers and Shippers Association of Cincinnati, and the Senator's reply. We should mention that the Receivers and Shippers Association comprises nearly three hundred of the largest shippers in that city. In the letter signed by their president, Mr. R. H. WEST, they made a number of assertions favorable to government rate-making, and requested the Senator to answer a series of questions. After pointing out that Mr. FORAKER was known to have in mind a plan of railway legislation which, in his judgment, is better than the plan embodied in the Egan-Townsend bill, and to a large extent reproduced in the HAZEN bill, Mr. WEST drew the Senator's attention to the fact that, under the existing law, the courts have decided that, while it is permissible for several lines to make joint through rates, they are not required to do so. Mr. WEST asks whether, under the plan devised by Mr. FORAKER, the carriers should be required to make reasonable joint through rates, and, if so, how? Then, again, if, under Mr. FORAKER'S plan, it should be determined that the rates from Cincinnati to Atlanta, Georgia, were unreasonably high and discriminatory, as compared with the rates from Richmond, Virginia, to Atlanta, Georgia, and the carriers were required to make a reduction in the rate from Cincinnati, what, inquired Mr. WEST, would prevent the carriers from Richmond, Virginia, to Atlanta, from making a reduction corresponding to that made from Cincinnati. Mr. WEST also wanted to learn whether, upon complaint being filed and a hearing given, and a particular rate having been determined to be unreasonably high and excessive, or unduly discriminatory, it would be possible, under Mr. FORAKER'S plan, to substitute therefor either a maximum, minimum, or absolute rate to be applied thereafter.

Now let us look at Mr. FORAKER'S reply. He began by reminding his correspondent that, in his speech at Bellefontaine, he expressed the belief that there are many abuses and evils to which shippers are subjected, and for which the law should afford a speedy and effective remedy. He did not believe, on the other hand, that it would be effective or wise, or, in short, anything but disastrous, to confer the rate-making power on the Interstate Commerce Commission. The difference, therefore, between the Senator and the Cincinnati Association of Shippers was simply one as to what should be the remedy for acknowledged evils. Mr. FORAKER had said at Bellefontaine that to take control of the rate-making power is to take charge of the revenues of railroads, and this means that the government is to assume the responsibility not only of determining what rate shall be charged, but also, of necessity, how much money a railroad shall be allowed to make. Criticizing this assertion in his letter, Mr. WEST had said that no proposed legislation like his knew of would have any such effect. The Egan-Townsend bill, for instance, which passed the House of Representatives in the last session of the Fifty-eighth Congress, merely provided for the substitution of a reasonable rate for one found by the Interstate Commerce Commission to be unreasonable. That was not equivalent, Mr. WEST thought, to prescribing how much a railroad should make. In his reply Mr. FORAKER showed that conferring the rate-making power on the Interstate Commerce Commission does mean that the government is to assume the responsibility of determining not only what rate shall be charged, but also how much money a railroad shall be allowed to make, because in effect this is what the United States Supreme Court held in the maximum-rate case, and precisely what Governor CLEMENT, of Iowa, recognized when, in his testimony before the Senate committee, he stated that he thought rates should be so adjusted as not to allow a railroad to make more than seven per cent. on its investment. Mr. FORAKER went on to point out what seems to him the fatal fallacy of the Egan-Townsend bill, or of any similar proposal to confer a rate-making power on the Interstate Commerce Commission. That bill was based, like Mr. WEST'S letter, on the assumption that it is possible to challenge a single rate as unreasonable, have it condemned, and substitute therefor another single rate. The Senator does not believe it possible to do any such thing. He directs attention to the fact that rates so overlap each other, and are so interdependent, that they are woven together in a web that makes it impossible to single out one that is complained of and change it, without at the same time changing hundreds, and perhaps thousands, of others. By way of illustration, he takes the rate for the transportation of the products of the cotton-mills of the South to Cincinnati. There is a commodity rate of forty-nine cents from Atlanta to Cincinnati; but why is

the rate fixed at that figure? It is thus fixed because of the rate on the products of the cotton-mills of New England to Cincinnati, and the latter rate in turn is governed by the rate from the New England mills to Chicago. It follows that, if you raise or lower the rate from Atlanta to Cincinnati, there must be corresponding changes on the other rates mentioned, and these corresponding changes in the rate on the products of New England cotton-mills will extend not only to Chicago and Cincinnati, but to every intermediate city and point. The Senator submits that it is not a matter affecting the revenues of the railroads alone, but a matter of the highest importance to the people of Cincinnati and of every other community, that rates should be so adjusted that the competing products from different parts of the country can come into the markets of the consuming communities, and there enter into competition with each other, to the end that thereby the consumer may benefit by the low prices that competition naturally brings. In other words, no consuming community wants railroad rates so adjusted that one section of purveyors can bar out another. The consumer wants the commodities of both. Another striking illustration was furnished by the case of New River coal. The local rate from the New River coal-field to Cincinnati is ninety-five cents a ton; but, if the coal be shipped through to Chicago, the Cincinnati portion of the through rate is cut down to sixty-seven cents a ton. Mr. FORAKER tells his correspondent that this is an arbitrary arrangement of the railroads, but that they are forced to make a low through rate to Chicago because the Creator, in His omniscience, saw fit to place coal-fields in the Hocking Valley and in Pennsylvania, and in Indiana, and in Illinois, and in Iowa, as well as in West Virginia, so that, when the coal of the New River district undertakes to compete in Chicago with the coal from those other fields, it is unable to do so, unless it can obtain a rate that places it on at least a reasonable approach to equality in their common market. If, therefore, the rate on the New River coal to Chicago should be challenged, instantly would come up the question, not whether that one single rate from point to point named was reasonable in and of itself, but whether or not it was reasonable and just in comparison with all the other competing rates. There could not be a change of that rate without a corresponding change in all the other rates. In other words, the theory upon which the Egan-Townsend bill proceeded is pronounced fallacious.

There is plenty of evidence for the soundness of Mr. FORAKER'S avowal on this point. One of the men who appeared on behalf of the shippers before the Interstate Commerce Commission of the Senate, which sat last year after the close of the Fifty-eighth Congress, was Judge S. H. CUNAN, of Texas, who represented the Texas Cattle Breeders Association, and the Cattle Shippers Interstate Committee. In the course of his testimony, after giving an account of the proceedings he had been conducting against certain railroads before the Interstate Commerce Commission to have a rate condemned as unreasonable, he said, by way of explaining why so much time had been occupied—more than a year—that the question whether the particular rate complained of was unreasonable, involved a careful examination of all the rates in the State of Texas. In southwestern Kansas, in Colorado, and in Arizona, Mr. WEST is further reminded that in the maximum-rate case cited by him, the Interstate Commerce Commission found it necessary, in order to change the particular rate complained of, to change more than two thousand rates, and one of the chief causes for dissatisfaction with their decision was that it did not change many other rates so as to make them correspond. Judge CUNAN, while chairman of the Interstate Commerce Commission, declared that, if the commission were required to exercise the rate-making power, it would in effect be compelled to act as rate-makers for all the railroads, and compelled to adjust their tariffs so as to meet the exigencies of business, while, at the same time endeavoring to protect the relative rights and equities of rival carriers and rival localities. He recognized that, in a country so large as ours, and with so vast a railway mileage, the task would be superhuman. In the maximum-rate case, to which we have referred, the United States Supreme Court said, in its opinion reversing the Interstate Commerce Commission, that there was nothing in the Interstate Commerce act—or was there, it may be added, in the Egan-Townsend bill—requiring the commission to proceed singly against each railway company, for each alleged violation of the act. The Supreme Court proceeded to point out that the order of the commission was in the very case at bar directed against a score or more of companies, and assumed to determine the maximum rates on half a dozen classes of freight from Cincinnati to Chicago respectively, to several specified Southern points, and the territory contiguous thereto, so that, if the power existed, as it was claimed, there would be no escape from the conclusion that it would be within the discretion of the commission, of its own motion, to suggest that the interstate rates on all the roads in the country were unjust and unreasonable, notify the several roads of such opinion, direct a hearing, and, upon such a hearing, make one general order, reaching to every road and covering every rate. It is just because the exercise of the rate-making power cannot be limited to a single rate, but must in every case embrace hundreds, and possibly thousands, of other rates, and in the end, practically all

rates throughout the Union, that Senator FURAKER does not deem it wise to confer the power on the Interstate Commerce Commission, or on any other political agency appointed by President ROOSEVELT, or by any other President, unless it can be shown that there is no other way to remedy the evils that are complained of.

The Case of Emma vs. Albert—From Krumenaker Papers

WHERE IS LAURA JEAN LEBREW? Here is a Real True Diary of a Girl from which that formerly prolific artist might construct at least one and maybe two or three romances. Or perhaps an undiscovered DICKENS would make a more fascinating tale, because LAURA would have to change the heroine's name EMMA to Krumenaker, and transform the commonplace KUMENAKER into a soulful Vere de Vere. And the real names are too fascinating for wanton sacrifice. Indeed, since the lamentable affair of Mr. Pickwick and the Widow Harrell, we cannot recall any that have fitted so admirably the characters and setting. As in that famous case, it is the lady who asks from the courts at law suitable compensation for damaged affections. EMMA HIRMA is her name, despite the misguiding assertion in the *News*, which tells the tale, that her father is Mr. KUMENAKER—Mr. H. CHARLES KUMENAKER, in precise, a cooker of baking-powder. The defendant is Mr. ALBERT KUMENAKER—known, however, to his intimates, as we discover from the records, as AL—s a widower in social life, and by profession a hatter of hair. The bruise to Emma's heart is valued by her at \$25,000, and the grounds upon which the compensation is demanded are clearly and consecutively set forth in a diary, which she was sufficiently thoughtful to keep written up and now enables us to advise.

The Widow Harrell should have kept a diary. The evidence introduced so eloquently by the learned Sergeant Bufina was glibly in comparison with the naïve and convincing record submitted by EMMA. It all happened between August 27 and October 17, 1905. But let the diary speak. Entry No. 1:

August 27, 1905.—Met Mr. KUMENAKER, who asked leave to visit. Granted. He is a widower with two boys.

The place of meeting and form of introduction are not set down. There is no reason, however, to doubt that all essential proprieties were complied with. It was probably at a party. Apparently, at first Mr. KUMENAKER attracted no particular attention until, himself favorably impressed, he inaudibly asked permission not merely to call, but to visit. The polite request implied complimentary appreciation, and was granted on general principles. But note the single significance of the succeeding phrase—"He is a widower with two boys." What a store of feminine forethought and sagacity is indicated by those few words! But how was the fact discovered? She could not have asked him! That would have been forward and too indicative of a calculating spirit. Nor is it probable that he volunteered the information. He would not thus impart his chance of visiting. We suspect that, after having granted his request, Miss EMMA made casual inquiries of a mutual acquaintance—probably the lady or gentleman who had presented Mr. KUMENAKER to her—and thus equipped herself with essential preliminary knowledge of conditions. Anyhow, he called, not once, but many times. Entry No. 2:

August 28 to September 9.—Received many visits from Mr. K. He has taken me on lots of automobile rides and to the theatre. Seems a nice man and well fixed. Talks all the time about how much he likes me. Think he does, a little, maybe.

Obviously Mr. K. is not one of those addicted to the baneful habit of losing time. Moreover, he seemed to appreciate the auxiliary value of an automobile. Not only were the rides agreeable and, therefore, helpful, but the mere fact of the motor, he shrewdly divined, gave rise to the important conclusion summarized concisely by "Seems well fixed." But Miss EMMA was not born yesterday. She saw enough of the ways and wiles of mankind to recognize the truth that professions of affection are not always dependable. But she would not be unjust even to a widower with two boys. It was her tender conscience that added the well-qualified yet, under the circumstances, generous and kind words, "Think he does, a little, maybe." Ah, that "maybe"! What disasters have been wrought by the hotted word! But the doubt was quickly dispelled—the very next day, in fact, as witness entry No. 3:

September 10.—While coming home with ALBERT in the auto to-night he asked me if I would marry him. Told him so-and-so, etc., and would talk to papa and mamma and think it over. Says he loves me to distraction.

He meant business. That was one comfort. But there was no hurry. The eternal feminine asserted itself. She neither would nor would not. As subsequently transpires, there was no serious intention of talking to papa and mamma immediately, but it was the

customary response, and then she did really want to "think it over." Why? "Says he loves me to distraction." Ah! there it is—the whole story. She likes it.

Mr. KUMENAKER—or ALBERT, as he has now become in the diary—had little time for the practice of his profession between September 10 and October 5. He was "sitting frequently," "having" "fine time in auto," "getting" "photos," "indulging in diversions, theatres, nearly every day," in short, "very attentive." His persistence deserved success and won it. "Think I'll accept," is the slight entry on October 5. And then:

October 6.—While out with dear ALBERT this afternoon I consented. I was afraid the car would run away. I was so preoccupied. Of course, papa and mamma consented, and then we kissed all around, and ALBERT said for papa to call him ALBERT and he'd call him papa. And then we fixed on the date, and it's to be my birthday, November 1. Oh, I feel so happy! I wonder if I'll sleep to-night, thinking of him?

No subsequent entry indicates whether the happy foreboding of insomnia was realized. We had already foreseen recent acquiescence from papa and mamma. Thereafter, ALBERT "called every day, of course," occasionally "going down-town" and selecting "a lovely pair of earrings which look fine on me," and once "a dozen of a piece of silk for a wedding dress," the purchase of which depleted EMMA's bank balance to the extent of \$1000. Happy, grateful days! But there was the inevitable rift in the blue.

October 8.—AL called again to-night and told me he had told his mom to call me "mother." Hope I'll get along with those kids.

There speaks the true woman—the American Mother, as Congressman SHEPPARD would say. She is not eager for the companionship of the kids and frankly says so, but she bravely faces the responsibility and hopes she will get along. What more could even a widower ask? (On October 14, ALBERT "looked queer" and "seemed preoccupied." The two succeeding days, apparently, he stayed away altogether. And then—But let us vainly imagine him the eloquent pathos of the simple record.

October 17.—Oh, dear, dear, such a day! What a monster that man is! But wait! I'll find out what's back of all this. I suspected something when he didn't come around yesterday. And as I said long ago, I've thought right along there was a screw loose lately. Anyway, what do you think? This morning a messenger-boy calls with a package. It was my photos and the little presents I've been making him. My heart jumped into my mouth, but, thank goodness, I didn't let on to that boy. I just fainted away when he'd gone, and came to as Mr. KUMENAKER (how I hate that name!) telephoned. "Well, what's the meaning of this?" I asked in my calmest tone. And he said he was so sorry, and it was "all off," and "I nearly had a fit." "Why?" "Well," answered the cold-blooded wretch, "I've made a blunder. I could never make you happy." (You bet he couldn't, but I'll make him smart yet.) "But why, and how?" I asked, soothing over the "phone." "Well," he says, "you don't understand me, Emma dear. I'm a hell-raiser, and we could never get along. But you can tell everybody that it was all my fault, and, besides, I'll make good all you've spent." I hang up the "phone. I never felt so terrible in all my life. A hell-raiser, indeed. Well, we'll see. And papa's just furious.

And did she "see"? She did. She hired a lawyer and "served a summons" to him, after a painful lapse of time, set down the final words as filed in the courts of law:

January 17, '06.—My first entry in nearly three months. I see. Heard to-day suit might come up soon. When it does I'll stop this diary business.

Yes, it is time. The day of the diary is ended. The evidence is in. In suspense, we await the verdict. What shall it be? "Guilty," says Sergeant Bufina. Surely; but how guilty? Twenty-five thousand dollars' worth? Why not? And disappointed hopes, heartaches, sordidness over the "phone, stern determinations to get along with another woman's kids as measured in pelf? No; but they may and should be appreciated in the great cause of humanity, of other females, generally, who may not keep their lights trimmed and burning over a diary.

As for KUMENAKER, look to the brewery for him! Let the cold-blooded wretch get a nurse for his kids, let him go on here-bottling and here-raising, if he will, but make him settle. If in his nefarious quest all of his ready cash has gone into Mr. FROSTMAN's capricious pockets, to the restaurant, to the vendor of gasoline, let him cough up the auto—the auto, we suspect, of his very soul. Nothing is too bad for him.

Stern justice must be done ever. But our lingering doubt remains. Why EMMA's name is HIRMA and the forums paper name KUMENAKER is a mystery yet unsolved. Can it be that EMMA is a widow? Then, then, would we interpret these rare confessions? Would they, by chance, seem somewhat too naïve and appealing to convince of genuineness? We care not to delve into the mysteries of a widow's heart. But AL! AL! the gay antiist, the belittling philosopher, the father of Lili—had he ever heard of Sennay?

Let us not mind!

Tolstoi to the Czar

In the following direct personal appeal to the Czar, Count Tolstoi urges still further concessions in behalf of the great proletariat in Russia. In view of the coming meetings of the National Assembly, the suggestions offered by Count Tolstoi are of particular interest at this time

DEAR BROTHER—I think it more fitting to call you "dear brother" because in this letter I am addressing myself less to the Czar than to the one and brother; and, more than that, I am no longer of this world, but standing at the threshold of the tomb. I do not wish to die without telling you what I think of your present activity—telling you what that activity is, and what it ought to be for the greater good of millions of men and for your own good; and also telling you what a source of evil your conduct may be for those and for yourself if your activity continues to follow its present course. To-day a third part of Russia is under akroon—in other words, a condition which sets the law at naught. There is a whole army of policemen, lawyers, and secret agents; and that army is growing; the prisons and the penitentiaries are overflowing; a considerable number of men politically condemned (and that classification covers the working class) swell the list of the thousands of common-law criminals. The veto of the censor has crushed the illuminating point of stupidity. Religious persecutions have never been as frequent or as cruel. In all the manufacturing centers armed forces are concentrated and turned out against the people at the least warning.

Bloody fratricidal struggles have taken place in many quarters, struggles even more terrible in preparation, and they cannot fail to burst out.

The result of the cruel action of the government is that the agricultural people, the 100,000,000 men in whom the power of Russia rests, are growing poorer every year. Famine has become a normal phenomenon. General discontent reigns among all classes, and the hostility of all classes to the government has also become an habitual fact.

Now the sad cause of the situation is this: Your advisers have persuaded you that when they stifle all vital movement in the people they assure the happiness of the people, as well as your tranquillity and your safety. But it would be easier to stop the current of a torrent than to stop the incessant, the progressive movement of humanity determined by Divine power.

It is easy to understand that men who are interested in preserving the present order of things, and who think "after us the deluge!" will try to convince you that such a condition is necessary. But you, the independent man of reason and of heart, whose every need is provided for, how can you believe that, how can you follow their appalling counsels, how can you do, how can you permit others to do, so much evil, and that because of a determination impossible to realize, the determination to stop the irresistible march of humanity?

You cannot be ignorant of the fact that from the beginning of the life of men, every economical, political, and religious laws have followed evolution; that from the brutal, the cruel, the irrational, the progressively gentle, kind, and rational have been evolved.

Your advisers make you believe the contrary: they affirm that orthodoxy and autocracy have always been the fundamental principles of the Russian people, and that orthodoxy and autocracy must rule the destinies of Russia to the end of the ages.

That is why it is so proud that the happiness of Russia demands the maintenance of the two political forms linked together—religious and political organization—no matter what the cost.

That is a double lie. First of all, it is not true that orthodoxy is the vehicle of Russian thought. It is in former times, but it is not now.

The reports of the Grand Procurator of the Holy Synod can inform you as to this; that the men of the people who are spiritually the best developed follow the teachings of religious sects, despite the fingers that they fear when they abandon orthodoxy. If it

* "Okoym" signifying the condition of poor, or—slight state of sleep.

were true that orthodoxy is inherent in the Russian mind, it would not be necessary to make so many efforts to maintain that form of religion, and it would not be necessary so cruelly to persecute those who refuse to follow it.

So it is with the autocratic institutions. If their system seemed indispensable to the Russian people when they believed the Czar to be the infallible god on earth, who alone could direct the country, that is not the case to-day, when all know—or when all learn as soon as they learn anything—that a good Czar is simply "a happy accident," and that Czaars may arise, and in fact, have arisen, monsters and madmen, like, for instance, Ivan the Terrible, and Paul I. They know, as they learn when they are studying things, that however good and however wise a Czar may be, he cannot, personally, govern one hundred and thirty millions of men; and that being the case, they know that the Czar's courtiers are the real rulers. The Czar's courtiers are men who can move for their own positions than for the well-being of the people.

"But," you tell me, "the Czar may choose great and unselfish or distinguished men for courtiers." No. Unfortunately the Czar cannot make such a choice; because he knows only a few dozen men, who owe it either to their luck or to intrigue that they have succeeded in approaching him, and who, having succeeded in getting close to him, are very careful to prevent any one from approaching him who could by any possibility compete with them in any way. So it is plain that the Czar cannot make his choice from the thousands of energetic, intelligent men who would be glad to serve the people. He must choose from such men as Beaumarchais had in mind when he said, "Mediocrity and push mean success." He chooses from the men he knows. Now, if a number of Russians are willing to obey the Czar, they are not willing to obey men whom they despise; and they cannot obey men whom they despise without sullying their own dignity. And yet despicable men rule in Russia, and they do it in the name of the Czar. It is evident that you are deluding yourself as to the people's attachment to autocracy, and to its representative, the Czar, because you in all the cities are greeted by crowds who cry, "Hail, hail!" and run behind your carriage. Such manifestations are far from being an expression of the people's fidelity. The crowds are nothing but inquisitive people who follow all uncommon sights with the same eagerness; and, generally, they show you take for the people's messengers of affection are nothing but needy wretches motivated by the police to make a show in your honor. I can cite the example of your grandfather. One day when he was at Kharkov he went to the cathedral. It was filled with the faithful, who, in point of fact, were disguised policemen.

If you could pretend along the railroad some day when the imperial train is to pass, and if you could see the peasants lined up behind the troops, if you could listen to what is said by the starostas and other village chiefs who have been brought there to shiver in the cold and wet, with not one cent to pay them for it—not even hire or soap, and that, too, several days in succession! you would hear from the mouths of these simple peasants (who are the real representatives of the people) words expressing anything but reverence of the autocracy and its manifestation, the Czar.

If the prestige of the Czar's authority was intact half a century ago under Nicholas I., great friends have been made in it during the last thirty years, and in these days all that was left of it has fallen so low that not one man fears to condemn the acts of the government—not to say the Czar—to shiver in another upon it and to cover it with ridicule.

Autocracy is a superannuated governmental form. It may secure the needs of some insignificant state of Central Africa that equates itself at a distance from civilization; but it does not answer the demands of the European people who have been civilized to comfort with universal progress.

Military Patrol in Moscow collecting Militiamen for Service against the Revolutionists

One of the hastily constructed Barricades of the Rebels near Catherine Park, Moscow

Amazement for the Troops captured with the Rebels being Escorted through the Streets of Moscow by a Cossack Guard

BEATING OUT THE BLAZE OF REVOLUTION IN MOSCOW

It was when the revolutionists in Moscow arose, threw up their barricades, and defied the civil and military forces of the city that the Russian government determined to teach the rebels a long-to-be-remembered lesson, and "Bloody Sunday" was the result. Hundreds were slain in the assault upon the barricades, and, according to the dispatches, the killing was continued until the rebellious spirit of the people had been broken. The photographs on this page were taken while the fighting raged between the soldiers and the revolutionists. At the moment the government appears to have the upper hand, but the revolutionists are reported to be awaiting a more propitious time for another uprising.

The President's New Panama Plan

By Henry Harrison Lewis

In the decision of the Administration to change the present plans and build the Canal by contract, substituting the work and subdividing the territory along the Canal among American contractors, a most important step has been taken. Mr. Lewis outlines some of the reasons for the change, with the results which may be expected from the new policy of the Administration.

IT has been definitely decided by the administration that the Panama Canal cannot be successfully constructed under present methods. Preparations are now being made to adopt the new plan of construction, which provides for the building of the canal by subdividing the work to American contractors who will work under the supervision of the government. This marks one of the most important steps taken by the administration since the inception of the Panama project.

The change in the administration's policy is popular and a great relief to all concerned. In Washington it is accepted as an easy and welcome way out of the many difficulties that have confronted the commission and have hindered its work. It is, in fact, the blade that will sever the Gordian knot. And it is universally believed that a division of the entire canal route into sections, to be handled by capable and experienced American subcontractors, is the only practical way to build the Panama Canal. In passing, it may be said that the only persons not entirely contented with the new policy are those connected with the Engineering Corps of the Army, who have felt that the great task should have been allotted to them.

It is now known that several of the most important contractors of this country, those who have been accustomed to gigantic engineering problems, have had the possibility of a change of policy in favor of contract work in their minds almost since the enactment of the Spooner bill. Several of these contractors have spent considerable time on the isthmus carefully investigating the conditions and laying out plans of campaign in view of just such an outcome. It is also known that at least five prominent railway engineers connected with big trunk lines have visited the isthmus, and there is little doubt that bidding will be done just as soon as the specifications are ready.

The long delay in reaching a decision on the type of waterway has hindered matters considerably. The famous board of international engineering experts took more time at their investigations and deliberations than was expected by the administration. President Roosevelt's desire to secure an official opinion from the concentrated scientific wisdom of the world was laudable, and it indicates very clearly that he appreciates the stupendous nature of the enterprise, but it has caused considerable delay.

The rendering of the International Board's decision has removed

the most important obstacle to progress, however, and as soon as the reports of the majority and minority of the board receive the attention of the commission, of the President, and of Congress, the important work of preparing specifications will be taken up by the commission and its engineering committee. This, of course, is no easy task, as it will require estimates and descriptions in minute detail of the whole line of the canal.

The advisability of building the canal by contract is borne out by the experience of every big corporation in this country and abroad. The costly and stupendous work of improvement undertaken by the Pennsylvania Railroad between New York and Washington, a task entailing the solution of engineering problems in bridging, tunneling, and track elevation probably offers the most recent and valuable example. This work is being done in many sections, each under the direct charge of a contractor, and the whole supervised by the railway's engineering department. There was no question of actual building by the railway's personnel. Aside from the picks and shovels of the regular section gangs, no constructive labor is being performed by men on the payroll of the road.

When the long-mooted question of constructing a subway under the streets of New York was settled, no one considered for a moment the actual digging of the subway by the city. There was a Rapid Transit Commission with its chief engineer, and the City of New York as a pacesetter. The excavating and blasting, the building of the framework, and the finishing of stations, the laying of tracks, and all the many details of actual labor were carried out by contractors who did their own work on their own section on bids carefully prepared and carefully accepted.

It was so with the Thomas Tunnel, and so with the raising of Gibraltar, and so with such stupendous private or semi-government enterprises as the Canadian Pacific and the Great Northern, and all the important achievements of modern times. Evidence is in favor of contract work on the Panama Canal are so overwhelming that it is strange that any other plan ever received consideration.

The decision of the administration to sublet the work means many things. In the first place, it offers the immensely important advantages of economy in time and cost. In one of his official speeches, Chairman Shreve has this to say:

"I wish to repeat and to emphasize the opinions I have

An Exhibition Drill of the Panama Post Department

expressed in regard to the application of the eight-hour law. The present wage on the isthmus varies from 80 cents to \$1.04 per day, in gold. As compared with the best common labor in the United States, its efficiency is rated at from twenty-five to thirty-three per cent. Over eighty per cent. of the employees of the canal are now and will continue to be alien laborers. A majority of the other twenty per cent. employed will be in a clerical, a supervisory, or in some other capacity to which the various labor laws of the United States are not applicable. It is in this kind of labor we are compelled to apply the eight-hour law—that is, to aliens who know nothing of the law's existence until they arrive on the isthmus.

Work application will increase the labor cost of canal construction at least twenty-five per cent. It is obvious that by forcing the eight-hour day upon us, millions of dollars will be added to the cost of construction. American labor in this country will have to pay its share in the consequent increase of taxation. The chief difficulty with which we have to contend is the employment of Oriental labor, for instance, lies in the laws which hedge about its use. A government like the United States must protect itself against the charge of forcing involuntary servitude, and hence it can adopt no safeguards which will prevent the labor from leaving the isthmus the day after arrival, thus losing the money to get it there, with an immense whatever.

"The West-Indian negro that we are using has but little life and ambition in him. We are practically trying to weld an inert mass, with the result that we are not getting over twenty-five per cent., or, from a most liberal point of view, thirty-three and one-third per cent., of the efficiency of the most ordinary labor of the United States."

Mr. Shonts, in the above quotation, outlines only one of the troubles connected with purely government work. It is hardly to be supposed that private contractors will be so susceptible to the restrictions of an eight-hour law as a government. Nor is it to be supposed that up-to-date practical American contractors will be content with a claim of labor characterized as "an inert mass." It is not the habit of the private contractor who has had long experience in handling men, and who is working at his profession for the profit there is in it, to permit labor to remain inert at his expense.

This statement is made with all due respect to Mr. Shonts, the members of the commission, and Chief Engineer Stevens. They are all practical men with extended experience, but their hands have been wound round and round with a very tenacious quality of governmental red tape which, as everybody knows, is detrimental to rapid work.

It is the consensus of opinion among practical engineers, including many who are not connected with contracting, and therefore have no axe to grind, that the Panama Canal can be constructed to far bet-

Station-house of the Canal Zone Police at Esquipa

ter advantage through the medium of private contractors than through the medium of government officials employed for this special work.

In the first place, in order to secure adequate services, the government must necessarily attract successful engineers from the field of individual endeavor. To do this, salary and other inducements must be offered which in many cases may be out of proportion to the value of the work done. When an adequate staff has been thus secured, the many and conflicting forces must be organized, and

the work must be so planned as to secure the maximum returns from the minimum expenditure of effort and money.

The disadvantages under which such a force must work are obvious, as contrasted to the work of individual contractors and builders whose forces are permanently organized and prepared to undertake large contracts at short notice. The value of such organizations, whose elasticity enables them to gather to themselves expert and unskilled labor and supplies, and to apply those forces when and where needed, is apparent.

From the view-point of actual economy in time and cost, the saving which may be effected by subletting the work on the canal to private contractors offers very material advantages. In the first place, the government is thus enabled to avail itself immediately of the services of trained and systematized organizations. If the contractors work on the comparatively new and important system known as the "cost-plus-a-fixed-sum contract," the workers on the canal, under the direction of private contractors, are brought into the same relation to the government as though in the government employ.

The builders under this form of contract are given no incentive for effecting economies to the detriment of the work, and are thus practically brought into the government employ on the same basis as the present government engineers, although they are enabled to bring to their work advantages which are impossible in a comparatively unorganized body. In this way every detail of cost and the quality and quantity of the work are constantly under the government's supervision. The government will be kept informed of the expenses which are being incurred, and it can take advantage of every fortunate circumstance which may tend to reduce costs through the organization of the contractors.

If further argument is favor of building the Panama Canal by contract is necessary, it is well to understand that the plan embodies all the advantages derived from the use of organizations whose actual existence depends on the practice of economy, and the use of every systematic detail discovered through practical experience. These include the benefits of cash discounts for material and the advantages of expert buying of labor through contractors whose business it is to keep down the costs, and who are in a position to make pur-

Hotel built at Vubba for Canal Employees

chases to greater advantage: the plan secures the benefits of the lists which these contractors have on file for materials which the various dealers carry in stock ready for immediate delivery; it has the use of purchasing departments which are constantly in touch with the best class of subcontractors and material dealers throughout the country; it has the benefit of the economy occasioned by the use of plans which comprise all kinds of labor-saving devices; it can mass on short notice any number of skilled and carefully trained mechanics; it can bring into service engineering machinery without the delay and cost of securing new material, and the plan provides for the completion of the work at a minimum cost, and as rapidly as is consistent with good workmanship.

Another great advantage to the government in letting out the work to contractors will be the saving resulting from competitive bids. The work will be given in almost every case to the lowest bidder if the first bidding is considered capable of carrying out its task to the satisfaction of the government. The possibility of combinations formed for the purpose of maintaining a high price is remote. It will be clearly understood that the government is in possession of a valuable working plant now on the isthmus, or in process of assembling, and any attempt to combine will result in the administration continuing under its present plan.

The Main Building of the General Hospital at Colon

ments, such as diplomatic, sanitary, and law protection, and it is doubtful if any change will be made in the present personnel. The great and important transformation will be in the method of actual execution and construction.

In preparing the specifications from which the various contractors will draw up their bids, extreme care will be taken to limit the bidding on the work to American contracting firms. It is the sense of the administration that the Panama Canal shall be an American enterprise pure and simple. It will be constructed by Americans employing American capital, and no opportunity will be given foreign firms or foreign money to share in the great work.

This does not afford any obstacle whatever to the speedy and economical completion of the waterway. The efficiency of the

Although the new organization is hardly completed, there is little question that the present commission will be retained to supervise the work for the government, or a new commission created under Chairman Shonts and retaining the most competent members of the present commission. The duties of the commission will not be changed in any extent, and the present chief engineer, Mr. Stevens, will continue to have direct charge on the isthmus.

It will be necessary, of course, to maintain governmental control of the Canal Zone, with all its various depart-

Dam of the Reservoir which supplies Panama with Pure Water

American contractor is known and acknowledged throughout the world. The great railways of the country and the innumerable gigantic achievements in engineering and construction scattered broadcast through the United States offer ample testimony to the capabilities of the American contractor. The building of the Canadian Pacific, with its marvelous feats of engineering skill, was the work of Sir William Van Horne, an American by birth and breeding. And it was on that road that the present chief engineer of the Panama Canal, John F. Stevens, obtained a goodly part of his practical experience. Theodore P. Shonts was selected by the President to act as supervising head of the commission because of his record as a builder of railways in the Middle West. There is no doubt whatever that Mr. Shonts could construct the Panama Canal economically and quickly if he could be free from the cumbersome and annoying details connected with governmental methods. There is, in truth, no dearth of American enterprise and energy at the disposal of the administration.

The extent of the work to be allotted has not yet been decided, but it is probable that the entire length of the canal will be included in the estimates. The work will be divided into classes, such as plain excavation, rock excavation, dredging, lock-building, dam-construction, and the building of wharves and sea-walls.

The United States Court-house at Ancon, the first to be opened in the Canal Zone.

time. Owing to the nature of the work and the comparatively restricted space, it will be considered best to give the task to only two contractors. As recent borings have discovered a substratum of rock, the work will be largely blasting and quarrying. In a recent report Chief Engineer Stevens says of this section, which extends from Bos Obispo to Pedro Miguel, a distance of about nine miles:

"Under whatever plan or type of canal is finally adopted, an enormously heavy land or dry cutting, so called, must be executed. And to successfully carry out this great project necessitates not only the employment of the most effective and modern machinery, but also as nearly perfect an organization as can be devised. The material framed in the proposed cutting, as shown by actual work

Beginning on the Pacific side, the task of dredging the La Boca entrance will, in all probability, be allotted to one contractor. Between La Boca and Miraflores extends an almost level stretch of eight miles, which offers few, if any, engineering problems. This work will probably be given to two or three contractors.

The mile-and-one-third stretch between the Miraflores lock and the Pedro Miguel locks, known as the Pedro Miguel-Miraflores lock, will be handled by one contractor. Now we come to the famous Culebra Cut, which will set the pace in the matter of

Cottages Erected at Cristobal for Canal Employees who are Married

performed, and by numerous borings and pits, is very much mixed in character, ranging from a red and yellow clay, through several varieties of rock of different degrees of hardness, to a hard trap-rock. Altogether the cut is what would be called a rock cut, inasmuch as a very large percentage of it must be hewn by blasting—in fact, about all of it—to enable economical handling.

From the line, thence to Colon, a distance of about thirty miles, the work will consist almost altogether of ordinary excavation, in which the steam-shovel will play a prominent part. This length of the canal will be divided into a number of sections, and as the greater part of it is within easy distance of Colon, the Gulf port, the successful bidders will find their work greatly facilitated.

The building of the great locks will call for exceptional skill. In all probability the locks will be allotted to separate contractors, although that is a question for future consideration. The work will include deep excavation and a large amount of concrete placing, and also the hanging of the great gates. In addition to this there will be the reconstruction of several income dams, and a number of other important tasks requiring efficient organizations on the part of contractors.

Some of the most important questions to be considered by the contracting firms desiring to bid on the work are connected with the transportation of men and material, and the housing and feeding of the men employed on the canal. It will not be like contracting in New York, or Chicago, or even in the Rocky Mountains, where transportation by rail is an easy matter. Panama is two thousand miles distant from a base of supplies, and the greater part of the work will necessarily be done in a jungle under severe climatic conditions. This question is not difficult of solution, however.

It is well known that the government has been awarding a valuable plant on the isthmus during the past two years, and to-day the entire length of the canal route presents the spectacle of a territory reedy and waiting for the signal to begin work. Everything necessary for the efficient care of an army of men has been done. In the matter of shelter there are almost one thousand houses, including hotels, cottages for married employees, and bachelor quarters. These are scattered along the line of the canal in such manner that each section will have its quota.

A practical and efficient commissary system is now in working order. This consists of a series of local commissary stores at every important labor camp, and groceries where food, either cooked or uncooked, can be obtained at cost. Food is brought direct from the north in refrigerator plants installed on the commission's steamers, and is distributed along the line of the railway in refrigerator-cars. The hotels previously existing in the canal zone have been purchased by the commission and added to the commissary system. Ordinary laborers are fed for thirty cents a day, and the better class of employees at nearly twice a day.

In the matter of transportation it is estimated that the men and material required by the contractors will be brought from the United States at cost. The commission is in control, through the Panama Railroad Company, of the vessels formerly belonging to that corporation, and also the two well-equipped vessels, the *Merano* and *Buenos*, purchased from the Ward line. This fleet will be utilized in the transportation of men and equipment. On the isthmus the contractors will be given at cost the facilities offered by the Panama Railroad, which is now being thoroughly equipped for the work.

The important question of the repairing of equipment and of tools will find a solution in the fact that the present commission has established and now has in working order three large construction and repair shops at Bar Matarich, Engruer, and Cristobal. A force of more than 1200 men is employed in these shops. The principal plant is at Bar Matarich, and includes machine-shops, with locomotive pits, boiler shop, blacksmith-shop, car-shop, planing mill, carpenter and pattern shop, foundry, and stores. An estimate has been made and preparations placed under way to complete an organization necessary to meet all requirements for the maintenance of our hundred steam-shovels, with the locomotives and cars required for operating them.

In addition to the old French plant left on the isthmus by De Lesseps, there has been purchased by the American government material costing approximately \$9,000,000. This material includes in part: Two ocean steamships, 11 steam shovels, 120 locomotives, 1300 flat-cars, 324 dump-cars, 12 rapid railroads, 22 winding ploughs, 13 earth-spreaders, 2 dipper dredges, 11 steel barges, 2 stone-crushing plants, 5000 tons of steel rails, 200 switch-stands, 200 split switches, 125,000 cross-ties, 14 air compressing machines, 3 cranes, 132 rock-drills, 30 portable deep-drilling machines, and a quantity of explosives.

All of this material will be placed at the service of the contractors whose bids are accepted, and at a price not exceeding the actual cost, with due regard for deterioration. It will be seen, therefore, that American contracting firms desiring to bid on the work will find practically an entire equipment on the ground.

The question of health will have an important bearing, inasmuch as the reputation of the isthmus in that respect has not been good, at least prior to the sanitary work accomplished under Dr. Duggan. In its last report the Isthmian Canal Commission said on this subject: "In view of the gratifying conditions shown by recent statistics, it may be safely said that the problem of sanitation need no longer be considered a formidable obstacle to the construction of the canal." This question of health on the isthmus has been the bugbear set up from the beginning by sensationalists and enemies of the administration. While sanitary conditions are still far from perfect, the work of Dr. Duggan and his associates deserves the highest praise and encouragement.

The Enforcing Corps of the Sanitary Force at Panama

DEFECTS IN THE POSTAL SYSTEM

By HENRY A. CASTLE

Former Auditor for the Post-office Department

The long experience of the author as Auditor of the Post-office Department at Washington qualifies him to speak with authority and from intimate knowledge of the defects in the equipment and management of the greatest business organization under Federal control. On this topic Mr. Castle has written five articles, of which this is the second; the others will appear in the next three issues of the "Weekly"

II.—Perversions and Perils of the System

COMPLAINTS of enthusiasts, varying in numbers and influence, advocate diverse schemes of socialistic paternalism, to be attached to the postal service, but in the end they must stand or fall together, for in purpose as in principle they are one. When we have postal railroads and telegraphs, it will be high time to set up postal savings-banks and life-insurance. It will also be time for public ownership of farms and mines and factories. In short, as one writer prophesies, it will be time "to inaugurate the commune, usher in chaos, and wind up our experiment in government with a grand explosion."

The extensions and ramifications which have been grafted on the simple original scheme have brought into play conditions which the attentive observer cannot fail to regard with apprehension. The whole enterprise is one of a purely business or commercial nature, outside the ordinary domain of governmental functions, carrying with it all the doubtful elements of a commercial institution conducted under public auspices. It is one of the penalties of such a venture that private interests come in contact with it at all points solidly to grapple with it and with each other for an increasing share of its benefits.

Suppose the United States government were grinding flour for the people and insisted on monopolizing that industry. Had the bakers of bread managed at an early day to secure patron for the brands of flour they use, fixed at one-eighth of its cost, while the baker-bakers paid one-half cost for their brands and the pastry-men or macaroni-makers paid three times cost for theirs, there would be friction and controversy and recrimination without end.

Yet this is substantially what is being done in the matter of carrying and delivering mail to the public. Discriminations are made as to the different "classes" of service, with little logic or consistency; several of these "classes" are carried at a loss, and there is an irrepressible conflict between those who are benefited and those who feel that they are wronged.

It was formerly an accepted principle of government that the individual should be encouraged to be self-reliant and personally ambitious. There are many who now seem to believe that the individual should sink his ambitions in the state, and rely on government to conduct many business operations, even to supply him with employment and protect him from the consequences of his own indiscretions. These are not only the socialists proper, who hold that they own and manage all productive enterprises, but others, who would repudiate the tenets of socialism, yet loudly call on the government to step in and shield them from the oppression of "monopolies," by running lines of business, even at a loss, for their special benefit.

For example—express charges are high, therefore we must have the parcel-post; savings-banks sometimes fail, hence a postal savings-bank should be provided; life-insurance companies are under a cloud, and post-offices should be made branches of a grand life-insurance system, supported by the national treasury; telegraph tolls are sometimes excessive, and the government should attach the telegraphs to the mail system.

Those who hope to gain by additional paternalistic features, and those who favor every proposed experiment on paternal principles, combine to exploit their ill-considered demands. The present agitator who declaims most vehemently against government by injunction is hottest in advocating innovations that would soon lead to government in the hands of a receiver. There are strenuous demands for the postal telegraph, postal savings-banks, and a postal life-insurance bureau. There are wild wage rises for the absorption of all railways under government ownership and Post-office Department management.

It may be true that the government could send our telegrams at reduced rates and pay expenses, but little compact England has lost \$3,500,000 per annum trying to do it, and is very weary of the experiment. It may be that we could pay three per cent. interest on savings deposits, fund them in two-per-cent. bonds at a premium, and earn profits after paying an army of employees to keep the accounts, but it is hard to convince an unbiased intellect that this is feasible.

Some problems would be solved and certain inconveniences minimized if the national authority would engage in certain lines of manufacturing and sell the products below cost; it would manifestly be pleasant, for a time at least, to be in a nation which would protect us against losses by bad investments, guarantee

liberal returns from all enterprises, and pay regular dividends to all citizens regardless of race, color, or previous inactivity.

An example of managing private enterprises under public auspices is seen in the "personally conducted" post-office, run specially to accommodate the business and for the sole profit of their promoters, which is a common experience of the department. A manufacturing or patent medicine firm, with large outlays for advertising through almanacs, catalogues, etc., secures the establishment of a four-story suburban or rural post-office. The proprietor of an enterprise is made postmaster; all advertising matter sent out goes through the office; the postmaster gets all or a major part of the revenue as his compensation, and thus the postage practically costs nothing, while the government is defrauded to the extent of hundreds of dollars—until the scheme is exposed and suppressed.

Co-partnerships with the government in postal affairs are frequently proposed. A bill was favorably reported during the last Congress by a majority of the post-office committee, under the provision of which an outside corporation would share profits and losses with the government on a scheme for return postal cards. The corporation offers to furnish its customers all over the country with these return cards, which are to be mailed to the correspondents of its patrons. In case the cards ever come back through the mail, this corporation agrees to redeem them from a fund previously deposited somewhere for that purpose. Every postmaster would, under the law, be working jointly for the government and a business concern—a phase of socialism severely contemplated by the founders of the Republic.

The communistic scheme of absorbing all the railways under governmental control, and attaching the entire transportation business of the country to our already oversaturated postal system, is still persistently urged in and out of Congress. There are about 1,800,000 employees now engaged in this business, and it is estimated that to purchase all our railways would involve an outlay of more than \$10,000,000,000. An increase of this inconvertible amount to our diminishing national debt does not stagger the advocates of this social measure. Neither does the addition of this tremendous army of salaried officials to the political ramifications now existing excite the least degree of dissent. But thinking people will ponder long and anxiously before consenting to a proposition which thus subverts all our ideas of popular government.

There is enough of complication and menace in present postal conditions, defects hidden to the public but fully revealed in expert testimony to suggest extreme caution as to venturing on additional and still more dangerous features. The post-office business, even on a legitimate basis, has grown so vast that the personal oversight of the head of the department is impossible. That chief executive and all his principal assistants, being political appointees, are removed at brief intervals, and have little opportunity to become familiar with their duties. The laws under which the mail service operates are a mass of inconsistencies—never systematically codified, but growing up year after year by hasty "provisions" attached to the annual appropriation bills, adding new features, modifying existing statutes, repealing and re-enacting, with an intelligent attention to coherence or effective operation.

Above all, the accounting system, upon which so much depends, is fatally defective. Of financial transactions aggregating a billion and a quarter dollars annually in accounts settled, less than ten per cent. have the administrative audit or the review required by law, owing to inadequate clerical force in the auditor's office. There is not the independence of scrutiny and report that correct accounting principles require. There is no intelligible system, such as prevails in banking and railroad offices where the complications and responsibilities are not as hundredfold more as great. "Take the service as it now is, without any additional branches, its business and labor are growing so much more rapidly than any other element of our social economy that we may well pause to inquire, whether does all this lead—where will it end? There is somewhere a limit to safety in the process of expansion, even on its present lines. It must be mastered by any careful thinker that this danger line will be reached soon enough without undue stimulus."

Thompson of the doctrine of government management of all so-called "public utilities," argue illegitimately from a basis of (Continued on page 111.)

THE AUTOMOBILE RACES AT ORMOND BEACH, FLORIDA

The fourth annual speed tournament at Ormond Beach began January 22, and will last six weeks. There is a total entry of 106 cars in the twenty-seven different events on the program, representing the five great auto-bathing nations—America, Germany, France, Great Britain, and Italy. Among the entries are two cars of greater horse power than have ever before been constructed—the 250-horse-power machine built by I. G. Vanderbilt, and the 200-horse-power Daimler in which Henry made his 20 3-5 seconds kilometre record. George W. Young makes his first bid for automobile-racing honors in entering his recently purchased "Pist" car which was driven by Lancia in the Vanderbilt cup race last year.

Buchanan's Wife

By Justus Miles Forman

SYNOPSIS OF PRECEDING CHAPTERS

Herbert Buchanan, a man of wealth with a selfish and repellent nature, whom his beautiful wife, Beatriz, has been induced to marry for his money, disappears one night from his country place, Buchanan Lodge, with a bagful of money he has caught entering the house. Buchanan gives the man a thousand dollars as compensation for being allowed to share his reckless existence, for he is weary of his own way of life, and anxiously desires to escape anxiety to those whom he loves behind. Stopping as a guest at Buchanan Lodge is a young

explorer, Henry Faring. He and Beatriz have had a love-affair prior to her marriage, and they now discover that they mean more to each other than ever before. An exhaustive search reveals no trace of Buchanan, who is supposed to have been murdered.

CHAPTER VI.—(Continued.)

THE TWO WAYS OF LOVING.

"MRS. CROWLEY is coming down from the house," said Faring. Beatriz looked up the long green slope of lawn to where, among the flowering shrubs, old Arabella stood in slow majesty, the tail of her dress caught safely up over one arm, the other arm pressing to a capacious bosom three small books bound in bright yellow paper. Several paces to the rear a maid followed her under a burden of rugs and pillows. Still behind marched a footman bearing drinkables on a large tray.

Mrs. Buchanan began to laugh.

"Observe the procession!" said she. "It is only too evident that Aunt Arabella meditates a debauch. Cushions, things to drink, and yellow paper novels. Oh, dreadful! The laugh died and she drew a little sigh. "Dear old Aunt Arabella!" she said. "What should I do without her—without all of you? You're much too good for me, you know. I fancy I'm not worth it. No, no! Don't protest, Harry! Dash! Here's Aunt Arabella."

Mrs. Crowley came to a ponderous halt outside the Japanese summer-house, and with disfavor regarded the two who sat within. "Oh!" she said. "You two here! And I had promised myself a long afternoon of lonely and vicious ease." She displayed the three yellow-covered books.

"These," she boasted, "are new, and of a singular and unparalleled wickedness. I have it on the word of Jacqueline de Courcy, who sent them to me, and Jacqueline never lies. Now you have spoiled my day."

"We might read them aloud," suggested young Faring; but old Arabella scouted the idea.

"Never," she said. "Never! You are much too young. I, on the contrary, am ancient, and my novels can no longer be destroyed. The books must wait, poor dears! Yes!—to the maid—" put those cushions in the big chair. I will at last be comfortable. What! Yes, yes, you will have to bring more glasses, I expect. Dear, dear, all my plans upset! This is a cruel, cruel world."

With much assistance and many groans and protests she was packed into the big willow chair, and the yellow books were stowed away under the cushions. Then she lay back and closed her eyes, panting greatly and waving a large palm-leaf fan.

"That," she said after a time, pointing a vague hand towards the landscape, without opening her eyes, "that is champagne cup. You shall have some of it when the other glasses come. As for me, really, I think I must have a nip at one. I am very warm. Yes, thanks, straw. Two straws. One is always broken. Ah, that is truly delicious! Who invented champagne cup? Does any one know? Not that it matters at all. The result is with us. I dare say the man who invented it was never able to afford champagne, poor wretch. I expect he drank beer, and dressed about inventing some wonderful mixture of that which never held at the same time agreeable and cheap. Why are things never

both agreeable and cheap? Can any one tell me?"

Old Arabella closed her eyes again absently.

"Why does not that man bring the other glasses? You should be wiser than him, Beatriz ought." She opened one eye.

"Oh, they are here already," she said. "How quick of him! Tell me, is it not delicious? You might even have some more brought. I'm sure we shall all be very thirsty, because the day is so warm. There, I have dropped my fan! Oh, thank you! Another glass of champagne cup? How clever you are to have felt that I wanted it. I wish, dear me, both of these straws are broken somewhere. They won't work. I have never known more than one to be spoilt before. One always is. I wonder why?"

Old Arabella pensively drank the second glass of champagne cup and thereafter appeared to fall asleep. But one never could be sure of Arabella. She usually did the unexpected thing. And in this instance talk flowed from her at intervals apparently out of a profound slumber like bubbles for lava from a quiet volcano.

"I left Ellen Trevor and Stanchoff on the east veranda of the house," she said. "As usual, the child had been stalking him for some hours, and had at last cornered him there. She seemed very tremulous and very happy over running the poor man to earth. I couldn't bear it, so I came away. They were talking about her soul when I left—at least she was. It appears that it is a most unusual soul—a sad, sweet, unappreciated one. Poor Stanchoff! He looked like some large solemn dog—a Boral, for choice—being annoyed by a kitten."

Beatriz Buchanan laughed.

"You shan't abuse Almon Trevor!" she protested. "She's a sweet child, Aunt Arabella, and I love her very dearly."

"Quite so, angel," said the old woman, still apparently deep in slumber. "So do I! And I will not quarrel with you. No heap insult and calumny upon my ancient head, as you will. I shall not strike you—nor isn't calumny the word I want? Just what does calumny mean? Can no one tell me? Be thou as chaste as ice, as pure as snow, then shalt not escape calumny." As what?—this name so cleverly said. Can one be chaste as ice and pure as snow if one reads wicked yellow-covered books? I wonder. Thank you, dear Harry! The third sip more. You are so kind."

Almon's going at the end of the week," said the other woman.

"She doesn't know it yet, but she's going. Three different people, to my knowledge, want her at Newport and two at other places. She's staying on here for my sake, but I won't hope it any longer. I won't begrudge her here when she ought to be away having a good time."

"Inhabitable busy!" rumbled old Arabella from the depths of her chair.

"And you're going too, Aunt Arabella," pursued Mrs. Buchanan. And Stanchoff. He really has to go. He told me this morning. And Harry. I'm going to turn you all out."

Arabella Crowley sat up among her cushions, in wrathful astonishment.

"Well of all that—the absurd nonsense!" she cried. "You're mad—quite mad. I go? I shan't stir a step. Why should I go?"

"Because you're making a thousand things and people to be here," said the young woman. "You're leaving everything at Red Rose and in town at lower ends just to hear me company. All of you are giving up things that you might not do, every day, and I won't have it any longer. No, it's quite serious! I mean it. You must go and leave me alone. I shall do well enough. It's—it's only waiting now. We can do no more, neither you nor I. We can only wait. I've been thinking it over very seriously. I shall stay here for a month or two longer—winter and if there is no news, if no change comes, I shall go abroad for the autumn

and winter. No! Don't argue, please. I'm quite determined, really. It's the best thing to do. I'll come to you for a while at Red Rose later on if you want me, Aunt Arabelia. But just now I rather want to be alone. I don't know just why. Maybe I want to think. Maybe it's that. I've never done much thinking. It will amuse me, I expect. Yes, you must go at the end of the week when Alliance goes."

CHAPTER VII

BEATRICE CONTENTS WITH DEVILS

AND they went, as Beatrice insisted. They went—all but Little Alliance Terror—fairly driven from the place. Stanslof left on the next day, for he was called over to London on affairs of some importance, and had to have a day or two in New York before sailing. Mrs. Crowley and Faring went at the end of the week, and Arabelia to her country-place on the Sound at Baychester, and Faring to town, whence he meant to go to the upper Adirondacks and join some people on Mt. Regis.

He had no more talk with Beatrice alone in those last two or three days. She seemed to avoid all opportunities for a tête-à-tête, and, in a way, he was not sorry, for he was determined to betray no feeling to her beyond the rather intimate friendship which the two had tacitly adopted, and this was not only difficult, but was, he felt, growing more difficult as time went on and he saw more of her and grew more and more to count upon her presence near him.

He was an uncommonly simple man—which is not in the least to say that he was stupid or dull. His mind moved without the indications of more complex and imaginative people's, and he had, therefore, fewer refuges, fewer safety-vents into which to draw back from his own impulses or from the world. There was something refreshingly primitive about him—primitive without being either cruel or rough. He knew quite well that his love for Beatrice Buchanan was the one very great and overwhelming thing in his career, and that it would never under any conceivable circumstances die. He had frankly to face the fact, for that elemental simplicity of his would not allow him to hide it from himself. Many men, and most women become adept at lying to themselves (though they may be eventually truthful to others), because it often saves their self-esteem and always makes their march through life easier. But men of Faring's type are denied such comfort.

And knowing the strength and endurance of this love in him, young Faring was in constant terror lest, in an unguarded moment, the love should away him beyond his control, and another verse like that of the evening of his arrival at Buchanan Lodge occur. He held his honor exceedingly high, higher than anything else conceivable save the honor of Beatrice Buchanan, and that is why he was glad to leave the place, though it was like rattling a limb from his body to look ahead into the days when he would no longer see her moving before him or hear her voice or know that she was near.

The night before the morning on which he was to leave he remained downstairs some time after the three women had gone up. He was alone, of course, since Stanslof was no longer there. And he went out upon the terrace and so down to the broad stretch of lawn which lay alongside the west wing of the Lodge. He knew which of the windows above him were Mrs. Buchanan's, and he walked up and down in the dark watching them, where they glowed yellow with their drawn blinds and curtains. He watched till the lights went out. It was a boyish thing to do—a foolish, over-romantic act for this sober century. Another sort of man might have done it, but it must have been with an inward, half-shamed grin, with the tongue in the cheek. Young Faring, however, whose sense of humor was, in the big things of life at least, none too keen, took it quite seriously. It did not occur to him that what he did was at all ridiculous.

When the lights were out he found a stone seat near and sat there, staring up at the darkened windows. He pictured the woman whom he loved lying there in her bed, her eyes wide, fronting the dark, hopeless, shrinking, fearing, dreading the morning's light, and the thought that he could not comfort her or lighten her burden weighed him to a sort of fury of bitterness and protest. Of what value was his love, his faithfulness, his strength, if he could do no more than sit by while she suffered. It came to him that to-morrow night and untold nights thereafter he could not even sit by—could not even bestow the poor comfort of a sympathetic eye and hand, and his face twisted suddenly in a swift spasm that might have been physical pain.

"If I could only do something, Betty!" he groaned in the dark. "If I could only help, somehow!"

The blind of one of the windows above him ran up, and some one in white came to the window and stood there a moment, dim in the moonlight, looking out into the gloom. Faring's heart leaped, his hand pressed against the shadows below, held his breath. It was Beatrice Buchanan. He knew so well her little trick of pose or of movement that even at that distance and in that faint light he could not mistake her.

She stood in the window for only an instant, then turned back once more into the inner gloom. But the man in the night below stretched out shaking arms towards her, and the velvet heart and throated at his temples.

"Betty!" he cried, whispering. "Betty! Oh, what's in become of you and me, Betty? How's all this horror going to end?"

And then—
"Good night, child! Oh, sleep well! For the last time, Betty, good night!"

In the morning, while the trap was waiting for him outside, he had a moment alone with her. She was very white, he thought, and hollow-eyed. She had not slept well, it would seem, in spite of his prayer.

"And so good-by, Betty dear!" he said. "You know where I am to be. When you need me or want me I'll come. Remember that. I shall never be far away. I'm still—under the colors, you know. And he tried to smile.

Mrs. Buchanan's eyes were upon his, tender and burning, with an old strain in them. She nodded. "I know, Harry," she said, under her breath. "And—and it's more of a com-

Mrs. Crowley came to a position half outside the Japanese summer house

fort to me than I could even try to tell you, but—for a while I must be alone. I need to think. Oh go, Harry, go quickly, quickly!"

He went without a word, but his eyes were blind. He groped for the seat of the cart with his two hands.

Little Miss Trevor would not go with the others. She refused to be driven forth.

"Please let me stay on," she begged. "I don't want to go to those people at Newport, I don't want to go anywhere where it's gay and they're having a noisy good time. I want to be entirely quiet. If you won't let me stay here with you I shall go down to the Mannerings or some place like that, and ask them to take me in. Please let me stay on, Beatrice!" Mrs. Huchans took the girl in her arms and held her off a little, looking curiously into her face. It suddenly occurred to her that Miss Trevor looked rather queer—that she was a trifle affected and a trifle odd, with something like a distemper in her face. Also she was thinner, the elder woman thought, and rather than usual.

"Baby dear!" she cried—little Miss Trevor was one of those girls who are foredoomed to be called "baby" by their friends—"what in the world has come over you? What do you want to hide yourself for? It's not like you at all. One might think you in love—". And then suddenly she paused, and certain half-noticed, half-forgotten things flashed through her mind, and she caught the girl up to her and held her close, stroking the yellow hair and murmuring over her as a mother comforts and cradles to a little child.

"Oh, yes, my dear baby!" she said, "you blessed infant! I didn't know. Truly, I didn't know. Oh, baby, I'm in a fool, a blind, blemished fool! I've been so drowned in my own woes! I might have seen! Yes, you shall stay! I wanted you frightfully all the while, but I thought I should be imprisoning you. You shall stay, dear! You must stay. We're two weary women whom God hasn't been very good to. There isn't much comfort for us, so we must comfort each other. Oh, child, child, my need you so have been hurt! Wasn't I enough in me house?" And then the two wept a little on each other's shoulders, and, womanlike, secret

"Does he know, dear?" demanded Mrs. Buchanan when they were sitting together afterwards. The girl raised a startled, horrified face.

(Oh, no, no!) she cried. "He—doesn't grieve at all. No. He must never know. It would only hurt him, despair, and that mustn't be. Oh, no, he must never guess. He—he has had enough sorrow and tragedy in his life. I don't want to add to it. I cannot drive out of my mind a thing that horrid (coughs) Kveryday. I don't want to think of it again, after dinner, when I'm alone. I believe's a sort of walking torment. I never think of Stanislaw doing anything nowadays," he said. "He's done it all. He's waiting to die." It was a horrible thing to say. It made me shiver, but I can't forget it, because it's—oh, dearest, it's true! He doesn't really live any more, because his heart is dead, long dead."

"I know," said Beatrice Buchanan, gently. "I know. It's true. And those men who have had tremendous tragedies in their lives, and have died, all but physically, are always loved by women afterwards. There's something about them, I don't know what it is, but it's fatal to our poor little hearts. Baby, isn't it?"

"I suppose so," said the girl. "I don't know. I've never known any one like him—and I never shall. Probably I shall never see him again, but I'm—sayhow, I'm glad. Oh yes, I'm glad. I'm glad it has happened."

"Ay, child," said Beatrix Buchanan, smiling wistfully out across the girl's head. "We love the fire that burns us—being women."

[illegible]

They had, Miss Trevor says, many long and intimate talks, and in these talks, however, or upon whatever subject they may have begun, Mrs. Buchanan managed always to come to the man who was lost and, for all they knew, dead. She spoke of him at first hesitatingly, a bit timidly, and contrived to make his introduction into the talk seem accidental, but later she spoke with a freedom that was almost eagerness. It seemed, now the talk was gone,

that she could for the first time approach their relationship—their life together (nay, rather apart!) with calmness, with a fair mind. It seemed that for the first time she could sit, as it were, in judgment, laying aside that bitter resentment which had so long clouded her, and ascribe blame where blame was due, credit where credit belonged.

And I would have said, "fair to him," she would say. "He had so much within himself to contend with, and I never realized that. I was too wretched and bitter and resentful to realize anything but my own misery. No, I wasn't fair to him. I never helped him. I never gave him any encouragement or support. I was only sorry for him too, but it never occurred to me. That must have been because I didn't love him, I suppose. Never you marry anybody you don't love. Oh, how triste and banal of me! And so," she said, "I must feel free to feel angry at him any more—now, for all that time. That was my fault, I know. I was so tired, in the last, the going away, I can never forgive. That's beyond me, and it always will be. No, I can't forgive him that—not even if he's dead. That was deliberate malice—I'm sure of it, just as the noxiousness of the air was. I can't forgive him that. I can't forgive him that I believe God expects us to forgive things like that, belly. Anyhow, I can't. I expect I'm not a forgiving sort of person in big things. Only very strong people can forgive, and I'm not strong, you

This sort of thing Miss Trevor says she would say over and over again, with a sort of ferocity as if she were arguing with herself. The subject seemed to have a morbid fascination for her. She seemed to have a sort of passion for laying bare, so far as she might, all that she had felt for and done in her life during their marriage, for picking out and examining all her old motives, not so much by way of self-justification as to determine where lay the preponderance of blame. It seemed that she must determine where lay the blame for those two spoiled lives—in herself or in the man who was gone.

And Miss Trevor says that her husband used to leave the house for hours together, spending whole mornings or afternoons alone in that little Japanese pavilion which sat upon the slope, or walking along the crest of the cliff above the sea, or on the beach at low tide. And she says that she came in from these hours of solitary drooping, pale in spite of the sun, and with a look mysteriously tired. Miss Trevor realized, she says, that the woman was undergoing a great struggle, was passing through a crisis which was vital to her, but as in spite of the intimacy which had come between them she dared not ask questions or seem to pry into anything, so she left Mrs. Buchanan to pass hers. And a later day came when she had heard her longed-for release. The day of August, when they had been living in this fashion for nearly two months, Mrs. Buchanan seemed to fall into a calm. The pallor went from her cheeks and the haunted, strained look went out of her eyes. It was as if she had been for a long time suffer-

Quite of her own accord she spoke of it one day as the two sat together on the terrace after their dinner.

again, and then groping in the darkness, she said, "staggering and fighting for peace of soul, and thank Heaven, it has at last come to me—in some measure at least. I expect that if I were like some women—oh, most women, I dare say—I should not have had to go through all this. Most women have such a store of patience and endurance, I think, that they can stand anything, and suffer a cruel person, baby dear. Truly I am. I resent injury more bitterly than any man I ever knew, and I have always felt that my marriage and—and this latter horror were injuries; that they were inflicted upon me by other people. I've always felt that I was wronged, and I've always felt that I was wronged. I'm less sure. Probably it isn't quite all base burnt out of me—the bitterness, I mean—but—dear, it would threaten and ally—I believe I'm a better woman. Indeed I do. Please don't laugh at me, child! If you laugh I shall cry. This is how I feel about my marriage, baby dear. I don't know how to feel about it, but for his—Herbert's. I wasn't very kind to him. I didn't love him, and so I didn't try to come near him, ever. I let us grow farther and farther apart, instead of doing my best to draw him to me. I let him grow into the sort of man he was towards the last. I let him be selfish, I let him be cruel. I don't know how to feel about that. Anyhow, up to that last night, I knew I was at fault. For his going I hold myself blameless. That I was unlovable, and I cannot forgive it. It is odd, is it not, how perfectly sure I am—always have been—that he was of his own free will, that he went to the end of his way, and that my own sin was simply mine. I want to say quite mysteriously and inimplable fashion, So I've purged up of bitterness and resentment, and I've done more than that. I've done what was more difficult still, and that is I've come to a sort of resignation over the present and the future. That wasn't very dear, it has wrong me sorely, but I've been brought to this. I've been brought to this."

"Ah, I know, dearest! I know!" said the girl. "That's the cruel part. I know!"

Yes," she said, nodding, "that's the cruel part. It means that I must put the thoughts of—of the happiness that I—of that sort of happiness quite from me. It means that I must look upon a life alone as inevitable. I'm a thousand times worse off than a widow—worse off even than an unhappy wife, for she has a reason for her grief. I have no reason. I have no one to turn to. I've made myself free and I grow familiar with it and I resigned to it. There are many levels of happiness, child. The upper levels are beyond my reach, it seems. The mountain peaks I shall never climb, but I suppose one may live some sort of a plodding life on the valleys where the—shadowy are. At the worst, there's no one there."

"But," said the girl, "they may yet find—Mr. Hutchinson. He

may yet come back, or they may find proof that he is—dead. There's always that possibility." The elder woman shook her head. "I have put that out of my mind," she said. "I—dare not think of it, and I do not expect it to come. It is three months now, and there has been found no trace of him. He won't come back. I think he is—dead some where. But we shall never know."

"And beyond that," persisted little Miss Trevor, "there's another thing. The law presumes him dead after a number of years."

"Five years!" said Beatrice Buchanan. "Is five years, child. I shall be thirty—middle-aged. In five years where will Harry Farley be?"

"Wherever he is," cried the girl, indignantly, "he will be as faithful to you as he is to-day, and you know it. He will love you as long as he lives, whether it's five years or forty or fifty!"

"I know, I know!" she said, gently, and a little smile came to her lips and trembled there, a sad little smile. "Oh, yes," she said, "he will be faithful. He doesn't forget. He's not the sort to forget—

but five years! Shall I keep a man bound to me for five long, empty, hopeless years? Ah, no, no! I couldn't bear that. And I wouldn't have him bear it, either. It would be too cruel for us both. Besides—you know him a little—do you suppose he would—marry me without positive proof that Herbert is dead? Do you? I might do it. I'm not so strong as he is. I might steal my happiness and take the risk, but Harry—Harry's

trix Buchanan gave a sudden little shiver, drawing her shoulders together as if she felt cold.

"The air is chilly here," she said, quaintly. "I shudder in it. Perhaps, dear, the sun will shine brightly on the other side of the sea."

To be Continued.

"Does he know, dear?" demanded Mrs. Buchanan

Drawn by Will Gould

The Lake in Winter

By Louise Morgan Sill

THEY beauty in remembrance wrings my heart.—

Then art more fair than ever women were,
Though their proud fair were blazoned in all art.

And when I think of winter's cruel hand
Laid hard upon thee, and thy beauty dim,
And frozen in his grasp, where all the land
Lies pale and silent is the fear of him.

My soul rebels, and I long for thee
A miracle! That melts the snow there be
A magic circle drawn about thy form—
That all the trees upon thy lovely margin
Be left forever green, forever fair!
That thy soft serious waters ever bear

Beneath perpetual summer, spire-warm,
The vision of an Orient metemorphosis
Shine flouting greatly through checkered days.
Then may the timorous, frost-affrighted deer
Steal silent to thy rim, released from fear,
To nibble at their will the coltsfoot—
And thy pale, there may the hungry fox
And shivering squirrel come on thy delight
Mischance, from out the frozen night,
And in their wake may all wild creatures roam,
That shiver by the icy birch and pine,
And come into thy summer, as to home,
No may'st thou lose them, lovely lake of mine!

Miss Sarah Truax, who will play "Princess Ivra"

Miss Julie Howe, who will play "Lail"

J. E. Dodson, who will play the title part in "The Prince of India," rehearsing a scene from the play

GENERAL WALLACE'S "THE PRINCE OF INDIA" ON THE STAGE

Henry Lee Wallace's famous work, "The Prince of India," has been dramatized by Mr. J. I. C. Clark, and will be produced as a play on February 7 at the Colonial Theater, Chicago. Brewster W. Parker, Professor of Music at Yale University, has written a successful score for the production, and the principal parts in the drama will be taken by a suitable cast, including J. E. Dodson as "The Prince of India," William Foxworth as "Prince Videmant," Joseph Lawrence as "Mira," Sarah Truax as "Princess Ivra," and Julie Howe as "Lail." The photograph on the lower half of this page shows a scene at the New Amsterdam Theater, New York, during a rehearsal of one of the scenes of the play.

**S. SEYMOUR THOMAS'S PAINTING OF GENERAL LEW WALLACE,
WHOSE "PRINCE OF INDIA" HAS JUST BEEN DRAMATIZED**

General Wallace's famous novel "The Prince of India" has been dramatized, and will be produced in Chicago early this month. The reader is referred to the opposite page for information concerning the new play and its production. The portrait, of which this photograph is a reproduction, was painted not long before General Wallace's death, and is considered one of the best likenesses of him in existence.

Correspondence

GEORGE WILLIAM CURTIS IN THE REPUBLICAN NATIONAL CONVENTION OF 1860

January 26, 1907

To the Editor of Harper's Weekly:

SIR,—I have just read in the WEEKLY for December 30 Mr. Addison G. Prentiss's very interesting recollections of the National Republican Convention of 1860 that nominated Mr. Lincoln for the Presidency. Probably no party convention that ever assembled in America is of greater historic interest than that one. The scene described by Mr. Prentiss, of Mr. Giddings's attempt to secure the insertion in the platform of a passage from the Declaration of Independence, and the notable speech of Mr. George William Curtis, called forth by the reluctant and conservative temper of the convention, have been frequently described, with variations. It may be that many of your readers would be interested in a contribution to this subject in the form of the subjoined unpublished letter from Mr. Curtis which he kindly wrote a number of years ago in response to an inquiry relating to this event:

"West Hill, Bayside, Great Neck, N. Y., January 26, 1897."

"MY DEAR SIR:

"The incident to which you allude is very simple. The platform had been read, and it was so generally acceptable that there was a general desire to accept it without taking the risk of any change. But Mr. Giddings moved to insert, in the first clause, I think, some words of the Declaration of Independence. There was a murmur of dissent, and Mr. Cortis, also from Ohio, and afterwards Judge of the City Court in Washington, said impatiently that we might as well insert the golden rule as the Declaration of Independence, and the proposal of Mr. Giddings was rejected. He then arose and was evidently leaving the convention; as he passed by me I put out my hand, although he did not know me, and asked him where he was going. He replied, 'I see that I am out of place here.' It seemed to me that the original impulse of the party was leaving the convention in his person, and I begged him to sit down, saying that I would try to get in the amendment. He seated himself, and as soon as possible, standing upon my seat, I caught the eye of the president, who gave me the floor, and I moved my amendment. There was applause and opposition, and Judge Curtis made the point of order that the convention had substantially rejected the amendment. The president, Mr. Ashmun, who was evidently displeased with the motion, promptly sustained the point of order. Instantly Frank Blair, whom I did not know and who sat across the aisle just in front of me, loudly exclaiming 'obscene joke,' was on his feet, and so energetically addressing the president that he was obliged to see him. Blair made the point that my amendment was to the second clause of the platform and therefore in order. Ashmun reluctantly acknowledged it, and said that the gentleman from Missouri was correct, and gave me the floor. I said a few words, the amendment was adopted without opposition, and Mr. Giddings returned to his seat.

Very truly yours,

GEORGE WILLIAM CURTIS."

Mr. Isaac N. Arnold in his *Life of Lincoln* describes the "few words," to which Mr. Curtis so modestly refers, as a "speech (improperly, but vehement and eloquent beyond description). It was received with deafening applause, and he carried with him the convention. No speaker ever achieved a more brilliant immediate triumph than young Curtis. It was touching to see Mr. Giddings as he went up to Curtis, and throwing his arms around his neck exclaimed: 'God bless you, my boy. You have saved the Republican party. God bless you!'"

Mr. Murat Halstead in his *Political Conversations of 1860* gives a fuller account of this event. It is to be regretted that more detailed and more accurate official accounts of all the great national conventions of the past have not been preserved.

I am sir,

JAMES ALBERT WOODRUS.

THE POOR MAN AND THE MOTOR-CAR.

CHICAGO, ILL., January 27, 1907.

To the Editor of Harper's Weekly:

SIR,—Your automobile number must have given interest to would-be motorists, but Mr. Sangster's article on "The Poor Man and the Motor" does not treat that subject fairly. Permit me to quote my own experience. My expense account for 1903 was:

Fuel (kerosene).....	\$17 59
Lubricating oil.....	6 39
Accessories.....	16 33
Repairs.....	83 63
Total.....	\$118 16

I bought it in April a 7½-horse-power steam-car, in which I ran until November 15, 1903. It was then burned and sold. My car carries four people comfortably, runs readily twenty miles per hour over decently good roads, and speeds up to thirty miles for short distances. I act as my own chauffeur, but being an indifferent mechanic, do not let the simplest repairs myself, patronizing

a local garage when anything goes wrong. Living in the suburbs, my car is kept in my own carriage-house, which cost me between \$50 and \$60, and is entirely adequate. From the repair store might be deducted my first bill, \$31 74, occasioned at the outset by a misunderstanding as to the capacity of my cylinder oil-tank, resulting in ruined cylinders, something that will probably never occur again. Omitting this bill, the year's expenses would run under ninety dollars.

My kerosene consumption is somewhat high in proportion to mileage, on account of my habit of frequently leaving the car standing all day with pilot-light on.

Mr. Sangster quite fails to explain that while the heavy, high-powered car, driven at high speed, costs heavily for tires, the moderate-weight car, driven at a reasonable speed, is quite inexpensive in that respect. I have owned three light steam-cars in five years, have driven over ten thousand miles, and though I have had repeated punctures, have never bought a tire other than those with which cars were originally equipped. My present car weighs fourteen hundred pounds; I drive usually with four people, at an average of fifteen to twenty miles (a little faster than the law allows). I am positive that my expense closely corresponds with that of many other drivers of similar cars in the vicinity of Boston. I claim that a man of moderate means can enjoy the pleasure of motoring, in moderation, at an average expense of one hundred to one hundred and fifty dollars per year. This, of course, means a moderate but not excessive car, and my car at the close of the first year, so far as running qualities are concerned, is a better machine than when it started. My repair bills, too, came very largely at the outset.

I am, sir,

GEORGE L. ADAMS.

SENATORIAL REPRESENTATION

NASHVILLE, TENN., January 25, 1907.

To the Editor of Harper's Weekly:

SIR,—Why does HARPER'S WEEKLY begrudge the less populous States their quota of Representatives or Senators in Congress? You are usually so fair-minded and impartial, but I can't help calling your attention to an editorial in the WEEKLY of January 6 in which you state "We want no more States like Montana, Idaho, Wyoming, and Nevada, which with an aggregate population of less than 500,000 offset in the Federal Senate the huge congressional delegations of New York, Pennsylvania, Illinois, and Ohio."

They were admitted into the Union in due form, and the Constitution allows them two Senators and why not cheerfully concede them their representatives in both branches of our Federal legislature? How would you remedy the matter? Change the Constitution so as to give New York, Pennsylvania, Illinois, and Ohio twenty, thirty, forty, or fifty Senators?

We of the South have fared badly in respect to national representation, but I hope we may so conduct ourselves that you can see your way clear to give your support to a Southern man for President before many years roll by.

I am, sir,

WALTER L. BRIDGEMAN.

SENATOR: FILES IN DEFENCE OF SPOKANE.

WASCO, WASH., D. C., December 22, 1903.

To the Editor of Harper's Weekly:

SIR,—My attention has been called to an editorial which appeared in a recent issue of your paper in reference to the lack of attractiveness of several Western cities to the traveler for pleasure. I am unable to name the issue of HARPER'S WEEKLY in which the article appeared, as the clipping which has been sent to me is one which was taken from the Spokane-Evening of Spokane, Washington, which quoted the article at length on December 10, 1903.

The article referred to in does the city of Spokane an injustice, and I have been requested by the chairman of the Publicity and Promotion Committee of the Spokane Chamber of Commerce to ask you to retract it.

"The intending traveler," says the writer, "can go to Blaine or Spokane on business, but could he go to those places for pleasure?" Would he be satisfied? Would he get anything to eat? As to Blaine, I am not in a position to speak with authority; but in regard to Spokane, I can testify from personal knowledge that the intending traveler be after pleasure, education, or something to eat, he can find each and all of these in unlimited variety and abundance, and I know of no place with the peculiar and characteristic charm of our Western inland cities—a charm so real and well recognized that it brings men passed into literature—is better exemplified than in the beautiful and highly civilized city of Spokane. There are probably no cities even of more than twice the size of Spokane, which can boast of the splendid hotels and resorts provided by that city.

While I have no desire to appear in print on this subject, I would be grateful if you would correct the erroneous impression which your article conveys.

I am, sir,

S. H. PHILLIPS.

Music And The Opera

MR. LOEFFLER'S MUSIC

BY LAWRENCE GILMAN

A CURIOUS and interesting phenomenon of the times, so far as they relate to matters of musical taste, is the undoubted and increasing response which is being made, both here and abroad, to the art of that most unkind of contemporary composer, Charles Martin Loeffler. The matter seems thus far to have escaped the attention of professional observers, or at least not to have evoked comment; yet it is both significant and suggestive. To demonstrate the fact, it may be pointed out that Mr.

"La Mort de Tintagiles" has been twice performed in New York, by the New York Symphony Orchestra, since the first of the year; his two new "Rhapsodies" for oboe, viola, and piano were performed here last week by the Kiesel Quartet; his choral setting of the 15th Psalm is to be given in March by the Musical Art Society; the orchestral score of "La Mort de Tintagiles" and of his fantasy after Rollinat, "La Villanelle du Diable," have been published, as well as the music of his new "Rhapsodie"; and here are songs, to words by Poe, Rossetti, and Loebler, are in press. This takes account of the present season only; last year and the year before saw the publication of Mr. Loeffler's four songs, with viola obligato, to words by Verlaine and Maeterlinck, and his four songs after Gustave Kahn, as well as a number of public representations of certain of his later works. In Europe, various eminent conductors are busy over his orchestral scores, and meanwhile Mr. Loeffler himself, in his Massachusetts home town—but not too near—Boston, is busily engaged upon the composition of new music, enjoying the fortunate and unknown situation of a musician assured of contemporary recognition.

The matter is, as has been observed, worthy of comment and inquiry. It need not be insisted upon that the spectacle of a composer bent upon the accomplishment of artistic results that are totally opposed to the general course of musical taste, and that often defy accepted and sanctified traditions regarding musical procedure, is not one that is usually associated with the thought of an immediate popular response. Yet Mr. Loeffler appears to occupy some such unique position.

He is utterly indifferent to that which in music is fairly sure of acceptance and applause. With effects that may be fairly achieved, with the familiar order of musical "eloquence," he has no concern whatsoever. A compulsion in predisposition and temperament, and a spiritual son of France, he is an unswerving seeker after the inner symbols of musical thought—and that without affectation of pose and without apparent anxiety. Thus after time he does things in his art which offend and perplex the formalists, and which, ac-

cording to all precedent, should repel and confound the average auditor, who is generally supposed to cling to the accepted and the familiar with an almost pathetic tenacity. He is fond of exotic and unusual words, of a harmonic structure that is as audacious as it is individual, and the poetic and dramatic subjects that arouse his imagination and serve as the basis of much of his music are often fantastic, sinister, ironic,—always remote from the territory familiar to the popular understanding. He is an intellectual musician of such poets and dramatists as Maeterlinck, Verlaine, Rollinat, Kahn, and Poe; and in music the vibrancy of Strauss, no less than the unimpeachable propriety of Brahms, are foreign to his temper and predilections.

Here is one to account for the acceptance of such a music-maker by a not inconsiderable number of a public habituated to the ways of such comfortably approachable moderns as Liszt and Wagner, Tchaikovsky and Debussy, Brahms, Saint-Saëns, and Grieg? A satisfactory answer does not immediately present itself, but the fact itself is surely one to command a surprised if not the less gratified recognition.

The most recent phases of Mr. Loeffler's activity invite particular comment. His two "Rhapsodies" for oboe, viola, and piano, transcriptions of poems by Maurice Rollinat, were performed here last week at a Kiesel Quartet concert, for the first time in public, by Mr. Longy (oboe), Mr. Gehlhard (viola), and Mr. Loebler himself, who plays the viola quite as well as he composes.

The poetic substance of the "Rhapsodies" is woven equally of needs of melancholy and dread. They are full of the grotesque and the spiritual not less with which so much of his music is informed; yet they do not suffer these needs with so sharp a poignancy as do, for example, the four songs, with viola obligato, which were published last year. Despite their not infrequent bounties, their extraordinary vitality, and their extraordinary ingenuity which restrained them, they seem to signify a less assured and confident creative impulse than is disclosed in much else that we have already had from him. I understand that they were, in fact, composed in advance of the viola songs of last year.

Mr. Loeffler's latest completed work, his four songs in English words now in course of publication, will, it may be ventured, prove somewhat of a surprise to those who know him only as the composer of "La Mort de Tintagiles," the "Villanelle du Diable," and the viola songs after Verlaine and Maeterlinck. For in them he has turned from those musical far-reaching and terror that have so often emboldened his imagination, to a region of inspiration which has yielded at once a nobler impulse and a deeper beauty.

A new Portrait of Olive Fremstad

One Fremstad, one of the principal interpretations at the Metropolitan Opera House, has been heard recently at "Siegfried," "Bianchi's," "In a Dream," and "Randy."

Cured

A poor mother, in despair of breaking her little boy of swearing, at last threatened that the next time he used a bad word she would banish him from home. The very next day he exploded a big D.

"I am very sorry, Thomas," said the mother "but I have never broken my word to you, so now you must leave home."

The man was instructed to pack Thomas's little boy out east, and he, without a word, told his mother good-bye and departed. After a stay at Thomas set his burdens on the ground, and, perched solemnly on the rock, chin in hands, fell into deep thought. The spectacle was too much for the good mother who was watching him from a dis-

Very quietly she started down the stairs and slipped up behind Master Thomas. & she was hovering on the point of surprising him with a kiss, a pensive old woman appeared.

"Child," he said, "will you—hans—tell
me where Mr. Franklin lives?"

“ You go to —, I have troubles of my own.”

The Intelligence of Ants

The testing of the intelligence of ants is a favorite study of naturalists, and recently few have been published accounts of some surprising experiments to determine the exactness of their responses. It is well known that ants are able to find their way out of any complexity of the maze species, and able to recognize one another, while to some extent they imitate or respond to one another. In the following interesting study the author rejects the theory that the ant follows in a "language race" in the antenae and claims that these organs are employed in the same manner as the human nose and tongue. In the experiments of all kinds, both in the laboratory and in the field, the author has shown that the antenae have some sense of smell and accordingly are avoided ants of the same species, and are refused ants from the forest and bee. The antenae are also used by the bee to feel and taste, and are used by the beetle as a bag in the infirmity of the leg. In the further construction of the antenae it was found that when an ant has derived of its food and when an ant has been fed and without disapproval.

Racial Discrimination

A small French-Italian mousting-steamers was proceeding on its way. The passengers were of various nationalities: English, American, French, Italian, and one large German. Most of the male passengers were gathered in the smoking-room, when the steward appeared at the door, and with a smile announced: "Dinner is served!"

...and started toward the dining saloon. He seemed aware that his announcement had not been understood by all, continued: "However, first serve!" and as a portion of the passengers still remained.

The French and Italians followed the British and Americans, leaving the large

... he muttered, hungry-
ly. "Is it hot in Germany now? Is some-
thing to eat on the list, please?"

Wireless Telegraphy in Mexico

Photography has been maintained by several teams across the Gulf of California and now the Mexican government has issued contracts for a plant that will afford communication over a distance of about 100 miles not only between the various corners of the system but with shipping. The Mexican government has a trained staff of radio operators, and it is thought likely that this method of communication will serve an important extension through that country.

The Latest Word In Sanitation

The name Sv-Clo on a closet means health insurance for your home or any building in which the closet is placed; it means freedom from all those diseases which are usually traceable to noxious odors and poisonous gases arising from ordinary closets.

SY-C10 stands for more than mere flaking; it stands for a wonderful syphonic action of great power—an action which literally pulls the contents of the bowl into the drain, cleansing the non-teachable parts, instantly sealing the outlet channel with a water trap to an unusual depth, and absolutely preventing all danger of gas.

The Sv-Clo Closet stands for an interior cleanliness and purity impossible in an iron closet, and unknown in any closet but one made of china—like the Sv-Clo. Hand-moulded of china all into one solid piece like a vase, the Sv-Clo is without crack, joint or rough surface to collect dirt or disease germs. It is as clean inside and out as a china pitcher, being made exactly the same way and of the same material.

The surface of the **St. Croix** Casket cannot chip off, is not affected by acid, water or wear, and hence cannot rust or discolor as an iron casket does. The **St. Croix** is strong, simple, durable; it cannot get out of order and will last, with ordinary care, as long as the house in which it is placed.

It costs but little more than the common closet, and when health and comfort are considered, it really costs less; in fact, *your doctor pays the bill*. Your plumber will tell you that S-V-C-O is absolutely the latest word in perfect sanitation.

CARTOONS OF THE WEEK

THE INCOMPARABLE WHITE THE CAR FOR SERVICE

STEAM IS THE WORLD'S STANDARD MOTIVE POWER

STEAM power, as utilized in the White car, possesses unique advantages. There is absolutely no noise, no odor, no vibration, and the speed of the car is controlled entirely by throttle. There is an ever-present reserve of power which is often found most useful.

The White steam generator is totally unlike any other steam-making device ever designed. To illustrate the radical difference, we might point out that in our generator the water is at the top and the steam at the bottom. In every other type of boiler, the steam is at the top and the water at the bottom. The safety, simplicity, and reliability of the system is demonstrated by the performance of the thousands of White cars now in use.

HARPER & BROTHERS, PUBLISHERS, NEW YORK

"collective ownership of all means of production and distribution," and the Provisional Department runs everything. "There will be no money in the present understanding of that term. The capitalist's gold and bonds will have no more purchasing value than beaten paper and iron. He must produce certificates of labor done in order to buy the simplest things which he needs. Profit, interest, and rent, the means by which he is now able so snugly to live in idleness, will disappear, and he must work as all men must work, or starve."

Upon the whole, then, and in conclusion, we have consolidated into one governmental structure an institution covering all the aspects, containing all the defects, subject to all the abuse of a private or corporate enterprise, and we are, as a body politic, more fully equipped for dealing with these evils than would be a corporation animated solely by business instincts and capable of acting strictly on business principles. The apparent success of this venture inspires no inherent demands for substantial legislative additions to its already overburdened and dangerous functions.

There is enough in present conditions and current tendencies to give a loud warning against unwarmed expansion.

Tolstoi to the Czar

(Continued from page 128.)

That is why it is not possible to apply this system to Orthodoxy without treating it as oppression in all its forms. Siege, harshment by the administration, religious persecutions, excommunications, interdictions of books and newspapers, and other bad and cruel action.

If such a character has been all the conduct of your reign. When you ascended the throne, your manner in the delegation from the government of Tver taxed its most legitimate appeals as "insane dreams," that answer provoked the indignation of Russian society.

All your evilnesses concerning Finland, the grasping of Chinese territory, your revocation of the conference of The Hague (is this inconspicuous of an increase in your military strength?), the gradual but general limitation of electoral assemblies, and the growth of arbitrary administration, the religious persecutions that you encourage, your appropriation of the monopoly of alcohol (in other words, government-trading in poison), and last of all the maintenance of the system of corporal punishment, despite the incessant appeals and demands all directed to you for the abolition of that stupid, useless, and humiliating custom, you could not have accomplished all that if you had not been able to the suggestions of your counselors, and taken upon yourself the visionary task of assuming the life of the people, and settling them even further back than they were in the older times.

Violent measures are excellent to oppress a people, but they are not good to govern it. In our day, the only means of really governing would be to place yourself at the head of the popular movement, which, rising from the evil to the good, from the shadows to the light, is to lead the people forward, naming by the means that we wish in reach of all. In order to be in condition to do that it is necessary before all else to make it possible for the people to tell what they need—to give them the possibility of making their wants known, and then having given them that possibility and having listened to them, it is necessary to answer their desires, and to accord what they require for the necessities not only of our class, but for all the needs of the majority of the people—the working classes.

Now, as to what the Russian people would ask were they free to claim what they wish: in my opinion, first of all, they would demand to be disembarrassed of the heavy exactions, which have put them in the condition of a parish; then they would ask the right to circulate freely; to go and to come, according to their own will and to be subject to their own conscience; and then the people—our hundred millions of men—could not as one man and more than for all, for the right to enjoy the ground, for the

COMMENT

We discuss elsewhere some of the details of the HERRAN bill, embodying the method of government rate-making for railways which is understood to be approved by the ROOSEVELT administration, and which, having been reported unanimously by the committee, may be expected to be sanctioned in the House of Representatives by a majority no less overwhelming than that which was obtained last year by the EICHENBERG project. All that we wish here to consider is the chance of its becoming a law. There is reason to believe that the opposition which the proposed measure will encounter in the Senate will prove much more serious than that which the Philippine tariff bill and the Satchel bill met with in the House. The insurrection against the administration in the last-named body was imperfectly organized. The Republican members who voted against the Philippine tariff bill were by no means the same as those who voted against the Satchel bill. An analysis of the names recorded shows that if the log-rolling process had been applied to those Republicans on the one hand who opposed the Philippine tariff bill, and to those on the other who were unfriendly to the Satchel bill, and if all of both seceding bodies could have been persuaded to "pool their votes," the former measure could have been thrown out, and the latter brought within a few votes of defeat.

If all Republican opponents of Mr. ROOSEVELT's policies in the Senate should issue warning from the failure of the revolt in the House, and agree to act together on the ground-take principle, they might be able to defeat no fewer than five administrative measures. We refer to the government rate-making bill, the Philippine tariff bill, the Satchel bill, the Isle of Pines treaty, and the Santo Domingo treaty. The last-named measure, which will require a two-thirds vote for ratification, could, of course, most easily be defeated, because, even if every Republican Senator should vote to confirm the treaty—this is scarcely expected—the assistance of four Democratic Senators would be indispensable. As almost all of the Democratic Senators deprecate the interposition of the United States between the Dominican Republic and its foreign creditors, they are expected to hold a caucus on the question, in which event the administration might find it difficult to secure any Democratic votes, except, possibly, those of Senator McKENRY, of Louisiana, and Senator CANNON, of Arkansas. To get the Isle of Pines treaty ratified will, of course, be a much less difficult task, because there is no reason to apprehend that the Democrats would caucus on the subject. We point out the merits of the treaty in another paragraph. All that Senator MONTAGUE and a few of his Democratic colleagues seem to desire is that the treaty shall be so amended as to provide additional guarantees that

American residents on the Isle of Pines shall preserve intact their civil rights and vested interests.

That the Senate will pass without amendment the Philippine tariff bill is by no means certain, although, as we have often pointed out, our plain duty to the islanders prescribes the enactment of the measure. The Porto-Ricans and the Hawaiians enjoy free trade with the United States, but under the bill now before the Senate the Filipinos will not obtain the same privilege until 1909, so far as their sugar and tobacco are concerned. On the contrary, those commodities must pay twenty-five per cent. of the DUTY rates in order to secure admission to the United States. In other words, for three years longer the Philippine Archipelago is to be treated as a foreign country, while at the same time we impose upon it the same restrictions with reference to coastwise commerce to which the States in the Union are subjected. Equity is one thing. The fact remains that the "stand-patters" are even stronger in the Senate than they are in the House, where they have shown themselves sufficiently powerful to extinguish the hopes of revision. Alive to this fact, the spokesmen of our domestic cane-sugar, beet-sugar, and tobacco interests are now more vehement than ever in opposition to the Philippine tariff bill. They warn Senators not to be beguiled by Secretary TAYLOR's assurance that the exports of Philippine sugar and tobacco to the United States would always be as insignificant as they are to-day. The champions of the beet-sugar interests assert that the sugar industry of the Philippines is capable of indefinite expansion, and that within ten years, should the bill now pending become a law, Philippine sugar will become a formidable competitor of beet-sugar and of Louisiana cane-sugar in the American market.

Our tobacco-growers are equally vehement. On January 27 the president of the American Tobacco League Association, speaking before the Senate Committee on the Philippines, pointed out that seven and a half billion cigars are now manufactured annually in the United States, and that every cigar brought into the country from the Philippines under the proposed law would mean the displacement of a cigar made by American labor. He explained that under present conditions no Philippine tobacco comes into the United States, because the tariff keeps the price beyond that which consumers will pay. Under present conditions it is unprofitable to sell Philippine cigars for less than ten cents. Consequently such cigars as might now be imported from the Philippines would come into competition not with our native product, but with Havana cigars. Were the duty on Philippine tobacco removed, the price on Manila cigars would be reduced to five cents, and they would forthwith become rivals to the domestic commodity. The argument of the sugar and tobacco men may be put in a nutshell, thus: Charity begins at home. We may owe a duty to the Filipinos, but we also owe a duty to those American citizens who are engaged in growing and refining sugar, or in growing or manufacturing tobacco. If the two duties cannot be reconciled, do that which comes nearest to your hand, and let the islanders go. We do not pretend to assert that the question is not full of difficulty. Justice we owe to the islanders unquestionably; but we as clearly owe a duty to our own citizens, whom by our protective policy we have encouraged to invest their savings and their labor in producing sugar and tobacco.

Public opinion at the Federal capital and all over the United States is gradually becoming aroused in favor of the measure, intended to purify elections, which has been introduced in Congress by the National Publicity Bill Organization, and a counterpart of which will, we hope, be enacted at Albany during the present session of the New York Legislature. As we have formerly pointed out, the purpose of these bills is twofold: first, to prohibit, under adequate penalties, the contribution of money by corporations for political purposes; secondly, to compel the disclosure under oath, not only by candidates, but by campaign committees, of every contribution or promise of money made during campaigns, effectual precautions against evasions being taken by provisions for detection, exposure, and punishment. It is well known that a similar law has been for some time in opera-

tion in Great Britain, and that the working of it has been highly satisfactory. A like measure in Massachusetts has had gratifying results. In an address issued on January 25 by the National Publicity Bill Organization, signed by the president, Mr. HENRY BELMONT, of New York, and the secretary, Mr. F. K. FOSTER, of Massachusetts, we are informed that the central association will not confine itself to the bills already introduced at Washington and Albany, but proposes to promote the formation of branch societies in every State of the Union, in order that the proposed national law may be supplemented by State legislation of a purport as nearly uniform as possible. That this movement has the support of representative men in both political parties, and also of organized labor will be evident to those who note the composition of the committees which Mr. BELMONT has recently announced. On the Executive Committee, for example, we mark the names of President J. G. SETHUMAS, of Cornell University, of General JAMES H. WILSON, of Delaware, of ex-Senator WILLIAM E. CHAMBLER, of New Hampshire, of Mr. JOHN E. LAMM, of Indiana, Mr. CHARLES W. KNAPP, of Missouri, Mr. F. K. FOSTER, of Massachusetts, delegate of the American Federation of Labor to the British Trade Union Congress, Mr. JAMES M. JENCKE, of Indiana, president of the Typographical Union, and Mr. JAMES WILSON, of Indiana, president of the Pattern-makers' National League. The Law Committee presents such well-known names as those of JOHN M. THURSTON, of Nebraska, JOHN T. McGUIRE, of West Virginia, LOUIS E. MCCORMICK, of Maryland, and HANNAH TAYLOR, of Alabama. This movement deserves success, and will command it.

It is interesting to learn that a law providing for the nomination of candidates of all political parties at primary elections may be passed by the Pennsylvania Legislature in the week ending February 3, Massachusetts, New Jersey, and Wisconsin already have similar laws. In the New York Legislature the other day a bill was introduced providing that all nominations, State and local, shall be made directly by the enrolled members of parties at party primaries, and that there shall be no State conventions except those called to amend the State Constitution. If this bill becomes a law in the present form, the system of party enrollment now operative in the cities of New York State will, with some modifications, be applied to the rural districts also. The annual primary day will be the fifth Tuesday before the day of general election, and in a year when a President and a Vice-President are to be chosen there will be an additional primary held on the last Tuesday in March, to elect delegates and alternates to a national convention. The bill further provides that all parties shall hold their primary elections at the same time and place, and under the direction of the same bipartisan board that officiates on election day. Last year Governor HENCKES advocated similar legislation in Ohio, and Governor WARFIELD has since taken a like position. A primary-election bill has also been introduced in Virginia. It is well known that in several States nominations for seats in the United States Senate are made at primary elections, and the popular will thus revealed is invariably obeyed by the Legislature, just as Presidential electors carry out the wishes of national conventions. It is obvious that if United States Senators are nominated at primaries, an amendment of the clause of the Federal Constitution which prescribes the method of electing them would be superfluous. It begins to look as if the twentieth century would witness the complete suppression of the system of nominating by conventions, which rapidly tended to become universal after 1824, when the old method of nominating the candidates of the several parties for the Presidency in Congressional caucuses was practised for the last time. The last that could be said of the caucus candidate that year—WILLIAM H. CRAWFORD, of Georgia—was that he "also ran." The candidate who got the most electoral votes in 1825—ANDREW JACKSON—had been nominated in a convention, which, however, was not national, but sectional.

The American residents in the Isle of Pines seem undismayed by the distinct refusal of the Secretary of State to countenance their assertion that the island should be regarded as belonging to the United States. In a letter dated November 27, and addressed to Mr. CHARLES REYNARD, president of the

American Club of the Isle of Pines, Mr. ROSS declared that the island is lawfully subject to the control and government of the Republic of Cuba. He added that in his opinion Cuba would never consent to give up the Isle of Pines, and that the United States would never try to compel her to give it up against her will. The Secretary further pointed out that the Isle of Pines has long been looked upon as an inseparable part of Cuba's political entity. To all of these statements Mr. REYNARD takes exception in a letter addressed to the head of the State Department. The writer insists that the Cuban Republic exists solely by virtue of the Cuban Constitution, which was ratified, promulgated, and put in force by the authority of the United States. He submits that the Cuban Republic possesses no powers except those conferred by that constitution. He goes on to point out that, by the very terms of that constitution, the Isle of Pines is expressly excluded from the constitutional boundaries of Cuba, and he argues that, until that constitutional limitation is removed, the government of the Cuban Republic can no more exercise lawful control over the Isle of Pines than it can over Key West or the peninsulas of Florida itself. It is also asserted that, by that section of the Act of Congress approved March 2, 1801, which is commonly called the FLATT amendment, the Isle of Pines was expressly excluded from Cuban territory, and that, until the provisions of that act shall have been repealed or modified by Congress, or in some other lawful way, they have the force of law. We observe, however, that Mr. REYNARD admits that under the Spanish régime, which came to an end in 1898, the Isle of Pines was treated as a part of Cuba from an administrative point of view. It seems to us that this admission leaves the American residents of the island without a case. If the Isle of Pines was treated administratively as a part of Cuba at the time of the cession made by Spain, we have no more right to detach the smaller from the larger island than we should have to set up a claim to the province of Santiago. It may be that, for technical reasons, a treaty is needed to settle definitely the status of the Isle of Pines, in which event our Senate is morally bound to ratify such an agreement. We know of no Senator who has shown any inclination to keep the smaller island, or at least to concede the possession of certain equities therein by American settlers, except Mr. MORGAN, of Alabama.

American citizens, who are accustomed to direct election by universal and equal suffrage, can hardly fail to sympathize with the demand of the Prussian Social-Democrats—that these are not by any means all Socialists—for a drastic reform of the electoral system prescribed by the Prussian Constitution for elections to the Prussian House of Representatives. It is well known that the election of members to the Reichstag, as the Lower House of the German Imperial Parliament is called, is direct, and that the suffrage is universal. The result is that the Socialists have been able to return more members to the Reichstag than can be mustered by any other single party, except the Centrist. They would have many more if to Berlin and other large cities, which have grown amazingly in forty years, were allotted the number of seats to which they are entitled by virtue of their population. On the other hand, in the Prussian House of Representatives the Socialists have not at this time, we believe, a single member. Their lack of representation, which, not unreasonably, they denounce as an iniquity, is due to two facts: first, that the Representatives are not chosen directly, but through the intervention of secondary electors, corresponding to our Presidential electors; secondly, the primary voters are distributed, according to the taxes they pay, into three classes, each of which is entitled to the same number of secondary electors. The practical effect of this system is that in some electoral districts, as, notably, at Elberfeld-Barmen, the highest of the three classes may consist of only a very few rich men, whereas the lowest class may comprise tens of thousands of operatives. Under these conditions it is easy for a few rich men, by winning over a little more than half of the electors chosen by the middle class, to fill the seat pertaining to their district. The Socialists want to see the same methods applied to elections for the Prussian House of Representatives which have been followed for nearly forty years in elections for the Reichstag. Many of the Liberals and Centrists are inclined to support the demand, and it is conceivable that they might pass a bill in the Prussian House of Representatives to that

effect. That the Prussian House of Peers (Herrenhaus) would concur is doubtful. If both Houses would agree, however, nothing but the signature of the sovereign would be needed to make the desired change in the Constitution, for in Prussia constitutional amendments may be enacted as easily as statutes, except that both Houses of Parliament have to record their wishes twice instead of once.

The French government justly considers itself insulted by President Castro's treatment of M. TANNY, its chargé d'affaires, and is determined to exact reparation. As we go to press, it is unknown just what course France will pursue, but a definite plan is said to have been formed and to have been stamped with the approval of our State Department. There is a report that instead of blockading Venezuelan ports, the French government may proclaim an embargo which would bar Venezuelan products out of France. The situation is more complicated than that with which Germany, Great Britain, and Italy had to deal in 1902. A third of the customs revenue of Venezuela's principal seaports, La Guayra and Puerto Cabello, has since been set apart for the payment of debts due to German, British, and Italian subjects. Their interests would be prejudiced, at least temporarily, if France should occupy or blockade those particular seaports. If, on the other hand, France should confine her coercive demonstrations to ports other than those named, it is obvious that the commerce of the places occupied or blockaded would be diverted to La Guayra and Puerto Cabello, the customs revenues of which would be correspondingly increased. That would be a positive benefit to German, British, and Italian creditors. Just at this time, while the Morocco conference is proceeding, it is of much moment to France to reconcile Germany and to retain the good-will of Great Britain and Italy. We incline to think, therefore, that her Venezuela programme has been submitted not only to the United States, but also to the three European powers which took part in the blockade of 1902.

That soon or late, and in one way or another, President Castro will be made to suffer for the indignities to which the French envoy was subjected may be taken for granted. Why the latest proclamation should have been offered is hard to understand, except upon the theory that President Castro is not altogether sane. At the time when he gave offence to France, by refusing to permit M. TANNY to disembark from a steamer which he had visited, Venezuela's international position had been materially improved. Our government had decided not to enforce the claim of the asphalt company, and there was reason to believe that the French Republic would follow our example as regards the claim of the French Cable Company. It is, we understand, unserviceable of proof that the cable company as well as the asphalt company rendered pecuniary assistance to the leaders of the Maracaibo rebellion, and that, consequently, their franchises were rightfully annulled by the Venezuelan tribunals. But just as things were going very well for Castro, his temper ran away with him, and led him to commit an act which no self-respecting government like that of France could be expected to overlook.

One outcome of the *entente cordiale* established between France and England is a revival of the project to construct a tunnel under the British Channel. The project was started nearly a generation ago, and long since would have been buried out had not the fear of an invasion produced so much excitement in England that the government ordered work on the English end to be stopped. The southern terminus of the tunnel was to be near the village of Sangatte, which is about six miles from Calais, and the northern at the South Foreland, close to Dover. The shortest distance under the strait is about twenty miles, but, including the approaches at each extremity, the tunnel would have been about twenty-three and a half miles, or about twice as long as the Simpson Tunnel. When the work was stopped in 1881, a length of about one and one-eighth miles had already been pierced at each end. The work of cutting under the sea was proceeding at the rate of eighty-two feet a day. The greatest depth of the British Channel between Dover and Calais at low water is about one hundred and eighty feet. It is computed that the Channel tunnel might be constructed in two years, provided

no large fissures are found in the chalk which forms the bed of the Channel, and which is considered the best material through which a tunnel can be driven. There is good reason to expect continuity and compactness in the chalk. When the tunnel is in operation, it will be possible to travel entirely by rail from London to Vladivostok. Lord LANSOWNE, who was a member of the joint committee of the two Houses of Parliament which examined the project in 1883, signed a minority report in favor of it. The success of the opposition was attributed mainly to General Lord WALDESEY, who at the time was chief military adviser to the crown. There seems to be now scarcely any solitary opposition to the tunnel, and there is no doubt that the company which desires to prosecute the work has sufficient capital to overcome the engineering difficulties, which, as we have intimated, are expected to prove materially less than those of the Simpson Tunnel.

The physical effects of mental causes have had striking illustration within the last six months in the cases of several of our fellow townsmen. The heads of the chief insurance companies which were investigated went successively to bed as though they had been poisoned with a slow poison. Mr. HYDE is still young, and the vigor of youth brought him through all distresses without any obvious impairment of vitality, but it went hard with the older men. Mr. ALEXANDER broke down completely under the strain, and his fellow presidents both in turn took sick, though they have since got better. So it has been with Justice DYALL, who went down before the exposures of the *Torn Topic's* trial as though he had been struck with a club. The firing-line is not considered a healthy place, but it is plenty enough healthier to be there than to be the target.

The late King CHRISTIAN of Denmark was an honest gentleman, a good king on a small scale, and the most successful parent of modern times. In all particulars that any one knows of his example was good, for he was a careful, upright, kindly, democratic king, who lived a good life and a long one, and paid his bills as they came due. But his kingship was not a very great place, and though he carried it off exceedingly well, it was as a husband and a father that he made his great reputation. Born in 1818, the fourth son of the German Duke of Schleswig-Holstein, he married in 1842 Louise, the daughter of the Landgrave of Hesse. CHRISTIAN was then an officer in the Danish army and very poor. Nevertheless he and his wife were as daring as to have six children. To help with their education and maintenance the father gave lessons in drawing and the mother in music. It happened that at their head to be chosen for old King FREDERICK of Denmark. The wife of CHRISTIAN had an hereditary claim on the place, and in 1852 the powers settled at London that CHRISTIAN was the proper man to be FREDERICK's successor. He was then named heir-apparent of Denmark with an increase of pay, and came to the throne in 1863. The Dimes had a prejudice against him, and did not welcome him at first, but when they came to know him and his family, they liked them, and it was not long before the royal family of Denmark was exceedingly popular at home. Very soon, too, the family got the reputation of being the best-looking and best-natured and best-behaved royal family in Europe. The children were well-born and well brought up, and the demand for them quickly distanced the supply. The eldest daughter married the Prince of Wales; the next daughter, the Czarevitch of Russia. A son became King GEORGE of Greece; another son has just succeeded his father as King of Denmark; another married an heiress of the house of Orleans; and the youngest daughter is Duchess of Cumberland. As for the grand-children, the tale of their preferment is too long to give here. The last to get a new throne was King HAAV of Norway. For nearly sixty-four years King CHRISTIAN and Queen LOUISE lived happily together, honored by all Europe, beloved by all their children, adored by subjects who were proud to have such tenants living such a life in their simple palace at Copenhagen. It is like a fairy-story this tale of CHRISTIAN and LOUISE; a very simple, pleasant story of love and good manners and honest living and a happy life.

Mr. CHRISTIAN invited to address the New York State Medical Society on January 30 at Albany, suggested to the

doctors that they should take their patients more into their confidence. Speaking as a patient, he said, "We do not claim that we should be called into consultation in all our illnesses, but we would be glad to have a little more explanation of the things done to us." So we should. Mr. CHESTNUT spoke a sound and timely sentiment. There are many cases in which it is very helpful to an intelligent patient to know the wherefore of the treatment prescribed for him. One of the most important duties of physicians is to instruct their clients in the care of their health. Doctors of medicine—old-fashioned family doctors—still perform this most useful duty. Doctors of Mystery slight it.

The bill introduced into the Ohio Legislature to authorize physicians to put an end to the sufferings of patients who have no perceptible chance of recovery and who wish for release touches upon an interesting subject for newspaper discussion, and is probably getting more attention than its legislative prospects warrant. Surely so much bill could become a law through the action of an American Legislature. Doctors ought to know when to let a suffering and hopeless patient die, and when, by anesthetics, to ease severe pains of dissolution, as well as when to put forth every effort and use every wile of science to keep the breath of life in a tormented body. Sometimes one course is right, sometimes the other. If the doctor does not know his business, no Legislature will help him. The law suggested is not needed by wise physicians, and would give to unwise ones a very dangerous power of life and death. All physicians have that power as it is, in a greater or less degree, and the less wise ones already have a larger measure of it than they are fit to handle. A discussion of this detail of medical duty may be worth while, but no legislation about it is needed.

If King HAKON of Norway has a robust sense of humor and his salary is paid punctually, he may hold his job with satisfaction to himself. That it is a very curious job. We read that his subjects and employers address him not as "Your Majesty," but as "Mr. King," just as we address our President as "Mr. President." The Norwegians, as will be remembered, were not quite sure whether they preferred to set up a republic or a monarchy, and when they finally chose the latter they evidently determined that their King should not be enough of King to hurt. There are advantages to subjects about having such a king as HAKON. A pleasant and good-looking young man with a suitable wife, and guaranteed not to meddle officiously with affairs of state, makes a serviceable and convenient social figurehead. For that use alone he is worth a fair salary and his reasonable expenses. So far as actual power goes, the King of England is not much more than that, but behind the English royal family are the traditions of a thousand years and very substantial accumulations of money. Moreover, the hereditary figurehead of a great empire has an influence and opportunities of political service which are by no means limited to the dimensions of his legal power. Kings are still useful in Europe, and King HAKON will doubtless be useful to Norway, provided he is the right sort of young man, and provided the Norwegian fathers do not make him too absurd by putting him on the head and calling him "Mr. King." The simple life can be overdone for kings as for other folks. Nevertheless it is popular with kings who do not get too much of it, as was exemplified in the case of the late King CHRISTIAN of Denmark, grandfather to HAKON, whose many royal children and grandchildren loved to visit him, as they did every year, because royal life as he practised it in Copenhagen rested their nerves.

After a year's deliberation the regents of the Smithsonian Institution have accepted the offer of Mr. CHARLES L. FARRER, of Detroit, to give them his art collections and to provide a suitable building to hold them. Why they took so long does not appear, but it is better to be a little too slow in accepting such an offer than overprecipitate. Very few art collections would be desirable acquisitions for our government under the terms which Mr. FARRER suggested, but Mr. FARRER's collection is one of the few, and it is a relief to know that his generous offer has been accepted. Mr. FARRER is to keep his collections during his lifetime, and his executors are to retain them after his death until the building for which he

agrees to make provision is completed. Once housed in Washington, they pass into the control of the Smithsonian, which agrees to provide for their care as a separate collection, and for the maintenance of the building that holds them. The estimated cost of such care and maintenance is \$10,000 a year. As will be remembered, Mr. FARRER's acquisitions include remarkable pictures by Chinese and Japanese artists, many admirable works of American artists, and by far the best lot of WHISTLERS in the possession of any single owner. The present market value of the collection is estimated at \$600,000, and the cost of the building will bring the total value of Mr. FARRER's gift up to a million dollars.

Mr. MARSHALL FIELD, by his will, left eight million dollars to the Columbian Art Museum of Chicago, which puts that institution in a position to compete in the art market with all the great museums in the world.

The "Big Nine" colleges of the West—Chicago, Michigan, Minnesota, Wisconsin, Northwestern, Iowa, Indiana, Illinois, and Purdue—took action on January 20 to relieve the game of football of its present disrepute. Through their representatives they abandoned the present game in favor of an amended game, still to be worked out, which shall be free from brutality and unnecessary danger. Further and even more important, they recommended shorter seasons from the opening of the fall term to the middle of November, no preliminary training, only five intercollegiate games, no professional coaching, no training-table, and the limitation of the price of admission to fifty cents. They barred out all graduate players, and urged that freshmen should also be barred out from intercollegiate games, thus restricting players to three years on a team. The "Big Nine" people seem to have a clear idea both of what is wanted and how to get it. It is to be noted that though several universities or groups of universities are taking action about football on their own account, they are all concerned in the action of the American Intercollegiate Football Rules Committee, which is trying to work out rules for a better game. Chicago and Minnesota of the "Big Nine," and Harvard, have representatives on this new Rules Committee, though the "Big Nine" are abstaining for themselves, and though Harvard has stipulated that she will not play the amended game the Rules Committee devises unless it suits her.

All the friends of liberty of speech owe gratitude to Professor LEONHARD of Yale for his defence in HARPER'S MAGAZINE of the use of "none" as the subject of a plural verb. What idiot precisionist it was that started the movement to schoolmaster that use of "none" out of existence we do not know, but his effort has had a deplorable degree of success. An awful example ought to be made of some of the grammarians who try to make language conform to rules instead of making rules conform to language. It will take years to untwist the tongues of worthy people who have compelled themselves to learn to say "none is" when their congenial impulse was to say "none are."

The most effective comments upon divorce are to be found in the news columns of the daily papers. Yesterday it was a story of a young girl in New Jersey, desperate over the failure of her struggle to reconcile her parents, who shot her father through the neck, and was barely saved by him from self-murder. To-day it is a story of a sixteen-year-old boy who gets word that his lately divorced parents can never be reconciled, and turns the gas on in his sleeping-room at boarding-school at Newburgh. Why should not the laws provide that the children of a marriage shall have power to veto the legal dissolution of that marriage? If anybody has vested rights in anything, the children of a marriage have vested rights in that marriage. To dissolve it without their consent—well, is it justice? Was it fair to the suicide schoolboy that his parents—BLAKESLEY, of Waterbury—should have got themselves divorced without his consent?

The Army Board on Coast Defence reports that the defences of New York are as nearly perfect as possible. That is well. Carefully, however, the town has something still to seek in the way of defence from boatings from within.

The Hepburn Rate-making Bill

On Saturday, January 27, the bill which is believed to embody the views and wishes of the Roosevelt administration with regard to government rate-making for railways was unanimously reported to the House of Representatives by Mr. HERRMAN, Chairman of the Committee on Interstate and Foreign Commerce. The measure, as reported, comprises parts of no fewer than nineteen bills, together with suggestions derived from five large volumes of testimony given at various times before the committee, and it represents the distended outcome of several years of study. As it meets with the approval of eighteen men, Republicans and Democrats, composing the Interstate and Foreign Commerce Committee, it is, necessarily, a compromise. The same accommodating and harmonious spirit which is evinced in the report is expected to characterize subsequent proceedings in the House. No attempt will be made to "jam" the bill through. On the contrary, an agreement has been reached that it shall be taken up and debated for two weeks with all bars down. There is to be no rule cutting off speeches, no restriction against amendment. The aim is to send the measure to the Senate with the endorsement of every Republican and every Democratic vote in the House, thus throwing upon the Senators the whole responsibility for its rejection or mutilation.

What are the main features of a bill destined apparently to be clothed with all the authority possessed by the House of Representatives? Confining ourselves, in the first place, to certain things which it does not do, we observe that the initiative in rate-making is not given by it to the Interstate Commerce Commission. No attempt is made to give the commission power to readjust freight classification, for the exercise of such a power would have involved the assumption of the initiative. We should next mention that the bill provides broader definitions of the words "railroad" and "transportation," so as to include within the jurisdiction of the commission the regulation of waterways, private cars, and terminal charges. Refrigerating charges are required to be included in the public tariff schedules, and thirty days' notice must be given by a railway before changes in these schedules are made. The purpose of this requirement is to do away with the grievance known as "the midnight tariff."

It is the fourth section of the bill which empowers the Interstate Commerce Commission to determine and prescribe, after a complaint of a particular rate has been made, and a hearing thereon has taken place—what will, in its judgment, be a "just and reasonable and fairly remunerative" rate or rates, charge or charges, to be thereafter observed in such cases as the "maximum" to be charged, and what regulation or practice in respect to the transportation in question is "just, fair, and reasonable," and must, therefore, thereafter be followed. The commission's order goes into effect thirty days after notice to the carrier, and remains in force, unless suspended, modified, or set aside by the commission, or by a court. Unless suspended, the order remains binding for three years after the same has been obeyed by the carrier. We should further note that the bill secures the expediting of rate cases in the courts. Additional requirements and restrictions are provided in the matter of awarding damages, receiving complaints, and giving notices of hearings. When an appeal is taken to the courts from a maximum rate, the commission, with the consent of the Attorney-General, may employ counsel. A penalty of five thousand dollars is to be imposed for violation or disobedience of the commission's order. We note, also, that two members are to be added to the Interstate Commerce Commission: the term of office is to be extended to seven years; and the pay is to be raised from \$2500 to \$3000 a year. We should, likewise, the reasons given in the report for the employment of the term "maximum." The word was used, we are told, in order that some flexibility might be given to the rate, and that the carrier ought, should he so choose, charge a lower sum than that fixed by the commission.

We have said that, in order to secure the unanimous approval of a large committee, a bill must, of course, be a compromise. The fact is recognized in the report itself, which acknowledges that an member of the Committee on Interstate and Foreign Commerce believes that the provisions of this bill will be satisfactory to all persons who may be affected by it, or that it will be satisfactory even to those who desire legislation upon the same general lines. It is, at the same time, pointed out that the bill involves questions of vast magnitude, involving property valued at thousands of millions of dollars, and interests measured by hundreds of millions every year, and with which all sections of the country are concerned. Under the circumstances, complete agreement of sentiment or opinion was not to be expected. The utmost that the committee have hoped to attain has been the formulation of a project that, in their judgment, would at least afford considerable relief from evils that are widely deemed major and grievous.

Assuming that the bill will pass the House of Representatives by a vote substantially unanimous, we are confronted with the question, What reception will it meet with in the Senate? The Senate can seldom be stampeded. It is apt to resent an effort on the part of the House to do so. A careful inquiry has been insti-

tuted, and it is alleged on good authority that the views of nearly every Republican Senator have been ascertained. It appears that only two or three of them are in favor of the HERRMAN bill as it has been reported to the House. Many of them assert that the HERRMAN measure does not afford the carriers adequate protection against hasty or incompetent interference with rates. These critics insist that a rate fixed by the commission, from which the carrier affected by it desires to appeal to a court, might not go into effect until the proper court shall have rendered a decision. The Democratic Senators, on the other hand, will undoubtedly concur with the House of Representatives in holding that the commission's rate should become immediately operative. Its application should not be retarded, they will maintain, by the law's delay. The disagreement of the two Chambers is likely to pivot on this point, and, unless the House yields to the Senate, the enactment of any railroad-making bill this year seems improbable.

The Outcome of the British Election

As we go to press, nearly all of the 670 seats in the House of Commons have been filled, and the Conservatives have secured only 159, while those who, for the moment at all events, concur in supporting the BANSERMAN ministry have obtained about 500, thus mustering already an aggregate majority of 340. Of course the majority is not homogeneous, comprising, as it does, 84 Nationalists and 45 Laborites, as well as 206 Liberals. It will be observed, however, that the Liberal majority over all other elements combined is about 50. As, at the outset, however, the Laborites can be counted upon to vote with the Liberals, Sir H. CAMPBELL-BANSERMAN will have a majority of much more than a hundred over Conservatives and Nationalists put together. It is likely, in any case, to foresee any circumstances under which a coalition of the Laborites and Nationalists with the Conservatives could be brought about, although if Mr. JOSEPH CHAMBERLAIN lives he may manage to hit upon a basis of agreement for destructive purposes. Any B. is, say, Sir; devilish sly. We assume, however, that the coming Parliament can count upon at least six years of life. Among the innovations which the Laborites are expected to demand are the payment of members of the House of Commons, an amendment of the law concerning associations, and an eight-hour day. Of these the first two will almost certainly be granted. The Nationalists, although, for the effect of such a demonstration on their constituents in Ireland and their friends in the United States, they may ask for a reintroduction of Mr. GLADSTONE's second Home Rule Bill, or for some equivalent measure, do not expect the request to be complied with, for the BANSERMAN ministry cannot be expected to waste time in passing bills which the House of Lords is certain to throw out. On the other hand, the House of Lords might be persuaded to concur in other substantial concessions to the Home Rule party, such as the establishment of a Catholic university in Ireland, an amendment to the WYNDHAM Land Purchase Act, and the creation of an administrative board in Dublin composed of delegates from the county councils. The Nationalists know that the new Premier can be relied upon to give them anything for which there is a fair chance of procuring the sanction of the Upper House. Under the circumstances, it is hard to comprehend what the Nationalists would have to gain by joining in an attempt to upset the present government. If there is anywhere a cloud in the ministerial sky, it is raised by the possibility of discussion in the ranks of the Liberals themselves. The leader of the Welsh members, and also of the advanced Radicals, Mr. LEWIS GOMM, will doubtless insist upon the disestablishment of the Anglican Church in Wales, unless he can be convinced that to carry such a bill through the House of Lords would be hopeless. Even to introduce such a measure in the House of Commons would alienate from Sir H. CAMPBELL-BANSERMAN many of his Anglican supporters. Thus, again, the English Non-conformists, who everywhere, except at Birmingham, seem to have deserted the Conservatives in a body, will regard themselves as betrayed by the present ministry unless a resolute attempt is made to repeal the last education act, or subject it to drastic modification. We say attempt, because here again a project which might be driven through the Commons might be wrecked in the House of Lords, the political stronghold of the Church of England, which, it will be remembered, secured a memorable advantage in the new education law, because the Non-conformists, already taxed to support the national or board schools, are now taxed a second time for the maintenance of the Anglican schools. From an American point of view such an imposition is monstrous. The Anglicans, in their part, say, however, that it is no greater hardship for a Non-conformist to pay rates for the maintenance of Church of England schools, which his children do not attend, than it is for Anglicans to pay rates for the support of the national or board schools, to which, as being secular, they are reluctant to send their children.

From the viewpoint of foreign politics, the political revolution disclosed by the present election has no great significance. The new government will be as friendly as the last to the United States, to France, to Italy, and to Russia. It is likely to show itself more

conciliatory towards Germany, and, perhaps, a little less enthusiastic about Japan. On the whole, in other words, Mr EDWARD GREY will probably follow closely in the footsteps of Lord LANSDOWNE; and, surely, he could do no better. It is with regard to colonial and Indian policy that the change of government will be felt most distinctly. Chinese labor will be barred out of the Rand, and the Boers of the Transvaal and former Orange Free State will have forthwith an elective legislature. The new Secretary of State for India is certain to come with Lord Curzon, as against Lord Kitchener, in holding that the military must be subordinated to the civil element in the Calcutta administration. Above all, the tremendous victory won at the polls by the BANSERMAN ministry threatens imperialism with a long eclipse, and postpones for a number of years, if not to the Greek kalends, the concession of a tariff preference to the colonies. Having no longer a prospect of securing a monopoly of the British market for broadstuffs, the development of the Canadian Northwest is likely to be checked. Not yet are Englishmen ready to abandon free trade, though what view the Laborites may ultimately take of protection is by no means predictable. They do not want more costly bread, but they do want higher wages, and the former might be made the pretext for the latter. It is conceivable that a dozen years hence, when the labor-unions have two or three hundred spokesmen in the House of Commons, they may adopt Mr CHAMBERLAIN'S ideas, but we do not believe that he will live to see it.

Electing a President of France

OUR neighbor, the *Quarrier des Etats-Unis*, says that the seventh Presidential election in France, which took place on January 17, "shows once more that the French Constitution, though less democratic than the Constitution of the United States, has nevertheless created a mode of election which possesses decided advantages. The election of the First Magistrate of the Republic is accomplished with greater tranquillity and rapidly in France than that of a petty official in America. It does not disturb the country for weeks at a time, as is the case in the United States; it does not measure the commercial and industrial interests; it does not occasion the periodical crisis which attends the Presidential election here." Let us consider this assertion for a moment in connection with a few facts.

In this recent French contest, M. CLEMENT-REMY, a Radical, president of the Senate, a good bourgeois, a rich man, a Moderate Republican, defeated M. DORMER, president of the Chamber of Deputies, a man who has risen from the ranks of the people, an anti-clerical, and "authentically" radical person. The voters were the members of the Senate and Chamber of Deputies, who decided, less than two hours after they came together, which of these two familiar presiding officers should be the chief executive officer over all the people of France. The business of electing a President has become, in France, the business of a very small class, and the powers of the President are small, compared with those exercised by a President of the United States. Moreover, the Radical and Socialist members of the National Assembly did not cast their votes for the authentically radical M. DORMER who has risen from the ranks of the people. On the contrary, they voted for, and elected on the very first ballot, the Moderate Republican, M. FALLIERES. The Republican *progressives* (the minority party), opposing M. FALLIERES, voted for their unfortunate enemy and against their natural friend.

Reasons for this behavior are given in the *Quarrier*. The choice of a French President at the first session (and, indeed, it was all over so quickly that we have only a glimpse of the hall of congress in the old palace of Versailles, to which some hot people having tickets gained admission, "a large proportion being ladies whose envying tolerance reflected the monotony of the black coats" of the President-makers) is characterized as homage paid to the "honorable mediocrity" of the successful candidate. The Radical and Socialist legislators govern France at present. "The Radical and Socialist majority dominating the French Parliament desired that M. LORAIN should have as his successor another M. LORAIN—that is to say, a man incompetent enough to give no offense to the managers of the 'machine.'" They chose M. FALLIERES for this reason. The 428 voters for the Moderate Republican candidate would have been cast in favor of his antagonist if this had been a genuine election. In our sense of the word, it is a pleasure to know that our deputy, M. DE BATHURIA, Royalist, in France, did try at least to give expression to his real sentiments—though, to be sure, even he was prevented from delivering his speech from the tribune, and had to be content with crying aloud, "Long live the King!" Naturally there was "little animation in the streets," as a press despatch tells us, the president at the first session having nothing at all to do with the proceedings enacted in the palace of Louvre in XIV. And naturally the election of a petty official in America or anywhere else is accomplished with less tranquillity and rapidly, if it is a real election by the people.

Personal and Pertinent

THE Czar of Russia has a bed, a present from the Shah of Persia, which is made of crystal cut from a solid block. We are willing to wager that he has not slept in it for the last few months.

CONSUL MASTENSON, at Aden, reports the discovery, by Dr. LAGOS, of a new cure for snake-bite. It is a vermifuge of potassium. We anxiously await the verdict of the Governor of North Carolina and the Governor of South Carolina.

"Clubs are only a place for idle old men and wasteful young men."—RUSSELL SAGE.

What does Uncle RUSSELL know about clubs? A club is a more or less hygienic home maintained by many men who do not use it, for the benefit of a limited number of their fellows who have no better place to go.

The investigator is certainly abroad in the land. Now comes the announcement that many of the most highly prized antiquities in the Smithsonian Institution at Washington, the Metropolitan Museum at New York, the University of Pennsylvania collection, and the Chicago Art Institute, including gems, Greek terra-cottas, and ancient pottery, are apocryphal. But it will take a lot of expert archaeological testimony to shake faith in Uncle RUSSELL'S green serge suit.

The American who goes to Germany equipped with "flave you seen the fat dog of the old butcher's little boy?" and his companion, "No, but my aunt has some peas, some ink, and some paper," and experiences more or less difficulty in sustaining a conversation, will rejoice to learn that hereafter the employees on many of the German railroads are to be compelled to learn English. Special classes have already been formed at Nuremberg and Munich, and the oral lessons are going merrily forward. A staff of instructors is on hand to point out familiar objects and repeat their names until the prepping Germans learn them.

We wish to congratulate Mr. WALTER SCOTT, of Death Valley, that his picturesque light which he recently shed in the East was not snuffed out by the man on the "red rule" who followed him from Bardonia in the hope of discovering the location of "SCOTT'S" secret mine. The press dispatches say the "red rule" rider gave "SCOTT" a bullet in the leg. What "SCOTT" gave him in return is shrouded in a pregnant silence. "SCOTT'S" friends think the "red rule" man's present wares are limited to an ambulance or a handkerchief. Will "SCOTT" please take better care of himself? If CAL VIN JOHNSON is dead, as the papers say, "SCOTT" is the only famous living example of his type.

A boss like FLANNY goes to McKINLEY and compels him—it didn't require much compelling—to send a man like GOWDY to Paris, where he was a kind of roving jockey all through his term.—*The Evening Post*.

An Indiana politician who knew no French was not the man an idealist would pick to be consul-general at Paris. Mr. THOMAS'S appointment was heralded as a bad one when made; nevertheless, we never heard complaints that American interests suffered because of him. He is a man of sense, ability, and kindness. They liked him in Paris. Mr. WASHINGTON, our minister to France in 1879, did not speak French. Nevertheless, in war-torn he proved himself the most useful foreigner in France, not even excepting the late CALVIN BRYCE.

The late STEPHEN SALISBURY, of Worcester, who left that city three million dollars for an art museum, must have had tastes and qualities very much out of common. We read that since his death there has come to Worcester from Yucatan a series of resolutions, signed by the governors and others of the more distinguished men of that country, reciting the regard in which Mr. SALISBURY was held there. The memorial says of him:

He had a marked liking for our literature, and there was not a work on the history, geography, and statistics of our peninsula that came to his knowledge that he did not acquire for his library or for those of the societies and corporations he patronized. But the chief trait and tie he had on our affections was the hearty sympathy he felt for our habits, customs, peculiar social being, and our popular ways.

Would that we had many more citizens like Mr. SALISBURY, men with hearty sympathy for the habits, customs, peculiar social being, and popular ways of other peoples, including peoples of various complexions, and all dialects. From the Philippines, from Porto Rico, from all points where citizens of the United States came in compulsory touch with folks of other hues and habits, there comes the complaint of the strong prejudice of the United States Americans against most of the other varieties of human beings. There is danger—indeed, there is an ominous existing probability—that our leaning towards our neighbors, especially the dark-complected ones, will earn us as hearty dislike as ever was incurred by our blood-relatives, the English. Mr. SALISBURY'S example should be known and cherished. It is admirable, and very timely.

The Truth about Morocco

By Arthur Schneider

Illustrated from Sketches by the Author

In view of the conflicting interests and demands of the Powers in Morocco, the record of an eye-witness of the events leading to the conference at Algierae is of the highest importance. The author, as the instructor and personal friend of the Sultan at court, was ofered opportunities rarely given to a foreigner to observe and record the international complications which have made necessary the present conference

GREAT nations in search of some new country suitable for colonization are compelled nowadays to resort to stratagem and intrigue. For, as in the case of Morocco, the great achievement is not to conquer the country, but to obtain the consent to the conquest from the nations interested. A country of not very extensive area, ruled by an absolute monarch, is the one most easily subdued. Entangle a despot, and his people suffer with him.

When, a few years ago, Mulai Abd el Aziz, the Sultan of Morocco, emerged from the confinement of his palace, with its atmosphere of Mohammedan teachings, and announced to his assembled viziers his determination to take an active part in the government of Morocco, he had a not very distinct idea of his duties as a monarch.

Less than twenty years of age and possessed of all the enthusiasm and "recklessness" of youth, he entered a game, so solemn, so deep, that to be maintained required diplomatic cunning which would tax the powers of the most subtle and astute ambassador. Many of his predecessors had battled with the same problem—to hold off the powers striving to acquire Morocco. By intrigue these powers had been kept at odds with one another. The present Sultan supplanted them with the prospect of a liberal expenditure of gold for the purchase of European merchandise, believing such action would prove beneficial in gaining the good will of the powers.

To this end, then, the Sultan exchanged the resources of his treasury gradually for commodities of European manufacture, which he was led to believe were essential to the well-being of a monarch and his domain.

As each caravan tolled through the gates of the royal stables bearing the wares of European manufacture, he held himself as being particularly shrewd in adopting means which served not only to the end of pacification, but gratified as well the curiosity of an Oriental for the novelties which came and went the claimed world. His viziers freely encouraged this idea.

How clearly they saw, by cunning arrangement with the European agents, opportunities of swelling their already modest coffers! And each vizier made it his business to serve his own government. That is to say, each encouraged the Sultan to order his effects from the country through whose merchants the vizier himself filled his money-bags.

And through whose influence he hoped to obtain protection from the long-standing Moorish method of handling viziers who become too skilled and glib in collecting revenue from the Sultan. This method is, by the way, at once sudden and efficacious. It includes imprisonment and violence by the government of all property and hoarded coin. Notwithstanding the haunting sense of uncertainty which shrouds itself in the faces of many Moorish officials, as though the image of this climax was constantly before their minds, this fear by no means raised a barrier to success. As a check, however, it served admirably.

To accumulate wealth and elude justice is a thing much closer to the heart of a vizier, than to rid in overting a foreign invasion. Thus, in aiding one of the European powers commercially in line with the Sultan's policy, he rested on the belief that that country would protect him. His personal revenue would then increase in proportion as his fear decreased.

Thus these hopes were not visionary but recently been demonstrated.

Not long ago the Sultan attempted to enslave Moorish justice upon El Mouskhi, his late Minister of War, but he was soon brought to understand that however mighty his efforts they were not to be tolerated by the government in whose interest El Mouskhi had worked. It can be safely said I think, that the influential

viziers of the present day are some of them in the pay, and all of them under the protection of foreign governments.

This is extremely unfortunate, and is in violation of the treaty of Madrid. And I can conceive of nothing more singular in the affairs of state than the lack of a measure to restrain or punish those who take advantage of civilian opportunities of gain. It is neither barbaric justice nor civilized law.

All Moorish officials are endowed with palms so notoriously adhesive to a certain per cent. of any government monies which may pass through their hands, that no matter how trifling the amount, it emerges diminished in bulk. For ages this has been so, the amount clinging to the palm of the official being accepted, or taken, in place of salary. If the practice is egregiously abused, however, the punishment is, or was, an ample one. The haughty chief, the wily flash, the partly customs official, each has paid for his office in proportion to its lucrative possibilities.

Oriental traditions, supported from generation to generation, are not easily upset. Consequently, when the Sultan, under European pressure, attempted the salary system, no self-respecting official could conceive of this save as a gift foolishly given.

I recall one day when the Sultan, so very telling him that I had sent in Tangier for various household necessities, remarked: "I will do as the viziers. When the goods arrive give me one of each article—that will be my commission." Of course he was joking, but it shows how the system is part of the Moor, and not contrary to his law.

The Sultan's treasury-emptying method of paying the powers met with disfavor among the natives. The Moors have at all times a simile upon their lips. "They are treating our Sultan just like a chicken about to be cooked—pulling his feathers," said a native to me.

Four or two European members of court were supposed to be mouthpieces of their governments, and fortunes were made by taking advantage of the Sultan's efforts at retaining their aid. The royal slaves were not above accepting tips. Upon giving one a small piece of silver he said: "You are a merchant and could give more." "Tell me what makes you think so," I replied. "The people say that thou receivest five hundred dollars a day besides plenty of commissions."

This was news indeed, and I came to the conclusion that some one had circulated that report to shield himself.

And just here it might be well to say that the only time I did play the part of a merchant was when the Sultan told me to order the furniture and materials for a studio, and further specified "from America."

From that moment, those influential at court, both European and Moorish, changed their attitude towards me. The Europeans were afraid this would be followed by a flood of American goods at court, thus reducing their profits, while the vizier to whom I carried the order was furious, because I had not arranged with him for his commission.

After that my path was uphill. A Christian at the Moorish court, no matter in what capacity, is supposed to be there for some political purpose, and the less obvious this purpose, the deeper it is supposed to be.

In addition to being the Sultan's artist, the doubtful honor of being a French spy fell to my lot, as I had already discovered.

As was intended, this report came to the Sultan's ears, and explains why, during my first few months at court, the Sultan asked me repeatedly if I could not speak French, looking at me with a rather peculiar expression when I answered that I could not, he finally ceased to ask, probably believing me.

At all events the money in

Sid Mohammed Turren, the Representative of the Sultan of Morocco at the Algierae Conference

THE SULTAN OF MOROCCO, PAINTED FROM LIFE AT THE COURT AT FEZ, BY ARTHUR SCHNEIDER

The illustration is reproduced from a painting of the Sultan made by Arthur Schneider, the author of the article beginning on page 186 of this issue of the "Weekly." Mr. Schneider spent considerable time at the Moroccan Court as a personal friend and instructor of the Sultan. At court Mr. Schneider was at first suspected of being a French spy, and had some difficulty in convincing his royal host that he was what he claimed to be.

the treasury was dwindling, which irritated the natives. And in time the rebellion started. It could have been easily put down had it not been fostered by France. But this country negotiated a loan with the Sultan. French customs officials appeared and opened offices at the custom-houses ostensibly to collect this loan. It was all a part of the game, which was to treat the Sultan as a bull in the ring and embarrass him on all sides.

In the European newspapers a great deal of space was devoted to this rebellion, yet at the time it was at its height I travelled seven days with a caravan, carrying sixty thousand dollars in silver. There were about six unarmed men, and two soldiers and myself armed. During my stay at Fez, nothing but the slightest skirmishes occurred, still the European press was busy reporting terrible engagements. The pretender's claim for taking arms against the Sultan was that God had sent him to save Morocco from the hands of invading Europeans. Yet, with the signing of the Anglo-French treaty—a treaty which gave France control of Morocco—the pretender ceased hostilities. The revolution was settled in Europe. Supplies and munition ceased to cross the Algerian border.

The kidnapping of Mr. Perdicaris was an exceptional affair, and was effected by Raisuli because of a grievance against the Moorish government, which, as the bandit had anticipated, paid the ransom.

As I have already mentioned, the outcome of the political up-roar was the signing of the Anglo-French treaty, and the birth of the expression "Pacific penetration," this being indicative of the supposed method of invading Morocco. The term is a silly one, and has been obsolete since the Kaiser's visit to Tangier last

The Sultan's Body-guard of the Sultan at Fez

spring. There is in this world no country whose natives will stand by in silence, while a swarm of foreigners calmly enter and appropriate the offices of government.

Another impression which seems to prevail in America, and is constantly exploited in the newspapers, is that the Moors take kindly to the French. Nothing could be farther from the truth. Do not fancy for an instant that the Sultan or any of his people are at all anxious to have the help or advice of any European country.

When a man is at the mercy of a powerful antagonist he must either submit or call for help, and pray for a deliverer to be within hailing distance. That was the position of the Sultan at Fez. When pushed to the wall by France, he implored help of Germany. The Kaiser then paid his memorable visit to Tangier. This visit created the most intense excitement I have ever witnessed in Morocco. Walls and buildings were newly whitewashed, triumphal arches were built, and the Kaiser advanced in great pomp and ceremony to the deep wall of the royal Moorish band. Although ashore for only one and one-half hours, it was long enough for him to greet the German colony, and make the memorable speech in which he declared that he would uphold the merchants' trade and the independence of Morocco. This saved Morocco, for the time at least, from the tightening grip of France.

From that moment "pacific penetration" vanished, and in time developed into a "pacific conference." The smuggling of arms into Morocco, the first thing taken up by the peace conference, was a common topic in the country, and it was an open secret that the Moorish authorities in Tangier were, in some cases, silent partners. And some of the supposedly respectable European merchants were not above participation in the plot. In former years this

The Sultan of Morocco coming from Prege at the Mosque after starting from Fez, in accordance with the Moorish Custom

The Kaiser escorted by Moorish Officials on his Way to the German Legation in Tangier

contraband trade was not very great, but now that the danger comes from a foreign shore, the customs official and only winks at the enterprising smuggler, as he tucks back and forth from Spain in his innocent appearing felucca, but collects what he is pleased to term his share of the proceeds.

The export trade from Morocco to Morocco is large, and the Sultan, who he spent a good round sum in giving an exhibit at the St. Louis Exposition, seemingly attempted to interest the United States in Morocco, knowing that if commerce could be established between these two countries, it would strengthen the independence of his empire.

As yet there are no vessels from the States which touch at Moroccan ports, but merchants, who are accustomed to Oriental trade, would do well to look into the matter, as it might prove more worthy of attention than trade in reseller regions. Those who supply the Moors with goods have nothing to do but give them what they are accustomed to, and at a cheap price. Patterned goods must have a certain design. Sugar must come soukled in conical form a few pounds in weight, and wrapped in a certain shade of blue paper. There is but one style of trapezoid used all over the land—a little squat shawl affair, with a black handle. It is generally accepted that President Roosevelt does not look with favor upon the automobile; he prefers the horse. The Moors hold the same opinion. A magazine rifle is the only invention acceptable to them. Since the era of civilization has begun in Morocco, the demand for spirituous liquors has increased.

In Morocco so barbaric as to require European intervention? No, emphatically no. The Moors know full well that an effort is being made to overpower them, and, although resenting it deeply, they are sufficiently civilized not to raise arms.

There are many evils in Morocco, but it is not, as many suppose, a lawless country. In case a Christian is robbed or killed, the Moorish authorities know that this will be used as evidence to show how loosely the country is governed; they know also that they will be compelled to pay indemnity. Their law to safeguard the travel of Christians is a good one. It is that the Sultan holds his chiefs responsible, and will compel them to pay that indemnity. The chief in whose district a crime against a foreigner has occurred displaces the Sultan, and his tribe pays dearly for it.

A few years ago, a Tangier Jew—under American protection—was killed in the streets of Fez. The American government demanded and received an indemnity. This money, plus commissions, was collected from the shop-keepers in the vicinity of the crime, who had ample time to save the man, but made no effort to do so.

There are elements of good breeding in every Moor, and the average native has a better knowledge of America than the average American of Morocco. He will at least tell you that America is a large country, has railways, and plenty of money.

Let Europe first attend to a lurly member of her own family, follow the line of thought suggested by this question of Mohammed Turrel: "Why do the European powers not hold a peace conference over Russia?"

Quaint Customs of the House of Commons

By Thomas P. Hughes, LL.D.

"HOW can I learn the rules of the House?" was a question put by an Irish member to Mr. Parnell. "By breaking them," replied the unrepentant King of Ireland.

The rules that for centuries have regulated the proceedings of the British House of Commons are both perplexing and amusing. Lord Palmerston admitted that he had never learned them, and Mr. Gladstone was a frequent offender against the "rules of the House."

Every sitting of the House is opened with prayer by the chaplain. The "front benches" of both the ministry and the opposition are always empty. But on the occasion of a great debate, there is sure to be "a large congregation," and for this reason, the House consists of six hundred and seventy members, but only half of this number can be accommodated with seats in the chamber. A member present at prayers has the right to

put in his hat a card is which is inscribed "at prayers," and then secures his seat for the whole sitting of the afternoon or evening. It is in this way that piety in Parliament meets with an immediate reward. No unseemly seat can be retained after prayers as a matter of right. When Mr. Gladstone introduced his Home Rule Bill there was a mad rush of members to secure seats, even "at prayers." Several honorable gentlemen were knocked down and trampled upon.

The hat plays an important part in the customs of the House. On one occasion the Speaker was informed that an Irish member had brought a dozen wolf hats, with which he had secured a dozen seats for his colleagues. No incident is greeted with more hearty laughter than that of a member who, after an eloquent oration, plumps down on his silk hat on the bench behind him. A young member who had just made his maiden speech sat upon his new

(Continued on page 208.)

DEFECTS IN THE POSTAL SYSTEM

By HENRY A. CASTLE

Former Auditor for the Post-office Department

The long experience of the author as Auditor of the Post-office Department at Washington qualifies him to speak with authority and from intimate knowledge of the defects in the equipment and management of the greatest business organization under Federal control. On this topic Mr. Castle has written five articles, of which this is the third; the others will appear in the next two issues of the "Weekly"

III.—Mistakes in Management and Organization

THAT protracted, but by no means exhaustive, postal investigations of 1903 revealed to thinking men the disquieting fact that our national mail system, which is now the greatest business enterprise in the world, is entirely destitute of a logical, coherent, business-like organization. In this day of trusts, the Post office Department may be called the most gigantic trust on the face of the earth. It tolerates no opposition or interference with its affairs; it has established rules and regulations which all people must obey. It even has a small army of inspectors to arrest and prosecute any violators of its regulations. Its affairs are so conducted that all, whether rich or poor, no matter how remote from centers of civilization, receive its benefits. But it is full of inconsistencies, largely due to hasty and incoherent legislation which has, from time to time, been engrafted upon the simple original scheme.

The administration of this great department is conducted by a few responsible heads in Washington, supported by a great army of assistants. The department has grown up, stone by stone, as the builders saw fit to put these in—mostly by means of clauses in appropriation bills. A number of the post-office committee were searching that ought to be added—he thinks that new cords ought to be tied about the wrists of the Postmaster-General. He invests his views in the next appropriation bill by means of short, ill-digested "provisions" and they become postal law, without reference to their agreement or disagreement with existing enactments.

For example: the "Docket Act" of 1893, which reorganized the whole national accounting system, created a side line, providing with much detail a fund of postal money-order, and made its own regulatory. The form was unsatisfactory, and about 1899, to the appropriation for printing money-order blanks was attached this sentence: "Provided that hereafter the Postmaster-General shall have power to prescribe money-order forms." This led to a prompt change of form, but the unregulated section of the Act of 1893 still stands in the compiled statutes, and under it every money-order issued since 1899 is technically illegal.

Again, vast and expensive postal features are created, without any formal recognition, with no framework or restrictions, and left to grow haphazard into all manner of complicated inconsistencies. Rural free delivery is a case in point. It originated in the appropriation of a few thousand dollars for "experimental" work. Increasing amounts in "lump" were voted, and the service was experimental, that is, wholly within the discretion of the department for three or four years. Then Congress simply appropriated the item, adopting fully the organization that had been built up and providing for its extension. Rural delivery now costs \$25,000,000 a year, but one may search in vain for a single line of general law giving its limits or regulating its functions.

Practically there are only two officials in Washington interested in the entire service, the Postmaster-General and the auditor. Each of the four assistant postmasters-general has a special bureau, and each chief looks after his own division. The Postmaster-General and the auditor have a general view over the whole system, but that is so vast, so ramifying, that if the Postmaster-General held office for life and studied the service diligently he would not know it in detail. And the auditor's office is much the same. The Postmaster-General, who, as a cabinet officer, is one of the President's general advisers, is never in office long enough to become an expert in the administration of his department. During the last twelve years we have had seven postmasters-general.

Thus, the business as a whole never centers in the hands of any strong man who understands it. There are four assistant postmasters-general, among whom the direction of the immense business of the department is divided in an illogical and arbitrary way. This prevents uniformity of method and makes for bad management.

Significantly as in the business each assistant postmaster-general is so transient, he seldom stays in his place long enough to know thoroughly his own quarter of the service, whereas it is not considered appropriate for him to know anything about the other three quarters.

Much is hoped by the friends of radical post-office reform from the present head of the department. If he will be content to retain the place long enough to do effective work, Mr. Cushman has the marked advantage of previous valuable experience in a subordinate position in one of the bureaus. He comes into office free from

political entanglements. He has the backing of a President zealous in correcting abuses and promoting efficiency. He will find plenty to do.

The American postal administration, which ought to be the best in the world because of the progress, wealth, and intelligence of our people, and the large use they make of the mail facilities, is falling behind that of many civilized countries. This is because the department has, at many points, lacked expert administration, as well as logical organization. Unfortunately the transportation interests that absorb one-third of the postal revenues are seemingly more influential at Washington than in the public domain, too freely voiced as yet, for a better service on a business basis.

There is an doubt that the present faulty organization accounts in some extent for the preponderance of irregularities. In conjunction with a lack in the enforcement of the letter and spirit of the law, the concentration of all responsibility in the heads of divisions at Washington has increased corruption, and has decreased the probability of discovery. With the business of the whole country passing through the department, devices and modifications of methods, whether demanded by the interest of the service or not, could be made applicable to the entire postal system. A contract has been made with so much, and the influence of the officials has been so valuable, that corruption naturally resulted. For with the enormous business piled on the shoulders of responsible officials, it was impossible to keep so closely in touch with all details as to insure the discovery of irregularities.

This is one difficulty now encountered. The whole department is subdivided into sections or divisions, each in charge of a chief or superintendent. Some chiefs are much more energetic than others in exploiting their specialty and adding to its importance. Hence, instead of symmetrical growth, one branch far outstrips others of equal or greater need, and the department has become lopsided, as it were, with unjustifiable preponderances.

Thus the postal money-order system was originally intended for the convenience of people who had no other safe method of remitting small amounts by mail. When it was established, the sensible idea prevailed that it should be the policy of the government not to interfere with legitimate private enterprises. The money-order service grew slowly and served its purpose.

But a wonderfully zealous and ambitious chief of the division was evolved. His side aim in life was to extend and "popularize" the money-order service, regardless of the public demand or the heavy losses incurred. He believed thoroughly in wiping out all private competition, such as small bank-drafts, express-orders, etc. He wanted Congress to prohibit them, but failing in that, continually reduced the fees until eighty per cent. of the \$3,000,000 postal orders sold annually yielded less than half the cost of some other services. He piled up an enormous business, the burden of which rested not on his own division, but on the auditor's office, in the Treasury Department, where nearly 500 clerks are required to handle the paid orders and settle the accounts.

It may be said that it is the duty of the head of the department to moderate the excessive energy or stimulate the haggard steps of his subordinates, as to keep the growth of all its functions necessarily uniform. And, theoretically, that is true. But going back during the long series of years in which this process of spasmodic development has been going on, we will find that comparatively few of our numerous postmasters-general have remained in office long enough to grasp the complex problem with which they have had to deal. The business "grows itself" on more or less antiquated lines held down by laws and rules dating as far back as 1794. Any attempt at reform by a postmaster-general or his lieutenants is pretty sure to be frowned upon by the real Post-office Department, which is the House Committee on post-office and postroads. Rates of postage are changed, service is rendered, contracts are made under regulations framed by men dead for generations.

An injurious effect of the lack of symmetry and proportion between the different parts of the postal system is the growth of intense jealousy between the heads thereof. This leads them to belittle all the other operations of the system, thwart the laudable efforts of rival chiefs, and obstruct the enterprising designs of the head of the department.

The men who surge to the front with their specialties soon begin

(Continued on page 292.)

Men of To-day

L.—Baron Rosen: Ambassador and Peacemaker

By Charles Johnston

BARON ROSEN has long held and expressed the view that every Russian statesman, before getting into harness, should be compelled to spend a year or two in England and the United States, so as to absorb, through the press, as it were, the theory and practice of free government. Perhaps Count Witte is to be held as a shining example of this theory; though in his case the cure was remarkably rapid. For when Russia's great finance minister landed in New York he was an ardent and convinced absolutist, and when he sailed down the bay, past the Statue of Liberty, he was already converted to the principle of constitutional liberty. What part his long conferences with his distinguished colleague had in this swift conversion is a matter on which history may one day shed more light; but this much we know, that Baron Rosen had already declared himself on the side of constitutional government in the days of the first Zemstvo Congress, in the fall of 1904. The collapse of the negotiations and the outbreak of the war with Japan had brought him home from Tokio, and during his long stay in St. Petersburg, in the terrible months of suspense and uncertainty when Russia still hoped for victory, Baron Rosen risked the wrath of the reactionaries by his frank and open advocacy of a Russian constitution, as the one way through a sea of troubles.

While his long sojourn in America and his visits to England may have contributed to this conviction, there is no doubt that rare character also had its share in forming Baron Rosen's views. He romps of Teutonic stock, and is by race a Scion. His admiration for English and American ideals is, therefore, firm, and it is entirely natural for him to attribute many of the evils which beset Russia to the communal and socialist principles of the Slavonic race. These principles and methods of communal living, in his view, weaken individuality, dwarf the power of the will, and sap the energy of the Slavs, so that a crisis finds them without dominant men. Baron Rosen was a very characteristic expression of this tendency in a sentence of one of our recent writers: "The Russian peasant has no respect for the successful man." Lacking the will and initiative to fight for success, he has no appreciation of will and energy in others, and no due regard for their results. Baron Rosen is, therefore, by race and conviction, an upholder of individual liberty and constitutional law,—a wise counsellor in the present turmoil of Russia's regeneration.

Coming from their ancestral home in Semya, the Rosens settled in Esthonia, a region lying on the southern shore of the Gulf of Finland, and in olden times a part of the ancient republic of Norgorod. The Rosens made themselves a name in Esthonian annals; and when Charles XII. was defeated by Peter the Great, one branch of the Rosens followed the fortunes of the retreating monarch, and found a new home in Sweden, where the Counts Rosens are prominent to-day. Baron Roman Rosen, the father of our ambassador, married a Georgian lady of distinguished family, sprung from a race famous throughout the Caucasus for personal beauty of the Oriental type. Their son, Baron Roman Romanovich Rosen (that is, last names of Rosent), was born fifty-seven years ago, and in due time began his studies in Riga, the Esthonian capital. He then went to the university of Dorpat, a historic city which has since borne its old Slavonic name of Yuriev; and from Dorpat proceeded to St. Petersburg. He studied in the Imperial Academy of Laws, where Baron Schillingenski, the well-known and very popular Russian Consul-General in Chicago, was his fellow pupil. They graduated on the same day, June 1, 1888. Baron Rosen entered the service of the government, in the Department of Justice, and was shortly sent to serve in the Caucasus among his mother's countrymen. He showed marked ability in matters relating for special but and political handling; and his gifts and success brought an early transfer from the Department of Justice to the Department of Foreign Affairs. He entered the Adalat section under Assistant Minister Strennevald, and was sent to Yokohama as Vice-Consul, and was presently promoted to be Secretary of Legation at Tokio. During the absence of the Russian minister, he acted for some time as *Charge d'Affaires*.

Baron Rosen, the Russian Ambassador to America

This was his first experience in Japanese diplomacy; and we may well believe that in those early days Baron Rosen began to gain that insight into the spirit and ambitions of the Japanese which enabled him at least in one that, in the negotiations before the late war, Japan was in earnest. Baron Rosen resolutely refuses to say anything on the subject, but from the position he held in the peace negotiations, when the war was ended, we may infer that the event showed that he had reasoned wisely.

From Tokio Baron Rosen was presently sent to the other shore of the Pacific Ocean, as Russian Consul-General at San Francisco. Here he had ample opportunity to come into touch with the American spirit, to gain his wonderful familiarity with the written and spoken idiom of the English-speaking races, and to watch a civilization in all things the polar opposite of bureaucratic and dreamy Russia. A large and ever-increasing part of modern politics is based on movements of commerce and trade, and the centre of gravity has been slowly but surely transferred from the noble and the soldier to the manufacturer and exporter. It behooves the diplomatist of our day thoroughly to master the new forces which govern the destinies of nations, to gain a complete insight into these legal and financial questions which lie at the root of modern statecraft. Baron Rosen had occasion to study this side of life and activity in San Francisco, and even more in New York, where he was appointed *consul-general*. From 1888 to 1899 there was a period of suspense in Russia's diplomatic relations with the United States, and no ambassador was appointed to Washington. All international relations were in the hands of a *Charge d'Affaires*, and for this very responsible and difficult position Baron Rosen was chosen, as in every way best qualified for the work. His conduct of affairs fully justified the choice, and after the interregnum in the Russian embassy he was permanently transferred from the consular to the diplomatic service. It is interesting to remember that during his first stay in Washington, Baron Rosen lived just opposite the new Russian Embassy in Ferragut Square. He was already married, Baroness Rosen having been a Mlle. Galimand, daughter of a former governor of Nijni Novgorod; and in the Washington house, close to her present abode, their daughter was born. After twice circling the world, this much-travelled young lady finds herself only a short block from her starting-point.

From Washington Baron Rosen was sent as Minister to Mexico, where, to quote his own phrase, he saw absolutism under the forms of democracy; a study which only strengthened his adherence to representative and constitutional government: for however great a genius Mexico may have in her autocratic President Porfirio Diaz, she will inevitably suffer the reaction when the time comes to choose his successor. M. Hanotaux, the secretary of the Russian Embassy at Washington, was in Mexico at the same time, so that Baron Rosen finds an old friend and fellow-worker in his chief assistant.

Then came a period of service in three of the minor kingdoms of Europe: Serbia, Rumania, and Greece, with an interval of duty in Japan. In Serbia the situation was difficult. A wave of enthusiasm for all things Russian had followed Alexander III.'s campaign of liberation in 1877 and 1878, which finally established Rumania and Montenegro, created Bulgaria into a practically independent principality, and made Serbia a kingdom. The Russian armies had also freed all Macedonia, but through the statecraft of Bismarck and Bismarck's helplessness Macedonia were thrust once more under the iron heel of the Turk, whose powers still freely and ineffectually make efforts to extricate them. But to this period of ardent enthusiasm came a shock of reaction. Stambuloff was in the ascendant. The refusal of Alexander III. to recognize the cession of Eastern Rumania to Bulgaria in 1885, as the result of a personal quarrel with Prince Alexander, turned gratitude into resentment, and Italian policies entered a phase which only recently been passed through by Bulgaria. Altogether, Baron Rosen probably enjoyed his stay at Munich least, where he found a

(Continued on page 263.)

The 50-horse power Stanley Steamer, which, driven by Macvitt, established the remarkable World Records of a Mile in 28 1/2 seconds, and a Kilometer in 18 2/5 seconds.

Clifford Eexp and the 100-horse-power Napier car, which won the 100-mile Race in the fast Time of 1 hour, 15 minutes, 40 2/3 seconds. During this Race he lost a rear tire, and drove the remaining fifty-two miles on the Rim.

Merwin in the 250-horse-power Van Dusen Race, which, although one of the most powerful Cars in the World, proved a great disappointment as a Racing Machine.

Lessem and the 110-horse-power F.I.A.T., which was making a great Run for the lead in the 100-mile Race when a broken Radiator forced him to withdraw.

THE AUTOMOBILE RACES ON ORMOND-DAYTONA BEACH, FLORIDA

The establishment of a new world's record for a mile, 28 1/2 seconds, by the Stanley Steamer, was the most remarkable feature of this year's contest in Florida. Overtopping the car's performance one of the dispatches says: "Like a dove, red colored torpedo, the graceful steamer being broken in but not plied, where part of Macvitt's head protrudes, it travels at a speed which leaves and the impression of a red streak. It does not seem to touch the ground, nor does it fly. It simply skims along smoothly and gracefully."

The Start of the final Contest in the One-mile Championship for heavy-weight Cars

Guy Laughan and the 80-horse-power Darracq, which he drove a Mile in 30.2.5 Seconds, and a Kilometre in 25 Seconds, both World's Records in the middle-weight Class

"Cranking" the 250-horse-power Underhill Car, which had an estimated speed of 132 Miles an Hour, but failed to show it

The Official Texas stand, showing the Electric Apparatus used for starting and stopping the Watches to catch the Races to fifths of a Second

BREAKING THE WORLD'S RECORDS FOR SPEED IN THE MOTOR-CAR RACES IN FLORIDA

The two-mile-a-minute speed contest on the Diamond-Brighton beach course which has aroused interest throughout the automobile world, resulted in the achievement of that great speed, with a few seconds to spare, by two racing machines. Victor Brenzon, in a 200-horse-power Darracq, established the record, making the two miles in 58.4.5 seconds, which is at the rate of 122.4.10 miles an hour. Fred Warratt, in the 24-horse-power Stanley Steamer, made the distance in 59.4.5 seconds. In the ten-mile open race Latania finished first, defeating the Stanley Steamer by nearly a mile. Latania's time was 6 minutes, 19.4.5 seconds. The record for the distance in 6 minutes, 15 seconds

Election Manners in England

By Sydney Brooks

London, January 21, 1910

EVERY election in England sees a goodly percentage of heads broken, platitudes uttered, speakers hushed down, and meetings turned into riots. In the campaign which has just ended, it was made quite clear that the spirit which was behind the cabbage and rotten eggs and dead rats that used to come flying like bewildering meteors round the candidate's head in the good old hustings days, is still alive and operative. It has changed its form of expressing somewhat, but its essence is the same. We still, however, calmly maintain that our crowds are the best humored and most chivalrous crowds in Europe, the least rebellious, and the most responsive in an appeal for "fair play." It may be so, of course. The election of an English Parliament may be more dignified and impressive than the election of the French or Italian chamber or the Reichstag or the Austrian Reichsrath. But I am very sure that in the United States the riotousness which we put up with as a matter of course would not be tolerated for one moment, and that our whole claim to be restrained and orderly conduct in the management of our political campaigns would be absolutely disputed.

For five years it was my good fortune to watch American politics and the machinery of American elections at close range. The longer I watched the firmer grew my conviction that in the way of quiet and subdued behavior the working-classes of America have a good deal to teach our own. The Presidential campaign of 1896 may be taken as a tale specimen. The excitement of it was greater than at the hitherto moments of the House Rule struggle, and for four solid months on end the most ingenious campaign managers in the world used every conceivable artifice to keep it up to boiling-point. Not a stimulus to passion and even to violence was wanting. In point of interest, the American continent was a magnified Ulster: the smallest village had its Bryan and McKinley clubs, its parades and torchlight processions, its mass-meetings, and its rival wire-pullers "to learn things right along." Yet wherever I travelled, along the Atlantic seaboard or two thousand miles inland, I found that speakers were listened to as courteously and meetings conducted as free from interruption as though nothing of greater moment were at hand than a gathering in aid of some local charity.

If America is the paradise, England is the purgatory, of the political speaker. He is very far from being allowed to England to have things all his own way. It is an unwritten law of the coun-

try that he is liable to contradiction. Any man in the audience may get up and dispute any statement he pleases, and the orator is not allowed to disregard the interruption, but has to stop and argue the matter out with his adversary. The heckler has a recognized standing, and all Englishmen are hecklers, and especially all English working men. In a company of six you have only to show an American that five are against him to convince him that he is wrong. That is just when an English working-man would become finally convinced that he was the only sane person in the room. If you have never watched an English working man heckling Mr. Balfour on the subject of Chinese labor, you have yet to learn of what a political meeting is capable. These contests are followed by the audience with supreme rest and good humor. If they threaten to become too protracted, the interrupter is pulled down in his seat by willing hands from behind, or simply thrown out of the hall. In the recent campaign, for the first time in the history of English electioneering, some ladies had to be forcibly removed from a meeting. They were earnest women's suffragists, and as the speaker of the occasion, who was no less than Sir Henry Campbell-Bannerman, would not stop to pay any attention to them, they proceeded to hush a banner (upside down as it happened), and to address the audience in competition with the Prime Minister. After five minutes of uproarious confusion, the police and some of the officials of the meeting gently but very firmly half carried and half pushed them out of the hall.

These hecklers, though, often were a very useful purpose. You must remember that in England there are no primaries or conventions, and only the shadow of a machine. You must also remember that in England it is not necessary for a man to be born or to live in the constituency he wishes to represent. Indeed, it often happens that the electors are called upon to vote for a candidate whom they have never seen or heard of before his arrival in their district, and of whom they know nothing, except that he calls himself a Unionist or a Liberal. In America the platform adopted by the nominating convention covers all the party candidates. In England just the opposite system holds good. Each candidate draws up his own platform and runs on it to suit himself. Of course, in general principles—politicians being everywhere a gregarious race—it agrees with the common policy of the party; but in smaller matters, which are often the ones that appeal most to individual voters, it may differ completely. The heckler, therefore, serves a useful political end in extracting

One of the Liberal Party's Posters which were set up throughout London attacking Mr. Chamberlain and the Unionist Party.

from a new and unknown candidate some statement of his views on particular measures; and a very pleasant and a very democratic sight it is to see him fly at even higher game, to watch him disputing with a cabinet minister as to England's policy in Macedonia, or the alliance with Japan, or the interminable intricacies of the fiscal question, or inquiring into his votes in the past session, or asking him to explain his absence from the House when such and such a bill—in which he had seemed so interested at the last election—was up before it. There is a real political value in meeting these inquiries frankly and in good part. A speaker with his wife about him can always score heavily if he knows how to emerge from these contests with credit and temper. Sometimes hecklers are silenced for the time being by being requested to reserve their remarks till the speech of the evening is over. Then papers and pencils are handed round, and the voters present are invited to write down any further points on which they would like to hear the candidate's opinions.

Taking it as a whole, this year the electioneering did not stray beyond the commonplace lines of canvassing, holding meetings, issuing pamphlets, and making the streets hideous with posters and placards. There were no parades or torchlight processions, or fireworks, or bands, or "straw" votes, or "wash" bets, or the mudslinging of rival houses—the election agent in England works altogether in the background, and the public rarely even hears his name—or hourly newspaper interviews with candidates. But in two particulars I observed an approach to American methods. The campaign pet was much more a feature than he used to be, and English audiences, instead of sitting in a more or less uncomfortable silence below the speaker of the evening has arrived, spent the time shouting campaign ditties

A Parliamentary Candidate who opposed Chamber Labor in the Transient and one of the Rock Chansons he Employed to Illustrate his Campaign. The "Chansons" were Robbed one Day and Bent

with an almost American fervor. Again the national flag has come into use as a party emblem. This is a new and not, in my mind, a very commendable development. It dates, I think, from the Boer war, and all parties in this campaign made use of it. But what for nearly a hundred years has been the overshadowing and distinctive characteristic of an English election still remains its greatest feature—I mean the extent to which women take part in it. In England there is no trained army of political workers such as exists in the United States. A parliamentary candidate has to rely on chance enthusiasts to get his canvassing done, and always among the first to volunteer for the work

are the wives, daughters, and sisters of his friends and supporters. No sooner is a candidate's banner hoisted than the fair enthusiasts for "The Cause" troop down to his headquarters and sit there from ten in the morning till six at night, mailing circulars, directing wrappers, doing the clerical work of the campaign. Numbers of them, too, push their political zeal even further. They go out canvassing, storming the voters in their homes and workshops, and simply refusing to depart until at least the promise of support is won. Society, for the moment, ceases to exist, except as a vast electioneering machine. Honorable members and would-be honorable members leave their town-houses and flee fearfully to their constituencies, taking with them their families and as many friends as they can lay hands on to give the British laborer and working-man one glorious fortnight of somewhat bewildering sovereignty. All institutions are governed by politics, and life is an endless political debate. If you are a devotee of The Cause and can make a speech, and know the arts wherewith the wives of rural butchers and urban mechanics are won over to guide their lords to the true faith, the fist of England is yours to feed on.

Buchanan's Wife

By Justus Miles Forman

SYNOPSIS OF PRECEDING CHAPTERS

Herbert Buchanan, a man of wealth with a selfish and repellent nature, whose life beautiful wife Beatrice has been induced to marry for his money, discovers one night from his country-place, Buchanan Lodge, with a burglar whom he has caught entering the house. Buchanan gives the man a thousand dollars in compensation for being allowed to share his wretched existence, for he is weary of his own way of life, and maliciously desires to cause anxiety to those whom he leaves behind. Stopping as a guest at Buchanan Lodge is a young explorer, Harry Faring.

He and Beatrice have had a love-affair prior to her marriage, and they now discover that they mean more to each other than ever before. An exhaustive search reveals no trace of Buchanan, who is supposed to have been murdered. Beatrice learns that the law requires her to wait five years before she can assume that her husband is dead, and so he tries to marry Faring. Faring leaves Buchanan Lodge for the Adirondacks, and Beatrice prepares to go abroad.

CHAPTER VIII IN SEARCH OF HUSBAND

THEY sailed from New York within the fortnight, for Beatrice Buchanan, once her mind had been made up, seemed ridden by a fever of restlessness and impatience. She could not wait to be gone.

"I cannot breathe here," she said again and again. "I want to be off. I want to have blue sea around me. I want to wake up each morning and say: 'America is three hundred and fifty miles farther away from me than it was four-and-twenty hours ago.' I tell you I cannot breathe here."

There was much to be done before the departure, but she hurried through with such duties as could not absolutely be neglected. Lesser things she left quite undone or consigned to the hands of others. She closed the Lodge, leaving there only the family of the head porter and by way of caretakers; and the few men who were still busy with watching for the improbable reappearance of Herbert Buchanan she left to the direction of a certain elderly and very faithful lawyer in whose hands lay her own property and affairs. It was this man who, upon the death, some eighteen months before this, of Beatrice's father, had taken in charge that gentleman's very badly involved estate, and to every one's surprise, had managed to evolve from what had been considered imminent bankruptcy a respectable fortune for the sole heir. As a result, Beatrice, who had expected nothing at all, found herself endowed with an assured income which, though by no means vast as American incomes go, was more than enough to maintain her, if ever she should come to depend upon it, in luxurious comfort. When she had first heard of this windfall the thing rushed in her as more than a bitter amusement, since she had at that time no prospect of ever having need of the money; Buchanan was not illiberal. She had but one thought. If this had come a few months before she need not have married, for what old Arabella Crowley had said to Stansholf about the marriage was sober truth. The girl's father had as nearly sold her to Buchanan as a man well may nowadays. It is small wonder that the sudden stroke of good fortune found no gratitude in her. She could have cursed it. But now, at this juncture, the curse was turned to blessings.

"I want you," she said to the lawyer. "To establish an account for me with some London or Paris bank upon which I can draw at will. I mean to use up my own money entirely."

She wrote a letter to Harry Faring, who was still in the Adirondacks. And this is what she wrote:

"I am sailing for Europe, Harry, on the 28th of September, and I am taking Almonde Trevor with me. We shall be gone a long time. I think—a year it may be, or even more. I feel that I can-

not bear it here any longer. The place had done me. I want a complete change of scene, and, as far as is possible, of thought too. That sounds as if I were still in the nervous, religious frame of mind in which you left me here, two months ago, doesn't it? I'm not, though. I've been thinking a great deal, Harry,—and, I believe, changing a great deal too. I'm not rebellious any more. I think I'm going to do. Almonde the other day—a better woman. Don't laugh! I mean it. I look forward now with no rage or resentment or dislike to the life I must live—and that is a change, you know."

"All this is, I fancy, by way of leading up to something which is difficult to say. However, don't count; it's this! I want to set you quite free. You said something long ago, while you were here, about 'never deserting the colors you'd enlisted under.' The colors are lowered, Harry, the army's disbanded, and you're free. Look! the thing is like this: I will not dodge or evade the truth. We two people love each other very dearly. I admit that, and I am proud of it. But here am I, a woman bound—as I said to you that day in the Japanese pavilion—by a chain, and the other end of my chain is lost in the dark. So our love is hopeless—oh, entirely hopeless. But because it still exists we must live, for both our sakes, see each other or be near each other. It would be too hard for us. That is, in fact, why I am going away, and it is also why I do not want you to go on giving up your life to me and to my service. What I do want is that you go back to your own chosen work—your exploring and all such—that you begin again to live your own life quite irrespective of me, and that my concerns cease altogether to occupy you. You understand, don't you, Harry? You see how miserable I should be to feel that I had wrecked you, bound you to my chaotic wheels, though you and I could never be anything more to each other. You understand, don't you, how glad and proud I shall be to know that you are doing the things, important things such as you have already done?"

"So I beg you, with all my strength and by the great love I bear you, put me and my troubles and cares aside! Go out and do your own man's work in the world, and let me drag upon you no more. Love me if you must—and I think you will, thank God!—but be free of me."

"So good-by, Harry! I shall not see you for a long time, for I don't want you to come to New York when I sail, and I forbid you to follow me. Good-by. If I thought God would listen I should pray for you daily. Perhaps He will. Anyhow, He'll guard you, I think, because you're strong and good. Heavens!"

They slipped away very quietly. "I don't want a shattering crowd of people with more and baskets of fruit," Beatrice said. "Let us tell no one that we're going." And so only Arabella Crowley and the elderly lawyer man, who edged with his eyeglasses and seemed to wonder why he was there, and Almonde Trevor's aunt, a frosty lady in uncomfortable black wear at the pier to see them off. Miss Trevor's aunt brought a large parcel with her in her baggage. It proved to be a new and amazing by ingenious sort of life-preserver which, when you had strapped it on, not only kept you triumphantly afloat in the worst of weather, but, from insusceptible recesses within its bowels, provided you with meat and drink. The dinner proffered to Beatrice Buchanan for not having provided two of these machines. It seemed thoughtless, she said, especially as Mrs. Buchanan was doing so much for dear Ellen, but the thing was so very expensive and one had so many calls upon one's means.

Old Arabella kissed Beatrice very affectionately, and her usually capricious box of nonsense seemed to desert her.

"I think you are very wise, dear child, to go away," she said. "I think it is far the best thing you could do, though I shall miss

you. Stay a long time, and try to amuse yourself. You're had no amusement for years. If anything turns up here—if you're needed—we shall let you know at once. Now go on board. This waiting about is so silly! And don't expect me to stand on the pier-head and wave a handkerchief, because I shall not do it. I'm going to take Mr. Althorpe home with me and give him some tea."

And two hours later, when the steamship slowed down outside Sandy Hook to drop the pilot and gathered way again, Mrs. Buchanan sank into her deck-chair with a great sigh of relief that was almost a sob.

"There's the last of America, thank Heaven!" she said. "It's shockingly unpatriotic in me, isn't it, but I'm glad, oh, I'm glad to be off! Bely dear, maybe the sun shines brighter where we're going. It's child here."

The Rue de Luxembourg borders the quiet westward boundary of the Luxembourg garden from the Rue Vaugrand at their foot to the Rue d'Assas at the top. It is a quiet street, asphalt paved, never racked by a din of traffic—the longer, more direct Rue Mazarine behind, takes that,—and since buildings line it on both sides their windows look across into the delicious green of the garden. There is, in the street's short length, but one detached house—"hotel" (this is the town house of a certain ancient French family once of note in history); the remainder is occupied by the intensely respectable and dignified apartment and flat houses which are characteristic of the better quarters of Paris.

Here, towards the end of October, Mrs. Buchanan and Alliance Trevor established themselves in a high, roomy flat, whose front windows looked across to the public gardens and whose rear windows gave upon a tiny private garden wherein grew three chestnut-trees and a row of lilacs. And here came often Stangsted and old Lord Stroppe, bringing certain friends, both men and women, who he knew would prove congenial to the two Americans, and who indeed quickly, formed a habit of dropping in quite informally at that hour of the day which is consecrated to tea and gossip.

In Madame de Monigny lunched there whenever she was in town for the day. Mrs. Buchanan and Alliance Trevor had, prior to installing themselves, spent a week out at Chateau Monigny, which is near Versailles, and between the elder woman and the famous beauty had sprung up one of those sudden and intimate friendships which often occur among women with no apparent cause and are afterwards, as circumstances fall, broken off with scarcely a pang; though this is not to say that they are not perfectly genuine and unselfish while they endure. Indeed, they are often of a surprising intimacy.

So in this quiet fashion the win-

ter wore on and spring came, but their events must not be set down here, because, although this is the story of Beatrice Buchanan and of certain of those whose lives were for a time involved in hers, it is rather of the things which happened afterwards that the chronicler must concern himself—the bigger and stranger things. This year abroad was a year of waiting.

Still, the very waiting, the quiet, pleasant life among congenial friends, the absence of anything dramatic or tragic, all these influences had their value as affecting Mrs. Buchanan's mind. It is the real growth of character in her which must be established here, the growth out of a bewildered, a resentful, a terror-stricken, and, finally, an exhausted girl into a woman whose calm soul looked upon life from a hilltop, who knew at last that happiness is not just freedom from care, who weighed her motives and her actions with severity, and, in the end, was able to choose the way she should go, not perhaps wisely or very righteously, but at least with a mind unclouded by fear or bewilderment—knowing the cost and the reward.

In August Mrs. Buchanan and Alliance Trevor went to Lord Stroppe's Breton castle near Anderne, but mid-September brought them once more back to Paris and to the apartment in the Rue de Luxembourg.

Just then, before they had fairly settled themselves, Beatrice had a letter from Harry Faring. He was in London, he said, just landed from Buenos Ayres—she had known that he was in South America, somewhere on the upper Orinoco, with an exploring party, but this was all she knew, for they did not write to each

other,—and he asked, without any expression of tenderness or such—rather formally, indeed—if he might come over to Paris and see her.

She had been for a long time quiet and sheltered, distracted by pleasant occupation from too much brooding. And with her newly acquired self strength she had been successful in forcing out of her thoughts Harry Faring and what he meant to her, as well as the tragedy which had driven her from her home. She had unconsciously connected them in her mind—Faring and the events which had nearly wrecked her, and, for this reason perhaps, it had been the easier to keep her thoughts from him.

But now, with his short, formally worded letter shaking in her hand, she felt a sudden overwhelming flood of emotion which she repressed and frightened her. It was her first experience with the truth that a great thing may, for a long time— even years—be quite dormant in a man's or a woman's mind, subconscious, as it were, and at last, through some trivial occasion, burst forth in all its old tremendous strength. She stood locked in her own room, bewildered and shaken, for an hour or more,

Drawn by Will Lowry

"That's the last of America, thank Heaven!"

Then she began to write letters to Faring. She wrote six, all very different and most of them absurd. Some told him to come, and some begged him, as he loved her, to stay away. Towards evening she tore them all up and sent a servant out to the nearest bureau de poste with a telegram.

It was a message of one word, and said, "Come!"

He came by that night's train, reaching Paris at five in the morning, but it was not until afternoon—a little before the formal hour—that he presented himself.

Beatrice had rehearsed with elaboration and care just how she was to meet him and what she was to say, for she was still very much disturbed and a bit frightened—by no means sure of herself. According to rehearsals she was to be exceedingly friendly—just that. She was to profess a great interest in what he had been doing this past year, and she was to be voluble over her own wanderings. By the time they had finished with these topics other callers were sure to have dropped in, and the situation would, from that point, take care of itself.

But when, as she sat waiting and playing with one of her

knobs—she never knew what look—in the long front salon which overlooked the gardens, he was at last announced—"Monsieur Varang," the servant had brought her karee gave suddenly under her when she tried to rise, and she began a little nervous foolish laugh of sheer hysteria over the absurd sound of the name as rendered by a French tongue. Faring came quickly into the room, and somehow she got to her feet to meet him. The oft-rehearsed lines went quite from her mind, and she found herself saying only: "How—thin you are, Harry! Oh, how thin you are!" Indeed, he was alarmingly thin, and looked worn and ill. His cheeks were hollow and his eyes were like the eyes of a man who has suffered a long illness. They seemed much deeper set than usual, and they burned somberly from their sockets. He was tanned and weather-beaten almost to the color of leather, but under this tan a grayish pallor of ill-breath took the place of the blood's rich stain.

"Only a touch of fever," he said, and the woman thought that his voice went with his altered face, that it was tired and slack. "I had a fairly bad time of it a couple of months ago," he said—"just as we were finishing, luckily, but the sea voyage across from Buenos Ayres set me almost right again. I shall be fit as ever in a few weeks. You are looking amazingly well!" he said, conventionally. "I've never seen you look so well."

Mrs. Buchanan dropped into her chair and began pushing the things about on the tea-table beside her. She might well have broken them, for her eyes were blind.

"Oh, I!" she said, in the same tone of polite conversation, "I'm well. Yes, of course! I'm positively sleek, don't you think so? I'm growing fat and matronly. It's quite ridiculous. You see,

Faring took the crumpled, white paper from the woman's hand and read it

stooped for it at the same instant, and she found herself saying only: "How—thin you are, Harry! Oh, how thin you are!" Indeed, he was alarmingly thin, and looked worn and ill. His cheeks were hollow and his eyes were like the eyes of a man who has suffered a long illness. They seemed much deeper set than usual, and they burned somberly from their sockets. He was tanned and weather-beaten almost to the color of leather, but under this tan a grayish pallor of ill-breath took the place of the blood's rich stain.

"Only a touch of fever," he said, and the woman thought that his voice went with his altered face, that it was tired and slack. "I had a fairly bad time of it a couple of months ago," he said—"just as we were finishing, luckily, but the sea voyage across from Buenos Ayres set me almost right again. I shall be fit as ever in a few weeks. You are looking amazingly well!" he said, conventionally. "I've never seen you look so well."

Mrs. Buchanan dropped into her chair and began pushing the things about on the tea-table beside her. She might well have broken them, for her eyes were blind.

"Oh, I!" she said, in the same tone of polite conversation, "I'm well. Yes, of course! I'm positively sleek, don't you think so? I'm growing fat and matronly. It's quite ridiculous. You see,

I've had such a quiet, lazy, powerful time of it. Just like a cow at pasture. I might say, if that weren't quite too insulting to my friends. Did you know that Alliance Trevor was here with me? And Stambold is here a great deal, and heaps of others who've taken us under their wings."

"Yes, yes!" he said, looking down between his clasped hands at the pattern of the rug. "Yes, to be sure!"

"Are you going to—stay abroad another year?" he asked, presently, when she did not speak.

"Oh, I don't know," she said. "I suppose so. There's nothing really to take me back to America. I've so few friends there!"

At that Arabella Crowley is the only one who truly counts. Dear old Aunt Arabella! She writes to me quite regularly once every fortnight and tells me all the scandal. I want to see her, of course, but—there's almost no one else, Aunt," she said, after a moment, looking away, "and no news."

"Yes, I know," said Faring.

Then those blindly groping hands of hers did at last push off one of the things on the tea-table—a silver strainer it was—so that it dropped to the floor. Beatrice

said, "Faring touched it was like an electrical contact between two charged wires. The woman began to tremble and, for a moment, she had not the strength to raise herself."

"Harry, Harry, Harry!" she said, in a shaking whisper. Young Faring drew a swift gasp which was like a sob, and his face went quite white.

What might have come of their sudden loss of control no one can say, for at that moment Alliance Trevor came into the room, and almost immediately after Stambold was announced.

CHAPTER IX

ARABELLA CROWLEY

THE correlation of striking events in the life of any individual is too familiar and too widely recognized to excite amazement. There is some mysterious law by which such events come to us grouped instead of singly, and we all recognize this law and express no criticism upon it.

And this same law, it would seem, must be held responsible for the bringing together of Harry Faring's visit to Paris and its consequent effect upon Mrs. Buchanan—it's setting at naught, at least for the hour, of all her long year of repression and powerlessness, and the coming of a message from far away which, infinitely more than the sight of the man she loved, uprooted her from her new world, and thrust her, trembling, face to face with Fate.

Faring and Stambold had risen to go. They had made their

adieux and had turned towards the door of the salon when a servant entered with a telegram. Mrs. Buchanan said:

"Oh, just a moment! We must arrange about the theatre. May I read this despatch?" She tore open the flimsy envelope, and Allison Trevor said: "Oh, it's not a *petit* bit. The paper is white. It must be a cablegram."

Then Mrs. Buchanan set down. After a moment she said, very low:

"Harry, Harry!" And Faring went quickly across the room to her. But first he said something to Stansford, and the Russian beamed little Miss Trevor out of the room to the iron balcony which ran the length of house outside the long windows. Faring took the crumpled white paper from the woman's slack hand and read it swiftly.

It was a short despatch, and it was signed by Arabella Crowley. It said:

"Body fossil resembling Herbert. Your identification necessary. Will preserve. Can you come New York immediately?"

Mrs. Buchanan sat in her chair, looking badly before her. Her hands picked and pulled at the lace handkerchief in her lap, but her face was absolutely without expression. Faring looked at her and went quickly across the room to a little table whereon stood several small liqueur decanters and glasses. He poured a glass of brandy and brought it back to the woman who sat staring.

"Drink this!" he said. "Drink it at once—all of it!" He spoke sharply in an old well-remembered tone, the tone of the man who directs a situation. He left the woman in her hand and stood for a moment thinking. It was good to see how his lassitude and illness—almost his pallor of cheek—had dropped from him like a cast-off garment.

There was another, larger table in a corner with books and magazines and daily papers. He searched among these, and took up the day's edition of the *Paris Herald*. He turned to the shipping news.

"To-day is Thursday," he said. "Thursday, the sixteenth. Friday! No, nothing fast on Friday. Saturday, September the eighteenth! French and Americans. The *St. Louis* will do it!" He turned back into the room.

"Betty," he said, "the *St. Louis* of the American line sails from Cherbourg on Saturday. That is the day after to-morrow. You must be ready for the special steamer-train which leaves the Gare St. Lazare at nine o'clock in the morning. I will see to the tickets and all that, and Stansford will look after your affairs here. All you must do is be ready with your luggage at half past eight on Saturday morning. Do you understand?"

Mrs. Buchanan nodded slowly. "Yes, yes!" she said. "I understand." But she seemed uneasy in the morning. I will see to the tickets and all that, and Stansford will look after your affairs here. All you must do is be ready with your luggage at half past eight on Saturday morning. Do you understand?"

Mrs. Buchanan nodded slowly. "Yes, yes!" she said. "I understand." But she seemed uneasy in the morning. I will see to the tickets and all that, and Stansford will look after your affairs here. All you must do is be ready with your luggage at half past eight on Saturday morning. Do you understand?"

Mrs. Buchanan nodded slowly. "Yes, yes!" she said. "I understand." But she seemed uneasy in the morning. I will see to the tickets and all that, and Stansford will look after your affairs here. All you must do is be ready with your luggage at half past eight on Saturday morning. Do you understand?"

When Mark Twain Lectured

By W. H. Merrill

BACK in the early seventies Mark Twain was engaged for a "star" lecture course in a thriving village in western New York. Arriving at the hotel, he was called upon by the secretary of the Lectures Association. After the usual courtesies of greeting, the distinguished lecturer asked:

"What am I billed to give here to-night?"

He was told that the lecture advertised was on "Artemus Ward."

"Oh!" he exclaimed, with a very face that attested the sincerity of his feeling. "I am so sick of that lecture! It makes me g-g to think of it."

"That is too bad," said the sympathetic secretary who tells the story. "Haven't you got a new lecture in your pocket, or your grip-sack, or somewhere about you?"

A new light came into the twinkling eyes. "I just have," he purred, demurely. "I've got a head-and-neck one that I pretty nearly finished in the car today. It is from my new book, *Roughing It*. But," he added, with the pucker of trouble wrinkling his forehead, "it ain't quite finished yet."

"But you have four hours before the time of the lecture," said the accommodating secretary. "I will stand guard at the door and see that you are not disturbed."

Still moving, Mark replied: "But I'm afraid I don't know it well enough. Suppose I should get stuck?"

"Never fear," was the reassuring response; "I have a dozen good young fellows in the association that I will scatter through the audience, each with a stout pair of boots and a ready hand. If you come to a hitch I will start the applause, and all the fellows will join in till you can find your place or pick up the lost thread of your discourse."

At once Mark brightened. "Will you do it?" he exclaimed. "Will you stand by and help me through?"

"Sure!" was the response; and the caller rose to go.

"Hold on a minute," said the lecturer. "Who is to introduce me to the congregation?"

The secretary modestly replied that the duty and pleasure would fall to his lot in the absence of the president of the association.

"All right," said Mark. "Would you mind, now, just to please

"Wait a moment!" he said, and went back to the *Herald* and its shipping news.

"Lascaris from Liverpool—Saturday," he said to himself. "Yes, better." And again turned to Mrs. Buchanan.

"No, Betty," he said, "I shan't go with you." She cried out at that, but he held up his hand to stop her.

"Wait! Let me explain," said he. "I shall cross the Channel to-morrow, after I've made your arrangements for you, and take the *Lascaris* from Liverpool, which sails on the same day as your ship. I shall probably be in New York at least a few hours before you. It—when you've had time to think it over, you will see that it's better so—better that I shouldn't go with you. You'll understand. Now I want a word with Stansford."

(He went out upon the iron balcony where Stansford and Allison Trevor were waiting and told them very briefly what the message had been and what he meant to do. Miss Trevor said at once that she would return to America with Beatrice, and promised to see to it that they were ready for the steamer-train on Saturday morning. Then Faring and Stansford went away together to make the necessary arrangements and left the two women alone.)

When they had gone Beatrice Buchanan seemed at last in waking from her stupor. The younger woman had dropped down beside her, perhaps upon the arm of her chair, and had drawn the still head against her breast, kissing it and stroking it in the tender way women have, and for a moment Mrs. Buchanan let it rest there. Then she freed herself gently and rose to her feet. She drew a deep breath and was seemingly herself once more.

"There will be a great deal to do, dearest," she said. "We must make our plans. We must, first of all, write to a number of people—to the Earl and to Isabella and—oh, yes, to Lady Sybil. The *Express* were coming over next week, were they not? There are so little time that we probably shall see some of them at all, save possibly Lord Stroppe to-morrow." Her eyes fell upon the thin crumpled paper of the telegram pasted with its narrow, typed strips of message, and she took it again and slowly read it through.

"Oh, lady," she said, at the end, "shall we find 'What's to come of this journey' our favorite?" And then as she stood there beside the table, wide-eyed and thoughtful, suddenly a crimson flush came up over her throat and face and she gave a little cry. It was as if it had only then come into her mind what this journey's end might mean. Indeed, probably would mean—the freedom she had so passionately longed for—freedom and something else.

She laid her two hands over her face, and moved blindly, stumblingly, across the room to one of the windows. And she stepped out on the balcony and stood there for a long time, her hands still over her face.

For a few moments little Allison Trevor watched and waited; then, as the elder woman showed no sign of stirring, she went quietly out of the room to her own chamber. There she locked the door and laid herself upon the white bed, face downward, and began to weep very bitterly.

To be Continued.

me, letting me introduce myself, as Artemus used to do? I'd kinder like to try the experiment."

The secretary gave ready assent, the door was locked, and the author began his work of "polishing up and getting acquainted with" the lecture from *Roughing It* which afterwards delighted thousands of hearers.

The momentous hour of seven arrived. The hall was packed with an intelligent and eager audience, suspenseful for a first night of the famous and favorite lecturer. The door at the back of the platform opened, but instead of the familiar figure of the president of the association, who was the member of Congress from that district, or of the secretary, who was the editor of the village paper, a stranger, with a keen, inquisitive face crowned with a mass of brown curls, encountered in a businessy manner, and surveying the astonished audience in a friendly manner, said, with an inimitable, hesitating drawl:

"Ladies and gentlemen, in the temporary and unavoidable absence of both the president and the secretary of the Lecture Association, I am deputed to introduce the lecturer of the evening. The lecturer of the evening, ladies and gentlemen," he continued, assuming a real orator's pose, "is well known to me. His great historical knowledge is equalled only by his vast and accurate scientific, linguistic, and geographical attainments. He comes of patriotic stock. His ancestors fit into the war of the Revolution. They were at the massacre of Bunker Hill. The ancestors of the lecturer of the evening, ladies and gentlemen," cried Mark, warming to his work, "were not persons to stand fooling around when a massacre was going on. One of them was wounded. He drove a baggage-wagon. He was killed by a man."

By this time the audience had become so excited that some of the men had by some means gained access to the platform, but their disconcerted looks and anxious glances at the door did not disturb the speaker. He started in with another paragraph on "the lecturer of the evening," raising his voice and gestulating earnestly, until all at once something in the way of a man came forward to strike him. Pausing suddenly in a flight of oratory, he walked to the

(Continued on page 269.)

The Man with the Magic Pen

By Charles Frohman

Within two seasons Mr. Frohman has made three productions of Mr. Barrie's play, "Peter Pan." In addition to the one now running at the Empire Theatre, New York, two other productions of the play have been brought out in London. The following article by Mr. Frohman is in response to a request for his opinion as to why a play so purely fanciful has taken such a hold upon both English people and Americans.

I CAN never think of J. M. Barrie merely as a playwright, except to contrast him with some of his contemporaries, Barrie, who has made the intangible palpable, clothed with reality the seemingly unreal, by whose genius cities are gifted with animation, the whole mystic realm of Fairyland given a local habitation and a name, the old as well as the young made boys again for a day, is the dramatist of us all. His distinctive note is humanity. There is rich human blood in everything he writes. He is a satirist whose arrows are never barbed with vitriol, but with the milk of human kindness; a humanist who never forfeits our smiles, but leaves much for our willing imagination; an optimist whose message is as compelling for its reasonableness as it is welcome for its gentleness. To me, it seems almost a miracle that such a man should produce in our day and generation such a work as "Peter Pan."

To us who are city dwellers, living in a world of flats, hotels, and restaurants, Barrie recalls, in the artless eloquence of "Peter Pan," the sweetness and the actual meaning of the word "home." To those mothers who are at times impatient with the burdens of the nursery he gently reminds the world-old maxims of a well-governed family. He suggests, but he never preaches. He hints, but he never reminds us of truths which once we knew well, but which we have allowed our environment to drive from our minds. In the drama, as in every other art, one shall not preach. There are more things accomplished by one persuasive appeal than by a dozen dry sermons.

"Peter Pan." I take it, is a plea under a new guise for the old, homely, incontrovertible truths of life. A man is as old as he feels. The merriest of companions is he who never grows old. Greater than the gathering of riches, than personal advancement, or than the esteem of our friends, as the boy Peter Pan thinks, is the sound mind in the sound body. An access of the imaginative is worth a pound of the practical.

I have been asked to account for the fact that while Barrie's "Peter Pan" has taken upon the affections of its audience here and abroad. The inquiry assumes that the American people are wanting in imagination. The assumption is unwarranted. The very success of such a play as "Peter Pan"—so completely in a class by itself as to defy comparison—proves that there exists in the American people a pound of the imaginative far every pound of the practical.

The shrewd observers of our social conditions point out as our impending peril not alone the menace of money-getting, but the danger of overcivilization and undercultivation, nor the least of the national ills solely towards national ends, but the combination of all these towards the despoiling of our imaginative faculty. Life in the big cities where huge buildings shut off from the child all contemplation of the open sky, and where dull grey streets have replaced green fields, where the lesson of the day is "getting on in the world" rather than being a child and enjoying the dreamworld of pirates, fairies, and hobgoblins—all these are pointed out as tendencies towards early self-consciousness, and the stagnation of the imagination. We are reminded that the whistling boy and the little girl singing her own improvised airs—those wistful little Peter Pans and Flodas of yesterday—are no longer with us. To-day they are lost rather upon among their elders. And it is asserted that with their disappearance will go that imaginative impulse which creates for a nation its great songs and lyrics.

As against these facts we know that men, women, and children have sincerely appreciated "Peter Pan"—a play which appeals to them because they crave of a people possessed of a healthy imagination. At every performance old hearts and old brains live over again the thrills and sensations of romantic youth. Its appeal is universal. There is joy in it for all classes and all ages. It is simply a matter of light attracting light. The pleasure taken by

the audience at "Peter Pan" has come, I think, from the fact that whatever is human and beautiful in thought or feeling in them has been touched by Barrie's humanity. Everybody who has been gripped by the charm of "Peter Pan" has only to thank himself that he has within him that to which the author has successfully appealed. Neither the skill of Miss Adams nor the power and graces of Barrie could have availed but for the responsive hearts and sympathetic feeling of the audience. It has fallen to Barrie to create what, in all my experience, the American stage has only now afforded—namely, an entertainment, creative of pure fancy in the city-bred child, and quickening to the imagination of the little people whose natural Fairyland we grown-ups have possessed—an illusion of a night during which the mother or father and child find abundant delights in common and realize new joys in being complete children.

So much for the message which Barrie brings us in "Peter Pan." On the other hand, his style is so intimately bound up with his personality that it eludes definition. I have often been asked whether Barrie will eventually bring about a new school of the drama. But with him the style is so much the man that while he may have his imitators, as Dickens had his, there can be none but another Barrie than another Dickens. Who but Barrie could express the natural with such definiteness and sweetness as to make it real? The Never, Never, Land has life and beauty beathed into it until we undoubtedly think of it as the Ever, Ever, Land. The incongruities of Peter Pan, Tootles, and his companions, are the counterbalancing of our own youth, and for any imagination but his would be impossible to describe.

I consider the simplicity of the story, for in its very simplicity lies its greatness. Mr. Barrie has not written down to the level of a child's understanding. By a trick of mental metamorphosis he has acquired the beautiful, optimistic vision of the youth who sees life clearly and sees it simply. Barrie's is the mind that will not grow old. He is the philosopher of simple speech come to persuade us that by the youth of the mind lives the youth of the body.

On the night of the first performance in London, where I first brought out the play, when the audience, vigorously called for by the author, the response was made in all seriousness by the child Liza, whom Mr. Barrie chose as his mouthpiece for the telling of this dreamworld in Fairyland. The little girl bowed her acknowledgment, and, with the statement that "her friend Mr. Barrie was not present," thanked the audience for their "cordial reception of her little piece."

It is well to keep Liza in memory for a thorough understanding of the play. She and the boy Peter Pan embody Barrie's great message to us all—that however old we may grow, physically, we must never grow old spiritually. The first outlook upon life is by that mind which neither wears out nor rusts out, but refines its eternal youth.

With a daring fancifulness, and presenting a view of the world through Liza's eyes, we are of a sudden in the house of a Mr. and Mrs. Darling, a human father and another with three quaint children. Mr. Darling is a possible being in this world of secret enchantment, but his wife is somewhat different. To her is given some perception of the fairy world. It is she who, having caught that merry spirit, Peter Pan, in her room one day, shut the window with the other ten children, in his hour in the Never, Never, Land. Away they all fly in the most delightful of adventures. One in the wonderful Never, Never, Land the children and Peter Pan pass through a succession of startling experiences. They encounter red

Miss Maude Adams as "Peter Pan"

Indians and pirates (led by one *Juan Plout*, a most bloodthirsty buccaner), and are fought for in approved story-book fashion. When *Wendy* and the children are carried off by the pirates they are in dreadful straits, but there is always *Peter* to fall back upon, and, as may be expected, he does not fail them. A formidable crocodile and some wonderfully ferocious wolves enter into the scheme, among other things. After the pirates have been overcome and driven overboard, and the children are free, the scene changes to the home of the *Barbings*, where the little wanderers meet the warmest of welcomes.

It would be interesting to know the inner workings of a mind that can snatch from Fairyland its very essence; that, giving free rein to a fanciful pen, can safely mingle reality with phantasy, melodrama with poetry, grotesquerie with idealism. But to analyze "*Peter Pan*" is to pick the petals from the wild rose, thinking thus to know what it is like. To talk to Barrie personally is to arrive at no more definite solution as to why and how he did it all. His is the wisdom that insists that the work must speak for the worker, and not the worker for the work.

On the second page of the manuscript, as Mr. Barrie delivered the play to me, are six notes under the caption: "On the Acting of a Fairy Play." They give us the key to Barrie's idea in writing "*Peter Pan*," and there is nothing comparable to them in the whole range of dramatic literature, except *Rinow's* advice to the players. Exactly as he wrote them, they are as follows:

The difference between a fairy play and a realistic one is that in the former all the characters are really children with a child's outlook on life. This applies to the so-called adults of the story as well as to the young people. Pull the beard off the Fairy King, and you would find the face of a child.

The actors in a fairy play should feel that it is written by a child in earnestness, and that they are children playing it in the same spirit. The scenic artist is another child in league with them.

In England the tendency is always to be too elaborate, to over-act. This is particularly offensive in a fairy piece, where all should be quick and spontaneous and should seem artless.

A great desire of the actor is to "get everything possible out of a line"—to squeeze it dry—to hit the audience a blow with it as

"*Peter Pan*" (Miss Adama) defying the Pirates

Pan sees them when he is sailing across the lake in the thrush's nest. A small part only of the Serpentine is in the garden, for it soon passes beneath a bridge to far away, where the island is on which all the birds are born that become luty boys and girls. No one who is human, except *Peter Pan* (and he is only half human), can land on the island, but you may write what you want (boy or girl, dark or fair) on a piece of paper, and then twist it into the shape of a boat, and slip it into the water, and it reaches *Peter Pan's* island after dark."

Every American city has its Kensington Gardens. Only here in New York we call it Central Park, but it is the playground of just as many *Peter Pans* and "lost boys"—the scene of as many Indian and pirate adventures—as any other spot on earth.

Through Barrie's eyes we see its beauty heightened and deepened—we know its true significance to the growing child—as we might never have known it but for this man's genius.

A Scene from "*Peter Pan*," showing "*Peter*" (Miss Adama), and the "*Barling* Children."

Correspondence

CHINA'S INDEMNITY DEBT TO THE UNITED STATES

November 2005, December 1, 2005

To the Editor of Harper's Weekly:

The *Shen Bao* and *Harbin* are the two Hongkong newspapers that a bill would probably be introduced in Congress this session relieving the Chinese government from payment of some twenty millions of the Boxer indemnity. I deem it my duty to write this letter to you, feeling that its publication in *Harbin* or *Wenwei* will bring to the attention of the Chinese people the views of American writers and publicists that is printed in any other journal. A sojourn of some years in China, an extensive acquaintance among the better class of Chinese, a feeling of friendship for them and their country, and a patriotic desire that such a powerful means for their enlightenment should be put to use. Some of the points I have appreciated prompt this letter. The Chinese people would be benefited by such possible Congressional action almost as much as if you were to give a drunken sailor a handful of greenbacks and turn him loose in the slums. The Chinese government is drenched from top to bottom, while graft permeates the whole system. The Chinese people are ignorant. Some of the points requiring a check or interdependence, it is utterly impossible for any one official to be absolutely square unless those above him in his suit are likewise. Many thousands of the Chinese official class realize the rottenness of their government, but are powerless to do anything. My proposal is this: Do not release the Chinese government from the Boxer indemnity without dealing with the concept and cooperation of the Chinese government, appoint a commission of, say, three Americans, and the Chinese government an advisory council thereto of, say, seven members, composed of two Manchurians, one Mongol, one man from Chihli province, one from Szechuan, one from the provinces of the Hukien provinces, and one man from the Kwangtung provinces, all interest money paid upon this debt to be placed to the credit of the three commissioners, who are to expend same on the creation and maintenance of a public school system in China after the best American model; the Chinese government to allow the three hands of reform to be free to do as they see fit, to be controlled by the commission; in the primary preparation of schools half of the day to be devoted to instruction under American teachers in Western learning, and the other half to study under Chinese teachers in Chinese; the system to be applied by provincial schools in Peking, Tientsin, Peking, Shanghai, Nankai or Szechuan, and in the Chinese provinces; the Chinese government to send to the United States students first in agriculture, and then in their own language, history, and literature, and an Occidental education qualifying them for entrance to American universities; a university be started in Peking to receive those fitted; graduates of the various provincial preparatory and grammar schools to enter American universities or colleges; the Chinese high schools to be maintained by the commission; none of the funds of the commission to be used in assisting any sectarian school; a printing and publishing plant be erected at some central point to publish all school books as necessary, the same to be given to the Chinese government at first, and then to be gradually replaced by graduates of the public school system.

If this scheme be properly conducted on strictly non-sectarian lines, I feel certain that it will receive the sincere support of the Chinese, and that as it grows any deficiency in funds will be freely made up by them. An advantage that would appeal to the Chinese would be that this money is spent largely in China for the country's good. For the establishment of the university at Peking some of our wealthy American citizens could find no surer means of rendering their names revered and honored among our hundred millions of people, and of doing substantial and lasting good to humanity, than to provide the funds, thereby.

THOMAS P. McANAY

UNCLE SAM AND POOR LITTLE GUAM

WILLOWTON, N.H., January 21, 1966.

To the Editor of *Harper's Weekly*:
SIR,—I have to criticise the tone of the paragraph in the issue of the WEEKLY for November 18, 1903, in which you refer to "our island of Cinnam" in a trifling way that is very unfair to ourselves, as well as to the people of this beautiful island.

Our Island of Guam stands in the position of a Territory of the Union, whether the ruling powers acknowledge it or not. It is an entirely separate political entity. It is neither a part of California, Hawaii, Samoa, nor of the Philippines. Here is a little colony of 16,000 people which has been under Christian influences for nearly a century and a half. It is the only Territory which was obtained from Spain and admitted as a Territory, and with an area six times as large as Manhattan Island; with a fine harbor, rich soil, mountains, plains and streams, lignite coal, hematite iron ore, lime-stone and clay, building-stones and timber; a climate suitable for coconuts, sugar, coffee, cocoa, rubber, vanilla, and other tropical products; a population of 16,000 people, of whom 10,000 are citizens, and awaiting only recognition by the American Congress and practically forgotten.

It is as if an eagle had swooped down upon a hummingbird and smothered it in its grasp and then forgotten it. I only ask you to read the report of Civil-Engineer Cox, U.S.N., in GUNN, 1905, issued by the Assistant Secretary of the Navy, and which report has this indorsement from Captain Seaton Schneider, U.S.N., formerly Governor of Gunn, and now Chief Intelligence Officer, Navy Department, Washington:

* Respectfully forwarded to the Navy Department, the Assistant Secretary's Office, approved as to both statements of facts and expression of views, "in which it is shown [see p. 17] that in the seven years which we have held the island we have done very badly for the people in comparison with the Spaniards; their property is confiscated, their money is taken away from them, their currency is not legal, their tariff is illegal; the appeals of each American governor for five years for the most necessary appropriations are ignored, their subsidized line of steamers to Manila discontinued, and the place of a fortnightly service furnished by the United States Navy is taken by a few small, fast, one schooner, for the American army transports will not take freight; the Postoffice Department even forces them to receive an answer from a friend in Manila and San Francisco, as the army transports, which carry the mail, do not stop there on their way to the Philippines. The Navy Department has no disposition to contract for better service."

Could you not at least say something in your paper to help remove the shame that any decent American must feel at the neglect practised by the leaders of Congress on this helpless people?

I 0120, 0160,

C. H. BARNSTON

THE SUMMER SUNDAY

December - January 26, 1968

To the Editor of *Harper's Weekly*:

Now,—We still are here and these many well-meaning parents enforcing upon children the Puritan Sunday, which is as injurious to health as the raw lugs which the Puritans used as medicine. Save some children's lives by showing parents that the Puritan Sunday is alike repugnant to true religion and to common sense.

The Bible never pretends to be the perfect and the infallible. Says the Bible, "There is no man that is perfect." Then no creed contradicted by the Bible is perfect. In my opinion, the great defect in our creeds is the prohibition of Sunday. There is but one way in which the Bible against playing on Sunday, and it is not specifically forbidden by the creeds. But the creeds were made severe enough to cover it, because they were built by old men with one foot in the grave—nervous invalids upon whom the joys of youth passed, and who were unconsciously influenced by their own love of quiet. Quiet all day Sunday may be good for a few, but is bad for the mass.

The **sour Sunday** turns people against religion. It is one, perhaps chief, among the causes which produce so many sinners that in a so-called Christian country nine-tenths of the people are not Christians.

Millions of those who soon die when stricken by disease or accident would recover if endowed with the vitality they would have had if they had been encouraged to play eight hours every Sunday instead of being repressed. The most fortunate life saver of the season can save but a few lives a year, but a clergyman could annually save hundreds by teaching parents that their children should spend the greater part of Sunday in play.

The thoughtless Sabbathman, at present untrained by societies but the prevention of cruelty to children, destroys the only play-day of those who have to work six days of the week. Even among school-children there are millions who have to work mornings, evenings and nights. New England has no children's day.

Playing on Sunday is now Sabbathbreaking, and it is, and those who would prevent play every Sunday, or compel others to work for them. No one in America goes without fires or warm meals on Sunday. There we don't break the Sabbath with ourselves, hire others to drive carriages and cars, and feed them with meat, bread and polished apparel, and even furnish for them.

The creeds of a higher civilization than ours will brand the doleful Sunday as the long-faced enemy of God and man. They will not permit the weeping child's ball to be taken from him on Sunday, but will encourage him to be as playful as the squirrel that lives in the leaves, and the delusion that bolsters the foam.

THE MARRIAGE RITE

Christiane Tassone et al.

To the Editor of Harper's Weekly,

Sta.—Regarding the sacramental character of the marriage ceremony, your correspondence of January 4 should have gone back rather far, for only more than 500 years to the "first age of the church, but to the apostolic age, when the sacramental character of marriage was first given to the advent of Christianity there were four ages of marriage, and the Romans in which religion had no part, but that was because the influence of earlier beliefs was passing away. In the oldest known marriage, that of Isaac and Rebekah, marriage was a sacred rite, and the priestly character of the marriage ceremony was not lost. In the second age, the Latins and Egyptians whose worship was chiefly fatherhood, and in the third, the Emperor Theodosius in 392 A. D. the Christians, and in the fourth, the institution of sacred marriage was added in the Indo-European religions, and the marriage ceremony was made a sacrament to exist without the other. Let me forget, then, that this is a part of our inheritance from the past, and that we are not to be ashamed of the home and the hearth fire, which even now in its hours of loneliness and loneliness, and in its loneliness, and in its loneliness, the qualities which are the source of the world to-day.

I am, sir,

M. L. 100-100, M. L. 100-100-100

Practical Politics

A PRACTICAL politician of the first water came to light in a small Indiana town not long ago. In this town there is an officer, designated as Inspector of Streets and Roads, who receives the munificent salary of \$250 per year. As the opposing political parties are very nearly balanced in this town, there is keen opposition, so that when this officer became vacant and the authorities ordered an election to fill it, there was a lively campaign for this small place, as other elections being near. The Democratic candidate was a rather shrewd old fellow by the name of Ezekiel Hicks, and it looked as though he would be successful, as a great little sum had been subscribed and turned over to him as a campaign fund. To the astonishment of everybody, however, he was defeated.

"I can't account for it," one of the Democratic leaders said, gloomily. "With that money we should have won. How did you lay it out, Ezekiel?"

"Hum," Ezekiel said, slowly, pulling his whisker. "Ver see, that offer only pays \$250 a year salary, an' I didn't see no sense in payin' \$900 out to get the office, so I just bought me a little truck farm instead."

Nothing Doing

AN author who makes a specialty of stories of "our great Middle West" with a heart-throb in each, tells of an odd character he met in that region. This odd chap, who afterwards served the author as the main figure of a book that was largely successful, lived alone in a cabin. Woman's care being, of course, unknown, the cabin presented the spectacle of the triumphant reign of dirt and disorder.

Sometimes the two shared to talk of cooking and cooking utensils. "I had one of them cook-books must," observed the old fellow, "but I couldn't do nuthin' with it."

"What was the trouble?" asked the author.

"Why, everything in the book began with, 'First take a clean dish.'"

Her Money's Worth

THE story is told of a young married woman in Philadelphia whose husband is always impressing upon her the importance, especially in written communications, of brevity and coherence. "Always keep to the matter in hand," the husband is fond of saying, with reference to the propensity of his wife to wander from the subject when she writes.

Recently the young wife received from her husband in Chicago, he being on the first trip away from her, a telegram reading: "Are you all right? Answer, Black Hotel, Chicago."

The youthful spouse, realizing that the situation called for an application of those principles of economy and directness of expression so frequently expatiated upon by her husband, was hard put to it for a while. The husband's intended movements were to be such that she could not write him a letter, so it must be a telegram that should answer his question. After a few moments in agitated thought she evolved the following, which exceeding not falling below the ten words she could despatch for twenty-five cents:

"Yes, yes, yes, I am very well, indeed, thank you."

Making Theatres Fire-proof

THE burning of a theatre or other public entertainment is likely to be attended with such loss of life that various municipal building departments aim to safeguard the construction in all possible ways. In order to study the matter more practically a committee of Austrian engineers has recently carried out a number of experiments with a model of the Ring Theatre in Vienna, which some years ago was destroyed by fire. The model was built, on a scale of one to ten, so that

its critical contents was one-thousandth of the actual building, and it was particularly valuable in showing what conditions of ventilation were least conducive to the spread of the flames. The most practical results reached were that it was absolutely necessary to have adequate smoke-vents over the stage, so the air when heated produced such a pressure that the gas-lights would be extinguished. Furthermore, this pressure is produced within an incredibly short space of time, but if once it was relieved the fire could be confined to the stage. The committee therefore recommended how dangerous it was to cover the ventilating shafts or smoke-vents with wire netting, as is required by the New York building law, for the draught is sufficient to carry up charred paper and canvas from the scenery, so that the shafts were completely closed. The provision of suitable and sufficient smoke-vents is the most necessary feature to retard a fire, as this alone can stop the outburst of flame and smoke into the auditorium. Without these safeguards fire-proof curtains and emergency exits will avail little. It was simply shown in the tests with the model, what has been experienced in great theatre fires, that the burning out of the flames in an rapid that escape is practically impossible.

ADVICE TO MOTHERS—Mrs. WILLIAM'S SOOTHING Syrup should always be used for children teething. It soothes the child, softens the gums, clears off pain, cures wind colic, and is the best remedy for diarrhoea.—[Ad.]

OVER SEA HABIT

Difference on this Side the Water.

The persistent effect upon the heart of caffeine in coffee cannot but result in the gravest complications, in time.

Each attack of the drug (and that means each cup of coffee) weakens the organ a little more, and the end is almost a matter of mathematical demonstration. A lady writes from a Western state: "I am of German descent, and it was natural that I should learn at a very early age to drink coffee. Until I was 23 years old I drank scarcely anything else at my meals."

"A few years ago I began to be affected by a steadily increasing nervousness, which eventually developed into a distressing heart trouble, that made me very weak and unsteady. Then, some three years ago, was added asthma in its worst form. My sufferings from those things can be better imagined than described."

"During all this time my husband realized more fully than I did that coffee was injurious to me, and made every effort to make me stop."

"Finally it was decided, a few months ago, to quit the use of coffee absolutely, and to adopt Postum Food Coffee as our last table drink. I had but little idea that it would help me, but consented to try it to please my husband. I prepared it very carefully, exactly according to directions, and was delighted with its delicious flavor and refreshing qualities."

"Just so soon as the poison from the coffee had time to get out of my system the nutritive properties of the Postum began to build me up, and I am now fully recovered from all my nervousness, heart trouble, and asthma. I gladly acknowledge that now, for the first time in years, I enjoy perfect health, and that I owe it all to Postum." Name given by Postum Co., Battle Creek, Mich.

There's a reason. Read the little book, "The Road to Wellville," in pages.

Postum Food Coffee contains no drugs of any description whatsoever.

Music And The Opera

STRAUSS' "SALOME"

BY LAWRENCE GILMAN

ACCORDING to rumor, it is possible that New York may have next winter the opportunity of hearing the most effectively advertised opera that has come into public notice since the production of "Pacifal" at Barenth, a score of years ago. The means, of course, Richard Strauss' "Salome," which was brought out in Dresden a few weeks ago, after having enjoyed the distinction of afflicting the sensibilities of various official guardians of public morality—notably

at Berlin, where it evoked Imperial disapproval. Strauss has held true to his lately developed predilection for unsuitable ambients. Not content, apparently, with his achievement in the "Dionysian" Symphony, in which he devoted his magnificent abilities to music's Symphony, in which he devoted the incidents of a day to a lady's the edifying purpose of depicting the incidents of a day to a lady's life, he has gone to the sufficiently violent extreme of writing music for Herodias and her inspired passion for John the Baptist. Like certain of the modern Italian opera-makers, he has developed, apparently, a flair for brutal and repellent themes. Those who have heard performances of the work in Dresden appear to be agreed upon the opinion that, so far as its dramatic substance is concerned, it is revolting, perverse, and artistically futile. The drama of Wilde inspires to Salome a ruthless and consuming passion for the Prophet; and those portions of the work which depict this motive in its climactic phases seem particularly to have stimulated Strauss' creative sense. One critic, Dr. Filtner, has noted that the music is most vivid, salient, and memorable in those episodes wherein the revolting elements of the play are most conspicuous. "He has written nothing more impressive," says another critic [of the London Times] "than Salome's final soliloquy over the severed head."

In the matter of nudity he has, if one may have a partial judgment upon the plans seen, surpassed himself. "The music," writes one of the German critics, "say that in this scene they themselves often do not know whether they are playing correctly or not. Some of the orchestral sections, for instance, play unconsciously in keys that are half a tone removed from the mode being used at the same time by other groups of the orchestra." It is to be hoped, nevertheless, that Mr. Curjel may bring about a production of this extraordinary work at the Metro politan.

That the Philharmonic Society has been the means of contributing to the current concert year a large part of its most memorable results is a fact which it is a pleasure to recognize. In pursuance of the liberal and enterprising policy which it inaugurated two years ago, the Society has imported this season, for the direction of its concerts, a number of European conductors whose performances have been observed with the sincerest interest. Perhaps it may be said, without invidious discrimination, that the most sympathetic impression have been made by Willem Mengelberg, of Amsterdam, and Wassili Salomeff, of Moscow—the former largely through his brilliant and eloquent reading of Strauss'

"Heldenleben," the latter by his wonderfully poignant exposition of Tchaikovsky's "Pathetic" Symphony. Mr. Salomeff has been, indeed,—as he has been before,—the hero of the Philharmonic season. A conductor of over-mastering emotional force, of compelling sincerity, and exerting a singular suggestion of personality, he has swayed his audiences with a sure and irresistible mastery.

It has been as persistently rumored as it has been officially denied that the Philharmonic Society has in view the engagement of Mr. Salomeff as its permanent conductor. Such a move would seem to come, from what is accurately called "the box-office point of view," a very substantial prospect. There is no doubt of Mr. Salomeff's individual hold upon a large portion of the concert-going public, especially in connection with the music of Tchaikovsky and those other masters whose appeal is of a kindred order. It has been said, with but little extravagance, that if the Philharmonic Society should choose to announce a series of concerts devoted exclusively to performances of the "Pathetic" Symphony under Mr. Salomeff's baton, it could count upon an unflinching popular response. That Mr. Salomeff would prove himself an equally authoritative interpreter of music fundamentally different in impulse and character need not be too positively affirmed. But at least one may say that there is small reason to doubt that whatever programmes the Philharmonic should arrange would receive at his hands a treatment at once dignified, suggestive, and vividly communicative. America does not at present possess its rightful share of the world's stock of greatly gifted conductors—which has yielded to France Mr. Colonne, to England Mr. Henry Wood, to Germany Messrs. Wiegand, Mottl, Niekisch, Mahler, and others of comparable ability. The acquisition of Mr. Salomeff would fill a place long vacant in our musical life.

The following verses, addressed to Salomeff, have been sent in us by Miss Ethel Dagwood Mason, with the request that their tribute be made public:

"Master of music, of men,
And of fate—
Priest who disenchants
To soul and to sense—
Poet with magical
Lure interior
Weathed in mysterious
Flame and with flowers—
Sculptor of shadows
That quicken and pass,
Yet pass as Immortals
Under thy touch—
Soul of a Man, royal,
Simple, and true
Return and abide:
We have need of thy powers.
—
We that are strong,
And yet falter at truth—
We that are young,
And yet die as though old—
We that aspire for light
And seek gold—
We who would love,
And whose love is a blight—
Thou, we entrust,
Know the cost, but alone!
Return and abide,
From this faded shrine
Tame visions and dreams
That call and inspire—
Breathe the chords that arouse
To the light!"

Wassili Salomeff

The sainted Russian conductor who has been heard this season with the Philharmonic Society

Men of To-Day

(Continued from page 191.)

spirit and civilization akin to his ancestral Scythian land, and where the military art of the Fatherland was within easy distance.

His tenure of the Tokio Legation began in sunshine. Rosen was carrying everything before her in the Far East. She had won immense prestige by the Shimomori treaty, which drove Japan out of Southern Manchuria. The Cassini convention had followed, giving Russia the lease of Queen-Tung and the right to build the Eastern Siberian Railroad, with "canceled areas" along its route, which were indisputable from Russian colonies. The part played by Admiral Alexeeff in the bombardment of the Taku forts, and by General Sissoeff and General Linvitch in the fighting around Taku, and the march to Peking had raised Russia's credit and power even higher. There came the reaction: protests against Russia's position in Manchuria; arrest, rapid increase of the Japanese fleet; the alliance between England and Japan.

Though Baron Rosen's long residence in Japan may have opened his eyes and embled him to see clearly the signs of the times, his home government was blind, it was overpersuaded by hopes and illusions, and the long-gathering clouds burst in a storm of war. Baron Komura handed his passports to Baron Rosen, and the great drama which changed the fate of the Asian Pacific began.

The Peace Conference at Portsmouth showed clearly that whatever view Baron Rosen may have taken during the negotiations between Tokio and St. Petersburg before the war, he had held and improved the confidence of his home government in his ability and sound judgment; and his association with M. Witte in that supremely difficult task was of high value. It would seem, not only to the Imperial Russian Government, but to future phases of M. Witte's policy and action.

As to present conditions in Russia, I am unfortunately able to give Baron Rosen's view in his own words: "Impartial history will pronounce judgment on these events, placing responsibilities where they belong. Impartial history will take into account that, in a time of great political upheaval, men's minds are apt to lose their balance, and that in the fever heat of political passions, long confined and at last unloosed, deeds will be done that will some day fill with burning shame the hearts of the very men who committed them. But severe will be the verdict of history on all those who, whether for selfish ends, or blinded by political fanaticism, have been inflaming the passions of the easily deceived, because politically and economically ignorant masses, thereby doing their best to delude the noble endeavors of the sovereign and his government to lead the country peacefully into the path of constitutional liberty based on the reign of law and order."

Discouraging Quest for Capital

One of Pittsburgh's bank presidents is a friend and most unassuming benefactor of ambitious young men. He is sympathetic when listening to cases which merit encouragement, but can not dissuade an interviewer with admirable abruptness.

A youth on one occasion entered the banker's office and jovially announced that he intended going to college. He intimated that a little assistance in the matter of obtaining a scholarship would be a most convenient start with which to start on his career.

"And to what profession do you aspire?" questioned the president, graciously.

"I won't give up," asserted the young man, boldly, "until I am privileged to share after my name the letters D.D., LL.D."

The banker turned in his chair and intimated that the interview was at an end by saying, tersely:

"A capital idea, sir, but one entirely beyond the resources of this bank."

THE NEW TYPE XII. 35-40 H.P.
Pope - Toledo

The highly successful culmination of experiments in a specially treated steel of great tensile strength has enabled us to produce in the new Type XII, 35-40 H. P. Pope-Toledo, a car that is away beyond even our fondest wishes or expectations. Everyone is more or less familiar with the past unapproached and unparalleled record of

Pope-Toledo stock cars, which have won so many notable speed, endurance and hill climbing contests—over 200 cups and medals. A few months back we did not think it probable or possible to produce a better car than that with which we have won all these victories. The Pope-Toledo has always been recognized as **A CAR OF POWER**, which means speed, hill climbing, capacity and endurance. But Type XII is a more powerful car, a faster car, a stronger car, a car with more room and more style. Yet, note carefully, it has only **10 1/2 pounds of engine weight per H. P.**, and what is still more remarkable only **54 pounds of total weight per H. P.** More significant still, it is the **most compact car in the world; seats seven adult people comfortably**—the wheel base is only 104 inches.

CARTOONS OF THE WEEK

Defects in the Postal System

(Continued from page 196.)

to clamor for an increase of salaries and an enlargement of dignity. They intrigue with congressmen who have influence, and exchange official favors. The chief of division blossoms out into the "superintendent" of a "system," and gets \$1000 added to his annual stipend. Then the other chiefs of divisions rear like hungry lions. Back-bittings and recriminations fill the air; burlesques are planted; cross purposes are installed; the cooperation and harmony so essential to success in the great interlocking postal enterprise are destroyed.

All this for the lack of coherent organization, restraining laws, and strong executive supervision.

It also encourages insubordination and "graft." The division chief, swollen into a superintendent, designed for approval by Senators and Representatives, soon begins to resent the intrusion of his bureau and department supervisors. He punishes surreptitiously in his own branch of the service, and intrenches himself against interference from above. Thus independent, he yields to the ever-present temptation. He accepts a share of the profits on contracts for patented articles, finding secure from observation by the isolation of his enclaves.

Politics, which still retains too much hold on the mail system, is one serious cause of its existence—a continuous source of weakness and peril. Criticism on this point is, however, to a certain extent modified by thankfulness that conditions are not worse. If our greatest railway systems were liable to have their ten or twelve leading officials changed every four years for purely political reasons, by which change new and entirely inexperienced persons were to be brought in, with all the risks incident thereto, it is probable that the decline in the market value of their securities would speedily reflect popular distrust of such methods. That the postal service is now so efficient is unquestionably due to the honest enforcement of civil-service principles among its vast army of subordinate employees and to the exceptionally able, devoted officials who have, in most cases, been evolved through the hazardous processes of political selection during recent years.

Can this good fortune be always relied on to furnish competent department and bureau chiefs? Whether it can or not, it is absolutely certain that to break down the merit system which now governs the selection and tenure of scores of thousands of postal subordinates would bring confusion and chaos.

It is a menacing defect in postal administration that some practicable form of the merit system has not been extended to the 70,000 postmasters of fourth-class offices. Their compensation is small, but their work is important. They should be required to show at least rudimentary clerical fitness for their work, which many of them now lack. And they should have that assurance of stability in office during good conduct which has stimulated efficiency in other lines.

We have thus sketched a few of the defective and dangerous elements of existing post-office conditions.

What are the remedies?

First, a revision of postal laws so as to eradicate much of the crudeness and inconsistency which has arisen from the pernicious habit of "paraphrase legislation" on annual supply bills. This will require an exercise of the highest statesmanship in the legislative branch of the government, aided by the disinterested advice and experience of the best attaining experts. It will never be attempted save in response to a aroused public opinion.

Second, a decentralization of some of the departmental functions, so that the overwhelming multitude of petty details which now delay or prevent the due consideration of more important matters by responsible officials in Washington may be eliminated. More power can safely be entrusted to city postmasters in the matters of local discipline of subordinates, passage upon trivial expenditures, oversight of local transportation and kindred propositions, all of which must now be referred to the department, where they are astutely decided by clerks who

ANHEUSER-BUSCH BREWING ASS'N

ST. LOUIS, U.S.A.

COLUMBIA MARK XLVII

OUR factory buildings and equipment, materials and processes, are unapproached in the entire American automobile industry, and in many essentials Columbia Gasoline Cars for 1906 are a full year in advance of all others. This is not mere assertion. Make the comparison yourself. In no other cars will you find crankshafts machined cold from a solid block of metal and chrome-nickel steel transmission shafts, jack-shafts, gears, etc., nor the 1-beam front axle forged in one continuous piece. In no others will you find the same perfection of body designs, beauty of color schemes and painstaking details of finish. Mark XLVII, four cylinders, 40-45 h.p., double chain drive, price, \$4500 to \$5500, according to body, is the accepted ideal of the American high-powered car. Mark XLVI, four cylinders, 28 h.p., shaft-drive, price \$3000, is unequalled among medium-powered four-cylinder cars. Mark XLIV-2, two opposed cylinders, 18 h.p. shaft drive, price \$1750, we offer as the highest grade two-cylinder car in the market.

Separate Catalogues of Columbia Gasoline Cars, Columbia Electric Carriages and Columbia Electric Commercial Vehicles will be mailed on request; also, special illustrated booklets: "Columbia Chrome-nickel Steel," "Fashioning a Crankshaft," "Consistent Differences in Columbia Cars," "Transmission, Etc."

there had no practical training in real post-office work. And the country should be divided into six or more postal districts, each in charge of a trained superintendent, with general supervisory authority over all postal branches and power to decide many points which now entail delay by reference to Washington.

Third, the budget of more discretion in the postmaster-general as to minor features now tied down by extraordinary and injurious legislative restrictions.

Fourth, and perhaps most important, the creation of a permanent Board of Actuaries in the Post-office Department, with salaries sufficient to command and retain the best talent, to constitute a tribunal advisory to the head of the department in all matters relating to important purchases and contracts; to all proposed innovations and improvements; in any branch of the service; to all friction and conflicts between different bureaus and divisions—with a view to preventing harmony of purpose and stimulating the highest degree of efficiency.

Quaint Customs of the House of Commons

(Continued from page 189.)

silk hat. There were roars of laughter. An Irish member immediately arose and gravely said: "Mr. Speaker, permit me to congratulate the honorable gentleman upon the happy circumstance that when he sat on his hat his head was not in it. This witty remark upon the dignity of the House, and the Speaker called 'Order, Order,' amidst roars of laughter.

Gladstone Out of Order

It is a curious custom that in Parliament members can wear their hats when they are seated on the benches, but when they rise from their seats, whether to address the House or to walk across the Chamber, they must uncover. A new member usually gets somewhat mixed up regarding this unusual custom, and he is frequently greeted with shouts of "Hat, hat." Mr. Gladstone never brought his hat into the House. But there are certain occasions when a member is obliged to put a question of order to the Chair seated with his hat on. One evening Mr. Gladstone had to address the Chair, and fearful of the rule rose in his seat instead of remaining seated with his hat on. A loud shout of "Order, Order," from all parts of the House forced him to his seat, and he was obliged to put on his head the hat of one of his lieutenants. The Grand Old Man's head was of abnormal size, and the comical effect of the hat drew forth loud laughter.

Forty members constitute a quorum. But the meetings of the House proceed uninterrupted even although there is but one member present. The Speaker himself cannot take notice of the absence of a quorum. When a member draws attention to the fact, an electric bell is rung, and the members rush in from the dining room, the smokers, and the lobbies, and then the House is counted. If there are less than forty, the Speaker leaves the chair in silence, and the sitting ceases to an end.

Ejecting a Future King

As every American visitor to the House of Commons knows strangers are only admitted on introduction in the "Strangers' Gallery." Women sit behind, perfumed with the odor of the nuptial end of the House from the men. If attention is drawn to the fact that "strangers are seated," the galleries must be cleared. In 1873 this unfortunate power was slightly modified, and now a resolution of the House to receive strangers is necessary. The occasion of the change was when the Prince of Wales (the present king) was present in the Strangers' Gallery, occupying a seat in the Peers' section of it. Mr. Joseph Stansfeld, the well-known Irish member, to the unpopularity as well as to the prominence of a crowded House, informed the Speaker that he "seated strangers." The strangers were immediately removed, including the future king of England.

POLE BAKER

BY

WILL N. HARBEN

Author of "Abner Daniel," "The Georgians,"
"The Substitute," etc.

POLE BAKER will be remembered as a humorous character in "Abner Daniel." In this new novel he is the central character—a shrewd, kindly, shirt-sleeves philosopher, with some capital yarns to tell as well as an important part to play in the love affairs of a young couple with which the narrative is chiefly concerned. Indeed, were it not for his genius for meddling in other people's affairs to their own ultimate good, the romance of the young lovers would not have ended so happily. The characters and scenes are again those of Georgia, and the same good-humored, delightful narrative winds leisurely through this story as in its popular predecessors.

HARPER & BROTHERS, NEW YORK

The CONQUEST of CANAAN

By Booth Tarkington

Easily the biggest
and best thing Booth
Tarkington has done.
—*Chicago Post.*

A thoroughly entertaining and readable romance. It is not only the best piece of work from Booth Tarkington's pen, but it is one of the most enjoyable stories and stands out against the mass of fiction that is swamping us. It is the story of the triumph of the village ne'er-do-well in contrast to the downfall of the tyrannous local magnate. All are thoroughly American figures, drawn true to nature and vivid. The episodes are exciting and lifelike, and told with a skill that carries the reader along.—*New York Sun.*

THE BUSY SHOWMAN.-V.

This, Ladies and Gentlemen, is my most famous world-renowned Pantomime quartet. This will now sing the stirring ballad known as "Dig, ye Tarrriers, dig, dig, ye Tarrriers, dig, dig, ye must dig each day in the man and you both pick and shovel and know and dig, dig, ye Tarrriers, dig, dig." Pay attention to the pitch-and shape on the workman's song! He is dead only to let a thousand dollars be in hand. Now, then? Are you ready—and whether you are or not "Dig, Ye Tarrriers, Dig!"

COMMENT

MANKIND, in the large sense that includes womankind, is very much interested in the marriage of the President's daughter, which takes place at the White House this week. Even if there were no newspapers, and the news of the wedding had to get about by word of mouth, it would still excite interest, because to be interested in weddings is the habit of man. In all stages of civilization and also in the savage state it is customary to make as much fuss over weddings as is convenient, and to make a particularly large demonstration over weddings in high life. The higher the life the greater the stir—that is the rule of the world, and that the stir over Miss Roosevelt's wedding should be exceedingly penetrating merely accords with that rule. From Washington as the centre of disturbance the waves of it go out over the country, losing but little of their force until they reach the Pacific. The oceans check them a little, but they travel on, sweeping easterly and westerly in perceptible undulations until they meet somewhere in western Asia. Perhaps the President would prefer that they did not reach so far, but there is nothing for a President to do when his daughter is married except to take things as they come, including all the jeweller's boxes, and all the international offerings, and let the world have things a good deal its own way. We hope that, once the President's daughter is married, our enterprising press will not deny to her husband and herself that reasonable measure of neglect which even an Ohio Congressman is entitled to claim for himself and his bride. The woods at this season are inhospitable, and our young friends should not be compelled to take to them to escape the attention of the curious. Reporters ought not to dog them; snap-shooters ought not to persecute them; crowds ought not to gawk at them. The politest way to treat young married people is to abandon them to their fate. We hope this much civility will be shown to Mr. and Mrs. Longworth.

The resolution adopted on February 3 in a caucus of Democratic Senators to the effect that every Democratic Senator must vote against a ratification of the pending treaty with Santo Domingo has raised the interesting question whether such a resolution does not violate the spirit and intent of the Constitution. The section dealing with the subject provides that the President shall have power, by and with the advice and consent of the Senate, to make treaties, provided two-thirds of the Senators present concur. That is to say, the Constitution gives the power of defining a treaty to one-third of the Senators present, plus one. The aim of the resolution passed in the Democratic caucus is to give the defeating power to a much smaller fraction. In fact, the drastic part of the resolution was carried by a vote of ten to four. It appears, then, that ten Senators arrogate to themselves the power of defeating a treaty, although more than the requisite

two-thirds of the Senate may be known to favor it. How can a conscientious Senator submit his private judgment to caucus action? How can he reconcile such an act with his oath of office? Is not his duty to the nation paramount to his duty to party? If he honestly believes that, from the viewpoint of the nation's welfare, a given treaty should be ratified, he ought to vote for it, and he cannot shift responsibility for failing to perform his duty upon a fraction of his colleagues because they have managed to control a party caucus. Of course this question has been mooted many a time during the hundred and ten years since the Jay treaty narrowly escaped defeat. Over and over again the caucus has failed to control some individual Senators, who have held that the national interests required the ratification of a treaty or the passage of a bill. It looks as if similar independence would be exhibited now, not only by Senator PATTERSON, of Colorado, and Senator CLARK, of Arkansas, but also by Senator McENARY, of Louisiana, and Senator TALAMON, of Florida. Their four votes, added to the full Republican strength, would just suffice to make up the fifty-nine votes required. We say fifty-nine, because one of the seats belonging to Delaware is unoccupied, and because Senator BURTON, of Kansas, is not expected to vote or to be paired. It is thought possible that, in addition to the four Senators named, two or three of their Democratic colleagues, who disapprove of the caucus resolution, may be found absent from the Senate-chamber when the voting takes place. In that event, of course, a smaller number than fifty-nine could ratify the treaty.

During the week ending February 3, conflicting reports came from Washington concerning the President's attitude toward the Hepburn bill. On the one hand, we were told that he had threatened the Senate with an extra session in the event of its failing to pass that measure. With equal positiveness we were informed that he was inclined to concur with the Senatorial opponents of the bill in thinking that a railway rate, fixed by the Interstate Commerce Commission, ought to be suspended pending an appeal to the courts. Three seemed to be as much authority for one report as for the other. Senator DOLLIVER, of Iowa, who has introduced in the Senate a bill corresponding to that brought forward by Mr. Hepburn in the House, has since denied earnestly that Mr. ROOSEVELT has been impressed with the argument imputed to Senator CRANE, of Massachusetts, that to make the commission's rate operative before it had been upheld by the courts might split the Republican party. Mr. JOHN S. WILLIAMS, the leader of the Democratic minority in the House, also refused to credit the alleged change of mind on the part of the President. He pointed out that Mr. ROOSEVELT had achieved a reputation for marching up a hill, but that there was no record of his marching down. He declared that the President could not, without dishonor, abandon an essential feature of the proposed rate-making legislation after all he has said and done, and after the Democrats, relying upon his steadfastness, have helped to report a bill expressing what were supposed to be his views. At the same time, Mr. WILLIAMS must know that the Hepburn bill's chance of passing the Senate without amendment is small. The fate of other administration measures—the Statehood bill, for instance—also remains uncertain, although Senator BAKERMAN is making a sturdy fight for the admission of Arizona and New Mexico as one State.

It is well known that Mr. L. FAULETTE, of Wisconsin, was chosen a United States Senator at a time when he was holding the office of Governor. Mr. DAVID R. HILL, of New York, was sent to the Senate under similar circumstances. It is understood that Governor STOKES, of New Jersey, desires to follow their example, and to take that one of New Jersey's seats in the United States Senate which is now occupied by Mr. JOHN F. DUNN. In that event he would be elected Senator in January, 1907, and would take his seat on March 4 of that year, although his term as Governor does not expire until January, 1908. There is some doubt as to whether such a proceeding is authorized by the State Constitution of New Jersey, which provides that a Governor shall not be elected by the Legislature to any office under the government of the State of New Jersey or of the United States during the term for which he shall have been elected. The right of LYMAN THURMAN, of Illinois, and of CHARLES J. FAULKNER, of West Virginia, to take the seats in the Senate

to which they were chosen was challenged on the ground that they were occupying in their respective States judicial offices at the time of their election, and that their State Constitutions forbade them to be elected to any other office during the term for which they had been placed upon the bench. Both THOMAS and FULANER, however, were allowed by the Senate to take their seats on the ground that no State can prescribe any qualifications for the office of United States Senator in addition to those declared in the Constitution of the United States. We assume, then, that if the New Jersey Legislature shall see fit to elect Governor STOKES a Senator, he will be allowed to take his seat. There will also be a change in Alabama's representation in the Senate if the younger Democratic politicians of that State have their way. They have passed a law providing for the nomination of United States Senators at primaries to be held next August. A number of candidates have already entered the field against Senator MONROE, who is nearly eighty-two, and against his colleague, Senator PETTIS, who will soon be eighty-five. Notwithstanding their advanced age, both Senators are vigorous, and have recently delivered some remarkable speeches. Should Senator PETTIS be elected, and should he live out the term ending on March 3, 1915, he would then be almost ninety-four years old, but he would still be seven years younger than Senator DAVID WARR, of the Dominion Parliament, who died at the age of one hundred and one.

Attorney-General MOORE was in Chicago on February 4, and declared in an interview that Commissioner GARFIELD never gave the Department of Justice any evidence against the meat-packers. He says the commissioner told them he would not, and he is a man of his word. Attorney-General MOORE was also at much pains to dispel the current notion that there has been or is any friction between the Department of Justice and Commissioner GARFIELD, or that the department has any intention of making Mr. GARFIELD a respondent. Mr. MOORE is, at the same time, convinced that if the packers shall obtain immunity in consequence of the unsworn testimony that they gave Commissioner GARFIELD, it will be impossible for the government to proceed against any of the railroads of the country on rate cases, or other violations of the Interstate Commerce Act, because most of such proceedings have been taken after evidence had been obtained in a similar manner. Under the circumstances, it will be surprising if the Attorney-General does not return to Chicago to make the final argument before the case against the packers goes to Federal Judge HENRICKS.

There seems to be no longer any hope of averting the application, on March 1, of the maximum duties provided by the German tariff to imports from the United States. It has thus far proved impracticable to make, by Executive order, any changes in our customs regulations which would be accepted by the Berlin government as an equivalent for the desired concession of minimum duties. It is understood that our State Department was willing to agree that, as a basis for valuing imports from Germany, we would take, not the domestic consumption price in that country, but the export price, which is considerably lower. To this concession our Treasury Department is believed to have refused assent, on the ground that it could not be confined to Germany, and that, by its sweeping application, our customs revenue would be materially depleted. Assuming, then, that, after March 1, our exports to Germany will have to pay the maximum duties, we may well ask ourselves just what difference it will make. It is rather our prospective than our actual commerce with Germany that will be seriously affected. We shall not be able to increase our exports of manufactured goods to Germany, but these are relatively inconsiderable. Our total exports to Germany in 1904 were valued at about \$236,000,000, but to this sum nearly \$144,000,000 was contributed by raw materials, and by certain food-products which are, and, unless we retaliate, will remain on the German free list. The dutiable products, including cereals, lard, meat, and dried fruit, such raw materials as petroleum, lumber, and tobacco, were valued at rather less than \$92,000,000 put together. A considerable fraction of the dutiable raw materials and dutiable food-products will, in any event, have to be taken by Germany, so that the possible curtailment of our exports is still further reduced. It should be borne in mind, however, that

if we should undertake to retaliate against Germany by imposing twenty-five per cent. above the DINGLEY rates on goods coming from that country, the Berlin government would be authorized, under its tariff, to levy on American goods, which now figure on the free list, duties up to the amount of fifty per cent. *ad valorem*. It is just as well that Congress should remember that Germany holds this weapon in reserve, although, so far as the raw materials now on the free list are concerned, German manufacturers would, of course, protest vehemently against the use of it. On the whole, a review of the situation may lead to the conclusion that it is better to submit to the imposition of maximum duties on a fraction of our exports to Germany than provoke a suppression of the free list.

The Canal Commission has reported in favor of an 85-foot-level lock canal, instead of the sea-level canal recommended by the board of consulting engineers. There is reason to believe that the commission's report will be endorsed by both Secretary TART and by President ROOSEVELT. It is possible, however, that the artificial waterway will be constructed not by the commission, but by contract. It is certain that if the work of excavation had been entrusted to contractors, a decision as to the type of canal would have been reached long ago, and an immense amount of "dirt" would have been "dug." As it is, we have expended nearly twenty million dollars, and have little or nothing to show for it in the way of excavation, although undoubtedly the sanitary conditions of the isthmus have been slightly improved. That is demonstrated by the relatively low sick-rate among the whites, and by the fact that at present there is not a single case of yellow fever in the canal strip. It seems that there are now some 17,500 laborers in the canal zone, and that quarters have been prepared for 7000 more. No further attempt is to be made to secure a supply of labor from Jamaica, because the laws of that colony require a head-tax to be paid to the colonial government for every laborer exported, and the employer would have to pay for his transportation to and from the isthmus. The commission's intention is hereafter to procure workmen from Colombia, Cuba, Barbadoes, and Martinique. Should, however, the canal be built by contract, the contractors may insist upon being permitted to employ Chinese. It seems that \$20,000,000 more will be immediately needed in the course of some weeks, by which time the recent appropriation of \$11,000,000 will have been exhausted. That will make \$41,000,000 spent, or to be spent, in preparatory work.

Although, according to the latest reports from St. Petersburg, Count WITTE seems to have suffered some temporary loss of influence at Tsarskoe-Selo, the reactionists having for the moment realized the sovereign's ear, it is probable that he will not be dismissed from office until the National Assembly shall have met, and until the large loan of money required by Russia shall have been procured from France. European bankers, who do not forget what he accomplished as Minister of Finance, when he immensely increased Russia's revenue, have more confidence in Count WITTE than in any other of his countrymen. The budget for 1906 shows that Russia will need to borrow this year \$250,000,000 in order to make both ends meet, and that the additional expenditure imposed in 1907 by the completion of the evacuation of Manchuria will amount to many scores of millions. It is therefore about \$400,000,000 that Count WITTE has undertaken to borrow in France, and we are told that the French bankers have agreed to furnish the money on certain conditions—to wit, that the National Assembly shall meet promptly, and shall agree to recognize all former loans, as well as the new loan now requested. If Count WITTE remains Prime Minister, the conditions will in all likelihood be satisfied, and the money will be forthcoming. In any other event Russia will be threatened with bankruptcy.

Among the measures which are expected to be urged upon the National Assembly is the requirement by purchase of tracts of land valued in the aggregate at \$150,000,000, which are to be distributed among the peasants. As we have formerly pointed out, many of the allotments, made more than forty years ago at the time of the abolition

of serfdom, were too small, and even where they sufficed at first, they are no longer adequate to the support of the increased population. The date of the elections for the National Assembly has not yet been fixed, but it is settled that the method of choosing delegates to the State Duma will be indirect. The primary voters will designate a certain number of secondary electors. The latter, in their turn, will name a still smaller number of tertiary electors by whom the delegates will be chosen. This is an even more circuitous mode of expressing the popular will than is followed in Prussia, where the members of the Chamber of Deputies are selected by the secondary electors. It matters not much, however, how the first National Assembly is constituted. It will undoubtedly demand, and probably will be allowed to exercise, the right of remodelling the fundamental electoral law. That is what the French States-General did in 1789, although that body was even less representative of the mass of the people than will be the State Duma.

As we go to press, the Algeiras Conference has arrived at a harmonious settlement of certain minor questions; but an agreement between France and Germany on the crucial point,—to wit, the control of the semimilitary police to which it is to be entrusted the maintenance of order in the interior of Morocco,—seems still remote, if not improbable. France, on her part, desires to organize and direct the force that would be employed for the purpose, while Germany would prefer to place it under the supervision of some disinterested third power, or of an international board. A perfunctory suggestion has been made that the function should be delegated to Italy, but the suggestion was evidently unwelcome to the Italian representative, the Marquis VISCOTTI-VENOSTA, who made it clear that he would like to further the wishes of France, in consideration of the promise that his own country shall have a free hand in Tripoli. On its face, the international control advocated by Germany seems equitable, and, for this reason, it is expected to have the support of the United States. That a majority of votes can be secured for it, however, is not, at present, believed, and for this reason it seems not improbable that the conference will prove abortive. France would rather leave the Sultan to maintain internal order in Morocco as best he can, than see the task relegated to an international force. Even should the conference prove entirely futile, there is no longer any apprehension that the relations between France and Germany would become strained. Emperor WILLIAM will be satisfied with having taught the French government a lesson, which M. DELCASSÉ seemed to avoid,—the lesson,—namely, that the future of Morocco cannot be settled without Germany's consent.

It looks as if the Unionist party in the new House of Commons might be split into factions if ex-Premier BALFOUR persists in refusing to adopt Mr. JOSEPH CHAMBERLAIN'S tariff programme. The two statesmen had a conference on Friday, February 2, but it came to nothing. Mr. CHAMBERLAIN is understood to have declined, on the score of age, to act as leader of the Opposition, and to have suggested that another tariff reformer, Mr. WALTER H. H. LONG, formerly President of the Local Government Board, should undertake the function of ostensible leadership. To this arrangement also Mr. BALFOUR is said to be unwilling to consent. Almost all the Unionist newspapers seem to be on Mr. CHAMBERLAIN'S side, and there is little doubt that, as against Mr. BALFOUR, he could control the Conservative as well as the Liberal-Unionist Association. Mr. BALFOUR is to stand properly for one of the seats belonging to the City of London proper, which was carried at the recent election with an overwhelming majority by Mr. A. G. H. CHURCH, but which, out of deference to the ex-Premier, he has resigned. There is no doubt that Mr. BALFOUR can beat his Liberal competitor, provided he can rely on the support of Mr. CHAMBERLAIN'S friends. But suppose they should decide to oppose him, as they did the Conservative free-trader Lord HILTON CROMBIE. In that event Mr. BALFOUR might be subjected to the humiliation of exclusion from the House of Commons, and he would have to take refuge in the House of Lords. Much interest is felt in Britain concerning the course which Lord CROMBIE is likely to pursue. He is, of course, eligible to the House of Commons, because, like Lord PALMERSTON, he is an Irish peer.

In the *Sun* of February 4 was "A Last Word" from Dr. GEDDOW SMITH, about the present state of religious belief as he observes it. It is one of many letters from Dr. SMITH on that subject, and in spite of its title we cannot believe it is the last one, because the subject is just as good and just as interesting as it was when he began expounding it. He is sure to have plenty more to say about it, and we guess he will go on saying. In this latest letter from him occurs this passage:

In the ministries of the different churches are a number of men, dedicated to a spiritual calling, whose character and learning, if they were free, might be very helpful. But they are in bondage to tests under which many of them wriggle, treating in shifts of interpretation whereby they do more harm than good. It is surely the interest of all who desire the truth that clerical thought and speech should be set free.

This suggestion accords with a sentiment that grows more and more prevalent in all the churches, and of the existence of which in the Protestant Episcopal Church there has recently transpired an interesting bit of evidence. Last May, in England, seventeen hundred Church of England clergymen put their names to a document which sets forth that observing the present unsettled state of religious opinion, which, for the clergy especially, connects itself with the study of the New Testament, and observing also a tendency to treat the full discussion of any questions arising from such study as inadmissible for the Church of England, and to commit its clergy as a body to non-critical views of the New Testament Scriptures, the signers record their desire "that, as many of the clergy have already, with advantage to Christian faith and with a general assent on the part of their rulers, welcomed important results of a patient, reverent, and progressive criticism of the Old Testament, so the clergy, as Christian teachers, may now receive authoritative encouragement to face the critical problems of the New Testament with entire candor, reverence for God and His truth, and loyalty to the Church of Christ." The document has five paragraphs, all interesting, but the gist and practical significance of it is in the one quoted. This communication after receiving, as said, 1700 signatures of clergymen in England, has been brought to this country and circulated among the Episcopal clergy and laity. Among about seventy persons who have already signed it and whose names have been published, are such eminent laymen of this city as R. F. CUTTIS, E. H. CROSBY, BRAMM MATTHEWS, SEYMOUR LOW, G. F. PRAYNOR, E. P. WHEELER, E. M. SHEPARD, GEORGE H. SCHUMER, and SEYMOUR THAYER. Four or five New York clergymen have signed, and thirty or forty other clergymen—a most interesting list from all over the country. We take it that the gathering of signatures has only begun, and that the list of signers will presently be long and significant enough to carry much weight.

A chief incentive to the movement in England was (as expressed in the letter) the "few lost the door of ordination should be closed to men who patiently and reverently apply historical methods to the gospel records, and so an increasing number of men both spiritually and intellectually qualified should be lost to the high office of the ministry." It will hardly be questioned that many able men who would be naturally inclined to enter the Protestant ministry are kept out of it nowadays by the fear that, once ordained and settled in the ministry, they will not be free to think the thoughts and offer the conclusions that are suggested by contemporary scholarship. They are not willing to enter what for them might prove a jagged profession. It can hardly be hoped that the Protestant ministry will regain its vigor while this fear prevails. In time, creeds will adjust themselves so as to be in harmony with accepted knowledge. Meanwhile it goes hard with clergymen who are constrained to accept knowledge which is inharmonious with parts of the creeds to which they have subscribed.

It is to be noticed, however, that clergymen differ very much in the degree in which they are bothered by the new knowledge, so called, and its apparent conflict with parts of the existing creeds. It is not so much that some of them appreciate more than others the importance of the new knowledge and the new methods of criticism, so that individuals have different points of view. One says, "I see errors, and I must declare them." Another says, "I see errors, but they do not

affect my faith in the essential truth of the religion to which I am devoted. They will be righted in time. Meanwhile my work cannot wait, and I must do it." Still another says, "I hear of errors, but I do not believe what I hear." So noble and conscientious men leave his ministry or invite a trial for heresy, and another goes on with his ministry with a spirit very little disturbed. And meanwhile a vast deal of church work is done, and well done, as got notice last week when the retirement of Parson RAYMOND from the rectorship of St. George's Episcopal Church in New York was announced. When Dr. RAYMOND took charge of St. George's, in 1883, it was a flourishing church that seemed about to collapse. When the breakdown of his health in 1905 compelled him to leave it, it had 7000 members, and with its extraordinary system of parochial enterprises was one of the strongest and most notable and admirable churches in the country. There are at least two other Episcopal churches in New York whose progress and development have kept pace with St. George's, besides many others of that and other Protestant denominations that are active and prosperous, and this in spite of the disturbance of many minds in the effort to reconcile new knowledge with ancient tests of faith. In the end the tests will have to square with what contemporary piety and learning accepts as true. The slow process of adjusting tests to faith is now going on, and when it is accomplished there will be better times for young ministers, and probably more desirable young ministers will offer. Meanwhile, as Dr. SMITH says, it is to the interest of all who desire the truth that clerical thought and speech should be free.

Is Boston really, though not officially, the second city in the United States with regard to population? The question is answered in the affirmative by the *Boston Globe*, and the corroborative statistics furnished are certainly impressive. The *Globe* begins by propounding the principle, which seems reasonable enough, that the numerical importance of an urban nucleus is to be measured by the number of people residing in an area the radius of which is fifty miles from the hub of the wheel, a distance which can be traversed in about an hour. If this test of numerical importance be accepted, Boston undoubtedly ranks next to New York, which metropolis, however, it can never overtake, because within fifty miles west of the City Hall there are upwards of a million citizens in New Jersey. There is, on the other hand, no doubt that the suburban district surrounding Boston is more densely populated than is that which environs Chicago or Philadelphia. A fifty-mile circle drawn around the Boston State House would include not only Boston proper, but three other cities containing over 100,000 inhabitants each; ten cities containing more than 50,000 apiece; 25 comprising more than 25,000; 46 including more than 10,000; and 92 more than 5000 each. The total population encompassed within such a circle would be 3,080,159. Were the boundaries of Philadelphia thus expanded, there would be included four cities with more than 50,000 population each, 9 with 25,000, 17 with 10,000, and 44 with 5000. The aggregate population would be 2,707,644. Within a fifty-mile circuit of Chicago's City Hall, on the other hand, the population does not exceed 2,688,415, or, in other words, is considerably smaller than that of a similar area circumscribing Philadelphia. There is but little doubt that, comparatively, the whole population of eastern Massachusetts comprised within the fifty-mile radius will be incorporated with the city of Boston.

As the decades pass, however, Boston is sure to be left more and more behind by New York. The Borough of Richmond alone can accommodate millions of inhabitants more than the Borough of Manhattan, and there is no visible end to the growth of the Borough of Brooklyn, of Queens, and of the Bronx. Besides, it is only a question of time when the American metropolis will expand northward and westward. Westward expansion is legally impossible, but usually, socially, and economically a vast area in New Jersey contained within a fifty-mile radius will be incorporated with the city of New York. It seems to be as certain as anything prospective can be that by 1950 the City Hall of New York will be the centre of a larger urban population than the Tower of London. The whole of the region, however, really tributary to the Borough of Manhattan is nobody ever to be controlled by a single municipal government, because the State of New Jersey

will never consent to cede its most populous and opulent section to the Empire commonwealth. We may soon witness, nevertheless, a Greater Jersey City, which shall include not only Hoboken and Bayonne, but Paterson, Newark, and Elizabeth.

Young Mr. ROCKEFELLER'S Bible class is one of the most interesting institutions in the country. We are always glad when its leader seems to us to expound sound moral doctrine; always sorry when any detail of his views seems to lack validity. The papers reported that on February 4 he talked about temptation, using JOSHUA as an example of successful resistance to it. He counselled his hearers to avoid temptation. One paper quotes him as saying: "For my part, I believe that the ordinary every-day temptations that beset us are enough." So they are; enough and plenty. But did he quote, with sympathy, as another paper reports, the confession of a fallen youth who said his downward career began "when he drank his first glass of beer"? We should class glasses of beer among the ordinary every-day temptations that beset us, and which are rather to be dealt with with discretion than fearfully shunned. A lad whose first glass of beer sends him sliding towards Gehenna isn't sound stuff. The fall of such a one does not illustrate the dangers of temptation, but the dangers of ignorance and of a shielded inexperience. Don't teach a boy that beer is a deadly and wicked beverage which all good people should avoid. Teach him that beer is beer, and it behooves him to look sharp how he feeds on much with it. Without temptations there can hardly be manhood or character, but the ordinary temptations are enough. To avoid, as far as possible, the dangerous ones, to deal warily with the common ones, and to kick the mean ones out of the road—is not that, or something like it, the right way? Shield children from all possible evil; but as for men—what comfort is it possible to take with men who have to live cased in cotton-wool?

In last week's issue of this paper there was a letter inspired by a trifling editorial allusion to Guam, in which the writer set forth details of the ill case of that small and distant possession of our large and propinquacious country. He said we had neglected Guam; and he quoted the report of Civil-Engineer Cox, approved and published by the Navy Department, to the effect that in the seven years of our control of little Guam we had done much worse by it than Spain did. This report says that Guam's schools have been entirely closed for years, its laws are in chaos, its currency is not legal, its tariff is illegal, the appeals of its American governor are annually ignored, its steamer line to Manila has been discontinued, the transports that touch at it won't take freight, so that its trade depends upon haphazard schooners, and its letters from Manila have to come by way of San Francisco because the transports don't stop at Guam on their way back. This is a disgusting showing. We are sorry for Guam. Indeed, we are sorry for any speck in the sea, large or small, that depends for the common comforts of government on the attention of the American Congress.

There the carriage was dismissed, and a little later Miss ROBERTS, with Mrs. GORDON and the Misses MITCHELL, started to walk up Fifth Avenue to Mrs. Gordon's home. On their way up-town they were so much amused by men with cameras that Miss ROBERTS stopped and asked them to give up taking pictures of her. No attention was paid to her request.—*The Sun*, January 21.

One may not speak in the street to a lady whom one does not know, but it seems to be lawful to snap a camera at her. Is not that the more injurious impertinence of the two? The rights of the law-abiding citizen as against the snap-shooter seem in need of definition and adjustment. It is obvious that men with cameras who snap-shot ladies on the street against their will and even in spite of remonstrance should be promptly arrested. So much will hardly be disputed, but how much further should the protection of the most defenceless be carried? When the snap-shooter is a nuisance he is a nuisance that requires immediate abatement if he is to be abated at all. Would it be right to make a law classifying snap-shooters with moonshiners, as creatures that policemen must, and any citizen may, smash with the consent of the State the instant they begin to be annoying?

Trust Companies, and the Demand for Cash Reserves

It is a question of great importance not only to the City and State of New York, but to the American community at large, which is examined in the February number of the *North American Review* by a well-known financier, Mr. THOMAS W. YUTEN, who was for a number of years President of the United States Mortgage and Trust Company, and who organized the Trust Companies Association of the State of New York, of which association he was the first President. The question is, Should trust companies, like banks, be required by law to maintain a definite "cash reserve," by which is meant an emergency fund, held in vault, independent and unavailable, except to meet unexpected demands by depositors upon an institution's resources? Unquestionably, trust companies, like banks and savings-banks, are financial institutions. Does it follow that the same methods of control and regulation should be applied indiscriminately to them all? It is certain that nobody would think of applying to savings-banks the rules for the conduct of business required of, or voluntarily adopted by, trust companies. Mr. YUTEN undertakes to prove that the distinctions between savings-banks and trust companies are not a whit more marked than those which exist between trust companies and banks.

Mr. YUTEN begins by asking: Where comes the demand that, as regards a "cash reserve," trust companies should be put upon the same footing as banks? Have their depositors complained? Does their record justify the demand, or does it, on the contrary, indicate that no additional protection to depositors is needed? Mr. YUTEN submits that the enormous increase of trust companies and trust deposits within the last few years amounts to an emphatic vote of public confidence such as has been rarely, if ever, paralleled in the financial history of the country. In the State of New York ten years ago there were but thirty-eight trust companies, with an aggregate capitalization of \$20,000,000, and with aggregate deposits of \$307,000,000. To-day there are eighty-one trust companies, with a collective capital of \$63,000,000, and with total deposits of \$1,137,000,000; the increase of deposits in ten years having been \$830,000,000, or approximately 270 per cent. In the City of New York alone the increase in deposits of trust companies during the decade has been nearly 247 per cent., as compared with a contemporaneous increase in the deposits of national banks within the same metropolis of only 136 per cent. Evidently, though they are not subjected to any legal restriction as to cash reserves, the trust companies are quite as solidly established in public confidence as are the national banks, for which reserves are compulsory.

This is a striking, but not the only, proof, that the agitation for the maintenance of cash reserves by trust companies is unwarranted and fictitious. If, in the methods of conducting the business of trust companies, there were any radical unsoundness, it is certain that, during a period extending over one-third of a century, and covering more than one financial crisis, the unsoundness would have received practical demonstration. One would say that many failures and disasters must have occurred. As a matter of fact, the record of the trust companies of New York shows that for a third of a century, during which they have handled millions upon millions of dollars, not a dollar has been lost by depositors. From 1871 to December 31, 1903, out of more than a hundred trust companies incorporated in the State of New York, only two have failed, and each of these paid every depositor every dollar of his deposits. In the same interval of time there were in the State of New York no fewer than seventy failures of national and State banks, involving losses of millions of dollars to depositors. These contrasting records do not indicate that trust companies afford less security to depositors than is afforded by banks, and that, consequently, additional legislation is needed to increase the safeguards.

Not yet have we discovered any ground for the demand that trust companies should be compelled by law to maintain a fixed cash reserve. Yet, obviously, there must be some motive for the demand. Mr. YUTEN suggests that we may find it in the fact that the banks have been forced by the competition of the trust companies to pay interest on deposits. We are reminded that, previously to the great growth of trust companies, the payment of such interest upon accounts was a lost unknown. The trust banks practically conferred power on the Interstate Commerce Commission to initiate rates, for it fails to report Section 13 of the old Interstate Commerce Act. Moreover, if a rate fixed by the commission is to become forthwith operative, and to remain so until pronounced unreasonable by a court, the function of initiative is unquestionably exercised. The Hepburn bill tends to provide, as its framers were twice recommended by the President to provide, for an immediate review of a rate-making order by a court. In the third place, it puts into the hands of seven men the power to determine whether or not they shall eliminate the preferential rate due to advantage of facilities intermedial with which preferential rate is the interest of every business between the 22d

stand the popularity of trust companies, and the dissatisfaction which an attempt to transmute their existing efficiency by legislation would provoke. That this dissatisfaction would find a potent talismanic value is evident when we consider that the trust company depositors in the State of New York now number 250,000, representing the productive element of one-eighth of the whole population of the State.

It is well known that in February, 1903, the clearing-house representing the banks of New York City undertook to dictate to the trust companies within the same area how they should conduct their business, by arrogating the power to fix the cash reserve to be carried by trust companies, making use of its clearing facilities, at not less than ten per cent., nor more than fifteen per cent. of their deposits. Thereupon, with few exceptions, the New York City trust companies withdrew from the clearing house, with no resulting embarrassment to themselves, or inconvenience to their depositors. Mr. YUTEN points out what would have been the practical result of submission on the part of the trust companies to the dictation of the clearing house. If the ten per cent. minimum had been applied, the trust companies would have tied up in their vaults on November 9, 1903, cash to the amount of more than \$101,000,000, although, as a matter of fact, they had less than \$250,000,000 tied up at that date. That is to say, had the trust companies submitted to the clearing-house rule, there would have been a withdrawal from circulation an additional amount of \$81,000,000. If, however, instead of the minimum, the maximum limit of fifteen per cent. of the gross trust company deposits had been enforced, the idle and unproductive cash lying in the vaults of the trust companies would have amounted to \$130,000,000. That is nearly one-tenth of the money in actual circulation in the United States—of the money, *i. e.*, which is not locked up in the vaults of either the United States Treasury, or in the national banks. That the withdrawal of nearly ten per cent. of the circulating medium, and the resultant curtailment of the loaning power, would have had a disastrous effect is evident from the rates at which money actually ruled in December.

The truth is that already the restrictions regarding trust company investments are of the most rigorous character. The law of the State requires that the capital shall be invested in bonds and mortgages on unencumbered New York State real estate to the extent of not over sixty per cent. of the value thereof, or in stocks and bonds of the State or of the United States, or of any county, or incorporated city in the State. A trust company may not hold stock in any private corporation in excess of ten per cent. of such trust company's capital, surplus, and undivided profits. In addition to such rigorous restrictions, regulations requiring trust companies are required to keep a deposit of securities with the State Superintendent of Banking, which, in the case of the trust companies of the City of New York alone represented in 1902 nearly \$6,000,000. No security of the kind is exacted of either national or State banks.

The further point is made by Mr. YUTEN that if the banks really feel that additional precautions are needed for the security of deposits in trust companies, and that the lack of a cash reserve in the trust companies' vaults is a menace to depositors, they have it in their own power to remedy the shortcoming. By the simple process of refusing to pay interest on trust company deposits, they could force back into the trust company vaults the cash reserve which, as they allege, it is so useful to keep there. No such step has ever been taken, nor, so far as we know, contemplated.

Representative Littlefield on the Hepburn Bill

THE most effective arraignment of government rate-making that has been heard during the session of Congress was made on Monday, February 3, in the House of Representatives, by Mr. CHARLES E. LITTLEFIELD, of Maine, who, during his career in the Federal legislature, has achieved a high reputation for independence of thought and action. After denying that there was any genuine demand in the country for the proposed legislation, he accused the two parties in the House of entering into a race with each other to enact something in response to a purely factitious agitation. Prompted by emotion, they had, in agreeing on the Hepburn bill, actually gone beyond the suggestions of President HEOVER in three important particulars. In the first place, the bill practically confers power on the Interstate Commerce Commission to initiate rates, for it fails to report Section 13 of the old Interstate Commerce Act. Moreover, if a rate fixed by the commission is to become forthwith operative, and to remain so until pronounced unreasonable by a court, the function of initiative is unquestionably exercised. The Hepburn bill tends to provide, as its framers were twice recommended by the President to provide, for an immediate review of a rate-making order by a court. In the third place, it puts into the hands of seven men the power to determine whether or not they shall eliminate the preferential rate due to advantage of facilities intermedial with which preferential rate is the interest of every business between the 22d

hantic and the Pacific, and from the Canadian border to the Gulf of Mexico, and upon the maintenance of which the continuance of every business depends. A violent or incompetent commission, he declared, could so exercise that control as practically to destroy the agricultural, manufacturing, and mining interests of the country, and wipe flourishing communities from the face of the map.

Mr. LITTLEFIELD did not impute viciousness to the Interstate Commerce Commission, for the individual members of which, he said, he had much respect, but he did ascribe to it incompetence, and maintained that the record of its work bore out the charge. He recalled that in thirty-two cases of complaint of unjust discrimination, the verdict of the commission had been reversed by the courts. In eight cases the commission had been sustained, and in twenty-four cases not sustained. In other words, there is three times as great a possibility that the commission will be wrong as that it will be right. Is that an exhibit, he asks, on the strength of which Congress should be rallied upon to take the rate-making power from the thousands of men bred to railway administration, and confide it to a government commission, the members of which know and run nothing about either the railroad business, or the other great business interests of the country? Mr. LITTLEFIELD warned his fellow Representatives that if they turned over the railroad business to such inefficient hands, they would not only ruin the railroads, but all those other enormous business interests which had been developed and made possible by the railroads. He did not, of course, contend that the railroads themselves had never made mistakes, but he challenged dispute of his assertion that the commission had made incomparably more. He looked upon the term "reasonable rate," which the commission was to be authorized by the HERRICK bill to prescribe, as a delusion and a snare. As a lawyer he did not hesitate to aver that nowhere in all the realm of legal decision, Federal and State, did there exist a definite scientific rule by which a reasonable rate could be determined. He would not go so far, he said, as to allege that there are absolutely no precedents existing in the railroad business which call for regulation, but he would say that, were the present issue upon the subject fairly, effectively, and continuously enforced, and were the people to apply to the tribunals already provided for the enforcement of their rights, nine-tenths of the complaints upon which the HERRICK bill is based would disappear. Summing up his argument, Mr. LITTLEFIELD objected to making any tribunal at once a detective agency, a prosecuting attorney, and a law high executioner, even though railroads should happen to be the objects and the victims of their action. Finally, he laid his associates beware lest if the efforts of a few men to array the masses against the classes, against invested capital and corporate wealth, should prove successful, a fire might be kindled which the wisest might not be able to extinguish.

Personal and Pertinent

THOMAS FRANK have never appealed very strongly to the German press, and now instead of using "entente cordiale" the Berlin newspapers have translated it into German as "Annerkennungsbestätigung." The test of true friendship is the ability to pronounce it.

GEORGE ANN packed up one fine day recently and went off to Europe. As soon as the dust settled his friends "got busy." They named a town in Newton County, Indiana, for him, and they are now hot-foot after him to run for Congress. That's not the way in which to bury him back to his active health.

It is not generally known that Representative NICHOLAS LONGWORTH, who marries Miss ROOSEVELT this week, has a most valuable collection of violins and is considered an expert in them. His collection includes a fine STRADIVARI, a GUTTAUERS formerly belonging to VIVANTI, and an AMATI, once the property of THOMAS THOMAS.

Three Representatives in Congress, Mr. HOFF, of Pennsylvania, Mr. HARRIS, of Vermont, and Mr. CHENON, of New York, look so much alike that it is sold only their intimate friends can distinguish them apart. Yet when any one of them looks at himself in the glass in the morning and thinks of the other two, he draws himself up and says, "The idea!"

A gramophone record of the voice of the Emperor of Germany has been obtained for preservation in the National Museum at Washington. The despatches announce that it will not be used in any public way during the lifetime of the Kaiser. A padded sound-proof cabinet will have to be designed for it, because report has it that it talks all the time.

We wish the late Mr. CHARLES YERKES had seen fit to write his autobiography, and leave that to the public as well as his fortune and his art collections. He must have had the materials to make a vastly interesting book as well as an instructive one. But the

great fortune-builders do not write autobiographies. That is a job by itself, which can rarely be successfully accomplished except by an experienced writer who is willing to tell all he knows.

The mound-bird, found in Australia, builds the biggest nest in the world. It makes mounds sometimes as great as 150 feet in circumference, in which it buries its eggs five feet deep.—*Indianapolis News*.

DEAN SWENSON—Congratulations; but if you want to see a really pretty bit of earthwork, come over to Pharoah and watch me scratch into the landscape.

THE AMERICAN EAGLE.

The editor of a newspaper in the western part of Kansas is in sore distress. He bore his tribulations in silence for a long time, and then cried out thus against fate with a list of articles which had been "harassed" from him:

One hatchet, one pair of pincers, one shoe last and stand, one office knife, one riding bridle, and a monkey wrench. A portion of the articles have been borrowed without the owner's knowledge or consent, but he needs them just the same. If you had consent to get them, bring them home; if you got them without our consent, just drop them in the back-yard and clear your conscience.

"R. W. H." of Charlottesville, Virginia, communicates to the New York Times a story told by the late Admiral MURRAY, about the much-lamented King CHRISTIAN, of Denmark. After the civil war a small fleet of American ships took Assistant-Secretary-of-the-Navy AUGUSTUS FOX to Europe on an international errand. The fleet visited Copenhagen, and the King invited the principal officers to dinner.

FROM MY seat at dinner [related Admiral MURRAY] I looked out on the pleasant lawn where the band was stationed. After the principal business of the dinner was over, at the invitation of King CHRISTIAN the glasses were filled, and, all the table being at attention, his Majesty arose and, with due formality, proposed "The President of the United States." Glasses were raised, but the King paused, glared over his shoulder, and abruptly left the dining hall. The guests, upon invitation of an aide, resented themselves. In a few minutes I saw the bandmaster come hurriedly into sight, followed by the king, who looked him across my field of view. Shortly after the King returned to the dining hall, took his place at the head of the table, and the guests having risen, again proposed "The President of the United States." As he raised his glass the band struck up "The Star-Spangled Banner." With a satisfied smile his Majesty emptied his glass.

King CHRISTIAN was an amiable man and an easy king. Yet it seems—and Admiral MURRAY's story illustrates it usefully—that with all his amiability he did not lack capacity to set with unshakable vigor when occasion demanded.

A FABLE FOR TRAVELLERS.

Once upon a time there was a man called Smithereens who returned from Europe a mere financial fragment of his former self. With much difficulty, being sore, he putted himself upon the back and rejoiced that at least it had cost him nothing to limp down the steamer's gangplank, because aboard he had certainly fallen among them. No sooner did he rest the sole of his foot in his own home than a great horde of friends and almost-friends did descend upon him with clannishness in divers keys for the gloves, handkerchiefs, stockings, cravats, pipes, and embroidered things which he had been requested to purchase for the hards during his brief sojourn in the camps of the peoples across the sea.

Of a truth did many rail, but few appeared to have been chosen, whereupon those unfortunate ones to whom Smithereens extended only the cold and empty hand and who cared not for their teeth set up a loud grashing until all the place was filled with the sound thereof.

In lowered words did Smithereens seek to square himself, but vocal honey was not what they wanted. Suddenly he saw a great white light, and summoning all before him mounted a table and lifted up his voice in this fashion:

"Friends, dear friends, when I set out upon my journeyings I provided myself with certain small slips of paper, and with the utmost care wrote thereon the commissions with which you had entrusted me, one slip to each of you. Upon a pleasant day I retired to a secluded part of the steamer's deck and there spread the slips before me to take account of my stewardship. Gazing deep into my clothes I drew forth the moneys you had given me to make the many and sundry purchases. I deposited the moneys upon the slips according to the amounts written thereon. When my task was finished I brandished the slips in the sunlight and gave myself up to the joys of contentment."

"Suddenly a great wind arose and hurled itself across the deck where I was sitting, and—and—all the slips which were not weighted down with moneys were blown away and strewn upon the face of the waters."

Smithereens ceased speaking and turned his palms upward, whereat a majority of those who had harkened unto him drew their mouths over their heads and didn't do a thing but snarl out,

This Week's Wedding at the White House

The Marriage of Miss Alice Roosevelt to Representative Nicholas Longworth, of Ohio

By Eleanor Vincent Howard

Washington, D. C., February 1, 1920

THE marriage of Miss Alice Roosevelt to Representative Nicholas Longworth, of Ohio, which takes place in the White House on February 17, has aroused an unparallelled interest throughout the country. Aside from the distinction which attaches to a wedding in the Executive Mansion and the fact that very nearly twenty years have passed since the last marriage ceremony there, Miss Roosevelt's wide prominence and the more or less national rôle she played during her recent Eastern journeyings have just now turned all eyes toward her and her wedding.

A great deal of romance invests the wedding, although Mr. Longworth's courtship seems to have set at naught the old saw about the course of true love. From the time Mr. Longworth came to Washington from Cincinnati his attentions to Miss Roosevelt were sufficiently marked to conjure up all sorts of happy conjectures among their friends. Then came the memorable Philippine trip of Secretary Taft, and it would be fully to say that Miss Roosevelt and Mr. Longworth were the least interesting of the Secretary of War's large golden opportunity for which Tom Unger had waited, and the President's daughter and her suitor did not reach their native shores one second sooner than the unofficial announcement of their engagement. The official statement of their betrothal was not made, however, by the President and Mrs. Roosevelt until December 13 last. But by that time, among their friends, it was an old story.

Representative Longworth also was a member of Secretary Taft's party, and, according to a recent interview, he evidently was as keenly conscious as the other of the courtship which was going on under their very noses. Of it he said:

"When we started on this Philippine trip we noticed Mr. Longworth's friendship for Miss Roosevelt. We also noticed that she apparently liked him, but it was not until we reached Japan that I saw there was something more than mere friendship between them. Some of it became known to us that they were engaged, but nothing was said. The time had not come for the announcement. The charming scenery of Japan is conducive to love-making, and I guess none of it was wasted."

So much has been written recently about Miss Roosevelt that any description of her must seem superfluous. Her popularity, her character, and her polished dignity upon occasions of ceremony are all sufficient to describe her. Mr. Longworth is a young man who, it is said, may expect a career in national politics. He was born at Cincinnati in 1870 and is a Harvard man, as is the President. After graduating law he entered Ohio politics, and served in both the Ohio Senate and the Ohio House of Representatives. In 1913 he was sent to Congress to represent the First Congressional District.

The last place in which the ceremony takes place is one of the most stately in the

White House. It is eighty feet long, forty feet wide, and twenty-two feet high. Until the Monroe administration it was not used for occasions of ceremony. Mrs. Madison made no use of it whatever. History says that Mrs. John Adams used it as a place in which to dry clothes when the weather was unfavorable. But in the Monroe administration furniture for it was purchased in Paris, and it was made ready for use when a chamber of such great size was necessary. Its size and the formal character of its appointments render it unsuited to anything save the largest and the stately functions. It is lighted by three enormous chandeliers, each one having twenty-seven burners, and being thickly encrusted with cut-glass pendants. The four mantels in the room are of black Italian marble picked out with gold, and over each is a tall French mirror elaborately framed. At each end of the room are two other mirrors, which accentuate the size of the chamber. It was in this room that General Grant's daughter Nellie was married to Algermon Charles Frederick Sartoris thirty-two years ago.

The Longworth-Roosevelt marriage is the tenth ceremony of its kind to occur in the White House. The first to be celebrated was that of Miss Todd, of Philadelphia, to Representative John H. Jackson, of Virginia, the great-uncle of General "Stonewall" Jackson. It was in the winter of 1811, during the Presidency of James Madison. Miss Todd was a cousin of Mrs. Madison. The wedding took place in the East Room and was one of the brilliant functions of the year, as Mrs. Madison was the social leader of her day.

In March, 1820, the second marriage in the White House was celebrated. The bride was Miss Maria Monroe, the second daughter of President Monroe. "She was known as the 'Blue Room' to Samuel L. Gouverneur, who was her first cousin on her mother's side. Mr. Gouverneur was at one time Postmaster of New York. This wedding was also a notable social function, although only relatives and a few intimate friends of the family were present. Commodore and Mrs. Stephen Decatur gave the bride the first ball of congratulation, and two mornings later, on March 22, 1820, Commodore Decatur went to Hadesburg, Maryland, to fight his duel with Commodore Barron. He was brought home mortally wounded that same night and died before dawn. The death of Commodore Decatur made it necessary to cancel a number of the entertainments which were to have been held in Washington in honor of Mrs. Gouverneur, and invitations which had been sent out were hastily recalled. A large hall was in haste been given Commodore Porter, the father of Admiral Porter, but this was promptly abandoned when news was received of the death of Commodore Decatur.

In 1820 another wedding was celebrated in the White House. It was that of Miss Helen Jackson and John Adams, the son and private secretary of President John Quincy Adams, and elder brother of Charles Francis

**MISS ALICE ROOSEVELT, WHO WILL BE MARRIED THIS
WEEK AT THE WHITE HOUSE TO REPRESENTATIVE
LONGWORTH, OF OHIO**

The reader is referred to the article beginning on the opposite page of this issue of the "Weekly," for an account of the coming wedding, and of the previous White House weddings, of which Miss Roosevelt's is the tenth.

Adams. The wedding is described as of a semiprivate character, and according to the accounts which have been handed down, President Adams "so far relaxed his usual austere dignity as to be the best talker at the table" during the weddingfeast. A series of great dinner-parties was given at the White House during the week following the nuptials.

The next wedding in the White House was that of Miss Mary Lewis, the daughter of Major Lewis, General Andrew Jackson's intimate friend and brother-in-arm. She was married to M. Alphons Joseph Voer Paget, of Martinique, who was secretary of the French Legation at Washington from 1836 to 1840. He was Minister from France to the United States from 1840 to 1848. Miss Lewis came from Tennessee, where her family were rich landowners. At the wedding the bride was given away by President Jackson, who presided over the elaborate entertainments given at the White House in honor of the bride. The international character of the wedding was accentuated somewhat by the gossip which was rife in Washington at the time. It was rumored that King Louis Philippe appointed M. Pageot Minister to United States in order that he might exercise supervision over his wife's valuable properties in Tennessee. Madame Pageot died in Montpelier, France, in 1865.

In President Jackson's administration there was another wedding in the White House. It was that of his niece, Miss Easton, who was from Tennessee also. She married Mr. Polk, of that State, after a very romantic courtship. Miss Easton was to have married Lieutenant Bolton Finch, of the United States Navy, who was, however, an Englishman by birth. In 1833 Lieutenant Finch had his name changed by Congress to Bolton, and when he died in 1849 he was known as Com-

A Photograph of Miss Roosevelt and Secretary Taft taken during their Far-Eastern Trip last Summer

modore William Compton Bolton. The social traditions of Washington account him as one of the beauty of his time, and quite a dandy. He had been engaged to be married to several young ladies before he proposed to Miss Easton and was accepted by her. At the time he was courting her his rival for the hand of Miss Easton was young Mr. Polk, whom she had rejected, much to the surprise of Washington society. At the last minute, however, for some reason or other which has not been very clearly handed down in the social annals of the capital, Miss Easton jilted Lieutenant Finch and accepted Mr. Polk, although the day of her marriage to the naval officer had been announced and the guests invited to the ceremony. Mr. Polk, who was an indomitable suitor and did not have the faint heart which loses the fair lady, determined not to relinquish Miss Easton, and posted at top speed in coach and four from Tennessee to Washington, to make another request of the young lady for her hand in marriage. He even appealed to President Jackson, who, it is said, encouraged him in his suit, saying to his niece with characteristic directness and force, "Take care, my dear; with love marriage is heaven, without it, hell." It is not known which influenced Miss Easton the more, Mr. Polk's protestations of love and his determination, or the President's emphatic advice. At all

events, Miss Easton and Mr. Polk were married. The sixth wedding in the White House occurred on January 31, 1842, when Miss Elizabeth Tyler, the third daughter of President Tyler, was married to William Waller, of Williamsburg, Virginia, in the East Room. According to the history of the time this wedding excelled in brilliancy any of those which preceded it. Daniel Webster, who was Secretary of State at the time, and Mrs. James

Algernon C. F. Sartoris and Miss Nellie Grand, whose marriage at the White House, on May 21, 1871, was the seventh wedding in our history

From Harper's Weekly of June 6, 1890

Madison were among the distinguished guests at the wedding.

President Tyler's first wife died in 1842, and in June, 1844, he remarried, and although the wedding took place at Ascension Church, in New York city, on June 26, he held his wedding reception in the latter part of June in the East Room of the White House. The choice of that room was no doubt strongly prompted by sentiment, as it was in the East Room that he began his courtship with his second wife, Miss Julia Gardiner, of New York. He met her the preceding February at an evening reception on Washington's birthday. Miss Gardiner was a great beauty, and not more than twenty years old at the time of her marriage. At the wedding reception Senator John C. Calhoun escorted the bride to the supper-table and cut the wedding-cake for her. In describing the reception Miss Gardiner wrote:

"The company who waited upon me with their most respectful compliments comprised the infant and the highest station in the land. For two hours I remained upon my feet, receiving quite in queenlike state, I assure you.

"At six o'clock I had to appear on the balcony, it being music afternoon, and go through introductions. Throughout, everything has been very brilliant—brilliant to my heart's content, as such as as if I were actually to be the Presidentess for four more years to come.

"Crowds followed me whither I went. My high estate has been thus far altogether pleasant to me."

The "music afternoon" in which Mrs. Tyler refers was the con-

Exterior of the Washington House in which Mr. and Mrs. Longworth wait five

cert by the Marine Band in the south grounds of the White House, during which the President and his bride appeared on the portico, where a large crowd had gathered to do them honor.

It was not for thirty-two years after the Tyler-Waller wedding that another marriage was celebrated in the White House. This marriage was that of General Grant's daughter, Nellie, to Algernon Charles Frederick Sartoris, an Englishman, on May 21, 1874. This ceremony was one of marked brilliancy. The wedding-breakfast was served in the State Dining-room, with President Grant at the head of the table, the bride at his left, with Sir Edward Thornton, the British Minister, beside her, Mr. Sartoris and Mrs. Grant were at the President's right, as was Vice-President Wilson. When it came time for the bridal couple to leave the White House they did so in a carriage drawn by four horses, and at the railway station awaiting them was a new special car of elaborately luxurious type which had been made for the Vienna Exposition. It was decorated from end to end with American and English flags, flowers and evergreens.

Four years later, on June 10, 1878, the eighth wedding occurred in the White House. Miss Emily Platt, a niece of President Hayes, was married in the Blue Room on that day, to Lieutenant Colonel of the Twenty-third Regiment of Ohio Volunteers, the regiment of which President Hayes had been Colonel.

The wedding of President Cleveland and Miss Frances Folsom was held in the White House on June 2, 1886. It was in no wise a large wedding, as the guests included only relatives of Mr. Cleve-

land and his bride, the members of the cabinet and their wives, and Mr. Daniel Lamont, the President's private secretary, and Mrs. Lamont. The wedding occurred in the evening, the guests meeting in the Blue Room at seven o'clock. The Marine Band in the corridor played Mendelssohn's "Wedding March" as Mr. Cleveland and Miss Folsom came down the western stairway. They were entirely unattended, and as soon as they entered the Blue Room the ceremony was begun. Mrs. Cleveland was hailed in the written accounts of the wedding as one of the most beautiful brides the White House had ever known. One writer referred to her as "beautiful in face and form . . . a vision of loveliness as she stood blushing before the audience of friends gathered about her." In the name of woman it may not be amiss to quote in part what was written by one chronicler who witnessed the ceremony. It refers, of course, to Mrs. Cleveland's wedding-gown, and gives the following detailed description of it:

"Her gown was of ivory satin, with trimmings of India silk, arranged in Grecian folds over the front of the high corsage and fastened in the folds of satin at the side. Orange blossoms and buds and leaves outlined this drapery and adorned the edge of the skirt.

"A coronet of orange blossoms fastened the veil, and garnitures of the same blossoms were artistically arranged throughout the costume.

"Her veil of silk tulle enveloped her form and softened the effect of the satin gown. It fell over the entire length of the long court train which lay about the feet of the bride in a glistening coil.

"She carried no flowers and wore no jewels except her engagement ring.

"Gloves reaching to the elbow completed the perfect toilet of the White House bride."

THE LONGWORTH-ROOSEVELT WEDDING—SCENES ON THE PHILIPPINE TRIP WHICH PRECEDED THE ANNOUNCEMENT OF THEIR ENGAGEMENT

Miss Roosevelt and Mr. Longworth were members of the party which went to the Far East last summer with Secretary Taft and the Congressional Commission which made an inspection tour of the Philippines. During this time many rumors of their engagement appeared in print, although the formal announcement from the White House of their approaching marriage was not made until December 13.

An Eye-witness's Story of the Russian Revolution

By Albert Edwards

The author arrived in Moscow when the revolt of the people against the Czar and his troops was at its height. He was a spectator of the principal meetings, and under Russian guidance was enabled to take part in the actual fighting between the troops and the people. This is the first of a series of three articles which will appear in successive issues of the "Weekly"

Moscow, December 26, 1917

WHEN we arrived at Moscow the station was crowded— jammed to the doors with people trying to get out of the city: hundreds trying to leave and only five of us coming in. The man who took our bags was badly scared, and kept screaming: "They are shooting! they are shooting!"

I thought at first that this was his way of telling us that the city was disturbed, but Wilsky, my interpreter, talked with an official and found that the strikers had made an effort to capture the station about two hours before. They failed, for the station was well guarded; but we saw signs of the fray when we got outside.

Coming from Petersburg, which is fairly blanketed with Cosacks, it surprised me to hear the isochetnik (driver) say that he did not think he could take us to the Metropole. It seems that the revolutionists hold the cabs for ambulances whenever one is needed. They killed an isochetnik yesterday for refusing. The man was right, for when we had got within a block of the hotel we were turned back by a cordon of soldiers. Their guns were stacked in the streets and they were gathered around their camp-fires. The driver said he knew of another hotel that he thought we would be able to reach, and Wilsky told him to go ahead. He succeeded in getting us here, and I found it a good place for me, right in the heart of the Kremlin and not far from the storm center.

Moscow is full of barricades—there are hundreds of them, and the revolutionists are reviving on a systematic, scientific guerrilla warfare. Every morning there is fierce fighting along the barricades, but it is usually over and they are taken by nine o'clock. The rest of the day is spent in picking off officers and disarming small detachments. Barricades are built again in the night. But to-day the militia still hold the barricades—at 2 p.m. I have skirted the whole cordon and have not heard any firing.

I am reliably informed that the revolutionary militia consists of only about fifteen hundred chosen men. There are plenty more who are eager to fight, but they have no arms. The troops have not melted as the militia hoped, but they offer a sort of passive resistance—they lose their revolvers, fall off their horses, and fire into the air.

The government has taken possession of the telephone, although the revolutionists have done their best to destroy it; but there are groups of young men signalling in the streets, and the strikers seem to know of the approach of the soldiers about twenty minutes ahead of time. The storm center to-day is the Arbut Street. Field-guns have been stationed at the Smolensk market, at the other end of the Arbut Street, and have been firing along the Smolensk Boulevard and the Novinsk Boulevard and the Arbut.

We walked along the Arbut from dusk to dark. The revolutionists were hard at work building barricades. They use everything—iron gates, spring beds, newspaper kiosks—everything. The object seems to be to impede the cavalry. No actual defence of the

barricades is attempted. A red flag flies over each. Every side street is barricaded—I should say a dozen across the Arbut alone. Between are entanglements of wire. A cavalry charge is a bad thing, for it would take a regiment of horses an hour to traverse the street, even if it were not defended. I have visited two emergency hospitals. The nurses are young girls, every one of them a revolutionist. I should say.

Almost everybody, I think, would favor a successful uprising. But the place is paralyzed. No one comes from out of town in bus, and the store-keepers are afraid to keep open for local customers. As far as they are concerned, the strike doesn't seem to be much more successful than in St. Petersburg. The "Black Hundreds" are being converted into a militia by the government. They have revolvers of a much larger caliber than the Brownings used by the revolutionists. There was some shooting a few hundred yards away from us this afternoon. The "Black Hundreds" started it, and then there was a regular fusillade of shots. The "Black Hundreds" lost a member or two in the affair.

The general feeling is that the revolutionists have put up a good fight so far. Everybody says so; and when they were building the barricades this evening everybody about seemed to be in sympathy with them. The fellow who was bossing the work at one of the barricades called out: "Comrades, don't stand idle! Everybody ought to work for the Revolution!" I should say that half the crowd turned in to help. There were women, too, in many places—wives of the workmen, servant women, and young girls, working on the barricades beside the men. They saw off trees and telegraph-poles, pulled down kiosks, and turned over horse-cars to build the barricades and then defend them. During the day the streets seem quiet, normal. Everybody goes along examining the bullet holes, but as it gets dusk the streets are almost deserted. The Dragons are frightened: they go to their barracks and make no effort to suppress the building of barricades. In a few places there are big camp-fires and guards. The revolution is divided between "Black Hundreds" and the revolutionary militia. The militia must have immense popular sympathy. I don't see how they could disappear and mobilize so readily unless practically every householder was ready to give them refuge.

Wilsky and I drove past the military message this afternoon. An officer stopped us and made us take our hands out of our pockets. I have seen a number of people searched. There are revolutionary proclamations advising the citizens not to kill private soldiers until they have given them a chance to hand over their arms peacefully. The Governor-General has ordered orders to be closed at 8 p.m. The Revolutionary Committee says the doors must stay open and that they will kill the *dvorniki* who refuse to keep them open.

The first important engagement of the insurrection in Moscow took place in the Prekorski factory. This is a huge cable and cotton mill, with about six thousand employees, in the western outskirts of the city. There is a sort of combined park and cemetery in front of it, with a huge stone gateway from which three boulevards stretch out into the park like the ticks of a fan.

When the factory employees struck, they took possession of this gateway and the surrounding streets, and erected formidable barricades. These barricades were built on December 10 and 11, before I got here, but they are the only ones that have not yet been captured.

Early in the morning three *soviets* of Cosacks, with six field-guns, marched down the centre boulevard facing the park across the stone gateway. It was quiet enough at the time, but they didn't dare attack it in front, and so they sent thirty men and three officers around to the left, where another barricade stretched out behind the gateway, and started to tear it down. There were only two revolutionary sentries behind it, when the Cosacks attacked it. They succeeded in killing the three officers in the first four shots, and the other Cosacks fled.

Of course the sound of this firing brought out the *dvorniki* (militia) rushing from the factory. But they could find no traces of the Cosacks, except the three dead officers.

Then all was quiet until noon, when their sentries told them that a hundred Cosacks and six cannon were marching down the right boulevard to attack them again. Thirty of the militia forced their heads behind a corner of the great gateway, but

The Nizhny Novgorod Printing Works at Moscow, which were attacked by the soldiers. The proprietors was a well-known liberal

the Cossacks wheeled their guns into position and began to fire. They tore down sections of the wall and damaged the surrounding houses, and the revolutionists had to fall back behind a second barricade, and took up their position in the entry of the courtyard. Then they decided that thirty militia were too great a number to oppose a hundred Cossacks, and sent all but six back to wait as reserves. The Cossacks ransomed the position for nearly three hours, with the result that they killed one old man in a neighboring house, stunned the captain of the insurgents by a falling brick, demolished a number of houses, and knocked down several chimneys.

So many of the buildings around them were being blown to pieces that these six insurgents dodged out around four or five houses and took up a new position behind another of their barricades, forty, but to one side of the attacking Cossacks. As soon as they did so, however, the Cossacks directed their fire there at once, and it was evident that in some way or other, in spite of the protection of the barricades, they knew the position of the insurgents. Again they changed their position, and saw a government spy on the third story of a house above them signalling to the Cossacks. The lieutenant of the insurgents shot him with his Winchester, and the spy fell down into the street. The six men made another detour and sat down quietly behind another barricade while the Cossacks bombarded the empty house for an hour longer.

Late in the afternoon the Cossacks got up courage to come out into the open and march toward the empty barricade on which they had been firing. This brought them into a position where the six comatose insurgents were in their rear, and when they opened fire the Cossacks evidently thought that a new detachment had come up and rushed pell-mell to their own safe position down the boulevard. During their hasty retreat the insurgents, who were armed with the best modern repeating rifles, killed or wounded ten of them in their first volley.

Their fire, of course, betrayed their position to the Cossacks, and they turned their cannon on this new barricade, demolishing a great number of old barrels, fence-rails, overturned wagons, and sawed-off telegraph poles, but the men themselves had retreated to another courtyard and opened fire again.

One shell from the Cossack guns knocked a hole in the building near the insurgents and a falling brick stunned their captain, leaving him unconscious for more than an hour. When he recovered, he used this hole made by the shell to fire through at the Cossacks with such good effect that they limbered up their cannon and re-

Revolutionists building a Barricade of Street-rails

terated. This was the only injury inflicted on the insurgents. A woman in a house to the rear of the Cossacks' position counted thirty-seven men carried off on stretchers. How many of these were killed and how many only wounded, she could not tell. She had counted one hundred and fourteen cannon shots and had then lost count.

As a matter of fact, there was no energetic attack of the soldiers themselves. They were content to remain at a distance and throw shots of shrapnel into the barricades. On the fourteenth a very daring raid was made by six of the militia from this barricade. The lieutenant of the *drujinskis*, whom they called the "Arcangel," stole out with five comrades and entered the house of the Chief of the Secret Police.

One of the men told me the story of the raid.

"Two of us guarded the street door," he said. "Michel and I waited in the court, and the 'Arcangel' and a comrade went up to the Chief's apartment. They pretended to be members of the regular police, and when a servant admitted them they went through the regular police formulae."

"What is your business?" they said to the Chief.

"I am the Chief of the Secret Police," he replied. "What can I do for you?"

"We are officers of the Free Russian People and we arrest you," they told him.

"They were up there for ten minutes, and we down below didn't know what was happening. We thought our comrades might have been killed, but we didn't hear any shots, and so we waited. Afterward they told us that they were letting him say good-by to his wife and children. Then we all formed around him and took him through the streets back to the factory."

"We organized a court, and he was regularly tried and sentenced, which was more than he would have done for any of us. We took away his keys and the six of us returned to his apartment; the others waited in the courtyard while the 'Arcangel' went through his papers. He found evidence enough to hang us all. We also found his bank-book, which showed monthly deposits of four thousand roubles (two thousand dollars), which I suppose was his salary."

"They shot him toward dusk, and in the night carried his body back again to his apartments. Three times we went to his house and back—twice in broad daylight, and this once at night with his body."

For sheer bravado I think this exploit has never been equalled.

THIS YEAR'S DOG SHOW AT MADISON

The annual show of the Westminster Kennel Club opened this year with an entry-list exceeding in numbers than last year. As this show may be said to set the fashions in dogs, it is interesting to note the numbers were to be in great favor, as 277 of them were benched. The second breed, numerically, was the cocker spaniel, of the latter. Other favorite breeds were bull-terriers, English setters, Irish terriers, and French bulldogs. See

A Meeting of Workmen in the Grounds of the Prokoff Factory

The men in and about the Prokoff factory represented only about one-third of the *drujenniks* in the city, and while this was going on they erected regular fortifications in some other parts of the city and captured cannon and machine-guns to put in them, and in one place resisted the troops for two days, and were not driven away until artillery was brought to bear on them from four directions at once.

They have made two unsuccessful attempts on the life of the Chief of Police and have attacked the railway station at St. Petersburg many times, but have always been driven back.

When I reached Moscow I had tried in vain to find the only two persons I knew in the city—two sisters whom I had met in Paris last spring.

One I knew to be a member of the Socialist Revolutionary party, and the other was active in the students' movement. On the morning of the 14th, the elder of the two, whom I will call Vera, came to the hotel.

I had last seen her six months before in the Jardin de Luxembourg in Paris, where she had argued earnestly against the tactics of the Socialist Revolutionary party, to which her sister, Pasha, belonged. We found a secluded spot in the reading-room, and she told me that she had just got my note that morning, as she had not been sleeping at home of late.

"What's the matter?" I said. "There hasn't been any shooting in your neighborhood, has there?"

"No," she said. "But I might be arrested at home."

"You!" I said, in surprise. "I thought you were peaceable enough."

"It's very different now," she replied.

"And what's Pasha doing?" I asked.

Her lips tightened a little and the corners of her eyes contracted. "She's one of the '*drujenniks*,'" she replied. "She's fighting in the Prokoff factory. She's been working there ever since she came back from Paris."

These Russian girls are a constant surprise to me. There is much talk of the "equality of the sexes" in America. But they don't talk about it here—it is an accepted fact.

I immediately said that she must help me get into the factory. It was the most interesting place in the city, for the revolutionists were still holding out against the Cossacks, and I had tried in vain to get in there by myself. Vera said that it would be "difficult." That, I find, is the Russian equivalent of "dangerous."

But she said that she was planning to go herself to take in some clothes to her sister and to make some arrangements for hiding her, in case the troops drove the insurgents out. And, as I insisted, she said that she would try to get me in with her.

To-morrow we hope to go to the Prokoff factory. I may get blockaded there for a day or so. But that seems to be the liveliest section of this exceedingly live village.

The soldiers are absolutely crazy. They have a habit of shooting a horse with field guns. I've had two or three close shaves, but always in broad daylight. I've learned the Russians for "throw up your hands," and sea do it very gracefully. I think I've been searched six times to-day.

THE CHINESE ANTIFOREIGN RIOTING IN SHANGHAI

The *Mixed Court* affair, in which Mrs. Li, the widow of a mandarin from Canton, the allround kidnapper of western children, for a while, was made a prize for a recent raid in Shanghai, which was, in truth, a forcible expression of China's objection to foreign intrusion. The British and Chinese authorities who were sitting during the session of the court differed radically as to their jurisdiction over Mrs. Li, and the place in which she should be incarcerated. When the contention was at its height the rioting occurred. The German Consul was seized, and the American Vice-Consul and several other foreigners were attacked and injured. Carriages and motor cars were smashed, and looting followed in various parts of the city. More than a score of Chinese were killed. A detachment of British sailors was landed and quelled the disturbance.

Men of To-day

II.—Sir Mortimer Durand: British Ambassador to the United States

By Charles Johnston

SIR Mortimer Durand is peculiarly fitted to represent the English imperial idea. By a singular destiny his immediate ancestors played distinguished parts in the two most vital and formidable events which befell the British Empire during the last century: the Napoleonic wars and the Indian Mutiny. His grandfather fought through the Peninsular war as a cavalry officer under Wellington, and was laureate at Waterloo. His father, Sir Henry Marion Durand, spent forty years in the midst of wars and perils in India, and played a decisive part in the fighting in Central India during the great and sinister mutiny of 1857.

Born in India in 1850, Mortimer Durand went to an English school, and afterwards studied for the Indian civil service, rightly held to be the finest career in the British Empire. He entered the Bengal civil service in 1873, and was called to the bar about the same time. The Suez Canal had been opened to navigation some four years before, so he escaped the tedious voyage round the Cape. Arriving at Calcutta, he reported to the Bengal Secretariat, and was gazetted Assistant Magistrate and Collector at Howrah, just across the Hoogli from the Indian seaport.

At the Hoorah police court Mortimer Durand doubtless tried the usual petty assaults and thefts, empowered at first to impose only a month's imprisonment as his utmost penalty. In the cool of the evening he found respite in the cordial society of Calcutta, where his father's friends and admirers gave him, we may be certain, the warmest welcome. From November, 1873, to June, 1874, he was on special furlough duty, and saw the piteous and pitiable sights that it lay upon.

Every six months after his arrival in India, Mortimer Durand had to pass strict examinations in the vernaculars of his province: Bengali and Hindustani; in Indian law, in government accounts, and other technical matters connected with his service. He also studied Persian, he believed, and found it stand him in good stead at a later day. In olden days, under England's predecessors the Moguls, Persian was the diplomatic language of all southern Asia, just as French was in Europe, and even to-day many of the Moslem princes in India make it a point of honor to master the tongue of Firdous and Saadi as a polite accomplishment more than a diplomatic instrument. But Persian is still potent in Central Asia. Mortimer Durand studied hard and passed his examinations bravely, and as a result presently found himself in one of the coveted posts in the Secretariat, with prospects of further promotion stretching before him. Bengal civilists are separated by these examinations into two groups: the larger and less privileged carry on the heavy and grinding work of life in the remote country districts; the privileged few fit between Calcutta in the cold season and Simla in the hot season and the rains. They consider themselves the brain of the service, while their less fortunate brethren in the plains consider them mere glided pets of fortune, promoted over the heads of their really meritorious companions. Mortimer Durand was attached to the Foreign Office of the government of India, thus passing from under the wing of the Bengal provincial government to the larger sphere of the supreme imperial administration. He was presently sent on special duty to Mount Abu, the sacred seat of the ancient Jain religion, as Assistant to the Agent of the Government General in the semi-independent province of Rajputana. Here he came into contact with the greatest race in Indian history, a race not only renowned in war and administration, but which gave to ancient India its most famous philosophers and teachers, Rama and Krishna, esteemed avatars, or divine incarnations, none of this race, to which also belonged Prince Siddhartha, known to all nations as Gautama the Buddha, the Awakened.

In 1879 trouble once more broke out between the British Indian government and Afghanistan, and matters went on far that an expedition was decided on, and sent across the frontier under Sir Frederick Roberts. To this expedition Mortimer Durand was

Sir Mortimer Durand, British Ambassador to the United States

joined, as political secretary; and by a strange destiny he thus came to traverse the same roads that his father had followed in the first Afghan expedition just forty years before. Mortimer Durand served as a volunteer in this campaign; and, at the request of the Commander-in-Chief, the Afghan war medal with two clasps was awarded to him for conspicuous gallantry in action.

After the Afghan war, which gained for the commanding general the title of Lord Roberts of Kandahar, Mortimer Durand was appointed Under-Secretary and later Secretary in the Foreign Department of the government of India, and he acted for a time as private secretary to Lord Lytton, also known to fame as Viceroy. Here is a humorous vignette from *Lord Lytton's Reminiscences* in which Sir Mortimer records a scene of those Simla days: "There was little room for the crowd in the small uncomfortable Government House where Lord Lytton had to receive his subjects; but these things are well managed in India, and the *hoor* was soon over. The Englishmen went past with every sort of salute, one or two facing the Viceroy fairly and bowing, some making a deep reverence sideways, some nodding hastily over their shoulders, some giving a familiar smile, some looking as pale and frightened as if they were being led out for execution; most were in military dress, a few in plain evening dress." Lord Lytton was succeeded by the Marquis of Ripon, who opened up new paths in Indian administration, and made himself intensely unpopular with certain conservative elements by seeking to extend greater power and privileges to the natives of India, gradually opening to them the doors of political as well as military preferment. This movement has gone far, and every year Britain tries to carry a step further the training of the natives of India in the art of representative government; and all the wiser men look to see this principle extended indefinitely in days to come. One has heard very diverse criticisms of the British government in India; and I for one am not strongly in favor of the policy of military expansion beyond the frontiers. But in general an government in the world is better and more effective, given the conditions, than that now existing in India. It has raised that much-suffering land out of the valley of a thousand years of war and conquest, and has given absolute security of civil rights and of contract to three hundred millions of human beings. More than this, it has cherished the native spirit, the native tongue, the native literature of a dozen different provinces, and insists on the perfect toleration of all forms of religion: Hindu, Moslem, and pagan, as well as Christian and Jew. It has preserved the age-old monuments, and given to the whole world the priceless literature and philosophy of India, and has there done a work for which all posterity is in its debt.

In 1893 Mortimer Durand was sent on a special mission to Kabul to negotiate with the strong and subtle Amir of Afghanistan a treaty of amity and mutual security. It was then Foreign Secretary under the Marquis of Lansdowne. The mission was entirely successful, and Sir Mortimer Durand was awarded one of the knightly orders especially associated with distinguished service in India. The second of these two orders was later conferred on him, so that he is a knight of the orders of the Star of India and of the Indian Empire. To these was afterwards added the decoration of Grand Commander of the order of St. Michael and St. George. His contact with Lord Lansdowne was destined to bear fruit later on: the Governor-General and the Foreign Secretary formed very high opinions of each other's ability and force, to which they have testified decisively in recent years.

The mission to the Amir was Sir Mortimer's last great work in India. In 1904 he was appointed envoy and minister in Persia, and presently found himself at the court of the Shah Nasir-ud-Din, well known to the outer world by his various European trips. It was a difficult time for the English minister. Russian influences

Buchanan's Wife

By Justus Miles Forman

SYNOPSIS OF PRECEDING CHAPTERS

Herbert Buchanan, a man of wealth with a selfish and egotistical nature, whom his beautiful wife Beatrix has been induced to marry for his money, disappears one night from his country-place, Buchanan Lodge, with a barge which he has engaged to deliver the boat. Buchanan gives the man a thousand dollars as compensation for doing it, and he is to share his valuable collection, for he is weary of his own way of life, and miserably desires to come out to those whom he loves best. Sleeping at a great

explorer, Harry Faring. He and Beatrix have had a love-affair prior to her marriage, and they now discover that they mean more to each other than ever before. An exhaustive search reveals an trace of Buchanan, who is supposed to have been ordered. Beatrix learns that the law requires her to wait five years before she can assume that her husband is dead, and so he tries to marry Faring. Faring leaves Buchanan Lodge for the Admiralty, and Beatrix prepares to go abroad. Some months after, while in Paris with her friend Miss Trevor, Beatrix receives a cablegram from her aunt, Miss Crowley, informing her that a body supposed to be her husband's has been found, and requesting her to return to New York and identify it.

CHAPTER IX.—(Continued.)

THEY arrived in New York Harbor on Sunday morning, for the gales had considerably delayed them. Old Arabella Crowley came down the bay on the boat of the customs officials and boarded the ship at Quarantine. She was entirely unexpected, and Mrs. Buchanan was not on deck to greet her, but Alanson Trevor was there to witness the inspiring sight of a large elderly lady of great dignity being pushed and hauled up a hatch-ladder to an accompaniment of cheers from the straggling passengers.

Old Arabella kissed Miss Trevor very warmly and told her how well she was looking. She asked for Beatrix, and the girl took her below to the cabin, where Mrs. Buchanan was superintending the packing of her bags. Beatrix gave a little cry when she saw the old woman in the doorway, and ran to her. But after the first few words of greeting she stood away, looking very anxiously into Mrs. Crowley's face.

"Is it—Herbert Buchanan, Aunt Arabella?" she asked, in a whisper.

"I think so, my dear," said old Arabella. "Every one thinks so, but we cannot be certain without your word. The servants of the Lodge are scattered since you closed the place, and we have been able to find only one or two whose opinion was worth anything."

The valet—Herbert's valet—has gone to England, and cannot be traced. There is one point which only you can settle. It all depends upon one point." Mrs. Crowley looked towards the maid, who was busy with her mistress's toilet things, and Beatrix sent the woman away.

Little Miss Trevor also made some excuse and left the cabin, so that the two were alone.

"The body," said old Arabella, "was found in the water, my dear, and—well—it is rather unpleasant to speak of, but it had been in the water a long time, you understand, so that decomposition is not so easy as one might think. But it looks very like Herbert, very like indeed. There is, however, one point, as I said before, which only you can settle. The body—this man whose body has been found—had an odd and conspicuous scar on the inside of one arm."

Mrs. Buchanan cried out sharply, and she began to tremble and, after a moment, to sob.

"The—right arm?" she sobbed. "The right arm?"

"Yes, dearest," said Arabella Crowley, "the right arm." And for a moment her own voice was a bit unsteady, so that she paused a moment before going on.

"It must be he," she sobbed at last. "That proves it positively."

Of course you will have to see for yourself. They will insist upon that, I expect. I am sorry. It will be very trying. But now there can be no doubt that it is he." She hesitated and looked doubtfully towards the younger woman as if she did not quite know what to say further—whether to express the satisfaction she really felt or the sorrow which conviction dictated, but Beatrix Buchanan, glancing up, caught the look, and smiled faintly back at her.

"Oh, no pretence of we, Aunt Arabella, please!" she said, and the fit of nervous shivering and of nothing had passed all in a moment, leaving her calm. "Let us not pretend what we don't feel," she said. "I am glad—frankly. I didn't love him, as you know, and I am glad to have all this dreadful strain over with. It sets me free, and before I was most cruelly bound. Oh yes, I am glad."

Then she asked if Harry Faring had arrived—he had, the night before—and when she would have to go through the ordeal which was before her, what arrangements had been made, and all such practical matters.

"Everything is arranged," Mrs. Crowley said. "As soon as the ship is berthed we will drive to the—where it is. They will be waiting for us, your lawyer man and the others. It will take only a few moments. Then we can go home. You're coming to me, of course, in Gramercy Park. Harry Faring will be there—at the house. He thought it would be best not to seem to be engaged in the thing at all, though he has been busy all this morning making the arrangements. For a man," said old Arabella, handsomely, "he has great tact and thoughtfulness, Harry has."

Beatrix Buchanan smiled softly to herself. "He has all that a man should have," she said under her breath. "He is all that a man should be. He's tender and strong and faithful and true, Aunt Arabella. I think there are no other men like him in this world. I should like him to know how good I think he is."

Old Arabella sniffed.

"I dare say he knows no much about it as is good for him," she said. "Never you praise a man, my dear! It spoils 'em. I know. They become quite insufferable. Discipline! That's what you need. They don't get half enough of it."

Then Mrs. Buchanan's mind came again to the door, and the two women went up on deck to allow her to finish her work.

At the pier the elderly lawyer man was waiting. He had procured a ticket permitting him to go inside the customs line, and greeted Mrs. Buchanan at the foot of the gangway. He was very nervous and excited, and he frisked about in an anxious fashion, saying over and over again:

"Now we must be perfectly calm—perfectly calm!"

Then the three—Mrs. Crowley, Beatrix, and the lawyer man—went at once to a carriage which was waiting for them, and drove away, leaving Alanson Trevor and the maid and one of Mrs. Crowley's men to pass the luggage through the customs and follow.

It was a wet, chill day, with howling skies and a fine driving rain—a November day come before its time. Beatrix sat back in the brougham and closed her eyes, and old Arabella noted that she was slowly growing paler and that her hands were again nervous and inquiet. The lawyer made a fine effort to manufacture cheerful conversation, but Mrs. Buchanan did not answer or seem to hear him at all, and presently old Arabella gave him a warning nod, and she subsided with a gasp. "Quite so! Quite so!"

It seemed to Mrs. Buchanan that they drove for hours—in fact it was not more twenty minutes or so—when—after a time she sat up and leaned forward to look through the rain-spattered window.

"We are going a very long distance," she said, in a fretful

to me. "Where are we? I don't recognize the neighborhood at all." And just then they drew up to the curb, and a man who had been standing in a doorway came out and opened the carriage before the footman was down from his seat.

The man said:

"Oh, it's you, is it? We was afraid you wouldn't be coming till afternoon. Come right along in!"

There was a little knot of men in the room which they entered, and the men all turned and stared curiously at the newcomers. One of them whispered something nodding towards Beatrice Buchanan, and two or three of the others took off their hats.

"We're all ready for you," said the man who had come out to the carriage. "Make a light in beyond there, Bill!" And one of the group said, "It's made already."

Then the man who seemed to be in authority looked towards Beatrice Buchanan.

"Shall we—shall I go in with you?" asked old Arabella. Mrs. Buchanan shook her head doubtfully.

"Better alone," she said after a moment. It seemed to be difficult for her to speak. She followed the man in charge, who had gone towards a door at the back of the room.

"Right in this way, ma'am!" he said, and she followed him through what seemed to be a tiny antechamber, and thence, upon the opening of a door, into a further room whose atmosphere smote her in the face with an almost palpable chill, for the temperature was below freezing. There seemed to be no windows, and the only light came from two flaring gas-jets which dropped from the centre of the ceiling, on a simple and unornamented T. Under them, stretched upon a plain trestle, rather like an operating-table which she had once seen, something long and still lay covered by a cloth.

The man in charge tipped across to the thing under those flaring gaslights, and Mrs. Buchanan wondered dutifully why he walked so. She decided that it was out of respect for her rather than for the dead, since his walking over a long slare have rubbed him of that. He turned back the cloth from the face of the dead man and from the right arm, which lay out at a slight angle from the side.

"Careful now!" he said, anxiously. "Don't you be afraid. There isn't nothing to be afraid of." He half held out his hands as if he expected Mrs. Buchanan to fall in a faint. Probably he had had unpleasant experiences with women who came there to identify friend or relation.

But this woman showed no sign of fainting. She turned up beside him, he said afterwards, with no evidence of fear or even of reluctance. And she looked down at the sorry thing which lay there. But the sight, after all, have been too much for her, for as she looked she gave a sudden scream, not very loud, and put her hands up over her face. Then, after a moment, she asked him, whispering, if he

would leave her alone for a little. He wondered at that, but women often asked queer things of him, and so, without comment, he went out, first jerking a chair from the other end of the room and setting it near her. He said that as he closed the door behind him Mrs. Buchanan was just sinking back into this chair, and he said she still held her hands over her face.

They left her alone with the dead man in that chill place, for it may have been, four or five minutes. Then Mrs. Crowley went to the door and knocked upon it. The elderly lawyer stood behind her. There was no answer, and so she knocked again and finally opened the door. Beatrice sat where the keeper had left her. Her arms had dropped to her sides and hung there, with the fingers nearly reaching the floor. Her eyes stared, uninking, at the thing which lay so long and still under the yellow gaslight. When Mrs. Crowley called out to her from the doorway she rose very slowly. Once on her feet, she averted as if she would fall, and put out a hand to save herself. But when the hand nearly touched the thing on the trestle she caught it swiftly back and gave a cry under her breath. The other two came forward into the room, and Mrs. Buchanan looked towards the lawyer. She seemed not to see old Arabella.

"It is—Herbert Buchanan," she said, in a dry voice. And she repeated it. "It is Herbert—Buchanan."

Then she let them lead her out of the place and to the carriage which was waiting at the curb.

CHAPTER X

BEFORE PARADISE GATES COMETH PUNISHMENT

It was about a week after this that young Faring, following his daily habit, turned into tinner's Park and saw up the steps of Arabella Crowley's old-fashioned house which stood at the foot of Lexington Avenue. The footman at the door said that Mrs. Crowley was in the drawing-room. He did not say that Mrs. Buchanan was there also, and Faring wondered why, for he knew that she must be expecting him at this hour. There were, however, so many simple and perfectly good reasons why she might not be below-stairs, or even in the house at just this moment, that, as he found himself wondering, he gave a short laugh and shook his head at his own egotism. It was rather like a boy, he thought, and he was no longer a boy in any way, but he was not in the least ashamed of being boyishly eager to see the woman he loved or boyishly disappointed if he was made to wait. The first sight of her after he had been away for twenty-four hours or even for a much shorter time always made his heart give a quick little leap and made it race for a few seconds. Also a sudden flush would come up over his cheeks and then die away. Possibly all this was because he had never been what is called a "lady's man," and so had pre-

She looked down at the sorry thing which lay there.

drawn by Rudolph

served a certain unusual shyness and a certain rare sensitiveness to that charm which a woman, and is particularly the woman one loves, spreads always about her like a palpable vapor. More probably it was because the man's whole face, simple nature was so charged with the great love he bore for Beatrice Buchanan that it was a sort of actual shock to come into her presence—a constantly repeated thrill which never grew less or turned commonplace or showed signs of cheapening itself to him.

In the big square drawing-room where the blinds were drawn down to shut out the sunshine Arabella Crowley laid down a book which she had been reading, and, without rising, held out her hand.

"Ah, it's you, Harry!" she said. "You'll hula and despise me, for I'm the bearer of evil tidings. Who was it used to kill bearers of evil tidings? I once had a picture about it. The bearers were all lying about the floor in an untidy heap, and the person who had been so annoyed by them was lying on an artist's couch thing with a sword in his hand, waiting for more tidings. A most depressing picture, I assure you. What? The tidings? Oh, she's gone! Beatrice has gone away."

Young Faring halted suddenly in the middle of the room. "What do you mean?" he said, in a still voice.

"Gone away!" repeated Arabella, crossly. And then, as he stood staring, she broke out in a half-sneering laugh.

"My good man," she protested, "do not stand there with that stricken-to-the-heart expression! There's nothing terrible in it. She's gone away for a few months, for decency's sake. I take it, you must remember that she's a newly made widow. I expect she's running away from you, if you should ask me. I expect you've been making love to her, and it's really not decent. Oh, bother the man! Here!" cried old Arabella, in a tone of exasperation. "Here! She's left you a letter. You may read it now if you like. I must talk to Haggins. There are people coming for dinner and I have not even seen the menu. Read your letter, lad! I shall be back in ten minutes." She lurched out of the room—a bit stiffly, for the autumn had brought on her rheumatism—but in the doorway she turned.

"If you want my opinion of this lost whim of Beatrice Buchanan's," she said, "I think it is too absurd to be patient over. Why in Heaven's name she could not have been contented to stay on here, through the winter, in peace and comfort with me, I cannot imagine. I'm very much out of temper with her. I told her so when she went this morning. Was she impressed? No! She laughed at me and kissed me on the tip of the nose. I wash my hands of her!" Old Arabella moved away, grumbling volubly to herself, and Faring tore open the envelope of his letter.

"Dearest," said Beatrice Buchanan—that "dearest" spung at him from the white paper with the same little thrilling shock he

The man still bent over his letter

Drawn by Will Gould

was wont to take from the first sight of her face after an absence. "I'm running away from you for a little while," she said. "I'm always running away from you. You will be thinking that it's a habit I've got. It isn't, though. This is why I am going—I cannot bear to stay where you are, to see you every day—and remain on the terms which are decent and necessary for us just now. It is too difficult for both of us, Harry. So I'm leaving you between two days. I had made up my mind about it before I saw you yesterday, but I said nothing because I hadn't the courage. I'm a frightful coward, you know. Truly I am. I was afraid that you would beg me to stay, and I knew that if you did I should stay on. And it really won't do. So I'm going away where you can't find me. Even Aunt Arabella doesn't know where I'm to be. Only my lawyer—a man known to me and he won't tell. So, Harry, do not try to find me. Wait a little time—only a few months. What are a few months out of a lifetime? This is the eighth of October. Six months from today it will be the eighth of April. On that day I shall let you know where I am, and then—then, if you want to, you may come to me. You see I'm still giving you your freedom. I say, 'you may come if you want to; not just 'come'! Ah, that's—very silly of me—a silly, pretending, make-believe. For I know you don't want your freedom any more than I want mine. I know that you will be coming the days just as I shall count them, and that you'll be very bitter at them because they go so slowly. We needn't pretend to each other, need we, Harry? We've already said too much for that. We know each other's hearts too well—do we? Do we, though? Ah, well, as well as is good for us, I expect."

"That's all I need say, I suppose. In April I shall write to you and you will come. Till then it's waiting. Oh, Harry, the waiting will be long for me as well as for you. You must believe that."

"Go and see Alliance Trevor sometimes. The poor child is not very happy, and she will be glad to have you to cheer her up. She says she is not going out at all this winter. I could never tell you what a comfort she was to me at the Lodge and abroad."

"Good-by, Harry! Don't call me names for all this—like Aunt Arabella, the blessed old termagant! Truly it's the only thing to do."

BEATRICE.

Mrs. Crowley, after what she considered a discreet interval, returned to the drawing-room. But the man still bent over his letter.

"You've had time to read that twice over," she said, deliberately.

"I have read it twice," said young Faring. "I'm reading it

(Continued on page 222.)

DEFECTS IN THE POSTAL SYSTEM

By HENRY A. CASTLE

Former Auditor for the Post-office Department

The long experience of the author as Auditor of the Post-office Department at Washington qualifies him to speak with authority and from intimate knowledge of the defects in the equipment and management of the greatest business organization under Federal control. On this topic Mr. Castle has written five articles, of which this is the fourth; the last will appear in the next issue of the "Weekly"

IV.—Accounting for the Public's Money

THE functions of an auditor's office are unknown to the public at large, and are but dimly understood by students of political science. Yet three functions and the accounting system which they represent are interesting subjects of contemplation to all who stand for good citizenship, official integrity, and the permanence of republican institutions.

The American accounting system is the right arm of the law-making power, established for the avowed purpose of insuring faithful obedience to law in making disbursements of public funds. Corrupt and deceiving institutions have no such system; Turkey and China, Russia and Spain, know it not; its existence and vigorous operation are the criterion of the civilization of a people.

There are six auditors who are specially attached to the United States Treasury Department, each of whom is charged with the duty of auditing the accounts of one or more of the great departments of the government. The auditor for the Post-office Department is subject to special emoluments, and his bureau, in number of employees and magnitude of work performed, is larger than the other five combined. There are now seven hundred employees in that bureau. The appellate tribunal of the accounting system is the office of the Comptroller of the Treasury. When an auditor passes judicially upon a case or a question, appeal may be taken from his decision within one year to the Comptroller, whose decision is conclusive as to the government.

Although the office of auditor for the Post-office Department was created in 1836, on the report recommendation of President Andrew Jackson, and in consequence of serious scandals which had then recently been brought to light, correct theories of accounting have not yet been applied to all branches of the service. This is due partly to its rapidly multiplying ramifications, keeping pace with the progress of invention and the industrial revolution of America, and in consequence of the fact that at one time the clerical force here was available to cope with the immense labor involved. There are many candidacies and imperfections still existing in this vital function, which are a constant source of uneasiness to those responsible for its accurate operation.

In theory, the functions of the office are quasi-judicial, but in practice the duties of the auditor are almost wholly executive, since more than 450 of the 700 employees exercise the powers nominally vested in the head of the bureau. An average of 2000 accounts, representing \$4,000,000, are settled every working day, which are never brought to the auditor's personal notice.

Theoretically, the position is held to be independent of the Post-office Department, but in fact, as the law has been correctly interpreted, the auditor is the officer of both the Treasury and the Post-office Department, having parity of official relation with both.

Detestably the auditor for the Post-office Department has more power than any of the other auditors, since the Comptroller of the Treasury only reviews his settlements in rare and exceptional cases. But in reality, as to retain vital points of effective accounting, he is short of important prerogatives through the provision of law which permits the Postmaster-General, contrary to the practice in all the other departments, to prescribe "the form of keeping and rendering all the accounts" relating to this service.

Presumptively there is a "double audit" of all governmental receipts and disbursements; but, literally, under existing law and conditions, ninety per cent. of the postal transactions can have no examination whatever in the Post-office Department. The accounts come direct from the postmasters to the auditor's office, where, except for the fragmentary reviews recently introduced, they are never reexamined. Less than \$150,000,000 of the \$1,200,000,000 annual transactions can have the shadow of a "double audit."

As to matters which receive a preliminary administrative examination, it is a fundamental axiom of correct accounting that the auditor is entitled to all the information possessed by the department when the account was approved, but as to claims for railway mail transportation, aggregating about \$10,000,000 a year, the auditor must rely on the blind statements of the departmental authorities that the amounts certified are due and payable; no evidence is furnished.

A partnership or corporation always endeavors to keep its accounts in such a manner that the profit or losses of each branch of its business may be readily ascertained. After the facts are known good policy dictates that an effort be made to change losses

into profits. Unfortunately in many branches of the postal service heavy losses occur, but there is in the present accounting system no method of ascertaining exactly what those losses are. In other words, the different features are so interwoven that the profitable ones are made to carry the unprofitable, with little or no attempt to apply a remedy.

The entire volume of the public business of the country transmittal through the mail, including documents, correspondence, even heavy cases of freight, such as postal cards, postal supplies, typewriters, enrolling machines, printing presses, etc., is carried without any compensation, and at an absolute loss, amounting, an expert declares, to \$11,000,000 a year. No accounts are kept.

Weekly newspapers, mailed free in the counties where published, constitute another heavy item of total loss. Other newspapers and periodicals, and many wholly unrequiring kinds of second class matter, are carried for only a fractional part of the cost of transmission. Transportation alone costs six cents a pound, while the postage rate is one cent. Second-class matter constitutes sixty-five per cent. of the total weight of mails transported, while yielding only five per cent. of the revenues. The legitimate part of this loss is cheerfully borne by the public in view of the educational benefits derived from the circulation of the public prints. But this does not excuse the failure properly to compute and tabulate it.

The money-order system is conducted at a loss of at least two million dollars a year.

The registry system could show a great loss if all proper charges against it could be duly collected.

Rural free delivery causes a net loss of more than fifteen millions annually.

It is probably fair to assume that the rates of postage on third and fourth class matter (books, etc., at one cent for two ounces, and "newsletters" at one cent per ounce), as a whole, cover the actual cost of transmission and delivery, including their share of general expense of administration.

This throws the burden of seeking to make a profit upon letter postage alone. In other words, the writers of letters are taxed for the benefit of the patrons of the losing ventures in the existing system. The twenty-cent stamp runs the whole machine.

It is a lamentable defect in our method of accounting that no attempt has ever been made even to approximate a proper distribution of expense among the different branches. There is nothing to correspond with the system by which a railway company, for example, not only ascertains the profitable and unprofitable features of its traffic, but also determines the relative earning capacity of its various types of locomotives and freight-cars.

And there are wide gaps in the antiquated methods of book-keeping still adhered to, through which underpayment and defalcation are directly invited to enter and help themselves.

No account has ever been kept with the Post-office Department of the stamps and stamped paper furnished by the bureau of engraving and printing, or by outside contractors. This account should have been opened in the auditor's office when postage-stamps were first introduced sixty years ago, and continuously kept until this time. It would be the fundamental corrective check upon substantially the whole revenues of the Post-office Department, amounting yearly to \$10,000,000. That no such account has ever been opened or kept is an astonishing revelation of defective methods, all the more glaring because similar accounts have always been rightly kept by the auditor for the Treasury Department with the Commissioner of Internal Revenue wherever revenue stamps have been required by law. The Post-office Department does not furnish its auditor with the requisite data, and if that were supplied, the clerical force of the auditor's office, limited by a significantly Congressional policy, could not handle it. The first the auditor ever hears of the stamps, etc., is his notice to debit them to a postmaster. How many have vanished or are kept on one's estimate.

The compensation to fourth class postmasters is fixed by law at a certain percentage bearing inversely with the business done of the supposed "commutations" of their respective offices. By "commutations" is meant the money value of the postage-stamps on outgoing mails during a quarter. The postmaster reports his "commutations," and the auditor's bureau credits him with his compensation accordingly. His report may or may not be true;

(Continued on page 213.)

Music And The Opera

A GREAT CONDUCTOR

BY LAWRENCE GILMAN

THE present American visit of Mr. Felix Weingartner, whom it is an exaggeration to call one of the greatest of living conductors, has contributed in large measure to the brilliancy of the current season of music, which even without his presence would have been unexampled. Mr. Weingartner has been heard with the New York Symphony Orchestra, whose leadership Mr. Walter Damrosch temporarily relinquished. To Mr. Weingartner's performance of Berlin's symphonic masterpiece a brief reference was made in this place a few weeks ago. He followed his remarkable achievement in the reading of that much-discussed score by noteworthy performances at the concerts of February 4 and 6, of Wagner's "Parsifal" overture, his "Siegfried Idyll," and Beethoven's Fifth Symphony. Mr. Weingartner's distinguishing qualities as a conductor are too familiar to need elaborate description. His most conspicuous excellences were displayed at last week's concert in his reading of that impressive picture of the brooding and despairful soul whose moods are tolled with so "Tristan" like an eloquence—an eloquence that anticipated that of the greater work by almost a score of years. Mr. Weingartner, it was quite evident, loves and profoundly understands this music. He gave a superb performance of it; it may be doubted if even Mr. Sells's reading of it, could we hear it today, would seem more completely revealing. In the "Siegfried Idyll" Mr. Weingartner was less satisfying. Though he realized much of the beauty of that exquisite score, he did not quite succeed in making manifest the lovely serenity of spirit

in its entirety, for it is both witty and ardent. But it misapprehends, nevertheless, the quality of those whose position it deprecates. "There are American composers," says Mr. Hale, "who are sure that there is a common conspiracy to crush them. Mr. Zeiss T. Field cannot understand why Mr. Gerasko will not produce his tenor part, 'Lary ol Hockannum Ferry,' and Mr. Hale knows that there are air sinister and malignant influences against him, otherwise Mr. Walter Damrosch would look favorably on his great orchestral fantasia, 'The Springfield Arsenal.'" He does not believe, he says further, "in crowding a composer who has not learned the technique of his art, and is without fancy or imagination." We hate yet to encounter any one who would be disposed to disagree with Mr. Hale on this point. He is taking the unnecessary trouble of demolishing an imaginary opposition. It seems careful to insist that, for those who espouse such an attitude as that undertaken by the New Music Society of America, considerations of mere patriotism are quite beside the point. No one with any sense of the artistic terribles would make propaganda for music whose only claim to serious attention were its American origin. What is contended is that there exist a considerable number of orchestral works by American composers which do not reverse the attention to which their artistic quality entitles them. There can be little question that a sincere endeavor to bring these works into wider public notice will hasten the day when a score signed by an American will receive the same consideration that is accorded to music of European origin.

which lives in its earlier portions: here his pace was hurried and lacrimose. No one is likely to dispute Mr. Kroll's assertion that the "Idyll" is not a composition of serious import; and accordingly there should be "lightness and cheerfulness" in its exposition; but may there not also be the note of agitation and of tenderness? Mr. Weingartner's interpretation somewhat disturbs one's conviction that the "Idyll" is one of the most poetic of modern scores. His performance of the C minor Symphony was such as to make that painfully hackneyed work almost electrifying. It was a reading of immeasurable ability and fire—one does not realize, as does, recall a more powerful one it seems a pity, though, that Mr. Weingartner chooses to minimize the tragic significance of the exordium by ignoring the tradition which recommends its headlong delivery.

Our need, no excuse for resorting upon Mr. Weingartner's manner of interpreting these familiar works; for he is a remarkable figure in the musical art of our day, and his performances are no inoperative as they are stimulating and significant.

The plan made in this place a few weeks ago for a wider recognition of music by American means, together with the unanimous consent of the recently formed New Music Society of America, has called into Mr. Philip Hale the distinguished Boston music critic, a student that has been widely read. It would be a pleasure to quote Mr. Hale's argument

Miss Bessie Abott

The American Soprano who has recently joined the Metropolitan Opera Company

No observer who stops to discriminate would deny that, as Mr. Arthur Farned has recently observed, most of the mass of American music is the smaller horns is at best adapted only to purposes of ornamentation upon some yet unbuilt structure of the slender substance of human thought and feeling; and much in the larger forms, as well, is but "a futile expression of the faculties of those who have trained themselves in the American school of harmony."

But it is not so with all, either in the small or in the large forms. The appalling array of clever but insignificant American composition will doubtless remain with us always, through the effect of its considerable technical facility. But when the balladeers go, the gods arrive! With the first voice that possesses sufficient beauty or power to reach us, discrimination begins. And such voices, when they come, even in American music, it is vitally necessary to weed out much—not from the country, which would be impossible, but from the sphere of our own appreciation—if we would fit ourselves to perceive and to compel the recognition of that limited but increasing body of American music which values some ending reality of the human spirit. It is for this reason that any sincere and unprejudiced endeavor to discover and make known the extent and quality of our national musical art can scarcely fail to promote its ultimate ideal. The artist will reveal not a little that may justly claim to be both beauty and distinction in the belief of many.

CARTOONS OF THE WEEK

Defects in the Postal System

(Continued from page 228.)

the temptation to pad the returns is constant, innumerable frauds in this line have been detected; it is believed that immense losses occur, which are never discovered. Under the existing system, which only begins to be changed by Congress, there is no remedy.

The amount received by postmasters in payment of postage for second-class matter is collected in cash, and there is no sufficient check on their receipts of these receipts. In other words, this large item of revenue is never "collected." Not millions of dollars a year is accounted for; how much is unaccounted for—who knows?

The withdrawal of claims of railroad companies for transporting the mails involves the payment of more than forty million dollars annually. The only evidence upon which the amount is settled is a certificate from the Post-office Department that the service has been performed during the preceding quarter. There is no way for the Auditor's office to ascertain independently, as contemplated by law, whether the computations have been correctly made—or, in fact, whether any mail has been carried by the roads during the quarter. This practice has been severely condemned by the Comptroller of the Treasury, and the matter has been repeatedly called to the attention of Congress by the Auditor.

The clearing house which has been created can be mentioned as a sample of defective methods such as are liable to crop out in any direction under present conditions. For a period of more than four years the amounts of postmasters' losing money—orders were settled by checking their entries and against the order, but against a stub or coupon detached therefrom which was supposed correctly to state the amount. Amounts aggregating, probably, thousands, were passed upon by this free-and-easy method.

It was like settling a customer's account at bank on his own list of checks—no audit, no check by the bank, but without scrutiny of the checks themselves. Orders could be and were issued for \$100 entered on the coupon as \$1, and the difference pocketed by the postmaster without risk of detection. This device was authorized by Congress and the Auditor's office, in other defiance of the law for the prevention of business frauds. It was the pleasant privilege of the writer to check this amazing procedure. Thousands of checks and coupons were disclosed in reviewing the work for only six months of the four years it had been in operation. In many cases thousands of mistakes and losses amounting to millions were determined. But even with this kind of treatment, the work is the largest annual cash movement of the nation, involving over \$600,000,000 of money—money vouchers to be handled every year, much to be checked by the thousands of thousands of long columns of figures, notes, additions. Some idea of the magnitude of the work may be gained from the fact that the postmasters' statements—statements of lost mail, lost mail binders and thousand volumes, each of which is larger than the largest counting-house ledger, and single tenfold pounds. The money-orders, which are due in bank-notes, fill three million every year.

Between three hundred and four hundred clerks are employed on this important work, doing it under the industry and much genuine devotion. Many clerks are conscientious—"stick" the numbers mechanically, and do not add the long columns of figures in order to prevent dishonest postmaster's entries. All this work should be reviewed; the millions of dollars involved justify it and it is but the law requires it. Thus until about

COLUMBIA MARK XLVII

OUR factory buildings and equipment, materials and processes, are unapproached in the entire American automobile industry, and in many essentials Columbia Gasoline Cars for 1906 are a full year in advance of all others. This is not mere assertion. Make the comparison yourself. In no other cars will you find crankshafts machined cold from a solid block of metal and chrome-nickel steel transmission shafts, jack-shafts, gears, etc., nor the I-beam front axle forged in one continuous piece. In no others will you find the same perfection of body design, beauty of color schemes and painstaking details of finish. Mark XLVII, four cylinders, 40.45 h.p., double chain drive, price, \$4500 to \$5500, according to body, is the accepted ideal of the American high-powered car. Mark XLVI, four cylinders, 28 h.p., shaft-drive, price \$3000, is unequalled among medium-powered four-cylinder cars. Mark XLIV-2, two opposed cylinders, 18 h.p. shaft drive, price \$1750, we offer as the highest grade two-cylinder car in the market.

Separate Catalogues of Columbia Gasoline Cars, Columbia Electric Carriages and Columbia Electric Commercial Vehicles will be mailed on request; also, special illustrated booklets: "Columbia Chrome and Steel," "Fashioning a Crankshaft," "Constructive Differences in Columbia Cars," "Transmission, Etc."

HASWELL'S OLD NEW YORK

"Reminiscences of an Octogenarian of the City of New York"

The volume is a perfect mine of topographical information. It has something to say about innumerable landmarks, about the streets and their names, about restaurants and places of amusement noted in their day, about the clausical and one things which gave New York its play-symphony, about the thousand and one celebrities who were prominent in the making of the city.

With portrait of the author, many illustrations, and map of New York in 1816. Crown 8vo, \$3.00

1860 no part of it was reviewed, and since then less than ten per cent. of it has been treated. This is regrettable, but the same, but Congress refuses the large additional clerical force required.

Serious inconveniences and possible divisions in the service—even a breakdown in the operation of some of its most necessary functions—may arise at any time through controversies between the Post-office Department and the Auditor's bureau, inasmuch as since such controversies have been in the past, the personal animosities, while known matter remains its present intensity, this is a menacing peril. The law which provided for the establishment and operation of the Auditor's office, providing and simplifying its functions in order for its independence, not contemplate that its functions should be carried in a spirit of antagonism. While obedience to law must be exacting and its penalties limited to the amounts granted, every effort should be made for a harmonious adjustment of relations between the bureau and the department. Happily this spirit has in recent years prevailed, and the public service has received no detriment.

On the other hand, the danger of collision is ever present, but in the nature of things scarcely so imminent. If the two offices could be more widely separated, this exposure to collision would be lessened. There is an esprit de corps in different departments, and even in different divisions in the same department, which throws the officials and employees thereof apart instead of bringing them together. Old clerks take a grim but foolish delight in "turning down" the rival institution. Except ordinary inadvertences may sometimes lead to avoidable collision between subordinates of the administration and accounting bureaus, but nothing serious would be difficult to avoid. The hand of the letter-giver seldom reaches into these avoided precincts.

Although the danger of collision has been exaggerated, the fact that the Auditor's bureau and the Post-office Department have always been tenants of the same building, and perform their work in one office, is a serious inducement to collisions. It is not in practice, which are contrary to sound principles of correct accounting. There has been too much intercommunication between the employees of the two departments, who have corresponding or interlocking duties connected with the adjustment of postal accounts. This practice is reprehensible and dangerous, leading to division of responsibility and other manifest complications, but is very hard to eradicate.

It will be apparent on reflection that postal deficits are revealed in the Auditor's office. That bureau in its settlement of accounts detects frauds and defalcations, with the attendant official prerogative of reporting criminals for prosecution, and attempting to collect delinquencies from delinquents in their households. It passes upon fraudulent and fictitious claims, of which only the closest scrutiny prevents allowance and payment in money cases. It handles all the multitudinous accounts of workers which have given opportunity for error, forgery, and fraud in their lapse or payment, besides constantly scrutinizing as to how the work is done, and, if necessary, the number of postmasters with their standing temptation to embezzlement. It is forever inspired with the difficulty of enforcing the government's just demands against defaulting postmasters, filling contractors, and other wrong doers, through the severity of judges and juries and law-bagges of the law. Above all, it is conscious of numerous defects in its own machinery, many of which are apparently impossible of adequate correction.

Earned efforts to cure these defects are constantly made by the officials and employees of the office, but the obstacles are insurmountable. Congress closes its eyes to all representations of the danger involved, and gradually appropriates barely sufficient clerical force to keep the clock approximately in current in its present broken mechanism for taking no additional work which year adds more new failures in the vast postal system, leading to its final complications, defects and perplexities, with no sufficient means to handle them.

A PRAISEWORTHY RECORD.

Rev. Sproggins: "I'm pleased to hear your grandson is so well behaved, Mrs. Buddie."

Mrs. Buddie: "Ah, sir, he's just like his poor dear father; he always had a bit took off his sentence for good behavior."

DICKENS' COMPLETE WORKS

~ ~ ~
A NEW ILLUSTRATED EDITION
IN THIRTY VOLUMES
~ ~ ~

THE present announcement has a special interest for all lovers of Dickens. Messrs. HARPER & BROTHERS have issued Dickens' Complete Works in an edition containing many features of a *de luxe* character, yet at a very moderate price. Complete in thirty volumes, handsomely illustrated by the original illustrators of Dickens' books, carefully printed, splendidly bound in olive-green cloth, stamped in gold, with gilt tops and uncut edges, this set is worthy of the dignity of being the corner-stone of any library. Assuredly no library is a library without Dickens. Here is an opportunity to place his complete works in your home—once for one dollar down and small monthly payments thereafter.

HARPER'S MAGAZINE for one year is included in this offer; or, if you prefer, HARPER'S WEEKLY, HARPER'S BAZAR, or THE NORTH AMERICAN REVIEW.

CHARLES DICKENS

FREE—Sol Eytinge's Famous Drawing of Dickens' Characters

In order to acquaint you with the details of this beautiful set of books, and the special terms on which it can be purchased, on receipt of the attached coupon, with your name and address, we will send you, FREE, a copy of Sol Eytinge's famous cartoon representing Sam Weller in the act of introducing to Mr. Pickwick all the principal characters in Dickens' novels. There are nearly two hundred characters in the picture, easily recognized by the reader who is familiar with Dickens. The picture is printed in black and tint on heavy calendered paper, *approximately 10 x 18 inches*, suitable for framing. It is sent also with your name and

**HARPER &
BROTHERS**
Franklin Square

OF THE

IS THE

Great Eighteen Hour Train between New York and Chicago.

It saves a day, and practically makes the run in a night.

Nothing quite equals it.

A copy of the 51-page Illustrated Catalogue, giving a synopsis of each of the forty-one books now comprising the New York Central's "Four Track Series," as well as a small half-tone reproduction of each of eleven beautiful etchings of scenery along our line, will be sent free, postpaid, to any address, on receipt of a two-cent stamp, by George H. Donahy, Manager General Advertising Department, Room 115, Grand Central Station, New York.

THE PRUDENTIAL
HAS THE
STRENGTH OF
GIBRALTAR

YOU may be so well and strong that the thought of the necessity for Life Insurance hardly ever crosses your mind. But it should occur to you, upon reflection, that life insurance is not obtainable after a man's health is seriously impaired and when his days are clearly numbered. Now when a man can save a little money year by year without feeling it, when he can lay up

a substantial fund against the day of his departure—when this protection for his family is possible and even very easy, what would be your estimate of him if they should be left penniless?

Is your life insured? The holders of over six million policies in The Prudential had reasons for insuring their lives in this company. It would be decidedly worth your while to know why and how The Prudential can satisfy the demand for economy, convenience, security and promptness in veritable Life Insurance.

HARPER'S MAGAZINE

for MARCH

A Night's Ride in the Desert

A stirring narrative by Mr. CHARLES W. FURLONG, telling of his experiences with treacherous native guards and their confederates on a night ride from Khoms to Kussabat. A remarkable true story of real adventure and a vivid picture of a night of danger.

A Bishop in the West

Bishop TALBOT, now of the Episcopal Diocese of Central Pennsylvania, was for some years missionary bishop of Idaho and Wyoming. He writes of the humors and the ups and downs of his life in the West. An amusing picture of life in the mining towns.

PART III.

Mrs. Deland's Great Novel "THE AWAKENING"

The Bible of Mani

An article which must interest every reader. It tells of the discovery in Chinese Turkistan of hundreds of ancient manuscripts which have been translated and proved to be portions of the long-lost Manichean bible.

Henry James on New York

In this paper Mr. JAMES revisits the New York of his childhood—the old Washington Square neighborhood. A delightful bit of philosophizing over what is left of the old town and what has gone.

8 COMPLETE
SHORT BY
STORIES MARIE MANNING, THOMAS A. JANVIER, ALICE BROWN, PASCHAL COGGINS, GRACE DENIO LITCHFIELD, LILY LONG, ELIZABETH MOORHEAD, ETC.

The University of Geneva

President CHARLES F. THWING, of Western Reserve University, writes of the famous Swiss seat of learning at Geneva, and of some of the great men who have worked there.

Ibex Hunting

An account of a remarkable ibex hunt, in which the author, Mr. JOSEPH CLARK GREW, participated, in the Himalaya Mountains in Baltistan. Illustrated with many striking photographs. A stirring story of good sport in a wild country.

Ways of Kentucky Cardinals

A fascinating story of some Kentucky cardinals that nested in the author's garden and displayed wonderful intelligence and interesting bits of bird character. The author had some exciting experiences while helping them build their nests.

The Anatomy of a Steel Rail

An article of the most practical scientific interest. It explains the manufacture of the steel railroad rail in all its processes, and analyzes the faults in manufacture which have been the cause of many of our most terrible accidents.

COMMENT

We discuss elsewhere the probable fate in the Senate of the HERRIN bill, which passed the House of Representatives by a majority even more overwhelming than that which was secured by the EAST-TOWNSHIP bill last year. Meanwhile we note that neither of two other measures known to be favored by the ROOSEVELT administration, the Steward bill and the Philippine tariff bill, seems likely to obtain the approval of the Senate in their present form. We are told that a considerable number of Republicans have announced a willingness to cooperate with the Democrats in defeating the former project, unless it is saddled with an amendment providing that the inhabitants of Arizona and New Mexico shall vote separately on the question whether they desire the union of the two Territories in a single State. If in either Territory a majority shall reply in the negative, the fusion will not take place. We do not mean that Senator HERRIN, who has the bill in charge, confesses a loss of hope, and we have no doubt that if his scheme be doomed to shipwreck, he will go down with all sails set and flags flying. One thing is certain, namely, that if Arizona and New Mexico do not come into the Union as one State, they must both resign themselves to occupying a Territorial status for an indefinite period. We do not understand that there is any serious opposition in the Senate to the admission of Oklahoma and Indian Territory as a single State, and we presume that in one way or another their part of the Steward bill will be carried out. As we expected, the stand-patners seem strong enough in the Senate to throw out the Philippine tariff bill, unless it be amended so that the customs duties imposed on insular sugar and tobacco shall be fifty per cent. of the DUTY rates, instead of twenty-five. Whether the Panama Canal problem will be solved in conformity with the President's views depends apparently on his acceptance of a compromise in the matter of railway rate-making. As the Santo Domingo treaty is also threatened with rejection, the triumphs of the administration in the Fifty-ninth Congress promise to be few and far between. It is evident that, owing to a considerable change in public opinion, brought about by the thorough examination which the rate-making project has undergone in the press, Mr. ROOSEVELT has less influence in the Senate to-day than he possessed a year ago, though he retains his hold upon the House of Representatives.

The effect of the speech made by Senator PATTERSON of Colorado in defense of his refusal to be bound by the resolution of the Democratic caucus against a ratification of the Santo Domingo treaty was momentarily impaired by Senator BAILEY's demonstration that not long ago Mr. PATTERSON had himself voted for a resolution making a two-thirds vote in a Democratic caucus binding on all representatives of the party in the Senate. After all, however, Mr. BAILEY established

nothing except the fact that the argument against caucus dictation in the matter of treaties would have come with more consistency from some other Senator than his colleague from Colorado. The intrinsic force of the argument was in no wise weakened. There is, however, some reason to believe that Senator BAILEY's speech exercised a good deal of influence over certain Southern Senators supposed to be wavering, and that the treaty in its present form will get only two Democratic votes, those, namely, of Senator PATTERSON and Senator CLARK. Two would not be enough to make up the necessary two-thirds. To avert, if possible, the rejection of the treaty, Secretary Root, it is reported, purposes to amend one of the articles—that, namely, by which our government agrees under certain circumstances to interpose for the maintenance of order in the Dominican Republic. Mr. Root intends, we are told, to limit our intervention strictly to the protection of the American citizens employed as collectors in the Dominican custom-houses. It is possible that by such a minimizing of our responsibilities two or three additional Democratic votes may be secured for ratification.

The inquiry said to have been made by the Italian government as to whether the United States would undertake the debt-collecting function in Haiti as well as in Santo Domingo, seems to have been based on a misapprehension of the facts. It was at the request of the President of Santo Domingo that Mr. ROOSEVELT agreed to collect and distribute the customs revenue of that republic. So far as we know, no such request has been made by the Haitian Executive, and we doubt if one ever will be; for, owing to the dread of annexation to the United States which is felt by the Haitian people, the life of a President who should take an overt step in that direction would not be worth an hour's purchase.

The Democratic Senators who have criticized the participation of our government in the conference concerning Moroccan affairs have predicted that the presence of our diplomatic representatives at Algiers would be construed in Europe as a definite departure from our traditional policy of aloofness in Transatlantic complications. The prediction was quickly fulfilled. In the week ending February 10, the *Statist*, one of the leading financial weeklies published in London, expresses the conviction that the conference will fail unless Mr. ROOSEVELT interposes to save the situation. It declares that if the United States would consent to undertake the policing of Morocco, everybody would hail with joy our readiness to resume an unpleasant responsibility for the sake of preserving the peace of the world. Unhappily President ROOSEVELT would like to preserve the peace of the world, as he proved at Portsmouth. That is not the ground, however, on which our government has taken part in the conference. We were represented in the previous conference held at Madrid in 1880, and our commercial interests are affected by the intervention which was signed then and there. It was not only our right but our duty to see to it that the privileges acquired by us at that time should not be infringed at Algiers. It is, of course, always possible that diplomats, seeking to magnify their office, may transcend the prescribed limits of their mission. Senator HALE, however, who is supposed to have spoken for the administration, has assured us that no such transgression of defined authority need be apprehended in the present instance. The notion of our policing Morocco is, of course, absurd, and is worth mentioning only as showing how hard it is for Englishmen, even when exceptionally well informed, to understand this country.

Is Pennsylvania to be for a time a Democratic State? That is a question which Republican partisans, who are looking forward to the Presidential election of 1908, may well ponder with some anxiety. The Democratic candidate for the State Treasurership, Mr. WILLIAM H. BERRY, was elected last November by a considerable majority, through a coalition of the so-called LAWRENCE Republicans and the Democrats. Will the coalition be renewed? Upon that inquiry much light will be thrown at the Republican State convention, which is expected to meet in June of the current year. The "renewal" or PENNSYLVANIA organization controls the Republican State committee, and, therefore, will be able to name the temporary officers of the convention, including the committee on credentials. Will delegates representing the LAW-

could Republican seceders of last year be admitted? If this question shall be answered in the negative, it may prove extremely difficult for the regular Republican nominee for the Governorship to carry the State next November, for in that event the LINCOLN Republicans will either put forward a standard-bearer of their own or support the Democratic candidate. Just now it looks as if, provided a fusion took place, the LINCOLN Republicans would have to allow the Democrats to name the competitor for the highest office in the State, though, of course, they would be permitted to fill some of the minor places on the coalition ticket. Whether the machine can put forward a nominee likely to win back most of the LINCOLN Republicans is doubtful. It is not believed that either Justice JOHN STEWART or Justice ELKINS would accept a nomination for the Governorship. If Senator KYOT would accept it, he probably could be elected, but nobody believes that he would resign his seat in the Federal Senate, except at the earnest request of President ROOSEVELT and for the express purpose of restoring the threatened ascendancy of the Republican party in Pennsylvania.

Political calculations would be gravely disturbed if Pennsylvania were to become once more a doubtful State at Presidential elections. It got its epithet of "Keystone" from the scale-turning part which, before the civil war, it often played in the choice of a President. Pennsylvania was pivotal in 1796, and again in 1800; it was expected to be pivotal in 1812. In 1824 its political importance was generally acknowledged; in 1844, in 1848, and in 1856, the political campaigns of opposing parties made it one of the chief fighting-grounds. Since 1860, on the other hand, Pennsylvania has always chosen Republican Presidential electors, though it has not always elected a Republican candidate for Governor. If its thirty-four Presidential electors should be Democrats in 1908, the Republicans would feel that they had lost their stronghold. We say stronghold, because of the other States of the first order of magnitude, the Democrats, since the civil war ended, have carried New York several times, and Illinois once, in Presidential years.

The Interstate Commerce Commission promptly sent to the House of Representatives the information desired by it concerning the investments made by the Pennsylvania Railroad in the stocks of some other lines, including notably the Baltimore and Ohio, the Chesapeake and Ohio, and the Norfolk and Western. It turned out that the Pennsylvania Railroad has not violated the Federal law, not having purchased a controlling interest in any competing line. The right of a railway corporation to purchase stock in another company is not disputed, provided it refrains from buying a majority of the shares. The almost simultaneous attempt of the Pennsylvania Legislature to investigate the relations of coal-carrying railroads in that State to coal-mining companies also seems to have been based on a misunderstanding of the law and the facts. The coal lands possessed by the railways in Pennsylvania were all acquired before such ownership was prohibited by the State Constitution of 1873, which expressly declared that no interference with vested rights was contemplated. President GEORGE F. BAER, of the Reading Railway, has pointed out in a published statement that the Supreme Court of Pennsylvania has uniformly held that the constitutional limitations imposed in the year named do not apply to property previously secured. In the same statement Mr. BAER shows that although the Reading system is now making money, there has been during the last twenty years only a very small increase in traffic receipts from anthracite coal. The figures will surprise many persons. The average annual receipts from the transportation of anthracite coal during the last five years have been \$10,334,000, while as long ago as 1883 the traffic receipts from the same source were \$10,046,000. The truth is that the transportation of anthracite coal has ceased to be an all-important factor in the revenue of the Reading system. In 1877 it constituted 61.50 per cent. of the total freight and passenger traffic receipts of the Reading company. Now it forms only 34.50 per cent. The receipts from miscellaneous traffic are now greater, and even the passenger receipts are equal to one-half the intake on anthracite coal.

Mr. BAER also has replied to the assertion made by the United Mine Workers that although the price of anthracite

coal has been raised since the agreement reached three years ago became operative, the mine-owners refuse to promise the miners an increase of wages after that agreement shall have expired on April 1. The facts prove that while the average price of coal per ton has advanced about seventy-three cents, in seven years, there has been a simultaneous increase of sixty-three cents per ton in the cost of mining coal. There is thus left to the coal companies an increase of only ten cents per ton in the septennial period. In view of these figures, it seems probable that the anthracite miners would in the end be content with a renewal for two or three years more of the agreement made in 1903 through the interposition of President ROOSEVELT's Anthracite Coal Commission, but for the fact that they consider themselves bound to cooperate with the bituminous miners in a strike, unless all the demands of the latter are granted. So far as a strike in the anthracite coal-fields is concerned, the consumer need not fear this summer the scarcity of the combustible which he experienced three years ago, because, first, comparatively little coal is burned in warm weather, and, second, the reserve stock of mined coal in the hands of the companies is exceptionally large. As, on the other hand, the strike fund, including the sums to be collected during the next few weeks, will be inadequate to the support of the miners for more than a brief period, the strike will spell disaster for them. The situation in the bituminous fields is different, because the reserve stocks are small. No well-informed person believes, however, that the soft-coal miners are sufficiently well organized to coerce the railway and manufacturing companies, to which supplies of that fuel are indispensable. If there is a strike, it will be a short one.

Whether in the new House of Commons, which was formally opened on February 12, the tariff-reformers will constitute a separate party depends largely upon the outcome of the meeting of Unionist members which, in compliance with Mr. JOSEPH CHAMBERLAIN's request, has been called by Mr. A. J. BALFOUR. In a published letter to the ex-Premier, Mr. CHAMBERLAIN denies that an attempt has been made to impose, as a condition of the continued union of the Unionists, the exclusion of those who decline to accept the whole programme of the tariff-reformers, but he goes on to say that in his judgment it would be dishonest to pretend that the Free-Feeders, who, while nominally supporting Mr. BALFOUR in the last Parliament, opposed his policy, are in the same boat with the tariff-reformers and retalliationists. Mr. CHAMBERLAIN expresses the belief that in the coming meeting of the Unionist members the tariff-reformers will have a majority, but should the contrary prove to be the case, he thinks that they might properly organize themselves into a distinct Parliamentary group, which would have "whips" of its own. Experience has shown that such a "group" is apt to stiffen into a sharply defined "party," which might at any hour enter into combinations of which Mr. BALFOUR would not approve. At present the Liberals are exulting in their great majority over all opponents put together, but there are clouds on the political horizon, and it remains to be seen whether the followers of Sir HIL. CAMPBELL-BANNERMAN will not in their turn undergo disintegration.

On the score of the opinions expressed on some interesting subjects by well-known American citizens, a good deal of attention is likely to be attracted to an article in the February number of the *Cosmopolitan Magazine*, entitled "Are Great Fortunes Great Damages?" Among the men to whom this and kindred inquiries were addressed may be mentioned on the one side Dr. CHARLES W. ELIOT, president of Harvard University, Justice OLIVER WENDELL HOLMES, of the United States Supreme Court, Dr. DAVID STARR JOHNS, president of the Stanford Junior University, Dr. E. BEKAVINUS ANDRÉWS, chancellor of the University of Nebraska, and the late EDWARD ATENSHAW; and on the other, JOHN WYNMORER, ex-Postmaster-General, Mr. ERNEST CUNNINGHAM, and Rev. WASHINGTON GLIMOCK, the social reformers, and JACK LONDON, author and socialist. Premising that the wealth of several American capitalists—a wealth not inherited, but accumulated in a single lifetime—is now conservatively estimated at from one hundred to five hundred million dollars, the interviewers inquired whether, in the judgment of the gentlemen named, any man could render to his country or to mankind a service

rustling him to so great a reward. Mr. ERNEST CROSBY and Mr. JACK LONDON curtly answer "No." The Rev. WASHINGTON GLADEN would not undertake to limit the possible pecuniary value of future services, but he did not hesitate to say that no man had yet rendered a service to mankind or to his country worth either of the sums named. President ELIOT and President JORDAN also replied in the negative, but added that some men had rendered or could render services for which no amount of money could pay. On the other hand the question is answered in the affirmative not only by Mr. JOHN WAXMAKER, but also, somewhat unexpectedly, by Chancellor ANDREWS and EDWARD ATKINSON. To the next inquiry, whether the possession of a billion of dollars in the hands of an individual constitutes a menace to the republic, Mr. CROSBY, Rev. W. GLADEN, and Mr. JACK LONDON say "Yes," but President ELIOT, Chancellor ANDREWS, Mr. JOHN WAXMAKER, and EDWARD ATKINSON are as firmly convinced that a negative answer should be returned. President JORDAN says that a surplus is always a danger, and that the fewer the persons controlling the excessive accumulation, the greater is the risk of its being ill used.

To the question whether, in the event of a billion of dollars being bequeathed to a reckless, wasteful, and unscrupulous heir, society should have any protection against him, President ELIOT, President JORDAN, and Mr. JOHN WAXMAKER respond in the negative. Chancellor ANDREWS would find a safeguard in a stiff inheritance tax; Mr. CROSBY thinks that if society permits such an accumulation, it ought to suffer for its own folly, and EDWARD ATKINSON declared that the quicker a spendthrift got rid of his inheritance, the better. Rev. W. GLADEN is convinced that if a man under our loose laws can legally acquire a billion dollars, he ought at least to be prevented from bequeathing it to anybody. To the question whether it is practicable or advisable to set any limit to the amount of property an individual may own, every one of the persons interviewed, whether conservative or the opposite, answered "No." That is to say, a rigorous and artificial limit to the accumulation of wealth meets with the disapproval alike of those who protest against the existing social system and of those who defend it. The questions above cited were considered together by Mr. Justice HOLMES. He pointed out that the real problem is not who owns, but who consumes, the annual product, and expressed the conviction that economically it does not matter whether you call Mr. JOHN D. ROCKEFELLER or the United States owner of all the wheat in the United States, provided the wheat is annually consumed by the body of the people—except that ROCKEFELLER, under the illusion of self-seeking or in the conscious pursuit of power, would be likely to bring to bear upon crop conditions a more piercing scrutiny of the future in order to get a greater return for the next year.

In a recent issue of the *Sax* there was a letter from an army officer about the army pay. An officer, he said, was expected to maintain his family and himself on a salary that was fixed thirty-five years ago. Since then the price of living has about doubled, and the incomes of persons who move in the general social plane in which army officers are expected to circulate have increased proportionately. Consequently, says the *Sax's* correspondent, the present pay of officers can no longer make a fair approximation to maintaining them as our government, which rates them officially as gentlemen, expects them to be maintained. We have had this same complaint from the college professors, whose salaries have been practically reduced by the increased cost of living, and the reasonableness of their moans has been generally acknowledged, and a good deal has been done already to better their case. The army officer is in several particulars worse off than the college professor. Suppose after twenty years' service he is a captain of cavalry, forty one or two years old, with a wife and two children, and an income of \$2800. He has to keep supplied with very expensive uniforms; he moves from post to post, and occasionally is sent overseas; sometimes to the Philippines. His children do not have even the advantage of a continuous attendance at good public schools, but pick up what haphazard education they may in the course of their parents' wanderings. As for sending them to boarding-school, that is an impossible expenditure for a married man with an income of \$2800. So

while the college professor can at least educate his children to his satisfaction, the army officer finds it extremely difficult to do so.

The officer who writes to the *Sax* holds that it is the higher grades of rank in the army that especially need increased pay. He recommends increased longevity pay: an addition of ten per cent. after ten years' service; another ten per cent. after five years more; and an additional twenty per cent. after another five years, making forty per cent. increase after twenty years' service. As a matter of fact, this increase has already been granted. It is a question, however, whether even this increase in pay is sufficient to provide for the growing needs of the officers of the army, due to the higher cost of living. But Congress will have to undergo marked change of heart before it votes further increase. There is even more complaint about the insufficient pay of private soldiers than of officers. For years there have been efforts to secure an increase of pay to our consuls. Our consul at Anting, a very capable official, has just resigned because his salary would not maintain him. The pay of our ambassadors is scandalously inadequate. Cabinet officers are ridiculously underpaid, and all the Federal judges should have a raise. In an article in the current *New American Review*, Mr. THOMAS L. JAMES discusses Uncle Sam as a parsimonious employer, and easily makes an impressive list of his parsimonies. The army is not worse underpaid than most of the civil offices, including the President, but the civil offices are for the most part temporary, whereas an army officer or a naval officer who sticks to the service has no chance to better his financial condition. Congress is generous to the pensioners, but to no one else.

A sound argument for the expenditure of whatever money is required to make our regular army an efficient and contented body of men can be based upon the immense cost of our wars as we have managed them in the past. The pension system, as it has been developed in the last twenty years, makes reliance on volunteer troops a colossal extravagance. A fortnight ago Congressman GARDNER, of Michigan, disclosed some interesting figures about the cost of the civil war. Its first cost was about six billion dollars. For pensions \$12,222,000,000 has been expended, and it is estimated that the total expenditure will eventually reach nearly double that sum. That would make an expenditure of \$12,000,000,000 to hold together a country of which the property valuation in 1900 was \$16,000,000,000. In the Spanish war (we still quote Mr. GARDNER) there were 312,000 casualties and 9578 deaths and casualties. Of our Spanish war veterans, 69,687 have already applied for pensions. If the civil war veterans had been equally willing eight years after 1865 to be assisted by the government, there would have been 500,000 applications for pensions. As it was there were 102,000. Our War Department expenditures have increased in the last twenty years from \$38,000,000 to \$122,000,000; nevertheless, feeling as we do about pensions, it is excellent economy for us to provide that, as far as possible, our fighting shall be done by professional soldiers, maintained in a state of high efficiency and commanded by highly trained officers. It does not take nearly so many of them as of volunteers to do a given piece of work; they do it quicker and better, and with much less peril to health and risk of disability. It costs too much to make veterans out of volunteers, and infinitely too much to make officers fit to be entrusted with the care of men out of green stuff of whatever natural merit.

In support of his thesis that our Federal government is a parsimonious employer, ex-Postmaster-General THOMAS A. JAMES says that Mr. ROBERT T. LINSLEY, who had been one of his colleagues in the cabinet of President GRANT, found, after serving for four years as minister to the court of St. James's, that his total expenses were just twice the amount of his salary, and he had to make good the deficit by draining upon his private purse. Yet it is known that Mr. LINSLEY, as compared with some of his successors, led a life of simplicity. He entertained only when he was absolutely required to do so because of his official station, and then by no means lavishly. Mr. JOHN BYRNE MEAR results in his *History of American Diplomacy* that, as long ago as GRANT's administration, Secretary FIST was of the opinion that the grade of the mis-

sions from the United States to the chief commercial nations of the world ought to be raised from that of minister to that of ambassador. His sole reason for refraining from taking any step in that direction was the conviction that Congress would not increase the salary to the amount which an ambassador, as the personal representative of the President, should receive. Events have shown that he was right. We now accredit no fewer than eight ambassadors to foreign powers, yet they receive only the salaries of ministers plenipotentiary. The result is that only a rich man can afford to accept any of those posts. A poor man, such as BENJAMIN FRANKLIN was, is practically barred out.

The Washington correspondents report that the administration is a good deal concerned over the possibility of another antiforeign outbreak in China. The chance that American troops will be needed again for the rescue of Americans in China has already led to the despatch of two regiments of infantry and two batteries of artillery to Manila and to other preparations. The transports which are taking the reinforcements to the Philippines are to stay at Manila in readiness to take troops to China if that should be necessary.

Still another infantry regiment may be sent to the East if Congress will vote the money. While these military precautions are being taken against the possible flying off of the Chinese lid, it is gratifying to notice that the imperial Chinese commissioners now on a visit of inspection and investigation in this country are being everywhere received and entertained with the heartiest cordiality. In New York, on February 3, a great dinner was given in their honor at the Waldorf Hotel by representatives of the Protestant missionary societies. On their way to New York they were elaborately entertained in Chicago and in Washington, and everything that they cared to see both there and here was shown them. Leaving here, they went to West Point, Niagara, Philadelphia, and Boston. In Boston a dinner was given in their honor on February 12 at the Algonquin Club, at which a number of notable addresses were made. Governor GIBBS and Mr. RICHARD OLMSTED were among the speakers, and President ELIOT gave the commissioners assurance of the readiness of the American colleges to receive Chinese students on exceptional terms of admission, and provide for them special guidance and pecuniary aid, if need be.

The commissioners are Viceroy of the empire, the senior of them being that TUNG FAN who, when ordered by imperial edict at the time of the Boxer rebellion to kill all foreigners in his province of Shensi, elected instead to protect them, and for this disinterested exercise of superior judgment was presently promoted to be governor of two provinces. He is rated as one of the strongest friends of progress in China. The commission of which he is the head goes from here to Europe and examines the institutions of Germany, Russia, Belgium, and Italy. Another commission will follow and inspect England, France, Holland, and Switzerland. The presence of these visitors and the ominous nature of the rumors of impending disturbances in China should both remind Congress of the need of so amending the exclusion act that it may not shut out Chinese students nor subject to indignities such Chinese visitors as it was never intended to affect.

Americans and American goods are now exceedingly unpopular in China. If any one remains ignorant why they are unpopular, he can learn something from the recent remarks of Vice-President SEYMOUR, of the Pacific Mail Steamship Company. Mr. SEYMOUR says that the moderation of the American troops in China at the time of the Boxer rebellion made Americans very popular. He attributes the present disfavor in which they are held to the brutal enforcement of the exclusion act and to the hostile treatment of Chinese in California. The officials who have enforced the exclusion act in California have proceeded, he says, on the theory that the more Chinamen they kept out the greater would be their popularity. Besides that, the San Francisco labor leaders began agitation against Chinese-made goods, using the boycott against grocers, tobacco-dealers, clothiers, and others who sold them. The Pacific coast Chinese wrote home about it. Well-born students sent by the Chinese government to the University of California wrote home that on their landing

they had been measured on the BERTILLOU plan and treated like criminals. They advised against sending any more students. Then followed the boycott against American goods, managed with scorching effectiveness by the great Chinese guilds, and the diffusion by them of anti-American literature throughout the empire. The result has been the development in China of an intense anti-American feeling, that has come to be a feeling against all foreigners, and which the Chinese government is doing its best to hold in check. We have sown the wind, Mr. SEYMOUR says, and are reaping the whirlwind. He thinks the condition of Caucasian missionaries in the interior of China is extremely perilous. The Pacific coast trade with China he reports to be very seriously crippled, many San Francisco firms in the Chinese trade having closed their offices in China. This condition of things is doubtless satisfactory to the labor organizations of San Francisco, which have been the chief agents in bringing it about, and which can probably see a profit in the extinction of all commercial relations, and indeed all intercourse, with China. Whether Congress will permit these organizations to continue to regulate the relations between China and the United States remains to be seen.

The famine in northern Japan, due to the failure of the rice crop, is very severe, and has brought thousands of persons to the verge of starvation. President ROOSEVELT has appealed to the American people for "help from their abundance" for their suffering fellow men of the great and friendly nation of Japan. We do not doubt that his appeal will meet with a ready and bountiful response. He recommends that contributions be forwarded through the American Red Cross to the Japanese Red Cross, to be used as the Japanese government may direct. Local Red Cross treasurers will receive contributions, or they may be sent to the national Red Cross treasurer, Mr. CHARLES HALLAM KEE, of the Treasury Department in Washington. Mr. JAMES H. SMITH, 500 Fifth Avenue, New York, will also receive contributions.

Since December 21 the running time of trains between New York and San Francisco has been reduced from 92 hours to 81 hours and 45 minutes, and the mail service between those points has been expedited by an entire 24-hour day. This saving of time has been accomplished by the efforts of the Postmaster-General in combination with the Burlington, Union Pacific, and Southern Pacific railroads. On the Southern route across the continent a gain of 16 hours has been made between New York and Los Angeles. Another very important gain of 12 hours has been made between St. Louis and Galveston, San Antonio, and other points in southern and southwestern Texas. Intermediate and connecting points on all these routes share proportionately these gains in time, to the very considerable and important advantage of business in the sections of country affected. The Post-office Department under Mr. CORTLANDT is not less successful and energetic, it seems, in denying the privileges of the mails to swindlers than in making those privileges constantly more valuable to persons whose use of them is lawful.

Whatever may be thought of Mr. ORR's political position just now, it is evident that the movement to force him out of the chairmanship of the New York Republican State Committee has miserably failed.—*Springfield Republican*.

It looks that way, but it is one thing to have ORR, lead the New York Republicans and another to have them follow him. ORR, if left in charge, can be trusted to give Governor HAZEN a Democratic success.

One hundred and one midshipmen graduated from Annapolis on February 12, and went home on leave, as glad, we presume, to put a safe distance between themselves and the Naval Academy as any lot of budding heroes that Annapolis ever turned out. No insider has disclosed what life has been like at Annapolis during the last three months, but it must have been very trying to the midshipmen's nerves. A new hazing law now before Congress gives the Secretary of the Navy discretion to dismiss or otherwise punish cadets who are caught hazing, either with or without a court martial. The bill also defines hazing, and makes it the duty of every officer stationed at the Naval Academy to report cases of it that come to his knowledge.

The Senate and the Hepburn Bill

If anybody imagined that the Hepburn bill would emerge from the Senate in the form given to it by the House of Representatives, he will be undeceived, not so much by Mr. FORAKER's declaration that he should vote against it—that was expected—as by the speech made on Monday in the Senate by Mr. LOAN, who is believed to reflect quite as faithfully as any other Senator the views of President Roosevelt himself. The crucial feature of the Hepburn project is, it will be remembered, that it makes a railway rate fixed by the Interstate Commerce Commission operative until it shall have been pronounced unreasonable by the courts. Mr. LOAN holds, on the other hand, that the rate should not be operative until after its reasonableness shall have been affirmed by the Federal tribunals. There is, indeed, grave doubt whether, even if the Hepburn bill were passed in its present form, a Federal court could be prevented from suspending by injunction the operation of a fixed rate by the commission if it should be complained of by a railway as unreasonable. Senator LOAN recalls that last November Senator KNOX, who was supposed to speak with the President's approval, pointed out that no order made by any commission or board now existing or prospective for the purpose of changing a rate or practice on the score of unreasonableness or injustice without its order being subject to review in a judicial proceeding in a United States court. Moreover, there is no law that does, and probably no law could be enacted that could, prevent the court, if inclined to think that injustice had been done a railway, from staying by injunction the operation of the commission's order until the court should have passed upon the merits of the controversy. The power of a court of equity, exercising its discretion to enjoin the operation of a rate made by the commission until a final hearing should have been given and a final decision made, is a power that inheres in the court, that need not be conferred by statute, and that probably, in Mr. KNOX's opinion, cannot be taken away by statute. We are further reminded by Mr. LOAN that the EPOCH-TOWNSHIP bill, passed last year by the House of Representatives, with a view of facilitating a judicial review of a rate fixed by the commission, created a court of transportation and endowed it with equity powers, which, of course, included the power of suspending by injunction the government rate. The fundamental objection levelled at the Hepburn bill by the Senator from Massachusetts is that instead of perpetuating the just-mentioned feature of the EPOCH-TOWNSHIP bill, or taking some alternative precaution to safeguard railroads from injustice, it seems deliberately to attempt to eliminate, so far as possible, from the proposed law all provisions for review by the court. Mr. LOAN, for his part, is not prepared to assent to any restriction upon the right of an American citizen to seek redress in the courts of his country. He is unwilling to substitute an executive commission for the courts of the United States. He recognizes that a proper regulation of the railway rate-making question is of vast economic importance, but in his eyes such importance is as nothing compared with the primary duty of preserving to every American—high or low, rich or poor—free access to the courts of the republic. He is quite aware that under our Federal Constitution no legislation by Congress could prevent an appeal to the courts if it were alleged that a rate fixed by the commission was confiscatory. But a rate may not be absolutely confiscatory, and yet be in the highest degree unreasonable and unjust—may, well-nigh ruinous. Mr. LOAN is ever inclined to share Mr. KNOX's doubt as to whether it would be constitutionally possible to deprive by legislation the government rate of appeal to the courts as to the mere reasonableness and abstract justice of a given rate. The distrust of the courts disclosed in the Hepburn bill, the avoidance of an explicit statement of a railway's right to a judicial review of the commission's decision, the refusal to recognize that a power to review implies a power to suspend by injunction—these characteristics of the attitude of the bill's framers toward the judiciary seemed to the Massachusetts Senator ominous in the extreme. In his opinion nothing could be more alarming to reflecting men than the disposition shown by some persons to transfer to the legislative and executive branches of our Federal government power pertaining to the judiciary, and thereby to deprive the citizen of his most fundamental and sacred rights. Mr. LOAN, of course, would not assert that judges have never decided wrongly, or that the law's delays have never wrought injustice. He maintains, however, that if we would look back over past generations, or contemplate events of contemporary daily life, we should be blind if we did not recognize that the courts have been and are the greatest bulwark of the State's peace and order, and of the people's liberty.

In a preliminary discussion of the Hepburn bill the Senator from Massachusetts showed that the grievances which government rate-making was expected to redress in whole or in part are excessive rates and unfair discriminations between localities. Discriminations between persons, or what are called "rebates," or "undue preferences," are dealt with by a stringent law which is already on the statute-book, and needs only to be enforced. As

for the power to abolish or modify discriminations between localities, Mr. LOAN proves from the experience of European nations that government rate-making does not stop such local discriminations, but, on the contrary, merely substitutes an arbitrary set of those made by the government for those which are brought about by economic forces, the competition of markets, and the interaction of business interests. In Germany, for instance, while personal discriminations or rebates have been abolished, as they could be in the United States by a rigorous enforcement of the EXCISE law, other discriminations have been actually multiplied, and applied, not only to localities, but to industries and the final destination of the freight. The result has been to sectionalize Germany under the pressure of political, local, and industrial interests. In the United States—which are already badly compacted rather than centralized—local and industrial discriminations, brought about through political action, would be peculiarly harmful. In the long run, they would prove far more oppressive than those which have come into existence through the natural competition of business interests and the working of economic forces. Nobody disputes that some of the discriminations between localities, which have been made in the United States have wrought injustice, but we concur with Mr. LOAN in thinking that it would be folly to establish a new series of government-made discriminations, which would work larger wrongs in the hope of curing the original inequalities. It is very doubtful whether any change of rates made by a government commission with a view of curing place discriminations would not prove a change for the worse. In any event, a commission's power should not go beyond the fixing of a maximum rate, while an absolute safeguard against hasty or prejudicial action should be provided by a provision for an appeal to the courts of the country.

The Administration of New York's Public Schools

Two bills which have been presented to the New York Legislature—Assembly bills Nos. 417 and 418—are evidently intended, though under the guise of amendments to the City Charter, to revolutionize the administration of the public schools of New York. In order to understand the spirit and purport of these bills, it is necessary to understand the existing administrative system. This system was worked out in its main features by Mr. SEYMOUR LOW, who was chairman of the Committee on Education in the Charter Commission of 1892, and was carefully elaborated and harmonized by Mr. HENRY W. TART and his associates of the Committee on Education in the second Charter Commission of 1901. The underlying principles of this system are two: The separation of purely educational administration from purely business administration, and direct responsibility for results on both the business side and the educational side. The board charged with the duty of appointing administrative officers and holding them to a strict responsibility is the Board of Education. To this board—a rather unwieldy body of forty-six members, appointed by the Mayor—six subsidiary boards and all executive officers, even where they are granted statutory powers, are responsible. In other words, while the Board of Education cannot interfere directly with a subsidiary board or an executive officer in the exercise of statutory powers, it has the authority to hold such board or such officer to a strict accountability, and upon charges prove, to punish for wrongdoing even to the extent of dismissal from the service. The duty laid on the Legislature or the Board of Education is thus partly legislative and partly judicial, and only in the slightest degree executive. The members of the board are representatives of the people, to determine, in the last resort, the educational policy of the city, and to see to it that the executive officers perform their functions promptly, economically, and impartially.

The chief executive officer on the educational side is the City Superintendent of Schools. The chief function of this officer is to act as chairman of two subsidiary boards, and to represent them before the Board of Education and its committees. These bodies are the Board of Examiners and the Board of Superintendents, both of which are charged with certain duties and responsibilities under the Charter. The Board of Examiners examines all applicants for teachers' licenses, grants licenses to those who successfully pass the given tests, and prepares eligible lists of licensees arranged in the order of standing at examination. The Board of Superintendents nominates to the Board of Education, in order of standing, from these eligible lists, teachers, principals, and other members of the supervising and teaching force. Within forty days after a nomination is made, the Board of Education may approve or reject it. In case an assumption is neither approved nor rejected within that statutory time, it becomes equivalent to an appointment. Other duties of the Board of Superintendents are to recommend textbooks and changes in the course of study, to provide for the promotion and graduation of pupils, to suggest the organization of schools, and to nominate district

superintendents who need not, under the law, be taken from eligible lists. In all cases, however, the recommendations and nominations of the Board of Superintendents are subject to the approval of the Board of Education. It may thus be seen that the initiative in all purely educational matters—the examination for teachers' licenses, the compiling of eligible lists, the making of courses of study, the promotion and graduation of pupils, the nomination of teachers—is placed in the hands of educational experts. At least, if they are not educational experts, we must assume that they are, because they possess the educational qualifications laid down by the Charter, and have they not been selected by the Board of Education? They are directly responsible to that body; and if they have not performed their duties efficiently, it was and is the duty of the Board of Education to dismiss them from the service.

The administrative educational system, thus briefly described, took the place not of one system, but of many systems, which existed, prior to consolidation, in the cities, villages, and townships incorporated in Greater New York in 1898. There was one system in the old city of New York, now the boroughs of Manhattan and the Bronx, under which a central board of education was responsible for business and financial administration, while a board of trustees for each ward appointed the teachers. There was another system in Brooklyn, under which a local committee for each school appointed the teachers; while in the boroughs of Queens and Richmond there were an entirely different systems in which were cities, villages, and school districts. All of these systems, however they may have differed in detail, agreed in three important particulars: First, no teacher, no principal, no educational expert was given any direct or authoritative voice in educational administration—his position was merely advisory; second, the members of the board of education or of the board of trustees, as the case might be, were responsible for every detail of school management—they were at once executive, legislative, and judicial officers; and, third, the appointment of teachers was regarded as, and actually was, a prerequisite of the school-board members—a prerequisite too often debated to subvert the interests of political bosses and district heaters, or to repay social and even religious obligations. The results of such a system may be more easily imagined than described. Responsibility could not be fixed. As a result, schoolhouses were not built in sufficient numbers, nor were erected in unsuitable locations to satisfy the greed of real-estate speculators; thousands of children were in the streets who ought to have been in school; the old city of New York was without a high school years after every other city in the country and many of the villages had provided that most America of all American educational institutions; the curriculum of the elementary schools was still the curriculum of the fifteenth century, either undisturbed or enriched; and, worst of all, inefficient teachers were appointed and permitted to remain in the system, while those who were efficient had their teaching ability impaired and their self-respect wounded by the necessity of appealing to politicians for permission to exercise their profession. Under such a system—the business management part, the teaching force demoralized—progress was both slow and uncertain.

That there was progress at all was due in the occasional presence in boards of education of men of liberal views and vision who did what they could under a defective system to build up the schools, and to the presence in the schools of teachers and principals who rose above their surroundings and worked with a single eye to the interests of their pupils.

At length, in 1914, the people demanded a reform in the management of their schools. In 1920, despite the opposition of the great mass of the teaching force, despite the opposition of the educational authorities, despite the opposition of Tammany Hall and all allied with it, the Legislature passed the act commonly known as the PACEY law—from the name of the Senator who introduced it—which converted many of the wisest provisions of the educational chapter of the present Charter—namely that requiring the nomination of teachers in order of standing from eligible lists.

There is this important difference, however, between the provisions of the Charter and the PACEY law with regard to the licensing, nomination, and appointment of teachers. Under the PACEY law, the licensing power and the nominating power were the same—the Board of Superintendents; under the Charter they are distinct and different: the nominating power remains with the Board of Superintendents, while the licensing power is transferred to a new board constituted by the Charter—the Board of Examiners.

It is evident that the Board of Examiners, which itself has no power to appoint, holds the key in the situation as far as the appointment of teachers is concerned. If the members of the Board of Examiners are independent, honest, and efficient, no inefficient teacher will be licensed; while those who are licensed will be given their relative positions on the eligible lists in accordance with intelligent and impartial standards. If, however, the examiners are dishonest or inefficient, or if, being honest and efficient, they are not permitted to exercise their functions with-

out dictation from those who would use the patronage of the schools for "electoral" purposes, the inevitable result will be that the teaching force will be demoralized, a return will be made to the old system of personal and political appointments, and the progress of the schools will be seriously retarded. A majority of the members of the Board of Education are now men appointed by Mayor McCAHILL, and are supposed to be closely affiliated with Tammany Hall. The bills referred to at the opening of this article would enable these men to control the appointment and promotion of every teacher in the schools. In a future article we hope to analyze these bills, and to show the way in which they have been cunningly devised to make the schools what they once were and what they have ceased to be, a political adjunct to Tammany Hall.

Personal and Pertinent

At this writing, with the White House wedding still in prospect, there are rumors that admission cards to the reception have mysteriously disappeared. We trust that none of them have fallen into the hands of flash-light picture-takers.

The *Richmond Religious Herald* objects in the verb in the sentence, "The fortune of his wife, who predeceased him," etc., which appeared the other day in this corner of the WEEKLY. It was lifted bodily out of *London Truth*, as was indicated, but not quite explicitly enough, in the context. We cheerfully relinquish the defense of "predeceased him" to Mr. LAMFUCKER.

The limelight has no terrors for the English Rider, General SUMMAY BELL, of Colorado. Though Rider is Cuban, and strike-squapper in Colorado, is billed at this writing to appear as a play-actor at the Broadway Theatre at Beaver. His costume, says a press despatch, will be the gorgeous \$1000 uniform he wore when, as Adjutant-General, he accompanied Governor PEARMAN to the World's Fair.

It is announced in the *Louisville Post* that Mr. S. H. McMAKIN, a prominent resident of Shelby County, Kentucky, is convinced that beans can be grown in that State, because he has grown them himself. Next thing somebody will grow a little sugar and somebody else a little hot water, and then what will become of the extensive mint farms? This is no time for a revolution in the affairs of Kentucky.

To Mr. GEORGE WESTINGHOUSE has just been awarded the Joux Prize gold medal, founded in 1902, upon the occasion of the eightieth birthday of the veteran steel-master by the four national engineering societies. By the deed of foundation the medal is to be awarded "for notable scientific or industrial achievement," and the specific achievement to be named in the present instance is the WESTINGHOUSE air-brake. Mr. WESTINGHOUSE is the first American to receive the medal. Lord KELVIN was the first recipient of the distinction.

According to the doctrine of our democracy every American citizen is a king or a prince of something equally fine. Colonel JOHN SCHMIDT, who lives in California now, but once was Probation candidate for Governor of Missouri, gives the rest of us our better. If things were not just as they are, he might be King of Poland. He was born in that country sixty-eight years ago, and he and his daughter are said to be the only known direct descendants of JOHN SOBIESKI, the warrior King of Poland, California, however, seems to want him quite well.

We take off our hat to His Youthfulness BEEMAN G. DAWES, the Republican Congressman from Ohio, because he looks ten years' younger than he really is. We will not dwell upon his years for country's sake. A few weeks ago he struggled through the crowd hanging about the main entrance of the House, and was about to go upon the floor, but the chief assistant-doorkeeper had spotted him and called loudly to one of the attaches:

"Hey! stop that young fellow; don't let him get in there!"

The attaché growled Mr. DAWES, and grumpy but greatly urged him back. There were explanations, and Mr. DAWES, looking at least five years younger than ever, pushed open the door and strode in.

In the schedule of prices for "theatre entertainment tickets," advertised by a tourist agency in Tokio, the following appears:

Tickets.—For the first-class Theatres of Tokyo: yen 1.50 each including chair and other fees for all hours.

For the Ten-tenemy and Flower arrangements: yen 10, including cost of special tea, cut flowers, oriental food for one visitor, and fees for the master or assistant of the occasion.

For Japanese dances of two hours: yen 10, including fees and usual presents for the performers and Japanese dishes for one visitor.

Rather reasonable, without, since the patron is provided with a chair, ancient food, and presents for the performers. Yens are worth fifty American cents apiece.

An Eye-witness's Story of the Russian Revolution

By Albert Edwards

The author arrived in Moscow when the revolt of the people against the Czar and his troops was at its height. He was a spectator of the principal events, associated with the revolutionists at their meetings, and under Russian guidance was enabled to take part in the actual fighting between the troops and the people. This is the second of a series of three articles which will appear in successive issues of the "Weekly"

WE spent two days in trying to get into the factory district. Troops were stationed on three sides, and the firing was almost incessant. We spent the time in various gathering places of the revolutionary committees, and finally found a member of the strike committee who had just come out and who worked on our maps the positions of the troops and the one possible way to get in.

We started about noon, changed our sledge a few times to avoid possible spies, and at last came to the neighborhood of the factory. With the aid of our map we found a small street which was free from patrols, and came shortly to the first barricade. A crowd of men, apparently loafers, was standing in the entry of a store, but as one of them came to meet us as soon as they saw us, I decided that they were some of the famous "druzheniks." Vera talked with the man, and as we had the password, we were allowed to go on. The first barricade passed, we found ourselves in a typical factory quarter.

The Prokhorov mills form quite a large village: a dozen big brick buildings, some workshops and some dormitories, a church, a school, and scores of small dwelling-houses. The line of barricades is a rough circle covering three or four miles. Besides the outer

barricades, every cross-street in the section was filled with obstructions, wire entanglements and snares to hide the movements of the druzheniks. An occasional rattling shot could be heard to the north, and the crack of small arms was frequent. But life seemed to be taking its normal course, old women gossiping at the doorsteps, children skating and snowballing among the barricades. Every one eyed us curiously, but all were very ready to point out the intricate way through the obstructions.

The central portion of the district, containing the principal buildings, is enclosed by a blockade, and at the gate we were again stopped and questioned. But we were allowed to pass, and came to the headquarters of the druzheniks—a stout, low building of rough logs which was formerly used as a dining-hall. After more formalities at the door, we were at last passed in.

We found ourselves in a long, low room, the air of which was hot and heavy and dense with the smoke of cigarettes. The light was dim, and at first, after the glow of the snow, it was impossible to distinguish any details. A dim gleam came from the heavily frost-encrusted windows, and two oval doors gave out a deeper glow. But soon my eyes caught the glint of gun-barrels and the polished brass of sword-bushes. Vera talked for a moment to some one near the door, and I had time to get my bearings. There were about two hundred in the room and half as many women. I soon recognized Pasha, even before her sister did. She had been in the factory for some weeks and was dressed in a peasant woman, a grimy shawl drawn tightly over her hair. She looked very tired and worn. It was a striking contrast with a night I remembered when we had talked together in the foyer of the Opéra at Paris, and had discussed the relative merits of "Carmen" and "Die Walküre."

The sisters had much to talk over, so I had time to look about. The first impression was that these druzheniks were very young. Many seemed still "in their teens." But Russians usually look young, and I found later that most of the older men were on sentry duty. Many of those off duty were sleeping on the benches and tables, or drinking tea and smoking countless cigarettes. But small groups were continually coming in and going out. These were all armed, and most of them well armed. Repeating pistols and swords (taken from the police and Cossacks) were the prevailing equipment, but in each group were two or three first-class rifles, Mausers and Winchester. As soon as a druzhenik came in he reported the condition of his weapons to a student girl who sat near the door. If anything was out of order, it was immediately repaired by a group of gunsmiths. Luckily the first job I had ever had was with a lock and gun smith, so I "made good" mending their rifles for them. Another girl had charge of the ammunition. She had all the different kinds of cartridges sorted, and kept a ledger account of what she gave out. She also had in her charge

A Caricature from "Talking Shadows": The Czar of the Future—The Cossack

all the reserve weapons, which she gave out only at the order of the captain. These two girls and the gunsmiths were each centers of animated groups. There were two other main groupings around the samovar of tea and the other about a table where half a dozen young girls were smoking cigarettes. The rest of the people in the room were either sleeping or sitting in two and threes, polishing their arms and relating the events of the day.

About a dozen of the men were evidently students, although they tried to affect the workingman. Six of the women were "intellectuals," but the rest of the two hundred were downy jaw workers.

It was impossible to get accurate information as to the number of men under arms. In reality it was a question of the number of arms, not of men. There were a dozen applicants for every weapon, and many were armed with cartridges taken from the police. I estimated that they had between three and five hundred firearms.

The discipline among the men was excellent. Only one of the one thousand or more strikers appeared to be drunk. The lieutenant took us over the scene of the revolt fighting, and I had an opportunity of seeing how carefully the system of sentinels was organized. We were challenged a dozen times, and signs and passwords were exchanged. At least two hundred

men were on sentry duty. They were all very much interested in me and in America. They wanted to know what I had seen anything like this in America, or if I expected to. They were anxious to know what I thought of them, and were especially interested—and depressed—by the news of absolute quiet that I brought from St. Petersburg.

My attention was attracted by "The Panther," the captain of the druzheniks. He has earned his nickname partly by his graceful springing carriage, partly by his distinctive bravery—distinctive among men brave to rashness.

Like Sam, he was head and shoulders above his followers. His leadership is undisputed and well earned. For fifteen years he has been a thorn in the flesh of the Russian spies. One exploit which has won him many others, gone to build up his reputation for bravery, was in connection with a bomb-factory in Kurf. He held the gunnaries at bay with his revolver for half an hour while his comrades escaped, and while waiting for this exploit he made a sensational and daring escape.

He seemed an ideal guerrilla leader—democratic, but absolute. There was no possibility of appeal or dispute over his decisions.

His closest friend and lieutenant was nicknamed "Archangel" after the promise of that name—on account of his character.

"Archangel" will probably be the hero of future "peasy children" and of many generations of Russian boys. A week ago he was in command of the "druzheniks" at the "House of Father." When it was decided to surrender, he escaped over the roof with a Mauser, a Winchester, one thousand rounds of ammunition, and three revolvers. He got through the police lines and joined the head at the factory in time for the fight, when a handful of druzheniks, after a three hours' fight, repulsed a squad of Cossacks and six field-guns. On this day he is reported to have shot three officers and a spy. The next day it was he who made the sortie from the barricades with five comrades and captured the chief of the secret police and all his private papers.

But to me the most impressive of all were the women. The girl who had charge of the ammunition could not have been over eighteen. She had, in her careless activity, earned the name of "The Art." She sat at a table covered with five cartridges and loose powder. When men came to her for ammunition she would ask them quietly to be careful with their cigarettes. There were enough explosives about her to wreck the whole section, but she apparently had no nerves and kept quietly repeating her warnings, and politely giving out cartridges and making entries in her ledger.

The daughters of these student girls seemed less affected than that of the men. Pasha was called "Antoinette" and she was ever busy sewing on buttons and darning mittens for great hulking peasants. She and "The Art" seemed most popular with the men.

Perhaps I may have been mistaken, but I discovered a puny

between "The Archangel" and "The Ast." When she glanced up from her work it was always for him that she looked, and when he could spare a minute from his many duties, he came and sat by her. The only time she left her work was when a call for help came and he hurried off with a squad of men to the danger-point. It was she who handed him his revolver and gripped his hand last. I saw slip defiant smiles on the faces of their comrades. Love wound out of place between this girl who sat on a powder-barrel and the man who was going out with a few comrades to face a regular army. But I think I was right in my impression.

Another thing that impressed me was the sobriety of the men. I saw only one drunken man within the barracks, and he was an old man, half-witted, they said, and now drunk. The only vodka permitted by the revolutionists was in the squashed hospital, and carefully guarded.

As the evening wore on, the room became more crowded. Only those on guard duty were outside.

Towards midnight "The Panther" turned over his command to his lieutenant, and with several others we went to another building to sleep. There were only rough benches to sleep on, in a great room weirdly lighted by the one candle at the table where the captain studied over a map and planned the campaign for the morrow. I do not sleep well on a hard board, and whenever I waked and looked that way, "The Panther" was still there. It was after four when he finally rolled up in his blanket, for sleep, that he fell was startled by the boom of cannon. In a moment every man was alert, buckling on cartridge-belts, making sure

Interior of a Moscow House destroyed by a Cannon-shot

that every rifle was ready. A breathless messenger came with the news that there was a serious attack, apparently from all sides. We went as quickly as possible to the headquarters. There "The Panther" gathered those who had not already gone to the barracks—men and women—and disappeared.

Vera and I made our way more slowly to the hospital where it had been arranged that we should go in case of a successful attack. I had my papers as a correspondent, and she was to be my interpreter. We had a cook and bull story cooked up—they will believe anything of an American—of how we had made our way into the barracks, and being suspected of being spies, had not been allowed

to leave. By the time we reached the Red Cross station, cannon were booming on all sides, shrieks were screaming overhead, solid shot were knocking down chimneys, and the "whirr" of rifle-bullets and the growl of machine-guns were incessant.

During the night almost all the soldiers and all the artillery in the city, including two regiments of infantry and a couple of batteries just arrived from St. Petersburg, were marched to this section, and the attack began about 6 a.m.

About seven o'clock—in no, inexperienced in warfare, it didn't seem that a soul could be alive in the district—a message came to Vera. She read the note and told me that it was very necessary for some one to get out and take a message to some people in the city, and that she was going. I didn't relish the idea of staying alone, so resolved to accompany her. The messenger said he could guide us through a side street where there were no troops. We followed him, but found a troop of dragons with two machine-

A Parson from "Talking Shadows," showing Thurston, Governor General of Moscow, and Treppoff, Chief of Moscow's Police. The Treppoff was in front, Thurston was only his shadow; when Treppoff turned against Treppoff he became the shadow of Thurston.

A Cartoon from "The Spectator," showing a wounded student lying on the sidewalk, the "Black Hundred Hoodlums" disappearing in the distance.

guns in the way. We then skirted the circle of the barricades, trying to find an outlet, but the line was drawn tightly all about. The noise of the cannonading was deafening. I counted eight batteries in full blast. Altogether there were over a hundred field and machine guns. The troops, believing, as I heard afterwards, that there were forty thousand druzheniks behind the barricades (though there were not more than five hundred), showed no desire to attack, but seemed bent on raising every house in the district by artillery fire. After two hours of trying to find a hole in the curtain of troops, we decided on a dash across the frozen river. As we scurried across we had the individual situation of two companies of infantry. I have decided that the only way in which to be safe from Russian troops is to get them in fire at you. Of all the fusillade only one bullet came anywhere near us. That dag up some five or seven yards in front of us.

I saw eight batteries at work. It was impossible to estimate the number of men in the attacking party. At ten o'clock, when I crossed the frozen river, the district of the factory was more completely beleaguered than Fort Arthur. Shrapnel was screaming in all directions; solid shot was ripping through walls and tearing down trees. All the druzheniks were on the barricades—men and women, boys and girls. The children whom I had found skating and snowballing around the barricades yesterday, the old men and women, and those who could get no arms, were in the cellars.

I said as I stood on the safe side of the river that they could not possibly hold out for half an hour. About two o'clock, after five hours of continuous firing, the noise stopped, and I thought it was all over. But it soon began again, and more troops just arrived from St. Petersburg were being hurried to the scene of action. Five broke out in the factory about three o'clock, and the firing died down soon after. Again I thought it was all over. But at about six the cannonade recommenced. The whole western sky was livid with the flames. Over a hundred field-guns and polemots poured iron into the district. It was miraculous that any of the revolutionists should have escaped.

Far into the night the shock of field-guns rattled my window, and my memory held only one picture: the last night I had had of my friends; deserted streets, shell-riddled buildings, a rude barricade of barrels and boxes, half covered with the night's snow. "The Panther" stretched along the top, coolly and accurately emptying his Winchester into a battery of artillery not a block away; "The Ant," close beside "The Panther," snatching her hand a minute from the trigger to wave us "farewell." And Pasha—my companion in many a walk through old Paris—grimly filling the chambers of her smoking revolver, shooting out of a doorway at a company of Cossacks. Over all the yellowish-white smoke of gun-powder—the shadow of Death. It was not a vision to sleep on.

With the first sunlight I was beating on Vera's door. She opened it—radiant. During the night "The Ant" had been there. Pasha was safe in hiding. "The Panther" and a comrade had slipped away at midnight. They had a bomb with them, and were resolved to throw it if they found it impossible to avoid the soldiers. There had been no exploits, so they were safe through the lines. Only "The Archangel" had not been heard from. As far as "The Ant" knew, not a single druzhenik had been even wounded. Truly the marksmanship of Russian soldiers is something to be wondered at!

Leaving her I drove to the scene of the fight. The artillery were still booming, the machine-guns growling everywhere. Flames were busy in a dozen places. No answering shots came from the barricades, but the soldiers had not yet ventured to storm the place.

For eight days—by a strange coincidence, the date of the Battle of Mukden—a Russian army had been trying to capture this factory of Prokhoroff. They had lost at least one hundred men, had spent thousands of cannon-shot, innumerable rounds of rifle-cartridges, and, as yet results, had killed, I fear, more than a thousand innocent women and children; had wrecked by shells and fire millions of ruble's worth of private property, and killed not more than a dozen revolutionists. They wasted all this powder, spilled all this innocent blood, destroyed all this private property—but they failed to stamp out the Spirit of Liberty! Some of these druzheniks will doubtless be caught by the police and executed. But the most of them will go free to carry the torch of revolt into other cities.

The barricades are down in the rest of the town; and this every one believes is the last of the insurrection in Moscow.

These main reasons can be assigned as the causes of the collapse of the "armed uprising" here:

First, the revolutionists counted on more support from the rest of the country. If there had been even a little trouble in Petersburg the government could not have poured in the troops who are smashing down the revolutionists now.

Secondly, the revolutionists did not dream that the government would use artillery in the crowded, crowded streets of Moscow. They did practically on agitating among the artillerymen. They had reached enough of the infantry to keep them out of the fight. But the government did use the artillery, and so at least five thousand people have been killed and wounded—five thousand innocent people—by the reckless fire; and the damage to private property is quite incalculable.

And perhaps, most important of all, the uprising was premature. The government forced it by its complete reaction. The arrest of dozens of committees and hundreds of leaders was endangering the whole revolutionary movement and they had to act, however unprepared. If they had had sufficient arms to arm all the people who wanted them, they would easily have overpowered the garrison here. Despite the fact that the eight days of fighting has paralyzed the city, the sympathy of the great majority of the population had been unwaveringly with the revolutionary fighters. The people of Moscow are more distressed to-night at the frightful position of the remaining druzheniks than they have been at their own dangers at any time during the struggle.

The only way I can see the affair is that both sides are "bluffed" to a standstill. All the Russians on both sides are frightened. There is an immense demand for hair-dyes, masquerade costumes, and false passports. During the last two days I don't know what happened last night; I had been awake thirty-six hours; there have been about a hundred arrests, for the most part of quite harmless people—doctors charged with giving medical aid to the innocent bystanders, and the like. At 7 p.m. last night, only one person of any importance to the revolutionary movement had been arrested, and he apparently by accident. It is extremely doubtful if the police know who he is.

These are the facts! An Admiral who distinguished himself

as a midshipman in the Turkish war, but who has not done anything since, is Governor-General. He had a tight military cordon completely around the rebel position in the Prokhoroff factory—had at least five hundred of the most dangerous revolutionists where he could shoot them down or arrest them. I got out of the only hole in his cordon, and that was closed ten minutes after I got out. If he had wanted to he could have caught and punished at least nine-tenths of these rebels; but towards noon, in a most unaccountable way, his cordon was loosened in a dozen places and the druzhenicks escaped. This was partly due to the cowardice of individual soldiers, who believed that every druzhenick had a bomb and would use it if captured. On the other hand, it was on too large a scale to be blamed entirely to the individual soldiers. The Governor-General believes that there are forty-thousand armed men (druzhenicks) in Moscow. He is reported to have said that there were only two kinds of people in Moscow—armed and unarmed revolutionists. I think he is afraid to push matters with them.

Also a sort of system is discernible in what at first appeared to be the absolutely senseless cannon-fire. Three large factories have been destroyed by shells, and as many more by "mysterious" incendiaries. The workmen of these mills cannot go back to work for a number of months—they will have to scuttle to their villages. All the government-inspired papers prophesy ruthless reaction—which hasn't, so far, made good. And so I think the Governor-General is most anxious to write to Petersburg that Moscow is quiet; that he is quite unconcerned as to what happens in the provinces; and that if he can scatter these seeds of sedition among the working-men by destroying the factories, and can scare the leaders away from the city by a bluff of wholesale arrests, he will be quite content.

The Cossacks, and always the Cossacks! This word has now become a fearful nightmare. Everywhere Cossacks! Cossacks to pacify the students; Cossacks to pacify the employees; Cossacks to pacify the working-men; Cossacks to pacify the peasants; Cossacks to pacify the revolting army—and last of all, Cossacks to pacify Cossacks.

A Barricade in the District of the Prokhoroff Factory, erected to obstruct the Railway

Petersburg who pacified the railroad employees on the line between Moscow and St. Petersburg, and made it possible to bring the soldiers into Moscow.

The military train from Moscow pulled slowly into Perovo, the first station on the line. No one was to be seen; no brakeman or station-hands met the train, even the loafing townspeople had vanished. Only the faces of the strikers looked from the windows of the main building. Before the train had fairly stopped, a volley came from its windows, under cover of which the pacifying Cossacks poured from the cars and rushed on the station. There were a few answering shots, a dozen of the strikers were killed, and the rest broke for safety to the other buildings; but most of them were beaten back from the doors and the Cossacks flowed in. The officers quieted the tumult for a moment and demanded that the strikers give up their leaders, implying that the rest of them would be allowed to go free. There was not a moment for consultation, but two of the men, Orlovski and Larinov, not in reality the leaders, stepped forward to save the others. A short command; the soldiers fired and the two men fell. Then the Cossacks began a gruesome game of hide-and-seek. They hunted the strikers through the main building, and through the surrounding yards and sheds, and whenever they found one, went through the form of searching him for arms; and if they found so much as a pocket-knife, he was killed.

After this blood-bath, the military train went on.
To be Continued.

THE LATEST PHOTOGRAPHS OF SCENES IN PANAMA

The photographs on this page have just been received from the Canal Zone, Panama. The photograph occupying the upper half of the page shows a squad of the "national police" who maintain order in Colon. Their uniforms are similar to those worn in Panama by our own Metropolitan police. Although the photograph of the view on Colon Street, Colon, indicates that the Sanitary Board still has something to do in connection with its improvement, the work of preservation from a sanitary standpoint along the canal is an achievement that its progress is amazingly slow. Much has already been accomplished in the way of making the sanitary conditions in the Canal Zone more favorable to those who have to live and work there, and the work is going steadily forward.

The Committee appointed by Governor Magosa, of the Panama Canal Zone, preparing \$385,000 worth of United States Stamps for burning

The Committee Watching the Official Destruction of the Stamps by Fire

BURNING \$385,000 WORTH OF U. S. STAMPS AT PANAMA

About June 3, 1903, the first United States post-offices were established in the Canal Zone, by Panamanian Ensign P. Tobin, United States Agent, then Disbursing Officer for the Isthmian Canal Commission. While awaiting the arrival of stamps from the United States an arrangement was made with the Panama Republic for a supply of the old Colombian stamps then in use by the Republic of Panama, nicknamed "Republic of Panama," name surcharged "Canal Zone." These stamps were sold either for their face value in United States currency, or for double that amount in the Colombian silver then in use. In July, 1903, United States stamps surcharged "Canal Zone" were put on sale at the same price, amounting to \$200,000 United States currency. Of this sum less than \$5000 worth was sold by the beginning of 1904, when the agreement made with the Republic of Panama expired then relations, the first amount Governor Magosa appointed a committee to destroy the remainder of the 10,000,000 stamps sent from the United States.

Our Record in Porto Rico

In the interest of fairness we publish below in full two letters from Charles Hartzell, former Secretary of Porto Rico, and W. H. Elliott, former Secretary of the Interior, with replies by Charles W. Tyler. The letters were written as a result of statements made by Mr. Tyler in the series of articles on Porto Rico which appeared recently in these pages.

To the Editor of Harper's Weekly:

HAVEING been nothing more than a mere unnoticed member of the "band of rascals, incompetents, or worse," as the Presidential appointees in Porto Rico have been classified by Mr. Tyler in his series of articles in HARPER'S WEEKLY, I am encouraged to believe that a very few of the most libelous and malicious charges in that remarkable series covered by the records themselves, which have been so cruelly distorted and denied.

I shall not attempt to present any personal defense of Governor Hunt, whose standing, personality, record, and attainments are so far above and beyond those of his detractor as to make any comparison ridiculous, or of Mr. Birmingham, whose name and whose splendid work in initiating an American system of free public schools in Porto Rico will always live as a monument in Porto Rico so enduring and so creditable that malicious misrepresentation cannot destroy it. Or of General Elliott, who built more good roads in Porto Rico in four years than the Spanish government built in four hundred years, and whose efficient and services both in his department and in the Executive Council can be demonstrated by an examination of the public records.

But to demonstrate the malice and mendacity with which these articles were written the following illustrations may suffice.

Mr. Tyler while in San Juan called upon the Assistant Commissioner of the Interior, and requested information on the question of the price of the celebrated steam road-rollers which were purchased by General Elliott, and respecting which purchase Mr. Tyler's articles are fairly reeking with charges. The Assistant Commissioner produced to Mr. Tyler the original vouchers for the payment of these machines, which showed that the total price of each was less than \$4000, excepting one, of special size, which cost \$4100, and explained to him that he had been misinformed as to the price paid; but in spite of having seen the original vouchers, and the assurance of the Assistant Commissioner, Mr. Tyler repeats, not once, but many times, the malicious libel in his letter, charging that the island had paid \$4500 and \$4000 each.

The question of the actual price paid and whether the island was in any way defrauded will be fully answered by the records themselves, which show that the same machines could not have been purchased for one penny less than was paid for them. But such questions pale into insignificance before the enormity of the offense of the accredited writer of a great periodical who, having absolute official authority, and the knowledge of the island, will defame his noble and great profession by deliberate falsification.

Mr. Tyler knows that many of his other charges are equally untrue, and knows it from absolute authentic and reliable sources.

That the President was deceived in the making of one or more appointments in Porto Rico may be very true, but that such mistakes were quickly and fully rectified is known to everybody who is at all conversant with the facts, and is particularly well known to Mr. Tyler; and taking into consideration that more than forty Presidential appointees have been in Porto Rico in the last six years, and that Mr. Tyler, notwithstanding the fact that he made it his business while in Porto Rico to hunt up and cater to all of the political hatred and malice which have been engendered in these years, was only able to attack the character of two or three of these officials, certainly should be taken as some evidence that it never was Mr. Tyler's intention to present a fair or honest review of the situation or work accomplished in Porto Rico, but that, on the contrary, his mission was to discover wrongs done and injustices committed, and to hold the American government in Porto Rico up to shame and disgrace before the American people. And although his material has not been plentiful, he has, by inventing his falsehoods, steam-rollers in steam-rollers in his seven articles, and his other slanders in proportion, made it appear that our experiment in Porto Rico has been a frightful failure, and that the government has been permeated with fraud and corruption, whereas the records show that of the more than \$15,000,000 of public funds collected and paid out, not a single defalcation worthy of the name has been committed in the history of our civil government, and no Presidential appointee has ever been accused of dishonesty except by Mr. Tyler.

The most serious charges contained in the articles and those which reflect most upon the American administration relate to the election of 1902, and which charge practically that the administration of Governor Hunt either openly favored or at least fully concurred in frauds in 1902, by which, with the connivance of the insular police, an election was held which "would disgrace darkened Russia." To those of us who were here and passed through that memorable campaign the language of Mr. Tyler has a strange familiarity sound, and it goes far to demonstrate that Mr. Tyler, during his very short stay in Porto Rico, was highly entertained by the entire of anti-Americanism and especially anti-administration persons who, by catering to the disoriented slaves and by attempting to misrepresent and obstruct every step in advance which has been undertaken, have rendered the task of Americanization and the harmonizing of interests infinitely more difficult than it would have otherwise been.

The facts and figures in regard to the election of 1902 show that of the two local political parties, the Republican and

the Federal, the Federal had withdrawn from the polls entirely in the election of 1900, and that the Republicans had the entire House of Delegates and most of the municipal offices by default; that the Republican party and its officials had honestly and conscientiously managed the American administration during the two years it had been in power, and American laws and methods of procedure were accepted and ratified, and great progress had been made.

With the approach of the electoral period of 1902 the alignment of the two local political parties became more and more distinct. As early as August, the acting Governor issued disjoint and positive orders through the police commission stating the attitude of the insular government to be absolutely non-partisan and impartial, and calling upon the police commission to give suitable instructions, and enforce the same to their fullest extent.

The executive council, which had the immediate charge of the elections under the law, selected for general supervisor an American entirely fair and impartial, and in every one of the seven elections during the year, he was managed by the hands of an American supervisor, who was instructed by both the Governor and the council that an absolutely fair and impartial election was the highest desire of the government.

It is not the purpose of this paper to discuss the question as to whether or not an absolutely fair and impartial election was had, for it is unquestionably true that frauds were committed by both sides, but the purpose is to show the absolute falsity and malice of Mr. Tyler's charges that the insular government countenanced, much less connived at, any unfairness or partiality. The records show that as the campaign progressed, complaints came from various points in the island, and that in every case prompt investigation was made, and rigorous action taken. For instance: a Federal meeting was being held in Pailillas, some disturbance occurred, and sixteen Federals were taken before the Republican justice of the peace, charged with rioting. They were all promptly sentenced to sixty days in jail. Upon this matter being brought to the attention of the acting Governor, the men were instantly pardoned, and the justice who had sentenced them was summarily removed from office. Many other cases might be cited from the records where similar action was taken in the effort to enforce a fair and impartial election. The police records show reasons and suspicions from privates to captains for alleged partisanship. On October 29 the Governor issued a circular letter to all of the Alcaldes or Mayors of the Island, declaring the determination of the government that the law should be enforced, that law and order should be maintained, and calling upon them for assistance and cooperation; and on November 1 the Governor issued a special order and warning to the police on the same subject. In both registration and election days the Governor called to his aid more than twenty patriotic Americans residing in Porto Rico, who were wholly non-partisan, and appointed them as his special delegates and agents, commissioning them to go to the different parts of the island where it was apprehended disturbances or fraud might occur, and with special powers and authority, for the sole purpose of insuring a fair and impartial election. It was seriously questioned at the time whether the Governor was authorized under the law to take this action, but his wise and patriotic intonation cannot be questioned.

In the face of the record, the charges of Mr. Tyler assume the form of wilful misrepresentation.

It is said by Mr. Tyler that at the election all of the judges were Republicans. Whereas the facts are that the election law distinctly provides that the judges of election in each precinct shall not all be of the same political party, and the Executive Council issued its instructions to the judges to the effect that, if possible, they should have in each precinct each party should have one judge, and that the third judge should be of the party which had the majority in that district at the prior election. So that there was at least one Federal judge of election and one Federal clerk in every precinct, being the usual minority representation in most of the United States.

Again it is reiterated and reiterated that the government was dominated and controlled by the Republicans, and particularly by Mr. Barbosa. The records show that at least three-fourths of the positions in the executive departments were filled by Federals during all of this time; for instance, in the office of the Secretary, where there were twenty-two employees, of whom more than one-half were Porto Ricans, and a single Republican was employed, and in the other departments the records show that the large majority of the employees were Federals. Many complaints were made by the Republican leaders that their claims for positions for Republican employees were unfairly rejected.

Mr. Tyler repeats, with not less than fifty variations in his articles, that a great wave of anti-Americanism is now sweeping over the island, and even quotes one prominent Porto Rican as expressing a fear that this anti-Americanism will lead to some violence. Such wild flights of imagination are hardly worthy of disproof. Perhaps the best answer to this misrepresentation would be to quote from the official report made only last week by the Grand Jury of the United States Court, which has made a careful study of the situation in Porto Rico during the past year, and which, in concluding the report on

the lack of criminal offences for their consideration, took occasion to answer Mr. Tyler's slander of their fellow Porto-Ricans, and explicitly denied the existence of any such feuding in Porto Rico as that described by Mr. Tyler, and reiterated by him in every column of his articles. The report goes further, and asserts that what the people of Porto Rico most desire is to be bound to America by closer ties, and to be given greater participation in the matter of government.

Anti-Americanism does not exist in Porto Rico, unless, perhaps, in the heart of some Spaniard whose mind is still on the good old days, when they were in control of the appropriation bill. On the contrary, the ties between Porto Rico and the United States are growing stronger, and are being more firmly cemented every day. Not only is this fully demonstrated by the millions of American capital which is to-day being lavished in the development of the island, the fact that fully three-fourths of the merchandise imported into Porto Rico is purchased in the United States, but it is much more strikingly illustrated by the fact that practically every Porto-Rican child who is sent away to be educated is sent to the United States, a thing practically unknown a few years ago, and yet today hundreds of young Porto-Rican families are studying Americanism at our schools and colleges.

The Porto-Ricans do want and insist upon certain changes in their present political status, and in their fundamental law. They want more of an efficient citizenship, and less anti-Americanism. They want a greater participation in their own government, and they ask for certain amendments to their organic act, and it is but repeating history to say that every political gathering or convention held in the island since our occupation has affirmed and reaffirmed its loyalty to the American government.

Many and important problems are presented by their requests, problems which should and must receive the earnest consideration of Congress, but none of them have the slightest taint of anti-Americanism.

One of Governor Hunt's appointees, a man named Kopl, is attacked by Mr. Tyler, and it is charged that he is practically a fugitive from justice. This is the assertion of rumors as facts. It may be that this man is guilty of some crime or offense, but up to this time no complaint has been made, and no public charges have been preferred against him, except by Mr. Tyler; but even granting that he is a most consummate malfeasor, the records show that during the three years that Governor Hunt was in office in Porto Rico, he appointed more than two thousand insular and municipal officials to office, and the fact that Mr. Tyler, with his supposed Sherlock Holmes ability to detect crime, together with his well-known association with the professional and chronic objectors in Porto Rico, has not been able to find more than one victim, and that one man who has not yet been publicly accused, except by Mr. Tyler, would seem to indicate that Governor Hunt was generally far-sighted.

The most preposterous thing about the articles of Mr. Tyler is the fact that he has made such a small amount of pith cover such a large surface. A stranger reading them would understand that he speaks of new and different malfeasors in each article; but to any one who is conversant with the facts it is quickly apparent that he has paraded the same person in a different guise in each of the articles.

One poor unfortunate official, who was sent here by mistake, and who was quickly recalled by the President, is made to serve as a whole army, like the general-utility man in a comic opera. He is dressed in a different costume for each of the series, until he is made to simulate or represent at least six or eight different unworthy officials. In fact, if this one official and the various allusions in his short career in Porto Rico should be eliminated from these articles, it would consummate very much the largest part of the material upon which more than forty patriotic and honest men have been branded in a great public journal under a general designation as "a bench-soup of drunkards, incompetents, or worse," as "such a set of sons and bores and worse."

Mr. Tyler's article is entitled "Our Record in Porto Rico," and in view of that title it would seem justifiable to inquire why his entire efforts have been devoted to the elaboration of the evil things he claims to have discovered. Why has there never been reference to our real progress in Porto Rico, to the great things for good which have been accomplished? Is there any one who is not so generous to the patriotic and unselfish devotion with which able and capable Americans, at the call of the President, have sacrificed good prospects and prosperous professional careers, to accept the wholly inadequate salaries provided by the Fisker law for Porto-Rican officials? Is there no credit given for the fact that great reforms have been made in the financial system, in the total reorganization of the courts, in the adoption of American codes and methods of procedure, and for the many other great problems in which real progress is shown? Why is not credit given for the great work of stamping out annually the grim specter of yellow fever, the scourge of the tropics which is being so successfully carried on by the government?

Why is not credit given for the almost marvellous advancement in matters of public sanitation and hygiene, of the splendid public parks, and correctional institutions maintained by the government?

It never was Mr. Tyler's purpose to tell the American people honestly of our record in Porto Rico. His actions while here, and his articles themselves, prove that his object was an evil one, and that his action was entirely devoted to the purpose of attempting to discredit our progress, and to wholly ignore and depreciate all of the good and honest work and progress which

would be shown by an honest review of the record of the American administration in Porto Rico.

CHARLES HARTRELL,
Secretary of Porto Rico.

MR. TYLER'S COMMENT UPON THE FOREGOING COMMUNICATION

ON REVIEWING for the present any reference to Mr. Hartrell's graceful introductory preambulations, we get down at last to his first specificities. It is this:

"Mr. Tyler while in San Juan called upon the Assistant Commissioner of the Interior, and requested information on the question of the price of the reboilered steam-rollers which were purchased by General Elliott, and respecting which purchase Mr. Tyler's articles are fairly reeking with charges. The Assistant Commissioner produced and exhibited to Mr. Tyler the original vouchers for the payment of these machines, which showed that the total price of each was less than \$4000, excepting one of special size, which cost \$4400, and explained to him that he had been misinformed as to the price paid; but in spite, etc."

Beyond the fact that Mr. Tyler called at the office of the Commissioner, there is not a statement in the above that is not either garbled or wholly untrue.

When, on every hand, from Americans in Porto Rico Mr. Tyler heard the astounding charge that Commissioner Elliott had made his own son his private secretary, the salary of the private secretary being immediately therewith cancelled, that this son-in-law still his father's private secretary, had gone to the United States and came back the agent of a steam-roller company, and, as such agent, had sold steam-rollers to his father as commissioner—when Mr. Tyler heard these charges denied and reiterated by Americans, he did not go to the office of the Commissioner and attempt to inquire about them. He did not go to inquire about the price paid for the rollers. That was entirely inconsequential. The point was whether Mr. Elliott, with three members of his family, besides himself, on the pay-rolls of the Porto-Rican government, had dealt with his own son and private secretary in the purchase, with Porto-Rican money, of thousands of dollars' worth of machinery.

That was and is the gist of the matter. It seems necessary to explain to Mr. Hartrell that there are those so constituted who can see so intimately transactions of that kind on the part of a public official serious ground for criticism. (Clearly Mr. Hartrell sees neither indecorum nor impropriety in it, since in his defense of Mr. Elliott he makes no reference to it. But Mr. Hartrell's apparent standards, in this respect, are happily not general. He is too conscientious to find out, and to say whether it was true that Mr. Elliott had done those things of which his fellow Americans on the island were accusing him.)

At the office of the Commissioner of the Interior, at the very desk where Mr. Elliott had sat, it was learned that the charges were true. The Assistant Commissioner's presence at the review, and he then and there volunteered the information that the steam-rollers which had cost the Porto-Rican government \$4300 or \$4500 could be bought in the United States for \$2400 or \$2500. This information was not asked for. It came unsought. Per se, it was, if true, very interesting by way of collateral aggravation of the original indiscretion, to use no harsher term. But the Assistant Commissioner made the statement. He had been assistant under Mr. Elliott. It was fair to presume he knew. His official word for it, given in the presence of his superior, the then Commissioner, was taken as sufficient. The figures were accepted, written into the article, and sent to HARPER'S WEEKLY.

In a subsequent conversation with the Assistant Commissioner, the question of the steam-roller prices again came up. Mr. Tyler asked the Assistant Commissioner if he was quite sure that the rollers were such a divergence. The Commissioner went out as the room, came back with a slip of paper bearing several numbers, and a pencil, which he said were the official figures. I have that identical slip of paper before me now. It shows that eight steam-rollers were bought—one of twelve tons, six of ten tons, and one of six tons. It shows that on August 2, 1902, \$6110 was paid for two rollers—\$4005 for one on March 13, 1902, \$4003 was paid for one on July 1, and \$4002 for another; that on another date \$4027 was paid for still another.

When the Assistant Commissioner was asked for his authority for the United States prices, he produced the catalogues and price-lists of the steam-roller company, with which Mr. Elliott, through his son and private secretary, had dealt. Prices of rollers given were by the ton weight. These prices ranged from \$230 to \$225 per ton. In other words, had the extreme price been paid, each of the six ten-ton rollers could have been bought in the United States for \$2250. They cost in Porto Rico upwards of \$4000. The Assistant Commissioner's memorandum before me shows that the freight paid on one of the rollers was \$202.93. This leaves the net cost of the roller to the Porto-Rican government over \$3800, its extreme cost in the United States being \$2250—a discrepancy of \$1550.07 between the younger, selling to a government through the intermediation of his own father, and selling a good many rollers—whether under such circumstances he did or did not get a standing below the company's actual catalogue price, may be left out of the question. History has afforded instances of such things happening, but in this case we will pass it by.

Now what do these facts show? They show that the Assistant Commissioner's figures, in his first and entirely voluntary state-

ment, were a few hundred dollars in excess of the amount the rollets cost in Porto Rico, and a few hundred dollars in excess of the amount the same rollers cost in the United States. The one practically offsets the other; at all events, it was of no consequence. For persons holding to other standards of the propriety than those which Mr. Elliott and Mr. Hartzell set to sell, the vital fact, the deplorable fact, was that Elliott the latter saw no impropriety in buying merchandise in his official capacity from Elliott the son and private secretary. The fact that the figures seemed to show that the son sold the father goods above the market price was a mere detail. Whether that difference was \$1000 or \$1500 was a matter quite too irrelevant and trifling to make it worth while sending on a correction. In the preposterously improbable event, however, of some fool friend of Mr. Elliott rising up in his defence with that idiotic quibble, the original memoranda furnished by the Assistant Commissioner were retained. It seemed utterly impossible that any fool friend could be quite so great a fool as to do it. But it appears you never can tell. He will be rash indeed who will put any limit hereafter to the possibilities of this kind of activity.

Mr. Hartzell says he is not going to defend Governor Hunt. Governor Hunt is to be felicitated. From misfortune of temperament, rather than from defects of either head or heart, Governor Hunt had trouble enough in his own life. He would not be a churl indeed who would not heartily congratulate him on escaping the character disaster which Mr. Hartzell thus promises shall not be visited upon him.

As to Mr. Brumbaugh, he brought thousands of dollars' worth of his own text-books for use in the department of which he was the head. He failed to establish that he received no royalty on the books. In Cuba Mr. Frye consented to the purchase of his own text-books on the condition that his personal royalty go to the support of a hospital. The question of whether Mr. Brumbaugh received and paid his royalty is still left unanswered. Mr. Hartzell would better save American interests by answering this question than by indulging in swaggering accusations of mendacity against those who raise it.

Mr. Hartzell demands that outrageous election of 1902. Of course he does. He was a member of the government at the time. He knows, and every American in Porto Rico knows, that that election was a farce, a travesty on the rights of suffrage, and that, as I have said, it would have "disgraced darkest Russia." He says that Mr. Tyler was "highly entertained by anti-American and especially anti-administration persons." One was Governor Winthrop, and the other was Manuel V. Bonner, whose pro-Americanism even in moderate Porto has seriously affected his personal popularity, as he himself avowed.

The information on which was based the statement that these elections could hardly have been unknown, if they were not actually condoned by the government, was derived from a member of that government itself, a member of the present government. That information came from Mr. Post, the present secretary of the island. I went to Mr. Post with statements on this point, which I had heard on every hand without contradiction, and he confessed these with full emphasis.

Mr. Hartzell says I specified one poor unfortunate official, and made him the basis for characterizing "over fifty honest men" as "a bunch-show of drunkards, incompetents, and worse." I specified officials picked up dead drunk in the street, waving revolvers in drunken delirium in restaurants, an official, a member of the council, who repeatedly drank when summoned before a joint legislative committee, officials in the tax department flourishing revolvers in peasants' faces, officials who assessed property for taxation without seeing it or going near it, an official from the bench uttering what by plain inference was a calumny of libelous, an official and member of the executive council challenging a hotel employee to a gutter fight out in the open. With all this and much more before him, Mr. Hartzell says I make that one unfortunate drunkard do for all the rest in a general charge of drunkenness, incompetence, and worse.

With volumes in my notes devoted to exhaustive statement and enthusiastic commendation of American achievement on the island—with all this in plain type before him, Mr. Hartzell says I have made no reference to our real progress in Porto Rico, to the great things for good that have been done there.

Mr. Hartzell has much to say about "mendacity." As to his own ability to qualify as an expert in mendacity, I venture to say that nobody who reads his communication side by side with the articles it criticizes will think for a moment of raising a doubt. He introduces himself in that communication in rather an aggrieved way as an "unnoticed" member of the "bunch-show of drunkards, incompetents, and worse." That he has thus chosen to personally revile the chief editor of the paper is, however, a matter for his own sense of the fitness of things to determine.

I AM, SIR,

CHARLES W. TYLER.

FROM W. H. KILLIOTT, FORMER SECRETARY OF THE INTERIOR

NEW CALEDONIAN, TONGAREV, 10, 1903.

To the Editor of Harper's Weekly:

Sir—I have read the articles entitled, "Our Record in Porto Rico," published in HARPER'S WEEKLY, beginning with the issue of October 14, 1903, continuing through the six subsequent issues, and contributed by Charles W. Tyler, saying, as stated, in the capacity of your special commissioner, to make a study of conditions in Porto Rico, and present "a complete and impartial exposition of present-day conditions in the island resulting from American supervision and control."

Of your real purpose in sending Mr. Tyler to Porto Rico, or of the instructions under which he was sent, I have no knowledge, and will not presume to discuss. To the matter personal to myself I beg to leave your attention.

I have read with mortification the charges and imputations against your personal honesty and official integrity contained in several of the articles, especially the one published in the issue of October 21, and while I at first tried to feel that a publication of the reported character of HARPER'S WEEKLY would not wittingly do any one a wrong, and that the correspondent, as he further pursued his inquiry, would become convinced that he had done me a great injustice and make suitable reparations, yet I fled to the end, not only without realizing that hope, but suffering the humiliation of reading additional slurs and references calculated to bring my name into contempt.

I therefore consider it a duty to my reputation at home and in Porto Rico, to my family and friends, to make defence of the allegations of your correspondents.

Permit me to state, preliminarily, that I was sent to Porto Rico in February, 1899, under instructions to institute a postal service for the island. I organized the Department of Posts, and directed the same until May 1, 1900, when, by virtue of the law establishing civil government, the department lapsed, and the business was turned over to the Postal Office Department, without loss of a penny, or friction of any kind whatsoever. This is a part of any service in Porto Rico to which your correspondent made no reference.

On June 5, 1900, and before I had completed my arrangements to return home, President McKinley, without solicitation by me, saw fit to appoint me Commissioner of the Interior for Porto Rico. I accepted, entered upon the discharge of my duties June 15, 1900, and served until December 1, 1904, the last six months an commissioner *de facto*, when I resigned because of the requirements of my private interests at home, desiring consideration of another appointment, the assertion of your correspondent to the contrary.

The charges of Mr. Tyler relate to the period of my service as Commissioner of the Interior, to my conduct of that department, and to matters personal. Some of the inferences included in his arraignment affect me in my relations to the people of Porto Rico, and with them I would gladly let judgment rest. But the charges that prevent me to the public as officially corrupt and personally dishonest I cannot pass so lightly by.

As I approach the subject I am made to realize the difficulty of presenting in small compass the evidence in corroboration of the several allegations by Mr. Tyler, and will undertake here only a categorical denial of the charges, with such explanations as may seem actually necessary for clearness.

1. I deny, absolutely and unequivocally, that I raised the salary of secretary from \$1000 to \$1800 a year, for the benefit of my son, and that I secured a native secretary.

After I had been a few months in Porto Rico as director of posts my son joined me as secretary and stenographer. He went with me into the Department of the Interior in the same relation, at a salary fixed by the legislature, not by me. When, in 1902, the native secretary died, I secured another, then the government, for him, I sent my son home. I immediately promoted the chief clerk, a native Porto-Rican, to the place, at the same salary, \$1800 per annum, and he so continued to serve, at that salary, until I left the island, and was, I believe, the only native holding that relation to the head of an department.

2. I deny, absolutely and unequivocally, that I secured the appointment of my two daughters, or either of them, as teachers, at \$1200 each a year.

My daughters were employed in the public schools during the last two years of the family's residence in Porto Rico. One, a student for two years in the New England Conservatory, taught music; the other, a graduate of the Girls' High School of New York, taught English in the graded schools. I did not secure a place for either. Both taught because, being considered competent, they were selected to take positions that needed to be filled, and for which material was scarce. No notice was injured by their employment. Their salaries were given at the rate of \$675 a year, and Spanish, as they were, and the fact that the school taught by one of them was awarded the prize offered for the greatest advancement in English in some edition of the teacher's proficiency. Both served during the school years 1902-3 and 1903-4, the one that I taught music, at a salary of \$675 a year, the other, at \$150 a year; and the two were paid by the Department of Education, for their whole service, the total sum of \$2250.

3. I denounce as maliciously false and libellous the charge of your informant that my son, while serving as my secretary, was employed by or received compensation from any person, firm, or corporation in payment for the sale of stock in the government, or similar government. I deny, absolutely and unequivocally, that he, while acting in such capacity, had any interest or concern whatsoever in the purchase of any steam-rollers, or received from any source any sort of compensation on account of the sale to, or purchase by, the Department of the Interior of any steam-roller. I likewise deny, with equal emphasis, that the prices paid for rollers were exorbitant or unfair to the government.

One of my first acts after taking charge of the department was to arrange for the purchase of a steam-roller. In my travels over the island, during the year and a half of my residence there, I had seen enough of the old construction and repair to convince me that the old method of rolling mauls with axes was not only slow and imperfect, but very expensive. The first machine purchased proved so very satisfactory both as to economy in operation and in the character of the work done, that other purchases were made, with my approval, by the bureau

of public works as required, and the means at command permitted, directly from the manufacturers, without the aid or intervention, or even thereof, of any agent or collector.

The fact that no person competent to set up and operate a roller, without instruction, was obtainable made it necessary for the manufacturers to send an expert with the machines. Further, the character of the roads and the kind of fuel to be used suggested certain changes of construction, which were made. Then the freight from New York to Porto Rico was always a matter of \$200 or more. Yet we never paid \$4500 or \$4600 for any roller, as alleged by your informant, never more than \$4000 or \$4100 total.

It would have been fair for your commissioner to state that the whole period of my incumbency of the office of Commissioner of the Interior was an era of road-building. During the four years from 1900 to 1904 the bureau of public works constructed and put under maintenance quite four hundred kilometres of road, more than had been accomplished in four hundred years previously. We needed modern appliances, and we provided them; to the betterment of the roads and the saving of money.

Other reflections and imputations cast upon my honor and integrity, personal and official, I pass as a saving of space, but I desire to place on record, in language as strong as I can command, that every charge and allegation, every slur and insinuation, against me by Charles N. Tyler in any and all of his several articles, published as stated, is wilfully, vilely, and maliciously false, unwarranted by any existing fact, grossly and viciously unjust.

The language used is justified for the reason that Mr. Tyler visited the Interior Department, and in response to his inquiries he was shown the vouchers for steam-rollers purchased during my administration, and knew he lied when he stated that they cost \$4500 or \$4600; he likewise had opportunity to learn what salary the secretary to the commissioner had received, and was given a great deal of truthful information relative to the work of the department during the past five years. Some of which he used, presumably because it reflected credit on the person he was interested in maligning.

I stand ready, sir, to prove by official documentary evidence the truth of each and every statement hereto made to contradiction of Mr. Tyler's assertions, and I ask you, as a matter of simple justice to a citizen who sincerely believes he has been libelled without cause or justification to investigate the matter, and publish the truth as you find it to be.

Very respectfully,

W. E. ELLIOTT.

MR. TYLER'S REPLY TO MR. ELLIOTT

MR. ELLIOTT does not deny that three members of his family were simultaneously on the pay-rolls of the Porto-Rican government. He does not deny that he made his own son his private secretary. He does not deny that while he was Commissioner of the Interior he dealt with his own son as the agent of a steam-roller company in the purchase of thousands of dollars' worth of machinery for the use of the department of which he was the head. He does not deny that the prices paid for steam-rollers by the Interior Department of Porto Rico were largely in excess of the quoted prices of the same rollers in the United States. He does not deny that when his son went to the United States he was his father's private secretary, drawing salary as such, and that when he returned as the agent of the steam-roller company he was still such private secretary.

None of these things does Mr. Elliott deny, and they, and they alone, were the gist of the criticisms of Mr. Elliott I heard on every hand among the American residents in Porto Rico. They and they alone are the vital points in what appeared in HARPER'S WEEKLY concerning Mr. Elliott's administration.

To meet these points, Mr. Elliott says his son's salary was not increased to the previous figure I said it was. Will Mr. Elliott deny that his son's salary was increased, whether \$1800 or be or not the precise figure?

He says that he did not procure the appointment of his two daughters as school-teachers, at \$1200 a year each. Will he deny that he, his son, and his two daughters were simultaneously on the pay-rolls of the Porto-Rican government, and will he deny that he secured the appointments of his two daughters at the same salary, whether \$1200 per year or be or not the exact figure?

Mr. Elliott says that he did not purchase steam-rollers of his son while his son was his private secretary. I would say distinctly and in the articles in HARPER'S WEEKLY that young Mr. Elliott resigned the private secretaryship at the time of opening up the steam-roller business with his father. It is irrelevant to the whole matter, anyway. What was charged was that the

father dealt with the son in the purchase of thousands of dollars' worth of material for public use, and paid for the same with the public money of Porto Rico. Will Mr. Elliott deny this?

Mr. Elliott justifies the use of the gentle word of "liar" as applied to me by saying that I visited the Interior Department, and was there shown vouchers for the rollers purchased, and "knew he lied" when he stated that they cost \$4500 or \$4600. Mr. Elliott does not lie, he is merely mistaken when he says this. I made no inquiries as to the price of steam-rollers; I saw no vouchers; I did not care to see any. What I was investigating was not the price of steam-rollers, but the astounding charge, heard everywhere among Americans on the island, that the former Secretary of the Interior, having on his shoulders the responsibility of maintaining the dignity and the sense of the propriety of an American government official, and that among a people accustomed from previous experience to put the word construction on acts of officials in the least open to criticism—this constantly formulated charge that an American official, in the person of Mr. Elliott, having placed three members of his family, besides himself, on the public pay-rolls, had yet had the astounding audacity to purchase of his own son thousands of dollars' worth of supplies with the money of the people of Porto Rico—that was the charge I went to the Interior Department to investigate, and in that department, and right at the desk at which Mr. Elliott himself had sat, I learned, with sorrow and humiliation, that an American, that that charge was true. What do all Mr. Elliott's quibbles over the exact salaries the members of his family received, the exact amount of difference between the prices paid for steam-rollers by his department and the prices for the same in the United States—what does all this paltry pettifoggery serve by way of relieving Mr. Elliott from the criticism his astounding acts in these respects have brought down upon him?

The Assistant Secretary of the Interior, in the presence of his superior, Mr. Elliott's successor, himself volunteered the statement that the rollers cost in Porto Rico \$4500 or \$4600, and that the prices at home were \$2400 or \$2500. I did not ask for these figures; I did not care for them. It was the charge of the business dealings between father and son that I came to verify. That was enough, and more than enough, to account for at least some portion of the prejudice I found among natives of the island everywhere against our American administration of the affairs. I did, however, accept the Assistant Secretary's figures, and they were used as he gave them to me. In a subsequent conversation he gave me some figures on a slip of paper. He said they were the official figures. I have them before me now. They show that on August 2, 1902, two rollers were bought at a cost of \$4053 each; on March 13, 1903, two rollers at a cost of \$4510, or \$4055 each; on the same date another roller at a cost of \$4052, and on another date still another roller at a cost of \$4052.

The Assistant Secretary at the same time showed me the catalogue of prices of the steam-roller company with which Mr. Elliott, through his son, had dealt. It showed that steam-rollers were sold by the ton weight, and that the price per ton was from \$200 to \$225. Six ten-ton rollers were bought. Their average cost to the people of Porto Rico was about \$4400. At the highest price—that cost, \$225 per ton, these rollers would have cost in the United States \$2250. The Assistant Secretary's first figures were too high by a few hundred dollars, both as to cost of the rollers in Porto Rico and as to their cost in the United States. The one just about offset the other. Yet it is with this gentleman's figures that Mr. Elliott meets the criticism that he saddled three members of his family on the Porto-Rican pay-rolls, and that he purchased thousands of dollars' worth of government supplies of his own son—a son whom he had long been employing as his private secretary at a salary raised by several hundred dollars more what it had ever been before, and raised by the executive council, of which Mr. Elliott was a member, immediately after the son took office.

And, inasmuch as Mr. Elliott is inclined to be so precise about figures, it would seem that there are, in fact, figures that are somewhat confusing, and on which he might throw light. The cost of the steam-roller in Porto Rico was \$4040. The unexcused before me, furnished by the Assistant Secretary of Mr. Elliott's department, shows that the freight was \$302. Actual apparent cost of the roller in Porto Rico, \$3838. The very highest catalogue price of the same roller is \$225 per ton, or \$2250 per roller. There is an apparent difference of \$1588 in the price of a steam-roller in Porto Rico and the price of the same roller in the United States.

Of course Mr. Elliott can fully explain this seeming discrepancy, and a dispensation of doubt of his ability to do so is here raised. It is only suggested that it would be more interesting to have him do so than to have him quibble about the precise salaries the various and numerous members of his family drew from the Porto-Rican government.

CHARLES W. TYLER.

A Pagan Hymn

By Andrew Shaughnessy

I 'm weary of strife and sin, God knows,
And the gray road beckons home
To a land of Rest where the fird wind blows
Through the heart of the seated *eternals*.

There would I quaff of the Wine of *Life*
And lay me down for a space,

And list to the wide sea's tender sweep,
With the hush of *God* in my face.

O weary am I of toil and haste,
Of strife and strife's *eternal* fight,
And I long for the great sea's desert waste,
And the purple hills of home.

Men of To-day

III.—M. Jusserand: Ambassador and Author

By Charles Johnston

ON reading certain of his books, full of the twilight and tenuity, the wonder and terror of the middle ages, and riting the love which he bore to his theme, it befell us to consider whether M. Jusserand had not been drawn to this period of mystic gloom, this old-world region north of the English Channel, by a reaction of feeling against the somewhat start-reaction of modern France.

I put the question to the ambassador himself the other day. He at once declared against my fancy, saying that far simpler causes had brought him to his life work. Determining to enter the French Foreign Office, he found it necessary to master two of the leading modern languages. He chose Italian, because it was so easy and so like French, and to Italian added English. M. Jusserand further pointed out he had chosen his field not only without reference to modern French realism, but before that tendency was fully formed, since he began his work in 1876.

One cannot quite concur with the ambassador's view that his entry into the English mediæval field was a simple matter of chance. M. Jusserand had a vocation, if ever a writer has a vocation that declared itself even in his school days.

Jean Adrien Antoine Jules Jusserand was born fifty-one years ago, on February 19, 1855, in Lyons, the third town of France. He studied there and at Paris, graduating in law in his native city in 1870, the year he came of age. I do not wish to press too far M. Taine's theory of the milieu, nor to suggest that M. Jusserand's books are the inevitable resultant of the past history of Lyons. Yet one can well see that the smilt, southern city, with its olive groves and antique churches, was a favored field for the growth of such a spirit. As he went to his classes in the law school on the east bank of the Rhone at the end of the Pont de la Feuillie, the young student may well have pondered on the early history of Europe as illustrated by his native city: its colonies from Tyre and Rhodes, its Celtic name, its Roman period of mosaics and imperial inscriptions, the Burgundians, Charlemagne, Provence.

Already familiar with Greek and Latin, the young law student had gone far in his English studies. While hardly out of his teens, he had him visiting England, catching glimpses of Tennyson and Browning, and turning over old English manuscripts in the Bodleian Library and the British Museum. In 1870, his twenty-first year, he struck the twofold note of his life, gaining admission to the French Foreign Office, and publishing a work of research on the English stage from 1550 to 1600. In the next four years he rose to be the head of a department, and gathered the materials for another book. In 1881 M. Jusserand, then only twenty-six years old, was entrusted with an important mission to Tunis, France's African protectorate over against Italy, in the old Carthaginian realm which Plautus had twenty years earlier reconquered for France. We find an echo of this African mission in one of his books, translated under the title: *English Wayward Life in the Fourteenth Century*, the first French edition of which came out in 1884. Three years earlier, a second edition of his first book had been issued; and two years later, in 1886, appeared *Le Roman légendaire*, followed in the next year by *Le Roman en France de Shakespeare*. M. Jusserand was now thirty-two. His reputation as a writer was established. His books were not only known in France; they were winning firm friends in England, and English translations presently began to appear.

M. Jusserand was equally successful at the Foreign Office. The Tunis mission opened the way to promotion; the author-diplomat was made chief of the department of Tunis affairs, and decorated with the Cross of the Légion d'honneur. Marshal Marmont had been succeeded by Jules Grévy, soon to make way for Sadi Carnot; and French ministries had risen and fallen with astonishing rapidity. One may well believe that M. Jusserand found much to

M. Jusserand, French Ambassador to the United States

entertain his gentle, humorous spirit in the manners and moods of the numerous gentlemen who came as "M. le Ministre" to the big brown building on the Quai d'Orsay, and with whom he was called to establish cordial relations, destined in last only a few months.

In 1887 M. Jusserand was appointed Councillor of the French Embassy at the Court of Saint James; and for three years he dwelt in that England whose old-time history already filled his heart and memory. Then came eight years more in Paris, 1890-1898, at the head of the department of Northern and Eastern affairs, during which new books, translations of earlier works, and new editions increased and multiplied. Most important is the admirable treatise on *Piers Plowman*; and very charming are the *English Escape from a French Psyche*, of which the essay on *Scarcely* is easily the best, a real masterpiece, an ideal literary monograph, with a wonderful, grotesque, pathetic, gifted, and valorous Frenchman as its theme. Two other works deal with the author's native land: *Shakespeare in France*, and *The Union of Old France*; and there is also the monumental *Literary History of England*. We may compile the ambassador's political record up to date by recording his appointment as Minister at Copenhagen from 1898 to 1902, in which year M. Jusserand was appointed Ambassador to the United States.

When we come to consider M. Jusserand's works as a whole, we are struck first by their abundance and their thoroughness. M. Jusserand evidently read thousands of volumes for every one he wrote, and turned all that he read to good advantage. Next we find a quality, which I may illustrate by a sentence from *English Wayward Life*: "The king always needed their services; when he moved from one manor to another, the brilliant cortège of the lords was followed by an army of borrowed carts." We may characterize much of M. Jusserand's best work by saying that he would most certainly have chosen to accompany the army of borrowed carts rather than the "brilliant cortège of lords." He invariably goes behind the scenes. He always finds the less obvious side most interesting; and I will wager that he has often looked at the back of those antique tapestries in the Embassy in Rhode Island Avenue, to see how the stilted, the array of borrowed carts.

In what we hold to be the most considerable of his books, the *English Wayward Life*, M. Jusserand very eloquently and convincingly shows that the wandering tribes of nomads and beggars, friars and outlaws, and fugitive peasants played a great part in the spiritual life of the fourteenth century. They will convincingly move the work of common consciousness, bringing the news of one district to another; telling the men of Shropshire what was going on in York; carrying the gossip of London to the Welsh borders, or distant Scotland; and thus bringing all the men and women of mediaeval England to a living sense of their common life. This national consciousness was born and quickened, and by these means, among others, was the soul of the nation made.

We may say that, in his own way, M. Jusserand has worked a like miracle, and carried out a similar task. He has brought to us the gossip of Elizabethan taverns and playhouses; he has carried the news of fourteenth-century inns and abbeys and villages. He has made us very familiar with the hopes and fears, the terrors and glories, of a great nation in a past day. In doing this, he has done much more. He has enriched our human joys; he has enlarged our feeling for the long struggle, the endless pilgrimage of man. And one may say, in general, that this is the end and fruit of all good writing: to bring home to the separate heart of the reader a sense of that great humanity of which he is a part—whose timeless struggles and agonies, fears and sorrows and strivings, have prepared the substance of his separate life, and for whose future he may, like any one else, be holding on with faith, courage, and sincerity some part of the great victory of mankind.

Buchanan's Wife

By Justus Miles Forman

SYNOPSIS OF PRECEDING CHAPTERS

Herbert Buchanan, a man of wealth with a selfish and repellent nature, whom his beautiful wife, Beatrice, has been induced to marry for his money, disappears one night from his country-place, Buchanan Lodge, with a bagful of money he has caught entering the house. Buchanan gives the man a thousand dollars as compensation for being allowed to start his vagabond existence, for he is weary of his own way of life, and maliciously desires to cause anxiety to those whom he loves behind. Stopping as a guest at Buchanan Lodge is a young

explorer, Harry Faring. He and Beatrice have had a love-affair prior to her marriage, and they now discover that they mean more to each other than ever before. An exhaustive search reveals no trace of Buchanan, who is supposed to have been murdered. Beatrice knows that the law requires her to wait five years before she can assume that her husband is dead, and so be free to marry Faring. Faring leaves Buchanan Lodge for the Adirondacks, and Beatrice prepares to go abroad. Some months after, while in Paris with her friend Miss Trevor, Beatrice receives a cablegram from her cousin, Miss Crowley, informing her that a body supposed to be her husband's has been found, and requesting her to return to New York and identify it. Beatrice, Miss Trevor, and Faring arrive in New York, where Beatrice identifies the recovered body as that of her husband. Shortly after, she tells Faring that, although they are now free to marry, she feels that the proprieties require that they wait for a little time. She decides to spend the winter in her country, but promises Faring that if he will come to her in the spring she will marry him.

CHAPTER XI

WE WIN TO THE GATES AT LAST

DULY, on the 9th of April, in a damp little icy-weathered church which she had spent the winter with a certain old kinswoman, Beatrice Buchanan was married to Harry Faring. Arabella Crowley was there—not as bridesmaid, and without the hoop-skirts, blue—and little Alliance Trever, and the faithful elderly lawyer, who wept. These, with the kinswoman, a Mrs. Davish, and her little granddaughter, made up the wedding-party, for neither Beatrice nor Faring wished to have many people there.

"Oh happiness," Beatrice said, "is our own affair, and interests very few people. Let us not be stared at and gossiped about by a crowd."

Her summons to Faring had reached him about noon on the day preceding this. It was very short, only telling him where she was—with a little laugh of triumph over having been so near him all these months without his discovering it—and saying that if he chose he might come to see her.

Faring had been waiting since early morning with his luggage ready looked and strapped. He went his way to the station with his luggage, and himself made a quick dash down to Gramercy Park, where he found Arabella Crowley just entering the house from an early drive.

"She says I may 'Come and see her'!" he jested to the old woman. Mrs. Crowley told his wife, long afterwards, that he was an absurd picture of that joy which latently resembles imbecility. "Come and see her," so phrase you! I expect she thinks that we'll talk it over at leisure and get ourselves engaged, and be married some time in the autumn—if not later still. Ha! She'll find herself the most thoroughly undeceived young woman in America. You're due at a wedding to-morrow, Aunt Arabella. Oh, and bring Alliance Trever too, and that lawyer man! I haven't time to see them myself. Come down to-night or on an early morning train." Then, says Mrs. Crowley, he was off in three leaps to his cab, with a parting wave of the hand. She says the cab turned into Lexington Avenue on one wheel like a Roman chariot in a hippodrome race.

The trains seemed exceedingly slow to him—which was perhaps not unnatural—and when, at South Norwalk, he had to change

to the little branch line which ran north into the hills, and waited an hour in the station there, it seemed to him that those dreadful six months of winter were beginning all over again, and he worked himself up into quite a temper over the aimlessness of the railroad company.

He had left New York shortly before two o'clock, but it was nearly five when he was set down at a tiny village which seemed to be all elm trees that met in arches over the streets, and flowering shrubs not yet in flower, and white-painted fences before white-painted Colonial houses a little out-of-the-way.

He went his luggage to the inn, and taking directions from a station porter, walked down one side of the "green," where spring's first signs were beginning, past the ivied church, upon which he looked with a fine proprietary air, and so at last came to a house exactly like the other houses, white-painted—not very recently—green-shuttered, pillared and pilastered, set about with clumps of yringes and morchellas and lilacs and such, guarded by forbidding pillage, in the midst of which a gate swung in the breeze and dismally creaked in welcome.

To the door came a lean and flat-chested old woman with tight gray hair, who peered at him through gold-rimmed spectacles. He demanded Mrs. Buchanan, and the old woman's grim face softened into something which was meant for a smile, and she let him in.

"Miss Buchanan's in the garden—back of the house," she said. "She wa'n't expectin' you till later on, I guess. I'll let her know."

"Might I not go through into the garden and find her there?" asked Faring, and the old woman said she supposed he might if he wanted to.

She led him through the long hallway, which, with doors at each end, seemingly bisected the square house, and let him out upon a rear porch not unlike the front one. Before him lay a stretch of garden, bare yet save for tulips and early crocuses. A gravel path led through it to a gate in a low stone wall, and beyond the wall went on under grape-arbors through an orchard to a little border of turf beside a brook.

And here, on the stream's bank, wandered one in white—tall, slender, moving very like a queen in a book. Also, she sang in a hushed murmuring voice, gay little bits of song all about spring and such.

Young Faring's heart, after that old way it had leaped suddenly and began to race. A sort of vertigo smote him, and under the load of the orchard trees he halted, breathing hard. At just that moment the woman in white by the stream's edge saw him and gave a loud cry.

He had reason to believe that he crossed the stretch of turf which lay between them, but he did not know he moved. The earth and the branches above the earth were breaking up, and the elements were in turmoil, but from a long, long distance he heard cries and murmurs and something like a sobbing. Then his lips burned with fire, and a very exquisite throbbing, which was not the throbbing of his own heart, beat upon his breast—and the madhouse passed, leaving him shivering, but sane.

After a time, when he could force words to his tongue,

"You are going to be married to-morrow," he said, and was displeased to find that his voice was far from steady.

"You are mad," said Beatrice Buchanan, her face hidden upon his breast. "You are mad, but I do not care. I am mad too, and you're I am not going to be married to-morrow."

"Wait and see!" said the man.

She raised her face to him, and that vertigo returned, blinding his eyes. There was something almost terrible in the sight of the passion which swayed and shook and engulphed these two who had been so long estranged.

"Do you mean that?" she demanded.

"Wait and see!" said he again, through darkness.

"Oh, I'm glad!" she cried. "It's absurd, and it's shameless, and I am not prepared, but I'm glad. I have been alone too long. I'm glad, glad, glad!"

A little child, Mrs. Dawlish's granddaughter, came through the orchard and found the two there, white-faced, clinging together, speaking in half-verse, half-choked bursts of words, and she was frightened and ran away whimpering.

Afterwards when this first storm and stress of emotion had swept past them and died away, leaving them calmer once more, they talked a long time of the months gone by—the months of separation that Beatrice had endured. Faring told her about the book he had been writing—the Indian book, which was now finished and awaiting an autumn publication. And he told her what he knew of Abella Crowley—"She's coming here to-morrow," he said—and of little Miss Trevor, who had been none too well during the winter. And Beatrice spoke of her quiet existence in the little village, and of her friendship with the rector of the parish, who had drawn her into his work among the village poor, and, before she knew it, had her almost as busy and as interested in it as he was himself.

"Oh, I've been very, very good, Harry!" she said, with a little laugh. "I've been astonishingly good. I never did anything of that sort before—working for the poor and the sick, you know. I hardly knew that such people existed. I don't quite know how I got so deeply into it. Yes, I do, though! It was that blessed and angelic old man—the rector. He's good, if you like! And he has a trick of sinking everybody about his good. Harry, I've—don't laugh—I've passed this winter—for the first time. Really prayed, you know. I—oh, well, what's the use of trying to tell. Anyhow, I've tried to be good—better. I've been a sort of savage—but a very good savage. I've prayed very hard that we may be left alone to make each other happy—that nothing evil may come to us. I wonder if God has heard, Harry?" she turned to

him, and her face was very earnest and a little drawn and pale. "Harry," she said, "I wonder if we are wise to marry each other. If we do not do it, I shall die—that's certain—but I wonder, I wonder if I shall bring you happiness. It's a—certain thing, this marrying, you know. No! Let me talk on! Don't stop me. Of one thing I'm certain, anyhow. Whatever may come, I believe I'm going to make you happy. I feel it some how—even if I feel those things. And oh, I want to make up in you what you've suffered in those last years! I want to make your life beautiful, Harry! That's what I'm marrying you for."

It seemed to Faring that there was an unnecessary earnestness in her tone—something almost morbid, but he reflected that she had been for a long time alone—bored, a great deal, doubtless, and he thought, further, of what bitterness her former marriage had brought upon her. It was not strange that she should shrink and tremble a bit. But as soon as he could be turned the talk to something else, and presently the vague trouble went out of her eyes and the color came flooding back to her cheeks.

"I have a surprise for you," she said, "I wonder if you'll like it. You must, though, for it's a pet plan of mine, and I'm very fond of it. Do you remember the little cottage with the very beautiful garden, a

mile or more beyond the Lodge—Buchanan Lodge? It is a part of the estate, but it has always been let to some one, at least in the spring and summer time. You know it has half a mile in from the highroad at the end of its own lane, and it has a few acres of ground and a tiny stream and that gorgeous old garden. The whole thing is quite out of sight of the Lodge beyond a ridge of hills. Do you remember it?"

"Yes," said he. "Oh yes, I remember. A painter chap and his wife had it when I knew it last. It's a jolly place."

"Well," she said, "we're going to live there."

"In the moon, if you like," said he, laughing.

"No, in my cottage," she said. "Harry, it's all covered with ivy and wisteria and . . . and there's a sundial with something Latin on it that I can't read—the sundial came from Tivoli—and there's a pool with irises and lilies and—oh, it's a duck of a cottage! Think of being buried there, quite alone by ourselves, all summer long. Do you want a better honeymoon?"

"I don't," said Faring. "And I want to go now, at once. When can we go there?" She hid her face from him.

"That's the nice part," she said—"and the shameless part. It's—it's all ready for us—servants and all. You see," she explained, crimson-creaked, "I was afraid, I thought—that is—Well, I thought you might insist upon—marrying me immediately, as you're doing, in this indecent fashion, and so I—I've been quietly having them get the cottage ready—in case, you know." Faring began to laugh, and she began to laugh, too. "You laugh at me," she said, "I shall cry. You're a brute, Harry!"

"We'll go there to-morrow," he said. "We'll send our luggage on in the morning and motor down ourselves, after the great event in that little church yonder. So we shall begin properly."

Beatrice looked up at him and smiled. She could not quite speak just then, and she remained silent for a little time, smiling to herself.

"Yes," she said, presently. "We shall begin properly—you and I alone together—in our garden. Good beginnings make good endings, don't they, Harry? Don't they? Nothing will find its way into our garden to hurt us or rob us of our happiness!" She gave a little shiver.

"I'm cold," she said. "Come up to the house. You haven't met my cousin, have you? She's a dear old woman. Come!"

CHAPTER XII

THE HOUSE OF CLOUDS
AND SUNDREAM

THAT YEAR was famous throughout certain parts of the country for as an extraordinarily early spring. By mid-April the fruit-trees were white with bloom and the flowering shrubs were making the air sweet. The month of May was a June come before its time, with roses and soft nights and blazing sunshines.

"It has been arranged," said Beatrice Faring, "solely in our honor—that our honeymoon should be perfect in absolutely every way from the very beginning." She was sitting upon a mossy sun-dial and sticking red roses in her hair with vain intent.

"Well, of all the cheek," said her husband, "yours is the cheeked. I've met? Claiming the very weather now, are you?"

"I grasp it! I choose!" she said, calmly. "I have no shame whatever, so you needn't call names. I'm beyond their reach. As for this weather, it is ours, and it was made for us—*from now on!* Are you glad you married me?"

"Yes," said Faring, without hesitation, "I

Illustration by W. H. Brown

"Nothing will find its way into our garden to hurt us or rob us of our happiness."

am." And his wife laughed. It had been so like him to say just that, without ornamentation.

He was standing close before her as she sat on the high sun-dial, with his hands resting on the moss-covered stone, one on either side. Beatrix slipped down to her feet, and his arms closed behind her, and she laid her head on his shoulder.

"If you were the slightest bit different to what you are," she said. "I should loathe you—and I should never have married you—and we shouldn't be here among our roses, and—and I love you very much—and I don't mind your knowing it. There! Come and walk. I want to move about. The sun is down over, so it will be cooler."

Beatrix Faring and her husband came under the sheltering roof and disposed themselves upon one of the stone benches. A tumbler of argumentative sparrows got up and left the place, jeering rudely.

Beatrix looked out from her half-shut eyes upon the tranquil sea, where pearly evening lights shimmered and changed.

"Harry," she said, and Faring waited for her to go on when she paused after the name.

"Harry," she said again, presently, "how—dear to you has this month of ours been? What would you be willing to pay for it if you had to pay? If our happiness should end to-night, if you should by some sorcerer find yourself back again in that hopeless interminable desert of waiting, or worse still, if, as the price of what we've had, you must suffer misery, shame, dishonor, would you still be glad of our month here, or would you think the price too high? Tell me!"

"Dishonor!" said he, picking the one word that she knew he would pick.

"Yes," she said, steadily. "Even dishonor." "That's a strong word, Betty," he said. "I don't know—Ah, but it's about! You're putting an impossible case. How could we have to pay for our happiness by dishonor? It's impossible. We've done no sin in marrying each other. Dearest, don't put morbid questions to yourself or to me. It's going out of your way for unhappiness."

"But," she argued, with a little laugh, "I dare to go out of my way for unhappiness. There is none near me, thank God!"

"Thank God!" said he.

"So let me spin my foolish fancies," she said. "They can do no harm. They will not make me sad, for I live in regions above and beyond sadness—above and beyond all woe. I cannot see them even when I look down from my clouds. But somewhere below us, Harry, people go about in misery as we used to go—people walk in shadows as we used to walk. My heart breathes for them—a little, as much as a heart can that's away up in a heaven of its own with only one other heart—a heart that's selfish, and very mad with joy, and bewildered still over finding that such joy exists. Look! There's our cloud, your cloud and mine, Harry, where we live above the world!"

She pointed westward, high over the sea, where a single small cloud hung motionless. It was rosy with the last glow of the hidden sun, rosy and golden and opalescent together; a solid thing of fixed, unchanging contour, a throne of pearl, a couch of unspeakable splendor, a dwelling fit indeed for two such love-enthralled hearts as Beatrix Faring talked of.

But somewhere down beyond the sea's far rim there would seem to have been other drifting veils which just then caught and draped the hidden sun, for, as the man and woman watched, suddenly the western glow paled and grayed, and those tints of

Drawn by Will Clegg

"Somewhere below us people go about in misery as we need to go"

rose and pearl began to die from the hearts' throne of splendor.

Beatrix gave a little cry.

"Ah, it's fading, fading!" she said. "It's dying, Harry!" And she shook from head to foot with a quick shiver. "It's dying!" she said again, and put up her hands over her face.

"Can nothing last?" she said. "Must everything go like that? Pale and fade away until it's dead? Not love, Harry, not love! That's immortal. Say it! I want to hear you say it! I want to believe it. Love's immortal, isn't it? Ah, I'm a fool! I must be nervous to-night, and I thought I had done with nerves. I'm a fool!" She turned her face away from the western sea, so that, lying upon the man's breast, it touched his bent cheek.

"Say something," she begged. "Talk to me. I talk and talk and talk—such wandering foolish nonsense, and you say nothing. Tell me things. I don't want to talk any more. I want to listen."

"What shall I say?" he demanded. "Talking's not my—line, you know. I can do almost anything else better."

"You might tell me," she suggested, with a little whispering laugh, "how very much I love I am than other people—or would that be too much of a struggle for you? You might tell me how much you—cared in those days when you thought we could never be—here, like this."

She felt the muscles of his neck and shoulder draw tight in the sudden movement he made—a movement like a shiver, and without looking up she knew how his face must be as the picture of those desert days came lightly before him. It was more eloquent to her than any words could have been—pleased her far more than anything he could have said, however impassioned.

"I'm afraid I—can't talk about that," he said, with the odd, hurried flicking which always came upon him in a moment of strong feeling. "It's too much of a nightmare—like the horrible thing that one sees in a fever. And speaking of fever—"he gave a little laugh—"there's a chap out in China now who knows more about me and me—I mean to say about how much I—cared and all that, than he ought to know. But he's a good chap; he doesn't gossip. He doesn't talk at all except to ask for what he wants or to give orders, so it's all right. You see, he was with me on the upper Ganges a year ago last winter—you were in Paris then—and I had a bad day of swamp fever, and was off my head for days. This chap, whose name is Brumling, saw me through it—nursed me like a woman. Then, when it was over with, he asked the only unnecessary question I ever heard from him. He asked me who 'Betty' was, and why in God's name I didn't marry her, instead of talking about it so much. I seemed to have bored him dreadfully."

Beatrix put up a hand and touched his cheek. "Oh, Harry, Harry," she murmured. "You all alone down in that horrible wilderness—ill—in danger of death, and I not by to care for you! No! You're right. Let's not think of it. It's too much like a nightmare. I ache to think of it." But after a little she gave a small laugh.

"Your Browning man is a beast!" she said. "I expect he hated my very name, didn't he? I expect he hated all women. He sounds like that sort of man. Ah, well, let him wait! That day a woman will take him in hand and civilize him."

"He wore a bucket about his neck on a chain," said Faring. "I fancy some one had civilized him already—or broken his heart, maybe. It's the same."

(Continued on page 279.)

The New Law

MR. BARRIE'S BENEFACTIONS TO HUMANITY ON THE STAGE

BY WILLIAM DEAN HOWELLS

confidential wink for the more sophisticated witness; an endearing kindness, a charming domesticity, with a trust of the spectator's intelligence and temperament which is flattering to the best in him.

Of course I was a reader of Mr. Barrie's Scotch stories, but I had given my heart to them with a sort of grudge, such as our feelings when one comes late to the reading of anything that a lot of people like already. As to his plays, however, I was well in with the first to recognize their charm, and I had not yet got through the opening scenes of "The Admirable Crichton" without wishing to render myself his eager captive, to be held in a lasting bondage to a genius as novel as Mr. Gilbert's once was, and, if such a thing is possible, even more agreeable. Here was something that not only consoled me for the winning of the Gilbert and Sullivan team, but that added the hope and prophesy of pure and lovely and delightful things to the memory of the miracles wrought by them for the redemption of the poor old depraved, but not bad-hearted theatre. Till one witnessed the revelation of the new spirit, not once gay and good, in Mr. Barrie's plays, one had mostly to go about sorrowing and ashamed for the sort of things one saw in the effort to please one's frowy theatre: the brutal and vulgar and stupid shapes that offered themselves, say, as musical comedy, and the atrocious and cruel travesties of life which called themselves comedy without the comic. But here, all at once, was reason, the eternal truth to human nature which is the only beauty in art, masked in the wildest fantasy; here was the old feeling for manhood which has always inspired the censure of society, but now newly alive to the fact that the conditions forbid manhood; here was a surprising and comforting leniency to lumping and all the amazing forms of lying; here was the discovery of a future in which on natural terms the best would always be first; here was the touch of "sharpest pathos" in manhood's acceptance of foreshadowed as the only possible result from the return to unnatural terms; here was, in and through and over all, such a gracious and genial fun, that those who wished only to laugh had enough in do, and perhaps were only long afterwards, if ever, entreated to a little thinking and feeling.

"Little Mary" was satire of the same unstrained sanity. Doubtless most of those who saw it considered it pure nonsense, and superiorly blundered themselves for their pleasure in it. But here again was the same just spirit, speaking as laughter, and delicately insinuating the same lessons for such as would learn. In neither play did I think the acting particularly good, so far as the American actors did it. The part of Crichton was too gloomily and severely imagined by the excellent actor and dramatist who took the part; and the two clever comedians who played the two lords in "Little Mary" were not less than deplorable. But it seemed to me that as in the plays of Ibsen and Alving and Strindberg and Björnstén and Björnsen, the acting, while if it were good, could brighten the spectator's pleasure, could not spoil it, if bad. The drama could somehow get on without the theatre; but if this is rather too forced a point, let us say that the dramatist was so prime a power in the scene that one could, by taking a little pains, forget the actor. That is why, in what I wish to say of Mr. Barrie's plays, I shall have little to say of the artists who represented them. I suppose one could not have got on without the actors, but they did not so much matter; though, when one comes to think of it, such acting, so little, so simple, so natural, so free, as that of Miss Mamie Adams in "Peter Pan" certainly helped very much. In fact, all that pretty piece was well acted; the real children were immensely real, and the natural ones not so much like real young ladies as to be very artificial.

But it is of the play, not of the theatre, that again I wish to speak. In "Peter Pan" Mr. Barrie has stepped quite across the borders of the realm of fairy without failing to take our old

familiar world with him. There is no satire in it, save the sweetest mockery of the gentleness of the superstitions, and the very heart of home beats in the home lessons of *Never Never Land*, where the Lost Boys dwell. But the supreme moments, to my fancy, are in the opening and closing scenes in the *Darling* family, with their faithful dog *Vand* as nurse, giving the children, much unwilling, their baths and molasses, and putting them to bed, and then with their mother, broken-hearted by their absence in *Never Never Land* heart-breakingly wailing from her. No truer, more charmingly popular father, in his faithfulness and dexterity, has ever been portrayed among all the depraved parents of the stage than Mr. *Darling*. He is the picture and the pattern of his kind, and the father who does not own to seeing his likeness in him is, depend upon it, a shameless hypocrite. The Redskins, those good Redskins who defend the Lost Boys against the pirates, make one blush for the national adage of "Good Indians dead Indians"; and the pirates are all that one could wish of pirates. No more obliging bandits of the sea ever helped small boys through their overboard when vanquished, and their wickedness is of the type which is unsports by one touch of virtue.

It has been my advantage to see "Peter Pan" twice, and on the second evening I had the honor and pleasure of the company of a young lady of eleven years. She followed the whole action with the flaming cheeks and shining eyes of intense interest, and would not once share my ribald mirth in the daring burlesque. I imagined that it was all reality to her, but a subsequent conversation instructed me that she no more believed in it than I did, and was merely held by the perfection of the art. It was also her second time of "Peter Pan," and at moments she predicted what was coming without losing any of the pleasure through her foreknowledge. I venture to speak of the effect of the pretty play with her because it seemed to me the finest and friendliest criticism of the young child there (and the theatre overfilled with children) was in the joke of the piece; that all helped in the make-believe, but they did not believe, as I afterwards learned from the frankness of my companion. The illusion was perfect, but there was no more deception with them than with me.

What I am trying to come at, however, is what is almost the most valuable thing in this tender burlesque of Mr. Barrie's, and that is the domesticity. There is no hint of love-making between *Peter Pan* and *Wendy*, even when they are playing father and mother to the Lost Boys. She is just the mother they have longed for, because mothering is her instinct, as it is that of the young girl (I forget her name) in "Little Mary," who adopts all the children she can lay hands on. Motherliness is what Mr. Barrie is always filling out in women, who are supposed by most dramatists to be mainly sweethearts and wives at the best, and flirts and adulteresses at the worst. He has thus added a grace to comedy which has seemed beyond or beside the reach of its art, and has probably endeared himself to a much bigger public than would like to own it. Motherliness, hungry and helpless enough, is the note of the home woman as "Alice-sit-by-the-Fire" who returns to the children separated almost their whole lives from her by her exile in India, and who loves them so much that she does not know how to have them, and all but puts her chance with them. The piece is of course in its surface a satire on romantic girlhood imprisoned and misled by the romantic drama. The well-grown up daughter of *Alice* has so often been crying woman "saved" by self-sacrificing friends, who opportunely arrive at supreme moments to take the blame of guilty appearances on themselves, that when she imagines her pretty and still young mother in love with a friend of the husband and father, she desires nothing better than to conceal herself in the young man's rooms, and to "save" her mother by claiming him for her own lover. The fact that her father comes with her mother to the wicked rendezvous does not affect her position. To the very last she believes that she has "saved" her mother, and when, late at night after they have all returned home, she hears her father storming at her mother for mistaking him of the deprivation of respect, she stands upon them in her night gown and says to her mother a sheer *bonnet*. The whole affair is delicious comedy, but the best of the fun begins when the mother and father understand what the daughter really means, and enjoy

Music And The Opera

SOME RECENT AMERICAN MUSIC

BY LAWRENCE GILMAN

THE paucity of distinguished writing in the mass of American music which concerns itself with the smaller forms was observed in this place last week. An apt and true remark of Mr. Arthur Farwell's was quoted as bearing upon this point. It was said that most of our music in this order—by which one understands to mean, for the most part, those works for piano, for voice, and for combinations of a few instruments in the lighter forms that flow with so easy an abundance

from the pens of our composers—is "at best adapted only to pursue of ornamentation upon some yet unshaply structure of the soldier substance of human thought and feeling." One need not be held to mean that the fluent and complaint triviality which marks the great body of our music in this sort is peculiar to ourselves, and that the condition finds no kind of parallel in Germany, or in England, or in France. What one must and does recognize, though, is the rarity of any serious concern with the art of music in those who contribute to the overwhelming flood of composition that flows its accomplishment in the catalogues of our music shops and, alas, on the racks of uncounted thousands of American pianos. It is possible to say, without exaggeration, that the names of those composers whose concern with the art that they are practicing is both scrupulous and sincere could probably be comprised within less than a dozen lines of this type. It is not so with our painters, it is not so, to any such extent, with our writers. With the reason for this—or with what one may imagine to be the reason—I need not here concern myself; my immediate purpose is to signify a recognition of a certain slender but increasing output which is far from being either unscrupulous in impulse or, in the convenient phrase of Mr. Henry James, "unguided" in performance, and which from time to time emphasizes its being by the issue of work that is, in entirely the best sense, at once serious and distinguished. I shall refer particularly to a few compositions that have lately been put forth with a modesty and a dignity that are pleasantly suited to the quality of their musical substance: the "Celtic Studies" (four songs to words by John Todhunter, Fiona Macleod, Nora Chesson, and "A Viking Skald") of Mr. Henry F. Gilbert, the Boston composer; and three piano pieces and a song, to words by Andrew Lang, by Mr. Arthur Shepherd, the young musician of Salt Lake City who was the Paderewski prize the other day with his "Inverture Joyeuse" for orchestra.

Mr. Gilbert is one of the most salient figures in that group of younger American music-makers who are approaching a realization of that faith in the ultimate potentialities of our own-art that some of us venture both to hold and to avow. Mr. Gilbert, who writes with assurance in both the smaller and larger forms of music, has before essayed the difficult and fascinating task of finding a musical equivalent for the Celtic note, as it is reflected in contemporary letters and in the traditions of an older day. He has made a dramatic and potent setting of Ferguson's magnificent "Lament of Inverurie"; he has written incidental music for Mr. Yeats's play,

"The Land of Heart's Desire"; and he has set for voice the song of the Fairy Child in that most haunting and pathetic of the products of the Neo-Celtic school, Mr. Gilbert is a musician of sensitive and rich imagination, and of insistent personality. He is cool, it goes without saying, always or often at his best; but some of these recent "Celtic Studies" of his do show him almost, if not quite, at his best. At their finest—as in the setting of Todhunter's "O Mighty, Melancholy Wind," in Nora Chesson's "My Heart is Heavy Night and Day," and in the fresh and harder music that he has conceived for the verses from Ballantyne's *Norances of the West*—he has realized with eloquence and beauty the authentic note of the Celtic imagination. He has not done so well with the verses of Fiona Macleod, whose performances in prose and verse remain for composers, as yet, an undepleted treasury of inspiration.

With Mr. Arthur Shepherd, whose sure and adventurous capture of the Paderewski prize for orchestral composition brought him precipitately into public notice a few weeks ago, one has the sufficiently curious experience of being able to write with the consciousness of making a positively achieved individuality. Mr. Shepherd is no older than he should be; yet whatever he writes is definitely directed from the centre of his own creative faculty. He may recall to one,—indeed, he not infrequently does,—the speech of Brahms; but one realizes that the suggestion has no vital significance, for there is also the voice of Mr. Shepherd himself: a voice fresh, confident, and virile. And, moreover, let it be noted that he writes with a sure and clarified intention, with an admirable command of the materials of his art. His technique is, indeed, extra-

ordinary: one studies his "Mazurka," his "Theme and Variations," and his "Prelude," for piano, with as much wonderment as pleasure; they are his opus one and two; yet in them the speech of the composer is neither faltering, incoherent, nor unregulated. But what is of far greater consequence, Mr. Shepherd's facile and undaunted technique is the vehicle of a temperament of singular maturity, poise, and force. His sense of design, his feeling for the architecture of tones, is exceptional, and it is exercised a little at the expense, perhaps, of rich and significant color; yet it makes, no doubt, for clarity and proportion; and music must continue to have, of course, its Brahmes and its d'Indy, no less than his Chopins, his Wagners, and his Debussys.

Of Mr. Shepherd's fine setting of Andrew Lang's poem, "A Star in the Night," I have left myself little room to speak in detail.

The writing has much of the effective reticence, the continence of emotion that characterize his work; he has learned the difficult art of husbanding his expressional resources for supreme and climactic moments,—an art which, in this instance, is reinforced by the noble beauty of Mr. Lang's verses.

I have singled out for comment this recent music by Mr. Gilbert and Mr. Shepherd, not because it is the best of its excellent kind, but because it is representative of the best; of a small, if growing, body of artistic endeavor whose achievements, however limited in volume, are not excusably to be ignored.

Madame Kirkby Luna

The English contralto who sang with the Philharmonic Society on February 9 and 19

DEFECTS IN THE POSTAL SYSTEM

By HENRY A. CASTLE

Former Auditor for the Post-office Department

The long experience of the author as Auditor of the Post-office Department at Washington qualifies him to speak with authority and from intimate knowledge of the defects in the equipment and management of the greatest business organization under Federal control. This is the last of the series of live articles on this topic contributed to the "Weekly" by Mr. Castle

V.—The Uses and Humors of Rural Delivery

THE rapid growth of the farmers' mail service, called rural free delivery, has been unparalleled, even in the history of our marvelous post-office development. There are tales of magic and enchantment in these significant figures:

	Appropriation.	Current.
1897	\$40,000	44
1898	50,000	149
1899	150,000	291
1900	450,000	1,276
1901	1,750,000	4,399
1902	3,093,000	8,485
1903	8,154,000	15,119
1904	12,921,000	24,566
1905	21,040,000	31,090
1906	25,814,000

That this tremendous movement has resulted in a quickening of the popular intelligence in regions where it would be most beneficial is unquestionable. That it has been accompanied by disappointments, heartburnings, and vigorous complaints is equally true.

The distribution of mail-matter to the agricultural population was a scheme so attractive as to command in advance the enthusiastic plaudits of all who wished well for the country. That many prophecies have not been fulfilled is no indictment of its general utility, but should be an incentive to more careful administration and a proper adjustment to the necessities of the case.

There are several classes of people to whom this beneficent innovation, so called, has brought chiefly gail and wormwood. The first breed and, we fear, least regarded of all the complainants are the postmasters whose offices are abolished by this unwelcome device. One of these writes:

"The routes are generally proposed and 'put through' by the postmaster of some office of importance who knows that a majority of those opposed oppose the rural delivery. The evident purpose is to kill off the smaller offices on the routes to swell the business of the postmasters at the distributing offices."

Another aggrieved postmaster, in an official letter to the Department, thus loudly voices the sentiments which struggle for adequate expression in his imperfectly organized intellect:

"Postmaster-General Washington D. C. Dear Sir as this Took of Rural Free Delivery has got up here and so many is Dissatisfied is the cause of the Petitioners being sent you, and if you will Nodds you will see that Several Names Appear in South Petitioners and About Nine out of Every Ten that Assign for Rural Free Delivery Male surres is Dissatisfied and don't Want bit and See they was Fool and Lyde in to sign the Petitioners for Rural Free Delivery."

Another set of objectors live up along the routes which have been omitted in laying off the delivery routes. It is made a matter of serious complaint that the price of land is adversely affected by being thus discriminated against, and the probability is that bitter controversies will rage for years, in many localities, over attempts to change the course of the agile carriers' daily pilgrimage. The fight between towns for the "county-seat," and the fight between streets for the location of a village post-office, are precedents in this point. As the vacuum of the conflict is ever in inverse ratio to its importance, we may well shudder at the grand aggregate of heat and heartache which this consideration involves.

The village stockbreeders join in emphatic expression of hostility. Through the operation of the system they are more than ever exposed to the competition of the mail-order houses, and they declare that in many sections the farmers have stopped coming to town to buy, since the establishment of the free-delivery routes. This, of course, hurts on the jobbers and wholesalers in the large cities, and the result is that the trade of both city and country has suffered severely.

Resolutions protesting against the further extension of the system and demanding its curtailment have been passed by commercial bodies all over the country, both local and national in character. An effort will be made to interest Congress in the fight against what is described as an imposition on the country at large for the benefit of a few mail-order houses, for it is alleged by the opponents of the system that it is not of any real benefit to the farmer.

Disappointed candidates for the office of rural carrier, and even

the Congressmen who have failed to get their friends selected by the civil-service boards, have their grievances and fail not to exploit the same. A Kansas Representative thus wrote to the Postmaster-General in endorsing one of his worthy constituents: "He seeks not to serve among the pillared and domed and colonnaded edifices of Washington. He is used to being summoned to work by the clarion notes of the barnyard cock, and would be out of place among the nine-o'clock risers of the national capital. He neither drinks whiskey nor plays penny-ante. He has never worn a dress-suit or an even-bush. He is a plain housewren man, who loves the fresh air and the green fields, and the sunshine and the flowers, and the lady he loves in the giddy-up of simple rural contentment. He wants to carry the mail over a rural route."

Referring to this candidate and to another, similarly endowed, "Neither of these gentlemen knows aught of the importance of a Congressman before a civil service commission," continues Mr. Cortelyou's correspondent. "They rightly estimate their Representative in Congress to be a great man, but when they hold him to be incompetent, I grieve for their innocence—and envy them too. In a vague, dreamy sort of way the good people of Kansas have knowledge of the Civil Service Commission, but they do not suspect its lay nature. It would take them a long time to really understand that the said commission is not eager to be guided by the wisdom of a county commissioner, a member of the Legislature, or a member of the matter of appointments, or that, in its opinion, a man—a dreamy bookworm—who does not know how to come in out of the rain, save by the principles of physiological deduction, is better qualified to conduct a rural route than one who is able to hurry a horse or, in a pinch, help a pasture farmer to stack his hay, or preach an uplifting and helpful sermon at the rural chapel while the regular pastor is away on his vacation."

The rural carrier has troubles, just beginning when he gets his commission and assumes his duties. The source of his woes is the overbearing exigencies of the "patrons." They ask him to find what hives is paying for wood, and let them know to-morrow without fail. They expect him to find out who has pigs for sale, and if Smith would loan them his gelding. They want him to find out what the butcher is paying for calves, and if the stockbreeder has any medicine that he would recommend for a sick baby, and to "step" down to the express office and see if there is a package there for them, and if there is to please bring it out. They place letters and packages in the mail-box without stamps, with written requests to deliver to parties living along the route.

A rural carrier in Saginaw County, Michigan, received the following:

"Friend Fred: As you run the free delivery by my house, I would like you to bring me on your next trip a barrel of salt, two sacks of flour, also a ton of coal, and three spools of wire, then throw a set of whiffletrees and an overer under the seat. When called by Marion Walker's get two of his largest chickens and bring them along; then I can have my turkeys caught so you can take them to town. Had I better get it out alongside the road, or will you go into the woods after it? I think this free delivery is a great thing for us rural people."

The problem of food and forage is another present anxiety to the estimable functionary. A carrier writes:

"I appreciate fully the low price of corn, oats, and hay, and have decided to give my horses all they can eat every Sunday morning, or afternoon, as circumstances will direct."

Our carrier mentions that he has secured a nice lot of corn at sixty-five cents per bushel, and thirty ears of this particular corn makes an even bushel, and three ears an excellent feed for a large horse (rural-carrier horse). Another carrier mentions some fine oats that he has discovered, a tremendous making a handsome feed for the one horse he drives every day over a twenty-nine mile route. This carrier also incidentally remarked that there were several fields of unharvested corn in isolated places along this route. A rural-route carrier at Rockport, Missouri, when asked to define his district, wrote:

"My route begins at the livery-stable and runs all around and ends at the post-office."

Hospitality is unstinted in some regions. The Rural Route Notes in an Iowa paper contain these arduous judgments:

"The mail carrier took dinner with Mr. and Mrs. Isenbaker Tuesday,

"Last Wednesday the mail-carrier took dinner with Mr. and Mrs. Abrahamson, of Mackay."

"Last week we drove down to Henry Jacobs with a registered letter and we stayed for dinner."

"We are under obligations to A. C. Grandson."

"He presented us with a load of hay."

Perhaps the crowning embarrassment of the rural carrier consists in his failure to sufficiently impress on his fellow citizens and on Congress the inadequacy of the compensation allowed by law for the performance of his arduous and responsible duties. His statutory pay is \$720 per annum, and he naturally wants more. He even makes odd jobs compulsory. The writer no soldier in the regular army has more regular drill. No soldier is required to endure one-half the fatigue, danger, and exposure of the rural carrier. The soldier has all his expenses paid and \$13 a month in addition, without the investment of one cent, without any previous education, acquaintance, or even character. I count the soldier's keep at \$10 a month and his pay at \$13 a month, and he has more remuneration than the carrier, who is an agent of civilization, instead of a relic of barbarism!

"This is not only a reflection against the carrier, but it is an actual slap in the face of the most useful and unassuming of every one of the industrial classes who have vested interests."

"Of the 31,000,000 of Americans who are potentially efficient—who are pursuing gainful occupations of some sort or other—as farmers and planters. As the total vote in a Presidential election is only about 15,000,000, the farmer should be politically efficient—sufficiently so to secure a rate of compensation for his letter-carriers which will assure the future of the service."

An organ of the guild sounds this clarion note of defiance: "Carrier! How does your Congressman stand? Has he been filling you with sweet words intending to betray you, or will he live up to his promise? Find out!"

The effort was made early in its history to have the delivery service placed on a business basis, similar to that of star routes, so that there would be competition between carriers as there now is between mail contractors. This plan was strongly opposed, but was defeated by a large majority in Congress.

One Representative, advocating the plan, warned his colleagues that the time would soon come when there would be 50,000 carriers, at \$1000 each per year—total, \$50,000,000 for salaries alone, besides allowances for wagon repairs, horse hire, etc., plus eight hours a day and millions for overtime. He predicted a solid combination of 50,000 carriers, clamoring for more pay, and organized as an aggressive political machine.

None of these predictions has yet been realized, but it cannot be denied that some tendencies are more or less ominous. The fact is, the system has been built up on a casual basis, and no advance theories have not as yet had time to adjust themselves to unexpected conditions and unforeseen obstacles. One by one vital questions will come up for solution which will require the careful wisdom both in Congress and in the department to settle properly. Neither Congress nor the department will possess that wisdom unless it is assisted by observant and intelligent patrons of the rural service—the farmers themselves.

The character of our carriers is so high, their conduct is so good, and their work, upon the whole, is so efficient, that no hybrid appeals or organized coercion and intimidation are necessary to secure attention to their claims. The sense of justice innate in the American people may be confidently relied on, in the end, to fully appreciate and adequately compensate all grades of faithful public service.

Each rural carrier must furnish his own wagon and horses. The standard length of rural routes is twenty-four miles in all sections of the country, but in the prairie States of the West this limit can be exceeded. The short routes are in most special conditions. The minimum patronage for a standard route is 100 families.

For the present fiscal year the cost of the city free delivery and the rural free de-

livery is about the same. In 1897, when the rural service started with an appropriation of \$400,000, the city service cost \$12,827,000. The city service has also grown rapidly in the past eight years, but it has not been accepted by the rural service, starting from nothing within that time. Next year the rural service will far outstrip the city service. The appropriation for the city service for the fiscal year beginning July 1, 1903, is \$22,780,000, while the appropriation for the rural service is \$25,814,100.

From these desultory side-lights it will be seen that there are flies in the ointment of rural free delivery. It has numerous and various elements which serve to modify the salubrity and serenity of its accustomed aspect. No valuable institution ever sprang full armed into smooth, effective operation. Out of the chaos and discords of the farmers' postal system will doubtless ultimately emerge a satisfactory mail service.

Born Blind

A GREAT criminal lawyer in New York, Mr. B—, has a rich and lovely client, who is famous for her extremely naughty manner.

This noted beauty had run down a poor old woman in her auto and was arrested.

"Oh, Mr. B—, do you think you will be able to get me out of this?" she asked, pitiously.

"Yes, indeed," said he, with a twinkle in his eye. "I'll prove conclusively to the jury that from the hour of your birth you've never been able to see any one worth less than a hundred thousand dollars."

ADVICE TO MOTHERS.—MRS. WOODMAN'S SCOTCHMAN'S SCOTCHMAN. Make it a rule to keep your child on the child, and the child will grow, and the child will be able to get me out of this."

DESSERTS are easily and quickly prepared when BROWN'S EARLY BREAKFASTING. Make it a rule to keep your child on the child, and the child will grow, and the child will be able to get me out of this."

ADVERTISEMENTS.

BETTER THAN PIE

Not Only the New Food, but the Good Wife, as well.

When they brought the new food, Grape-Nuts, into the house the husband sampled it first and said, "It's better than pie!" When it brought back the glow of health to his wife's cheeks, his admiration for it and her was increased, so she says, and the rest of her story follows:

"From childhood I was troubled with constant and often acute indigestion, and when my baby was born it turned out that he had inherited the awful habit."

"A friend told me of Grape-Nuts, and I invested in a box and began to eat according to directions. It was after only a few days that I found my long-neglected stomach was growing stronger and that the attacks of indigestion were growing less frequent, and in an incredibly short time they ceased altogether. With my digestion restored came strong nerves, clear, active brain, the glow of health to my cheeks, and I know I was a better wife and mother and more agreeable to live with under the new conditions."

"When the boy came to be 10 months old he developed such an appetite this dyspepsia disappeared with mine! That his mother's milk was not sufficient for him. He rejected all baby foods, however, till I tried Grape-Nuts food, at husband's suggestion. The youngster took it at once, and has eaten it daily ever since, thriving wonderfully on it. He now demands it at every meal, and was much put out when he dined at a hotel a few days ago because the waitress could not fill his order for Grape-Nuts." Name given by Postum Co., Battle Creek, Mich.

The Mayor of Algiers

The Arrival of the International Delegates at Algiers

Mr. Henry B. Hall, U.S. American Delegate

Moroccan Delegates at Algiers awaiting the Opening of a Session of the Conference

THE ALGERIAS CONFERENCE ON THE CONTROL OF MOROCCO

The crisis of the international conference being held at Algiers, in Spain, to discuss the rights of the powers in Morocco, is the discomfiture of Germany and France over the power control of the country. Germany wishes an international settlement of this question, and, according to dispatches, it is assumed that her delegates "will assent to no proposal which would open the door to the Frenchmen of the whole east coast of Morocco." Thus it is rumored, would handle the issue for the incorporation of Morocco in French Africa, which once again for Germany's objections and the announcement of the conference, the other hand, France, since its absolute preponderance in the control of the power throughout Morocco, giving Spain similar control in certain districts. At this writing, it seems unlikely that either France or Germany will sign any demands to the point of open hostility.

America's Billion-Dollar Commerce

THE foreign commerce of the United States approached the three-billion-dollar point in the calendar year 1905. The total imports and exports of merchandise for that year, as shown by the Department of Commerce and Labor through its Bureau of Statistics, was 2800 million dollars, against 2507 millions in 1903, an average increase of 100 millions a year in the five-year period. If to the 2800 millions of foreign commerce in 1905 were added the figures of trade with Hawaii and Porto Rico, formerly foreign territory and included in our statements of foreign trade prior to 1904, the total would approximate 2900 million dollars, or about 600 millions more than five years ago, and 1200 millions more than ten years ago.

All Gone

THE editor of a paper in Richmond tells of the assignment given to a young woman in the employ of that journal to cover the wedding of the daughter of a well-known citizen.

The "society editor" was prevented by sickness from attending the ceremony, and so was obliged to make the best she could of a second-hand account of the festivities. Early in the morning after the wedding the young woman reported to the home of the bride's parents. To the darky who opened the door she said:

"I have called to get some of the details of the wedding."

An expression of intense regret came to the dusky countenance of the servant.

"I'm awful sorry, miss!" she exclaimed, "but dey is all gone. You oughter come last night. De company out up every scrap!"

A Case for the Humane Society

A PHILADELPHIA real-estate broker purchased an automobile last summer, and proceeded industriously to familiarize himself with its mechanical construction.

After a week's coaching under the guidance of a chauffeur, the broker determined one evening to take a spin into the country without his tutor. He decided to ride slowly. And to insure against being helplessly stalled on a lonely road, he fastened the family horse to the rear of the auto, so that it could tow the machine home in case of a breakdown.

The auto chugged along gently, when of a sudden the horse swayed and was dragged to earth.

"Poor horse!" muttered the broker, sorrowfully, as he stepped from the car; "it's utterly exhausted."

"Exhausted?" started a passing farmer, as he sniffed the oily atmosphere; "you mean asphyxiated."

The Growth in Imports

THE nation's import record for 1905 is in excess of that of any preceding year, being for the twelve months ending with December, \$1,179,356,846, against \$1,053,900,100 in 1904, the first calendar year in which the imports crossed the billion-dollar line. The growth of imports, while not rapid, has been steady and continues to be so, keeping pace, approximately, with the growth of population. Imports in 1875 were 563 million dollars; in 1885, 587 millions; in 1895, 801 millions; and in 1905, as already indicated, 1179 millions. The character, however, of imports has somewhat changed in recent years, the percentage of manufactured materials from the total having steadily increased, and supplying in 1905 about 48 per cent. of the total, against 40 per cent. a decade ago, in 1895.

CARTOONS OF THE WEEK

Buchanan's Wife

(Continued from page 276.)

"No talk of broken hearts, my dear!" said Beatrice. "Broken hearts use things we, on our mountain-peak, know nothing of. They're hated from our paradise—forever. Hold me close, Highness! I'm—sleepy."

So, in such hazy-headed fashion, these two lived and had their encephalated being. They drift, as the women had said, in a sort of dream, on rotating frames. It was as if they had been literally and physically caught up into that peer-fitted cloud of her fancy, way far above the world and the artist's life. It is entirely impossible to give any picture, however inadequate, of such an existence, because no great exaltation, whether of spirit or of heart, has any outward tangible characteristics which may be described. To understand such a state requires a corresponding exaltation, and words cannot produce that.

To be continued.

Same Old Town

A THUNDER, sometimes whose "terrifying" lies in the Northwest was once afternoon, when a flashily dressed person crowded with cheap jewelry came into the antitank room from the platform, where he had been standing since the closing of the last train.

"I'm old-time hasn't changed a bit since I was here," said he, by way of general observation, to the passenger and two or three others of the place. "Everything's not the same as it was 35 years ago. Not a particle of change!"

I asked that about it, mister," replied an old fellow who was robarbing a young fellow. "Your buttin' it don't make no sense. Now there's no difference in the dressed old fellow."

Refining Steel by Electricity

They definitely can be used to such advantage in many industrial processes, its application to streamlining the production cycle on which there is much discussion. The following figures show how many uses can be used in making steel. The electric power makes the generation of electricity possible. A recent illustration is the electric furnace used in making steel. The use of electricity has completely revolutionized the metal and its handling. The electric furnace has made it possible to produce the metal at or near the point of use. It has also made it possible to produce the metal in a much smaller quantity than before. The electric furnace has also made it possible to produce the metal in a much smaller quantity than before. The electric furnace has also made it possible to produce the metal in a much smaller quantity than before.

His Tip

Some FINE MURDER tells of a burglar who of very luxurious tastes who, whatever he may be, is satisfied with no less than the best.

The good was much impressed by his out-
ranching the rest of the various houses.
There he obtained. As the dinner passed
around the table he asked the houseman as to the
names

"Well," said the horse-owner, "if he means no well, I generally lend him a dollop on the nose."

[illegible]

OUR factory buildings and equipment, materials and processes, are unapproached in the entire American automobile industry, and in many essentials Columbia Gasolene Cars for 1906 are a full year in advance of all others. This is not mere assertion. Make the comparison yourself. In no other cars will you find crankshafts machined cold from a solid block of metal and chrome-nickel steel transmission shafts, jack-shafts, gears, etc., nor the I-beam front axle forged in one continuous piece. In no others will you find the same perfection of body designs, beauty of color schemes and painstaking details of finish. Mark XLVII, four cylinders, 40-45 h.p., double chain drive, price, \$4500 to \$5500, according to body, is the accepted ideal of the American high-powered car. Mark XLVI, four cylinders, 28 h.p., shaft-drive, price \$3000, is unequalled among medium-powered four-cylinder cars. Mark XLIV-2, two opposed cylinders, 18 h.p. shaft drive, price \$1750, we offer as the highest grade two-cylinder car in the market.

Separate Catalogs of Columbia Gasoline Cars, Columbia Electric Carriages and Columbia Electric Commercial Vehicles will be mailed on request; also, special illustrated booklets: "Columbia Chrome-nickel Steel," "Fashioning a Crankshaft," "Constant Differences in Columbia Cars," "Transmission, Etc."

Mr. Barrie's Benefactions to Humanity on the Stage

(Continued from page 272.)

her romantic illusion together. It was then that the acting of Miss Barrymore, for which one might have forgiven a little better, became the masterpiece: it was in the expression of motherly tenderness breaking into difficulty hidden mirth at the girl's posthumous confession.

It has often struck me that there is never anything so novel in the arts as the truth; and in those pieces of Mr. Barrie's, especially the last, he has devised something quite new in the poor old world which often likes to get such a tickled smack on over its simple and lucid face. In a very nearly way it is optimism of the best type. It is the same world which Mr. Popen and Mr. Jones, and that unhappy Oscar Wilde (artistically the poor of critics), have shown in different and not less fulfilled phases; but now we see that it is often not such a bad world; for the most part it is a very fair world, and even a very good world. We owe much to all the modern English dramatists, but Mr. Barrie seems likely to make us most deeply so, after, especially since Mr. Ibsen, his only rival in fantasy, fantasies no more. Even Mr. Gilbert at his best had not Mr. Barrie's confidence; that is so nearly all his own, that I can think of not one other dramatist to be named with him for it, and I am rather glad that this was an American, the late James A. Heron.

The Young Idea

A man's woman who teaches a class in a Jersey City Sunday-school was recently talking to her pupils relative to the desirability of becoming its membership. When she looked the comparison to that end of the several members, the youngest member he shook his head dubiously. "I might get one boy in our neighborhood to come," he explained, "but all the others like him no."

Mixed Wives

In the story of the last century there lived an old New England house a Mr. Church, who in the course of his earthly life had four wives, all of whom were based on the same lot. In his old age it became necessary to remove the remains to a new cemetery. This he undertook himself, and in the process the bones became hopelessly mixed. His New England conscience would not allow him, under the present circumstances, to use the original landmarks, as he perceived new ones, one of which lies in the following inscription: "Here lies Hannah Church and probably a portion of Emily."

Another:

"Buried in the Cemetery of Emily Church who comes to be mixed with Ma-

hilda.

Then followed three lines:

"Hear ye now and sing a tune:

For Emily Church lies buried here

Mixed in some perplexing manner

With Mary, Matilda, and probably Han-

nah.

Depths Lead to Heights

A Westerner made directed the atten-

tion of a party of sightseers to a small

gray-haired man, and said, affectionately,

"There you see of this street over in

the country. That's Chief Justice Fuller."

"Was he no no stature whatever?" asked

one of the ladies.

"No, sir," hastily replied another

in the group, "but he has managed it a man

time in so great a height."

The guide answered him significantly and

loudly, "because of his great depth."

The
**FARRAND
CECILIAN
PIANO**

Played by hand or by foot

This Piano yields its stores of melody as freely to the person who knows nothing about music as it does to the one who has spent years in the practice and study of piano playing, and its dual nature enables it to completely and perfectly satisfy the demands of both, for—

IT CAN BE PLAYED JUST LIKE ANY OTHER PIANO—
WITH THE FINGERS.—OR—
IT CAN BE PLAYED BY MEANS OF THE MECHANISM OF
THE CECILIAN PIANO PLAYER WHICH IS BUILT INTO IT.

By means of this mechanism **any one** can play this piano—just slip in a roll of perforated music, put your feet on the pedals, and pump—any one, young or old, can do that.

All the technical part of the work is done by the Cecilian Piano Player, yet your control over it is so absolute and perfect that you can put into the performance all the individual expression and spirit of which you are capable.

The Farrand-Cecilian Piano has a full, rich, sweet tone, a quick responsive action, and its construction throughout is the very best.

It is "high grade" in every particular.

The price is \$675.00. It can be bought on easy monthly payments and your old piano will be taken in exchange at its full market value.

Descriptive circulars on request.

The Rise and Progress of the Standard Oil Company

By GILBERT HOLLAND MONTAGUE

This is a scholarly and accurate study of the Standard Oil Company, from its beginning in 1863 till its control in 1875 of nearly five per cent. of the entire oil business of the United States, and thence down to the present time. The story of this gigantic trust reads like a tale of magic, and is of profound interest even to the casual reader.

THE INCOMPARABLE WHITE THE CAR FOR SERVICE

WHITE RELIABILITY AND LOW GASOLINE CONSUMPTION AGAIN DEMONSTRATED

The silent, swift and sturdy White steam car starts on its sixth year of successful service with a sweeping victory in an important competition. The Los Angeles-San Diego endurance contest, held January 25th-26th, was won by a White steamer carrying five passengers and 150 pounds of baggage. The winning White, driven by Charles A. Hawkins, made a perfect score—1,000 points. One other car, of 40 per cent. greater cost than the White, also made a perfect score, but as Mr. Hawkins used but seventeen gallons of gasoline, as compared with twenty gallons used by his adversary, Mr. Hawkins' White was declared the winner, in accordance with the rules of the contest. Three other Whites, driven by private owners, participated and received first-class certificates, losing but one, two and three points, respectively.

The results of the above competition, except for differences in dates and places, read much like the summaries of every other reliability trial which has been held, starting with the New York-Rochester run of 1901.

COMMENT

As we go to press, we learn, on the authority of a newspaper that is usually well informed concerning men and things in Washington, that the President has made up his mind to insist on retaining the provision of the Hepburn bill which permits the courts to pass only on the law, and not on the commission's findings of fact regarding rates. If the report be well founded, and if Mr. ROOSEVELT persists in the intention ascribed to him, he will enter on a course that may embroil him with the chief engineers of the Republican machinery, and prove fatal to the prospects of his favorites in the next Republican national convention. It is certain that a large majority of the Republican Senators—including almost all the influential veterans, and even Mr. LODGE, who used to be regarded as the President's next friend—are determined to amend that clause of the HEPBURN bill to which we have referred. It is possible that Mr. ROOSEVELT may thwart their wishes by persuading a Republican minority to cooperate with the Democratic Senators, so as to pass the bill in the form which it received in the House of Representatives. What then would be the position which the President would occupy? It would be that of a vanquisher of a large majority of the Senators of his own party, by virtue of his leadership of a coalition in which Democratic Senators would constitute the most powerful factor. That is to say, he would undertake to perform the part which was essayed by JOHN TYLER and by ANDREW JOHNSON. JOHN TYLER, it will be remembered, having alienated the majority of the Whig Senators, recognized that logic and equity constrained him to reward the Democrats for the support they gave him, and, accordingly, he reconstructed his cabinet, filling several posts with Democrats, and ultimately making JOHN C. CALHOUN Secretary of State. As for ANDREW JOHNSON, it is well known that, having defied most of the Republican leaders—the one strong man who adhered to him was WILLIAM H. Seward, Secretary of State—he found his power of appointment and removal crippled, was subjected to the humiliation of impeachment, and escaped conviction in the Senate by only one vote.

Mr. ROOSEVELT may hold these precedents irrelevant, because he is a stronger man than was either TYLER or JOHNSON. Undoubtedly the President is, at the present time, very popular. He is not more so, however, than GROVER CLEVELAND was at the date of his reelection to the Presidency in 1892. Before the next four years were over, however, CLEVELAND had become an object of detestation to all American citizens who held that we were bound by duty, by honor, and by treaty to aid and comfort the French Republic. Indeed, it is notorious that in 1896 CLEVELAND could not have carried his native State for the Presidency, which was the true reason for his refusing to be a candidate for a third term. It is also well known that, after his refusal to be again a candidate

had been published, GILES of Virginia, and many other Representatives from that State, thanked God at the prospect of his disappearance from the public stage. In view of WASHINGTON'S experience, it is unwise for any other President to take for granted the permanence of his popularity. We add that GRANT'S popularity at the close of his second term was but a shadow of that which he had possessed in 1868. Yet GRANT was a conqueror who hailed, not from San Juan Hill, but from Vicksburg, the Wilderness, and Appomattox.

The campaign against the railroads is not by any means confined to the demand that a rate-making power shall be given to the Interstate Commerce Commission. The Pennsylvania Railroad is to be investigated with regard to its alleged discriminations against certain producers of hard and soft coal, and also with reference to its interest in the anthracite-coal trust. The Pennsylvania Legislature, before adjourning, provided for an investigation of the Reading Railway, and expressed a determination to bring about a two cents per mile rate of fare in the State. The Legislature of Ohio has passed a bill to that effect, and in Wisconsin a suit has been begun to learn whether the State cannot force railroads within it to reduce their fare to two cents a mile. Governor HANCOCK, of Indiana, is thinking, we are told, of calling an extra session of the Indiana Legislature for the purpose of passing a two-cent railroad-fare bill. The Maryland Legislature is preparing to investigate the Baltimore and Ohio Railroad, and to compel it to pay over money that belongs, it is claimed, to the State. The Governor of West Virginia has asked Congress to investigate alleged discriminations against coal miners and shippers in his State, and he accuses Senator ELLIOTT of being a chief offender. In view of these multiplied attacks it is surprising that railway securities should obtain the high prices which, as a rule, they command on the Stock Exchange. The roads that use bituminous coal are threatened with serious trouble in the event of a strike by the bituminous miners, for there are no considerable reserves of soft coal. On the other hand, the anthracite-using railways have nothing to fear from a strike, as they have sufficient reserves to supply consumers through the summer. It should be kept in view that a stoppage of the normal deliveries of bituminous coal would cripple not only most of the railways, but the great iron and steel industry. As we go to press, however, the prevailing opinion is that no strike will occur.

That the Santo Domingo treaty is really defunct is generally admitted since the Democratic caucus rendered it impossible for the administration to win over enough Democratic votes to secure ratification. It is not technically dead, however, until it has been formally rejected, but should rather be described as in a state of suspended animation. Meanwhile the provisional arrangement continues operative under which American citizens appointed by President MORALES, and since confirmed by President CARRERAS, are collecting and distributing the Dominican customs revenues. At any moment, however, provided the majority of the Republican Senators should become unfriendly to the President, the Senate may pass a resolution inquiring by what authority American citizens are discharging the functions of Collector of Customs in a foreign country and depositing about half the money received by them in a New York bank. The rebuff which has been administered to the President by the Senate's refusal to ratify the Santo Domingo treaty is of far-reaching significance. By that refusal his interpretation of the MORRIS doctrine is disavowed and discredited. The ROOSEVELT "corollary" is extinct. Our Federal government will not be permitted by the American people to interpose between European creditors and indebted Latin-American commonwealths. Hereafter European creditors will do well to abide, as in practice they generally have abided, by the maxim *caveat emptor*. If they can persuade their respective governments to use force for the purpose of collecting inflated debts, they are at liberty to do so, so far as the United States are concerned, but they must remember that the Mexican doctrine, as originally formulated, prohibits them from a permanent occupation of Latin-American territory. To demonstrations of force made exclusively for the purpose of securing repayment of debts we have never abetted, and the position taken by the Senate with regard to the

Santo Domingo treaty practically commits us to a like inoperative attitude when an armed force is used to compel the payment of debts arising out of contract. No doubt the codification of the customs revenues of Latin-American republics in the interests of European creditors may practically reduce them to the condition of Egypt, but the Senate virtually says that we shall survey the process with indifference as long as it stops short of permanent occupation of a republic's soil. We wish the Senate could have been persuaded to take a different view of the matter, but it seems to be inflexible, and we must make the best of it.

The movement in favor of the nomination of United States Senators at primary elections is gaining immense momentum. Everybody understands that the passage of a constitutional amendment striking out the clause which provides that a State's United States Senators shall be elected by the Legislature would be impracticable. It is quite possible, however, to nullify the clause in practice, just as we have nullified the provision that a President shall be chosen by Presidential electors. We continue to designate Presidential electors, but we make dummies of them. It is now proposed to make dummies in like manner of State Legislatures, so far as the choice of United States Senators is concerned. Already in a number of Southern States the Democrats name their candidate to fill a vacant seat in the United States Senate at primary elections, the man receiving the largest number of votes at the primaries being accepted as the nominee of the party by the Democratic members of the Legislature at its ensuing session. For instance, last autumn in Virginia, Mr. T. S. MARTIN received the highest vote at the Democratic primaries for United States Senator, and, accordingly, the Legislature has just reelected him to the Senate. A contest for nomination at the primaries is now going on in Tennessee. In Alabama a primary election will take place next August, and the primaries will determine whether Senator MORGAN and Senator PERKINS are to keep their seats. Some Republican States also seem inclined to select the same method of evading the constitutional provision for the election of United States Senators by Legislatures. A resolution has been introduced in the Iowa Legislature, directing the Governor to take steps tending to joint action on the part of two-thirds of the States to secure the calling of a constitutional convention for the purpose of carrying an amendment for the direct election of Senators. It is true that, if two-thirds of the States consent, they can call a constitutional convention, whether Congress likes it or not, but for an amendment to become a law, it would have to be ratified by three-fourths of the States, and few persons believe that the consent of three-fourths could be obtained. The feasible plan is to follow the example of certain Southern States, and nominate the United States Senators at primary elections. In the New Jersey Legislature, both State Senator COLBY and State Senator HULLAY have introduced bills intended to enable the voters to indicate to the Legislature their preference as to candidates for the United States Senate.

On Monday, February 19, Chancellor von Bismarck introduced in the Reichstag a bill authorizing the imperial government to postpone for a year the application of the maximum duties of the new German tariff to American products which by law should be made on March 1. The postponement is certain to be opposed by the Agrarians, as the party of the landowners who desire to monopolize the home market for foodstuffs is called. The maximum duties were framed to propitiate them, and it was principally at the United States that they were aimed. On the other hand, the National Liberals, the Radicals (both sections), and the Socialists will vote for the bill, and it is probable that the Chancellor can persuade most of the Centrists and some of the Conservatives to cooperate. We take for granted, therefore, that the bill will pass, but what many will ask, can have induced the German government to make to the United States a concession which is certain to be complained of by European countries which have had to pay roundly in reciprocity treaties for similar privileges? It cannot be said that we have made any equivalent concession to Germany. No reciprocity treaty would have a chance of ratification in the United States Senate. Certain modifications of our customs regulations which are within the competence of the Secretary of the Treasury were requested by the Berlin Foreign Office, but have been refused.

German importers desire that the certificates of American consuls at ports of shipment should be accepted as conclusive proofs that the valuations of goods are correct. Having failed to secure the promulgation of such a rule, they next urged that the evidence tending to show that certain imports were undervalued should be given in presence of the importers, who thus might have an opportunity to cross-examine and controvert. This demand also was rejected by our customs authorities, on the ground that no evidence of undervaluation would be procurable, unless it could be given under the pledge of secrecy.

From the view-point, therefore, of German manufacturers, Chancellor von Bismarck is giving us a great deal and getting nothing in return. What they overlook is the political consideration. We do not now refer merely to the fact that the German envoys are understood to have the support of the United States in the Morocco Conference, but to the vast importance to Germany from a moral, financial, and naval view-point of winning the good-will, sympathy, and cooperation of the great American republic. The German Emperor is too sanguine and far-sighted not to dread even an approach to a triple *entente cordiale* on the part of Great Britain, France, and the United States. He knows that, possessing between them the major part of the world's capital, those three nations could make friends wherever they chose, and by concerted operations on the great stock-exchanges, could paralyze the pocket nerve of us easily. That is why Emperor WILLIAM II. is sparing no effort to detach the United States from the Anglo-French combination. He has taken a long step toward the fulfillment of his purpose by suspending in our favor the operation of the German tariff. That is a proof of regard which he has given to no other country.

The Parliament which was opened by King EDWARD VII. on February 19 is interesting not only because some two-thirds of the members of the new House of Commons are men who have to work for a living, but also because of the emergence of a new party which has placed itself on the Opposition side of the Chamber. From some statistics lately compiled concerning the occupations of the new members we learn that there are 7 factory hands, 2 stone masons, 5 carpenters, 2 shoemakers, 1 cooper, 1 farm laborer, 1 barn-builder, 2 blacksmiths, 2 mechanics, 5 compositors, and 16 miners. There are, on the other hand, it seems, 34 solicitors and 103 barristers, but these numbers are likely to be reduced hereafter if the Laborites succeed in making Parliament hold its sessions by day instead of by night. The new Labor party, by the way, does not include all of the 54 Labor members, because 29 of these have proclaimed themselves Liberals, and announce their intention to support the government on most questions. We take for granted that not only they, but the 34 Laborites proper, will vote for the expected bill to repeal or alter radically the late Education act. Why the ministers feel constrained to bring in the measure promptly is intelligible enough when we observe that the new House contains 176 Nonconformists, to say nothing of Roman Catholic members. The Anglicans, however, constitute a majority of the Liberal party, and in combination with the Conservatives could defeat any modification of the Education act, but such a coalition is, of course, improbable. A curious feature of the new House is that the Free-Trade Free-Traders (Free-Feeders) number only 4, whereas in the last Parliament they were about as numerous as the advocates of Mr. CHAMBERLAIN'S policy, and were upheld in the country at large by the influence of the Duke of Devonshire. If the four Free-Feeders stick by themselves, they will recall the Fourth Party of Fens, which, under the leadership of Lord RUSSELL CHURCHILL, made so much noise in the Parliament of 1840-5. It is asked that ex-Premier BALFOUR is to be the leader of the Free-Trade Opposition, but to keep the peace and avert a split in the Free-Trade ranks he had to accept in a published letter Mr. CHAMBERLAIN'S programme. This he stands forth to do until the day before Thursday, February 15, when a great meeting of the Free-Tradeists was to take place at Lansdown House. The speaker, though tardy, was complete. He is no longer a retaliationist. He is a protectionist of the CHAMBERLAIN type, willing to tax foreign breadstuffs in order to give Canadian grain a preference in the British market.

Although Miss ROOSEVELT's marriage was not by any means the first White House wedding, it was unique in respect of *detail*. The number of invitations—one thousand—was many times greater than that issued on any similar occasion. Indeed, before the Executive Mansion was remodelled three years ago, it would have been impossible to accommodate comfortably more than 200 guests. When President CLEVELAND married Miss FOLSOM in 1885, invitations were restricted to the relatives of the President and the bride, the members of the cabinet and their wives, and Private-Secretary LAMONT and Mrs. LAMONT. So, too, when in 1878 Miss PLATT, the niece of President HAYES, was married in the Blue Room, the ceremony was marked with relative simplicity. At the wedding of Miss NELLIE GRANT in May, 1874, 200 guests were present, including the members of the diplomatic corps, as well as the most important officials of the Federal government. President TYLER was married during his term of office, but the wedding did not take place in Washington. His daughter ELIZABETH, however, was married in January, 1842, in the Blue Room. This wedding was intended to be a quiet one, but it developed into a social event. During the JACKSON administration there were three marriages in the White House. JOHN ADAMS, the son and private secretary of President JOHN QUINCY ADAMS, was married in the White House, the bride being Miss MARY HELLIS, of Philadelphia. This wedding was the great social function of the time. In the MONROE administration, Miss MARGARET ESTHER MONROE, the President's daughter, was married in the Blue Room to Mr. S. L. GORREYER, of New York. On this occasion not even the members of the President's cabinet were invited. We recall, finally, that during MONROE's administration there were two White House weddings, the first bride being Mrs. MONROE's youngest sister, LUCY PAYNE WASHINGTON, widow of a nephew of President WASHINGTON, while the second was Miss ANNA TOLLE, a cousin of Mrs. MONROE's.

The proceedings of the congress on uniform divorce laws which met in Washington on February 19 are not yet available for discussion as we go to press, but their subject is one of lively interest. If it were possible to frame a set of divorce laws which would be acceptable to all the States, and if all the States could be induced to accept them and stick to them, it would undoubtedly be to the advantage of American society. Even if a considerable number of the States should accept the same divorce code, it would be some gain, and that much may sometime be accomplished. But we are not very hopeful of the agreement of all or nearly all the States about divorce. The opinions of thoughtful and well-behaved individuals differ so very widely on that subject that the task of bringing even a considerable majority of the Legislatures of forty-five States into agreement about it looks very formidable. The subject, however, is well worth discussing, especially if the discussion is truly representative and includes the expression of all views which are widely enough held to be important.

Nothing else than a fairly liberal divorce code could hope at present to win adoption by very many of the States, but it would help matters somewhat if the States that go in for easy divorce should put their bars up and make it harder for outsiders coming into them for divorce purposes to acquire a residence. Whether even that much can be accomplished is doubtful, so hard is it to convince any considerable number of our easy-going people that it is their duty to constrain partners to stay married after they are tired of their bargain. Married women are well protected by our laws as it is. It is very hard for a man to get loose from a lawful wife who has not misbehaved, unless she is willing. The rights of the children of a marriage that has collapsed deserve to be guarded with the utmost care, and perhaps the courts should distinguish, as observers always do, between childless couples who seek divorce and couples who have children.

Incontinent men who hire their wives to get divorces in order that they may themselves be free to marry some one else should be denied this enlargement of their privileges. A relation that is openly mercenary is much less mischievous to society than the successive "marriages" of such persons. If they must have variety in domestic companionship, it is as well for them, and much better for their relatives and friends, that they should find it outside of marriage. The

chief difference between adultery that has been legalized by a trumped-up divorce and remarriage, and adultery that hasn't, is that in the latter case the sinners suffer the inconveniences of their sin, and in the former case they shift a large share of them on society.

Any conceivable divorce law will make some hard cases. Divorce is a remedy for disaster. It is impossible to make a pleasant medicine of it, or one that is adapted to every case. Strict divorce laws are supposed to protect society at the cost of some innocent and deserving individuals. Loose divorce laws are supposed to benefit some deserving individuals at the cost of society. Both suppositions are disputable. The average American legislator cares more for the social units than for the social lump. He will always incline to be liberal with the individual, who is small and has but one life, and let society—a big corporation that doesn't age or die—look out for itself.

An oversight last week led the WEEKLY to say that the increased longevity pay suggested for the army had already been granted. Army officers now receive "ages"—ten per cent, increase—every five years for twenty years, or forty per cent, in all. The increase advocated is in addition to the longevity pay now granted.

On February 19 the President communicated to Congress his idea as to the kind of a canal to be built at Panama. He thinks that it should be a structure with locks, with a summit level eighty-five feet above the sea, to cost \$139,745,500, and to be completed in eight and one-half years. In this preference President ROOSEVELT has the support of Secretary TATE, Chief-engineer SHRYVER, and all the members of the Canal Commission except Admiral EMMETT. He mentions in his letter to Congress that though a majority of the Board of Consulting Engineers, including all five of the foreign engineers, recommended a sea-level canal, five out of eight of the American members of that Board preferred the lock system. He thinks the minds of the foreign engineers have been influenced by the Suez Canal, whereas our great lock canal, the Soo, has impressed our engineers with the good points of a lock system. By choosing the lock canal we make an estimated saving of \$107,000,000 in money, and of from four to ten years in time. The Canal Commission's majority opinion, transmitted by the President to Congress, is not merely that the lock canal will be a better canal for the money, but a better canal irrespective of cost, because it will be safer for ships, quicker traversed, safer from flood damage, much less costly to maintain, and easier enlarged and for less money than the other. Congress can set aside, if it will, the preference of the President and his advisers and order a sea-level canal, but the prospect of its doing so is slight. In all probability work will go ahead on a lock canal, and we judge that that solution of the problem will be satisfactory to the people of the country. What modifications of the plan may come with the progress of the work no one can predict, but it is held to be one advantage of the lock system that it is more readily susceptible of modification and of future enlargement than the sea-level plan.

The newspapers report that JOHN A. McCULL, in the shadow of death, said to his son:

"If it is God's will that I must go, I am resigned. I have nothing to fear. It is true that I have not been a saint in my life, but I have never deliberately done anything harmful to man, woman, or child."

We do not doubt that those words were sincerely spoken, and true. Some of Mr. McCULL's actions were condemned. He was practically found guilty—as were ALEXANDER and McCUNY—of malfeasance. The jury was the whole nation, and there was a sweeping unanimity in the verdict. But the sins of all these men were sins of environment. They did not know they were doing wrong; neither did their associates; neither did the public, until suddenly all hands waked up and saw things as they were. They should have known better, but they really didn't. That is why there is so much sympathy for them as men, though not much as officials. They were victims of a bad system which they had to be sure, a hand in making, but for which they were no more responsible than many others. They have suffered far more than, as individuals, they deserved to suffer. It was as

though their reputations—solid and honorable, the work of years—fell back on them, without conscious fault of their own, and crushed them.

"As soon as war ceases the higher evolution of man ceases, for the weaklings will never be killed off." So writes Major WOOLFEY in a letter that is printed in the Correspondence page of this issue of the WEEKLY, in which he argues against the assertion of Dr. DAVID SVEN JONAS that the greatest factor in the destruction of nations has been wars, because wars have killed off the best men in such nations, and their kind has not been reproduced. Dr. JONAS's theory may not be entirely sound, though it is interesting, but to our mind it deserves more credit than Major WOOLFEY gives it. Nor can we agree with Major WOOLFEY's assertion, quoted above, that evolution ceases when war does, because, lacking wars, the weaklings are not killed off, and the strong have no advantage. Modern war, such as we have had in this country, seems to be of small utility in killing off weaklings. In our civil war the fighting-men on both sides were of the best stock in the land. The weaklings stayed at home, and nobody killed them; neither did they starve to death. On the contrary, in the North at least the absence of a considerable proportion of the stronger men at the front gave the weaklings a better chance than usual to make a living. The civil war put our country's evolution back at least a generation. If it did the South any good, it was by humbling the strong, not by destroying the feeble. Any good it might have done the North (on Major WOOLFEY's theory) by causing the feeble to perish, we have carefully eliminated by our pension system, which encourages the ostensibly feeble to live on to the last gasp. Evolution as we see it is working double time for the elimination of war, and will go on all the faster when war is finally abolished.

We think, too, that Major WOOLFEY underestimates the efficiency of the processes of peace in killing off the weaklings. Is not ruin, for example, a very valuable agent in that process? Taking folks by and large, do we not see the more astute and self-controlled and strong and diligent of them getting the best of the competition? A bullet has no discrimination. It will put out a strong man or a weak one, a good liver or a bad one, a wise man or a fool, without any regard to his qualities, but the natural forces of elimination, though their judgment is far from sure, do exercise a considerable measure of discrimination in destruction. People who have the intelligence to perceive and regard the great laws of nature have a better chance than stuper people to live out their time and leave descendants who will do the same. Virtue has a lot of rewards besides itself. The scheme of nature, geared as we see it to the apparatus of society, is such an astonishingly able contrivance for the betterment of human beings that we wonder men don't improve a great deal faster than they do. Was there ever a contrivance with such spurs, checks, combinations, compensations—ever such a device for constraining sentient creatures to observe, think, reason, deduce, and shape their conduct according to knowledge? War has not ceased to be useful, but its use to-day is not to kill the weak, but to make education compulsory in all nations that hope to maintain an independent existence. See Russia reluctantly learning that lesson, and now China. Education may be trusted to regulate the birth-rate, and if education doesn't, wealth, resulting from education, will be sure to do it.

Observe how things work. The able and wiser people are more prosperous than the less able, and live better, and acquire more property and better chances for their children. The degenerate tend to die early, and, as a rule, childless. The feeble, the incapable, and the vicious leave descendants to be sure, but have fewer descendants than better people, and leave them in a bad case, to be the victims of their parents' vices or their own, and to die prematurely. The worst families are constantly tending to extinction. Curiously enough, the richest families, and some of the best, seem to tend the same way. Successful greediness or too much luck, or sagacity too skillfully employed brings too much wealth; too much wealth brings too much ease and destroys grit, or too much pleasure-chasing, and impairs both the mind and the body. At last it leads to those results. It takes a number of generations oftentimes for processes to

work out, and no rule holds in all cases, but usually the rich people and the more intelligent people have small families, and the poorer people of less (demonstrated) intelligence have larger ones. Biologically speaking, the people who work in the world (provided they don't work excessively) are doing better than the lazy or the idle, the moral people are doing better than the triflers, the people who give value for what they get better than the folks who get something for nothing. The game of getting something for nothing—so very popular at this time—may seem profitable to an individual, but is sure to beat a family if you give it enough time. Finally, some of the something-for-nothing people are rated as good; actually, some of them are shrewd, and they have good bodies; but biologically—perhaps by reason of an ethical defect—they seem to be classified among the weaklings which the peaceful evolutionary processes wipe out.

Take the case of a man who makes, say, five million dollars speculating in stocks and retires from business. Is he in a favorable position to found a family that will be valuable to the world? Of course he may do so if he has some fairly good children to start with. But a man does not make five million dollars in stocks without putting his mind for a considerable space on speculation, and a man whose mind is on speculation is apt to have very little of it to spare for training his children according to sound ethical standards. So the chances are rather against the stock-speculator's having a promising outfit of well-trained children to start with. But suppose he has them, what is he to bring them up to? If he trains them to industry, they have his example of great gains without appreciable equivalent given to make them impatient of the slow processes of earning bread. Moreover, why should they work so long as he has five millions? He has deprived them of the strongest practical motive for effort, and having no better business to train them in, what better can he expect than that they should devote part of their working-time to improving the breed of horses, and the rest to the endeavor to buy stocks low and sell them higher? Such exercises have made many men poor and some men rich, but biologically considered, they are small potatoes, and do not make for the perpetuation of useful families. Is it not true that the man who has made five millions in stocks is an unpromising biological factor, and that the chances are favorable for his seed to perish?

Major WOOLFEY has himself explored one influence other than war which makes for natural selection and the elimination of the locally unfit. On the basis of studies and of his army-surgeon experience in the Philippines he has written a book about the effects of tropical light on white men. It is the light, even more than the heat, of the tropical countries, he thinks, that makes them so unwholesome for white men, and the deductions that his researches counsel as to the expediency of every race of men sticking to the climate which is suited to their complexions have a very important bearing on the assumption of tropical responsibilities by people of Caucasian descent. We know more about the effects of light in these days of X-rays than we did fifteen years ago, and the new knowledge is of a great deal of practical value in enabling white men to avoid some of the climatic hazards of brown men's and black men's countries while they live in them. But it forbids the hope that white men will ever flourish in such countries, and, conversely, it sentences the black race to eventual extinction in the United States. By the scheme of nature, or by age-long processes of selection and adaptation, certain races of men have been qualified by color and physical construction to live in certain zones, and the final success or failure of the migration of races has turned on whether or not they migrated out of the zone they belonged in. Climate will modify an immigrant race to a certain extent, but if too much modification is required, the subject of experiment will perish. The earth is a wonderful laboratory, and what a country can eventually make of a race of men is quite as interesting as what men can make of a country. What England, for example, can do to white men is fairly well known, but our knowledge of what America can do to race rests on no more than a mere four centuries of experiment. Of course we are hopeful as to the result, but we have a good deal to learn yet, and we suffer no little inconvenience from past mistakes.

The Amazing Industrial Progress of the South

SOME interesting facts and figures concerning the extraordinary industrial and commercial development of the South in recent years are brought together in four articles contributed to the February number of the *Review of Reviews*. Mr. RICHARD H. EMMANUS, editor of the *Manufacturers Record*, Baltimore, has compiled a table of statistics by which it appears that the value of the cotton crop increased from \$212,000,000 in 1880 to \$490,000,000 in 1905. Formerly almost the whole of the raw staple was shipped to foreign countries or to the Northern States. Since 1880, however, the amount of capital invested in Southern cotton-mills has increased from \$21,000,000 to \$225,000,000; the number of spindles from 167,000 to 5,265,000; and the number of cotton-bales used in the mills from 225,000 to 2,163,000. To appreciate these figures, it is needful to recall that in 1880 New England and all the country outside of the South consumed 1,250,000 bales, or six times as much as the South then used, whereas in 1905 the whole country, outside of the South took but a few thousand bales more than were needed by the Southern mills. Between 1880 and 1905 the South nearly quadrupled its consumption of cotton, whereas New England increased hers only twenty-eight per cent. If we turn to the iron industry, we find that the quantity of pig-iron made in the South, which in 1880 was but 397,000 tons, had risen in 1905 to 3,100,000 tons, or nearly as much as the entire United States made in 1905. Twenty-five years ago only 4,000,000 tons of bituminous coal was mined in the Southern States, as against 20,000,000 tons in 1905. The present output is larger by 28,000,000 tons than was that of the United States in 1880. There seems to be no limit to the possible development of the South's cotton, iron, and coal industries. Its progressive citizens look forward to the time when the South will spin and weave all of its own cotton. Mr. EMMANUS seems to think it probable that the Southern mills will eventually consume a quantity of raw cotton equivalent to the present annual crop, or 10,000,000 or 12,000,000 bales, but he proceeds to show how signally the crop might be increased, so as to supply the want of the outside world. For example, an expenditure of about \$250,000,000 by the national government upon the levee work of the Mississippi River would reclaim an area of 36,000 square miles, or 20,000,000 acres of land fertile enough to yield a bale to the acre. There are also vast stretches of land in the Southwest never yet touched by the plough, which could be made to produce five or six million bales a year. With regard to the mining expansion of the South's real industry, Mr. EMMANUS points out that Alabama has 8500 square miles of coal area, or nearly as much as Great Britain ever had, and of thicker veins. Kentucky has more bituminous coal land than has all of the United States. The entire South has a total of 82,957 square miles of rich coal land, whereas Great Britain and Germany put together have but 12,600 square miles. Of iron ore in close proximity to its coal-mines Alabama has sunk vast stores that, according to Mr. EMMANUS, three or four of the leading iron companies of that State possess more than do the United States Steel Corporation. Passing to other industries of the South, we observe that cottonseed oil, of which very little was made before the war, is now a great and rapidly increasing product. The number of cotton-seed mills has grown from 45 in 1880 to 748 in 1905, and the capital invested in them has increased during a quarter of a century from \$5,000,000 to \$54,500,000. The total value of the South's farm products, which in 1880 was \$600,000,000, was \$1,730,000,000 in 1905. The value of the lumber products has risen in a quarter of a century from \$19,000,000 to \$250,000,000. It is unnecessary to think of cotton as the chief crop of the South, yet in 1904 that section produced 661,000,000 bushels of Indian corn, or more than one-fourth of the total maize crop of the country; 65,000,000 bushels of oats; 65,000,000 bushels of wheat; nearly 25,000,000 bushels of Irish potatoes; 21,000,000 bushels of rice; 9,500,000 bushels of sugar, and 600,000,000 pounds of tobacco. It is a fact not generally known that Georgia raises more peaches than any other State, and that eastern Carolina is the chief strawberry centre of the United States.

The aggregate length of the railways in the Southern States in 1905 was 90,000 miles. The railroad mileage of all the rest of the country in 1880 was 51,000. The exports from the Southern States last year were valued at \$555,400,000, as against \$201,000,000 in 1880. The exports to foreign countries from all the rest of the United States twenty-five years ago were valued at \$55,400,000. The utilization of water-power for electrical purposes is an important feature of Southern industry. Mr. EMMANUS tells that already water-powers aggregating half a million or more horsepower are being harnessed for electrical work in the central South. Over 80,000,000 are being spent to generate 75,000 horsepower on the Yaffin River, North Carolina, and near Chattanooga several million dollars are being applied to the utilization of a great power on the Tennessee River. Other power-developing plants are in course of construction in many parts of the Southern States, from Carolina to Texas. The last decade has also witnessed a marked revival of commerce in the Gulf ports. Pensacola now imports more "naval stores," as turpentine and resin are termed,

than any other port on the Gulf of Mexico. From Mobile fifteen steamship lines ply to all parts of the world. That city's exports to Cuba exceed the combined exports of all the other cities in the United States, except New York; in imports of tropical fruits she ranks third, and she handles almost the entire seed crop of Yucatan. From Gulfport, Mississippi's new harbor, there were shipped in 1904 no less than 153,302,800 superficial feet of lumber, or 24,500,000 more than were exported from Pensacola. The quantity of wheat and maize shipped from New Orleans has fallen off since 1903, but the total valuation of all the articles shipped is nearly a billion of dollars. The shipment of raw cotton alone was worth \$307,000,000. Most astonishing to the reconstruction of Galveston, which was reduced of more than 8000 inhabitants and nearly \$20,000,000 worth of property just five years ago. It is now the converging point of fifty-three steamship lines and nine railway systems, it has six miles of dock and five grain-elevators; it exports one-third of the wheat sent to foreign ports from the United States; during 1905 it shipped 465,000 more bales of cotton than New Orleans, and, finally, this year, it has passed in turn Baltimore and Boston, and now ranks third among the exporting ports of the whole country. The facts and figures here set forth justify the assumption that, at the end of the next quarter of a century, the South will exhibit an notable proofs of prosperity as are presented in all the rest of the Union to-day.

Count Witte Still the Czar's Prime Minister

THAT contradictory reports reach us from St. Petersburg with regard to Count WITTE's present relation to his imperial master is to be expected, for assertions and predictions necessarily vary, even when they emanate from Tass-Scie, according to the source from which they come. For instance, a statement made in good faith by an inflexible reactionist might misrepresent the actual state of things, because the wish is apt to be father to the thought. In order, therefore, to deduce the truth from a mass of data often conflicting, it is necessary to check and compare reports, by comparing them with undoubted events. Thus when we are told that councils are held in the Czar's palace to which Count WITTE is not invited, that his advice is no longer heeded, and that in the mind of his sovereign he is held responsible for all the commotion by which the Russian Empire has been racked, we must inquire whether such assertions are reconcilable with notorious facts. It is certain, for example, that Count WITTE still holds the post of Prime Minister, while that his influence has not been lost is evident, because his political, his agricultural, and his religious programmes are being carried out. There is no reason to doubt the announcement telegraphed to this country that the elections to the state Duma, or national assembly, will take place on April 7, and that the body will convene precisely three weeks later. It would have met earlier, no doubt, had not the outbreak of revolution made it indispensable to restore order before representative institutions could be introduced. To charge Count WITTE with the delay would be glaringly unjust. It should be superfluous to deny that the disturbances which have taxed all the resources of the government to suppress are traceable to the manifesto of October 17. A thing may be *post hoc* without being *propter hoc*. More sequence in order of time should not be reckoned with the relation of effect to cause. As a matter of fact, it is probable that but for the manifold concessions to the Russian people which the manifesto embodied, the disorder which, for a time, threatened to reduce Russia to anarchy and chaos would have been much more widespread, devastating, and irreparable than it was. It was in truth, a catastrophe which Count WITTE averted by a well-timed acquiescence in the principal popular demands, and he has thereby placed his sovereign and his country in a position of comparative tranquility.

That the members of the coming national assembly are to be chosen by the voters, not directly, but indirectly, is true; but so, as we have formerly pointed out, are the members of the Prussian Chamber of Deputies. The only difference is that in the Czar's empire the electoral process will be more complicated, since the primary voters are to name secondary electors, who, in their turn, will designate the tertiary electors by whom the delegates to the state Duma will be chosen. It does not follow that the delegates will not be truly representative. A question of more importance than the method of election is the nature of the functions with which the new assembly will be clothed, thousands, the Duma was intended to be a purely consultative body. But the Czar would scarcely ask its advice if he did not mean to take it; and, if he does, the Duma will practically take part in legislation. We have no doubt that ultimately it will be permitted to initiate bills on all subjects except the army, the navy, and foreign affairs; but these bills will not become laws unless they are approved by the Council of the Empire and by the Czar. In other words, the powers of the Duma are likely to be nullified on those of the Czar, or the Council of the Empire, which are more intimate legislation with regard to almost everything except the affairs of the

War Office, the Ministry of Marine, and the Foreign Office. That is the utmost concession of legislative functions which ought at the outset to be made in a country entirely destitute of political training, and in which at least four-fifths of the population are illiterate peasants. Evidently Count WITTE knows just how far he can go with safety, and without being subjected to the disconcerting necessity of retracing his steps.

It is equally plain that no disavowal has been made from Count WITTE's policy of religious toleration, or from his proposed method of solving the agrarian problem. Mr. POMERANTSEFF, whom the Jews have reason to compare with TOMATEMARA, has been ousted definitely from the post of Procurator of the Holy Synod, and the organization of the Orthodox or State Church has been materially changed. Not only all Christian dissenters, but even Moslems and Buddhists enjoy complete liberty of worship; only the Jews remain restricted to the so-called Pale of Settlement. It is absurd to suppose that Count WITTE, who himself is married to a Jewess, can view with any feeling but abhorrence the anti-Semitic persecutions in which many of the provincial governors have been implicated. When order and the Czar's authority are thoroughly restored, no belief that rigorous measures for the protection of the Jews will be taken by the present Prime Minister, who coasts the respect and esteem of fair-minded persons. We may also consider it settled that Count WITTE's plan of relieving the pressure of the agricultural population on the land, by assisting peasants to purchase additional holdings, will be carried out. That is to say, the muziks will be helped to buy from private proprietors what extra land they need, and pay for it in small annual instalments, stretching over a long period; the government in many if not in all cases advancing the purchase-money. That the government, so long as it is directed by a liberal Minister, will show itself forbearing and sympathetic in the collection of instalments must be clear to the peasant proprietors, because it was only the other day that arrears of taxes and unpaid instalments of purchase-money on holdings acquired more than forty years ago were remitted.

Not only does Count WITTE deserve the confidence and support of his imperial master, but the latter is prompted by the strongest motives of self-interest to uphold him for at least some months to come. The present Prime Minister is the only man in Russia in whom European financiers put faith. Count WITTE's services are, therefore, for the moment, indispensable from a pecuniary point of view. The Russian budget, recently published for the current fiscal year, shows that, if the needed expenditures are to be defrayed during the next two years, the Czar will have to borrow £400,000,000. Notwithstanding the tremendous volume of their existing investments in Russia, the Paris bankers have agreed to lend this additional sum, provided the State Duma is allowed to meet in pursuance of Count WITTE's programme, and provided the assembly shall formally sanction every loan that has been previously made, together with that which is now desired. Under these circumstances it is probable that those creditors or bureaucrats who are counting on Count WITTE's speedy removal from office are reckoning without their host.

Personal and Pertinent

In a recent lecture in New York in the biology section of the Academy of Sciences, Professor F. N. LEE announced ready to be an excellent card for fatigue. While this may be new as a scientific pronouncement, it has a strikingly familiar flavor. Somehow or other we seem to remember something about men taking boxes of candy home to their wives to overcome their fatigue at having set up so late. This was probably after the failure of a national box of fried oysters. But Professor LEE did not say anything about fried oysters, although he did advise cooking soda.

New York is threatened with an epidemic of hypersensitiveness, otherwise an extraordinary sensitivity of the sense of hearing.—Dr. JOURNALISM or GILDER.

Very true. We stood at the junction of Broadway, Sixth Avenue, and Thirty-fourth Street the other afternoon about five o'clock, and distinctly heard the elevated trains, the Broadway cars, the Sixth Avenue cars, the Thirty-fourth Street cars, the delivery wagons, the carriages, the express wagons, the automobiles, and, incidentally, using to our advantage, the shuffle of some two hundred thousand feet. We must have hypersensitiveness.

The considerable part which English women play in politics is well expressed by the London Mail, in an article upon the recent death of Lady LINT, wife of Sir Edmund LINT, Secretary of State for Foreign Affairs. It said, in part:

Even apart from her devotion to her husband she was the keenest possible Liberal politician, though the daughter of an old Tory squire, Major S. F. WINDHAM, whose ancestor is mentioned in the Ballad of Chevy Chase, and whose personal popularity in the Border county was responsible for much of its liberation. For Sir Edmund she worked incessantly and faithfully, from his first

political campaign, two months after his marriage in 1885, down to the late battle, from whose triumph she has been so tragically called away.

Lady LINT had a large desk at Fribourg devoted to political papers, answered many of Sir Edmund's letters, and throughout his five campaigns frequently took notes at his opponents' meetings of points in the speeches which she thought needed reply.

The charges are that any newspaper a man picks up just now will remind him that E. W. HOWE, of the *Asheville Globe*, is travelling round the world. Mr. Howe, is the man who wrote a very sensible, head-scratching book about twenty years ago, called *The Story of a Country Tour*. It was ghastly wit, very striking, full of bad weather and red sand, but had a curious fascination about it. Howe apologized for it by saying that it had all been written after working hours, when he was tired and could not smile.

Mr. Howe is one of the most reluctant travellers that Kansas ever sent out. He likes Kansas, and prefers to stay there. We don't know how he was induced to take to the road. When he got to Honolulu he was homesick and longed to come home, but was ashamed, and grinded his teeth and went on. He was last heard from in India. He looks upon all things like a man who has never seen anything but Kansas, so that he gets novel, strong, and interesting impressions, and all the newspapers copy passages from his letters to the *Globe*. It is hard to say which is more interesting, their pictures of Asia or their pictures of HOWE. For example, he writes from somewhere in India:

We were not permitted to enter the temple; we were only permitted to look in. And we were compelled to remove our shoes before looking in. It seemed queer to me that a Methodist, a follower of the true religion, was compelled to remove his shoes before so much as looking into a pagan temple. But it was a beautiful place, and the son of the founder was a very polite and agreeable gentleman. His family conducts a jewelry business in the city, and he invited us to call there, which we did not do.

Again, he says, writing from Ceylon:

I have long had a notion that should I meet a Mohammedan, I would find him ashamed of his religion and of his prophet; both seem so false and ridiculous to me. But I was never more mistaken; the Mohammedan is about the best satisfied man in the Orient. He is as well satisfied with himself as a Chinese man, or a Pennsylvania, or an Englishman. And he has this to be proud of, at least; his religion is more widely distributed over the earth than any other. And he makes his pilgrimage to Mecca as surely as a salmon returns from the broad rivers to the Columbia River. There is very little back-sliding among Mohammedans. They are as well satisfied with their religion as a Freemason is satisfied with France.

One claim about Howe is the difficulty of determining whether he is simple or compound.

The Committee on railroads of the New York Board of Aldermen met the other day to hear what the people had to say upon the question of recommending the Board to investigate the merger of the local traction interests. It would have been one of those real nice little sessions which the committee holds from time to time but President COCHRAN, of the Borough of Brooklyn, taken his pen in hand. But he elected to write a letter to the committee, which was read by Chairman DIERMAN, and when he finished and sank back in his chair, MORRIS, McFARLANE, HARRIS, TORNEY, WATSON, and GRUFFENBERG, his colleagues, looked like the man who, after a railroad accident, was found wandering in a lousy dell plucking violets and murmuring, "Where am I?"

In the first round Mr. COCHRAN "fiddled" for an opening, did a little footwork, and then "handed" this to the committee:

"The people are the city," said SHAKESPEARE'S Roman citizen long ago, and the interest of the people who are this city is nothing less than that of the people who are that city. It is incontrovertibly axiomatic for, the controlling, overruling, all-governing consideration, the law of laws and the touchstone and test of constitutions; the one thing on an account to be ignored, impaired, or made little of, the one summary interest by all means, by all the resources of civilization, to be safeguarded, promoted, guaranteed, defended, kept sacrosanct.

Then he side-stepped the perspiring chairman and drove him to the ropes with:

Even in spite of all the errors and treasons which have so far so greatly dwarfed and starved the foremost embodiments of our client's rights, we as the people's spokesmen have still in a standing in court which even the most pedantic judicial lawyer or advocate for the safety of privilege has not by any long-sighted misanthrope in encounter that will not persistently deny to be even technically available to authorize our proceeding with the solemn and indispensable high respect which I beg you to recommend.

Once during the bout Mr. COCHRAN "got in" this good one:

It is a "party in interest." In fact in law, in morals, nay, it is the party in interest par excellence, the party in interest transcendently, unconditionally, beyond all comparison with—

After this and one or two others the chairman took the count and it fell all over. At the count of five the little bird overlanded some one says: "How did I know? I guess COCHRAN got the wrong address."

An Eye-witness's Story of the Russian Revolution

By Albert Edwards

The author arrived in Moscow when the revolt of the people against the Czar and his troops was at its height. He was a spectator of the principal events associated with the revolutionists at their meetings, and under Russian guidance was enabled to take part in the actual fighting between the troops and the people. This is the last of Mr. Edwards's series of three articles. The others appeared in the issues of the "Weekly" dated February 17 and February 24

WHEN the military train from Moscow with its Cossacks, who had been detailed to the duty of "pacifying" the strikers, arrived at Ljubezsky, the soldiers and strikers of a far different temper from those they had encountered at Pervovo. Word had come to them of the massacre of their comrades at Pervovo and the unprovoked capture of the men at Wolskyski, and without waiting for the train to stop, they fired on the soldiers. But they were not able to face the answering fire from the train, and fled the station. As in Pervovo, the soldiers pursued them, and, alighting even the pretext of a search for arms, killed every one in the uniform of a railroad employee. This time they didn't have to demand their leader from the strikers and there was no chance for heroic deception, because the station director, Andronov, who acted in the name of his comrades, was well known, and was almost the first one captured. He was led before the officer, his condemnation to death read to him, and all that night he lay bound while the Cossacks celebrated an orgy of victory before they shot him in the morning.

During that night of victory, however, alarming news came to the soldiers. They learned that the employees of the next station were preparing a new sort of resistance. They were no longer to be met with flesh and blood, but even by guns and knives in the hands of experienced workmen, but by a weapon they could not combat—a train loaded at full speed to meet their own in a destructive collision. This was not to be feared, and so, with three hundred peaceful dead to their credit, they turned back in triumph to Moscow.

And now Moscow is at peace. The government, which was almost an underground one during the disturbance, has resumed its old place and put the revolutionary societies underground, the position they were in before the revolt began.

And with Moscow perfidy everybody is explaining. The government begins its explanations, to be sure, on the first day of the barricades. They begin by saying that the outbreak had no significance, and that now some have been proved to their own satisfaction that it was an accident. They are saying that the government had been too lenient; that it had allowed this conspiracy to grow, and that that the people had taken arms through the carelessness of the rulers. They say that there need only have been more Cossacks in Moscow and there would have been no outbreak at all. According to them, the outbreak itself, which was small and of no political significance, was due to a sudden and overzealous spasm of loyalty on the part of the Cossacks; most of the population did not support the Cossacks at all, or if they did, were terrorized into it; the army was absolutely loyal in spite of the fact that a large part of the infantry had to be locked up under guard without arms. This official explanation is elaborate and varied. It explains the outbreak until all their impudence vanishes, and then insists that they never happened.

The revolutionists are also explaining, and their explanations come with the bitterness of defeat. They say that the arming of the population was not in preparation for this outbreak; that under the peaceful rule of Russia the ordinary citizen grew armed to be ready for any emergency. They do, however, admit that there are regular armed organizations, and that a body of about ten thousand revolutionists had been armed in preparation for some conflict indefinitely planned in the future.

While the government declares that the loyalty of the Cossacks forced the outbreak, the revolutionists declare that the violent repressive measures taken by the police and the soldiers after the general strike was declared made it necessary for the revolutionists to rise. Even though they were unprepared, they dared not let Moscow pass quietly into a period of reaction lest the revolution should lose its hold on the masses of the population. They say that they didn't terrorize the population; that it was the government which roused them to an equal pitch of fear and anger. Then, whether they were prepared or not, the revolutionists certainly

did not receive the support they expected outside their revolutionary organizations. They expected the army to revolt, and though it is true enough that the infantry were to a great extent neutral, that they fired into the air, and made so many difficulties that their commanders found it impossible to use them against the revolutionists, still the cavalry was fully loyal through the whole trouble and the artillery entirely so.

There is absolutely no question that the revolutionists were not prepared for the sort of attack the government made on them. The barricades were absolutely proof against the infantry; they had used wire, glass, and other obstructions which made the cavalry more or less ineffective; and they had counted on being attacked with machine-guns. They had not, however, expected to be attacked with cannon or rapid-fire guns, or to have to meet what was practically a siege on a small scale.

Besides, they had not thought so many regiments could be poured into Moscow. They had counted on the efficacy of the railroad strike to prevent their coming by rail, and they knew that it was impossible for them to come in the winter by any other means. They had also hoped for trouble enough in St. Petersburg to keep them busy at the capital, even if transportation were interrupted. In all of these things they were extremely disappointed. The railroad strike was ineffective and quickly parried; the trouble at St. Petersburg was not sufficient to hold the soldiers there, and their expectation of outside assistance was more a feverish hope than a well-grounded plan. There is no doubt that the barricades in Moscow were defended by men desperate because of the failure of their plans. They were in despair because the army had not revolted; because the railroad strike had failed; because the troops were pouring into the city; and, worst of all, because the rest of revolutionary Russia had not acted.

And now the depression which hangs like a cloud over the revolutionists of Moscow is blacker than ever. Their organizations have been broken in pieces, many of the leaders are in prison and the rest are in hiding. A large proportion of the arms, which are so much less plentiful with them than are men, have been lost. They feel that the revolution is much further off than it was before the rising. Part of this is, of course, due to the natural depression coming after the weeks of exciting fighting and barricades. They are beginning slowly to realize, however, that though the future in Moscow is absolute, the revolutionary organizations over the rest of Russia have not been touched. The fact that the Moscow leaders are in prison is not so serious as it might be when one considers that in Petrograd it is the same. There were one hundred thousand people either in prison or in exile, and that this was not enough to stop the uprising or the general strike.

The revolution is already too widespread and too deep-seated to be killed by a mass of arrests, even though the revolutionists say in their bitterness, "All Russia has gained the reward, and Moscow has paid the price."

Admiral Dulafoff says he is "pacifying" Moscow. "He will succeed," wrote the correspondent of the *Manchester Guardian*, "but at a frightful cost—the rest of the loyalty of Moscow." In reality, it is not possible for him to pacify the city—he can only drag it.

On December 23 a small band of about three hundred of the city's militant inhabitants—took up arms against the government. They fought a desperate fight for eight days and were at last overpowered by a final outside troops. Before the outbreak of the insurrection Moscow was considered the most loyal city of the Empire. Now it is the least so. Admiral Dulafoff himself is reported to have said that all the people of Moscow were divided into two classes, armed and unarmed revolutionists.

It is certain that at the outbreak of the fighting the vast majority of inhabitants were either bitterly opposed to an armed revolt, or at least thought it was ill timed and unwise. But counting for the weakness of the government and expectation of its imminent liquidation arm day by day, and the contempt and

A Russian cartoonist's idea of the liberation of the people

exasperation became loathing and fury during the days of "purification."

The measures which the Governor-General took to suppress the insurrection hurt only the non-combatants. The reckless firing of cannon in the streets did not injure the *drugivnicks*, but killed and maimed many innocent people and destroyed numerous private houses. The order to close all doors and keep off the streets after nine in the evening was laughed at and defied by the revolutionists, but fell heavily on the peaceful citizens, and resulted in the death of at least one woman in child-birth who could not get medical aid. The constant "searchings" were maddening.

It was impossible to go quietly about your business even in those parts of the city where there had been no disturbances. A dozen times a day you were peremptorily ordered to stop, and had to submit to an offensive search by more or less drunken soldiers. This of course did not trouble the insurgents, as there were not enough soldiers to search at every street corner, and those who carried arms found it possible, almost without exception, to avoid the patrols. But if you were in a hurry to get anywhere you were sure to be held up two or three times. I was searched twice in two minutes at the Iberian Gate. Another time I was riding along the Loutifskaiskaya with a friend. Our sleigh was stopped and we both had to get out. A young officer, having searched the sleigh—I suppose for bombs—allowed my friend to get in again.

He then turned to me and began—rather nervously—to search me. My chance I had a large pipe in my pocket, and through my heavy overcoat it may have felt like a revolver. He cried out an order, and three soldiers with fixed bayonets rushed to protect him. My friend told me afterwards that I looked like the statue of Arnold von Winkelried gathering in the lares of the Austrians and making way for liberty. At the time she was thoroughly frightened as she thought I might have a revolver. I didn't have time to think about statues. I was wondering whether the soldiers were sober enough to search me first or whether they would, as often happened, shoot first and search afterwards. I had to stand there, "hands up," while the officer unbelted my overcoat, and gingerly pulled out the pipe. This incident had its humor, but more often there was nothing to laugh at.

On the Russian Christmas eve, which falls on January 6, Admiral Dulaioff suspended the nine-o'clock law and allowed the people of Moscow to stay up till midnight. About ten o'clock in the evening I was driving down the Nicholaskaiya and saw a band of Cossacks needlessly annoying a woman. She was well dressed and evidently respectable. They were pretending to search her—in a not very delicate manner. My "izvestnik" was frightened by her cries and refused to stop, so I was unable to see the outcome. But I presume she escaped with nothing more than a fright and rough handling, for it was a much frequented street, and even the Cossacks would not have dared to treat her as they treated many unfortunate women who fell into their clutches in outlying and deserted districts.

On January 15—the fighting had stopped on December 31—a dragon ran amok in the Nibolskaiya, a busy street in the Krem-

lin. He may have been unbalanced by the eight days' fighting, but more likely by vodka. He got off his horse and staggered up the street waving his carbine and occasionally shooting at random. He searched everybody he met, and then made them get down on their knees and beg his pardon. He was eventually disarmed by other soldiers—luckily before there had been any loss of life.

These things are daily occurrences, not in a little provincial town as has often been the case in the last few months, but in the streets of one of Europe's most brilliant capitals.

The town council, or *Duma*, was bitter against the insurance companies on the day of my arrival, but before I left Moscow its time was occupied in passing resolutions against the atrocities of the military. One member tells the *Duma* that at half past two in the afternoon of the 24th he saw an old woman of sixty wantonly shot by dragons on the Aleksievskaia. On the 25th he saw a boy of fifteen shot down by the Red Arch, while he was trying to get permission to cross the street. The same day he saw a charge of shrapnel fired from a field-gun without any apparent reason, on the Mstetrol. This street is always crowded and, in the words of the speaker, "the passers-by—men, women, and children—were mown down."

The sidewalk of a respectable merchant named Paul Wortman was put on record. On the 25th he was walking quietly down the Trerkskaiya. He was struck from behind and knocked senseless. His arm also was broken. He recovered consciousness while being taken to the Police Station. There a charge of being an "agitator" was placed against him. After some hours he at last secured a hearing, and having no trouble in establishing his innocence and respectability he was discharged. But he tells in detail the revolting scenes of that Station-house.

Mr. Tolpoff, a member of the *Duma*, relates his own experiences. He was stopped by two drunken Cossacks who demanded that he give up his arms. As he did not have any they searched him for revolutionary proclamations. Not finding any of these they knocked him down and beat him. Some of the crowd that gathered gave the Cossacks money and he got away from them.

Two sessions of the town council were entirely devoted to the recital of such outrages.

The loss of property to small house-holders from fire resulting from the *razzameds* is estimated at \$50,000 roubles (\$425,000). This is exclusive of factory buildings destroyed. It is quite impossible to state the financial loss to non-combatants due to the failure of the government promptly to suppress the revolt. And no estimate has been made of the loss of life.

The way in which people changed sides in these few days was significant. An army doctor whom I met on the day of my arrival was outspoken in his denunciation against the "trouble-makers." A few days later he was as bitter against the government. A friend of his, a doctor, had been visited by two gendarmes. They asked him if he had been connected with one of the emergency hospitals established by the revolutionists. He said he had not, but had treated some wounded people who were brought to him. Then they asked if he had arms. He replied that he had a revolver, but that he had a permit from the Chief of Police. They asked to

A Sketch of the *crusil* Profound Factory, and the Barracks at the main Entrance

see the permit, and as he turned to get it from his desk they shot him in the back. This happened in the presence of his wife and children.

The brother of an acquaintance of mine was killed in the street while giving medical aid to some of the wounded. He was a doctor and wore the Red Cross, but he was pierced by twelve bullets.

While I was calling on a friend, a wounded woman was brought to a doctor in the next apartment. A bullet was imbedded near her spine, and the doctor said she would have to be taken to a hospital so that the bullet could be located by X-rays. The hospital was only a short way off, and two young sons of my hostess helped to carry the stricken woman. On their return they said they had been shot at four times by the soldiers. In this way I saw a whole family who were before moderate liberals converted into active revolutionists.

The night before I left Moscow I attended a meeting of a committee of the Constitutional Democrats, one of the largest political parties in Russia, very moderate in its demands and openly opposed to armed uprisings. The meeting had been arranged before the outbreak of the insurrection, and now, according to the manifesto of Admiral Duboussoff, such a meeting was a crime and each person liable to three months' imprisonment. The man whom they had intended to nominate for the coming elections had been arrested the day before. Fourteen leading Moscow lawyers are now in jail, many of them having intended to take an active part in the campaign. These people cannot much longer have faith in peaceful political action when to suggest a man as a candidate is to send him to jail.

And so the "purification" has spread the revolutionary sentiment up socially to all classes. People who were before moderately liberal or even conservative are now forced into revolutionary activity.

The revolutionary feeling has also been spread out geographically to all the Empire. Many factories have been demolished, others forced to close, and great numbers of employees on the government railroads, suspected of disloyalty, have been discharged. Nine-

One of the Technical Schools of Moscow from which the Students were driven by Bombardment

tenths of the Moscow workmen are peasant born. They come from the villages and small towns of the provinces. This army of men without work will be scattered to all corners of the country. Some will be ordered by the police to return to their villages, as is the usual practice, the rest will be forced by their lack of work. Their revolutionary feelings have been more rapidly developed by the sights of the insurrection and subsequent purification than could have been done by the words of all the agitators of all the parties of all the Russians. This scattering of revolutionary workmen among the villages is especially significant, as the government has always relied upon the possibility of setting the peasants against the town workmen in case of need. The village priests lend themselves very readily to this work, telling their flocks that the city dwellers are godless people who wish to make the condition of the peasants even worse than it is. Admiral Duboussoff's "purification" has resulted in sending ambassadors from the working-men's council into almost every village community in the neighboring provinces. In thousands of peasant homes—already pale with hunger—these workless workmen will tell and retell the story of Moscow, and so fan the fires of revolt already abate among the peasantry, and fuse their vague desires with the more coherent demands of the cities.

A recent utterance of Maximal Gor'ky's in the *Nascha Zina*, the St. Petersburg organ of the radicals, presents an interesting view of the necessities of the situation which has developed since the so-called "purification" of Moscow. "The danger now," writes Gor'ky, "is in indifference. In indifference, born of the sense of failure and futility, the government may now find a source of new strength. Just because the electoral system is an absurd, tricky one, designed to place in the Duma sham representatives of the people; just because the moderates and nondescripts thoughtlessly and eagerly ran toward it, just for that reason must we, as a matter of duty, register, agitate, and vote, elect our own representatives, and strive in every way to remove the obstacles to free political life and representative government."

A Barricade which was shielded and deserted, although the red flag was left flying

Hasekura Goto, Minister of Justice

Saionji Kimmochi, Minister of War

Kato Taniaki, Minister of Education

Marquis Saionji, the new Premier

Kato Taniaki, Minister of Home Affairs

Vice-Admiral Matsuoka, Minister of Marine

SOME OF THE PRINCIPAL MEMBERS OF THE NEW JAPANESE CABINET

The members of the new Japanese Cabinet took the oath of office at Tokyo on January 7. The positions in the new Government are now held as follows: Prime Minister, Marquis Saionji; Minister of Foreign Affairs, Tadahiro Kato; Minister of Home Affairs, Kato Taniaki; Minister of Finance, Yuzuru Sakatani; Minister of War, General Saionji Kimmochi; Minister of Marine, Vice-Admiral Matsuoka; Minister of Justice, Hasekura Goto; Minister of Communications, Isahaya Yasumasa; Minister of Agriculture and Commerce, Aoki Hakuseki; Minister of Education, Kato Taniaki; Baron Komura and Baron Kato, who were members of the Japanese delegation to the Portsmouth Peace Conference, have been appointed Privy Counsellors. The only members of the former Cabinet who have been retained are Saionji, Kato, and Sakatani.

Guests arriving at the East Entrance of the White House, near which a large crowd had congregated

The East Room of the White House decorated for the Wedding Ceremony, showing the Dais upon which Miss Roosevelt and Mr. Longworth stood

THE WEDDING AT THE WHITE HOUSE

The photographs show scenes connected with the marriage of Miss Roosevelt and Representative Nicholas Longworth, at the White House, on Saturday, February 11. The President's daughter was married to Mr. Longworth in the historic East Room, in the presence of a distinguished company of 800 guests, comprising representatives of foreign countries, personal representatives of various sovereigns, and important members of Washington's official life. The ceremony was performed by Bishop Henry Y. Battey, of the Protestant Episcopal diocese of Washington. Late in the afternoon Mr. and Mrs. Longworth left Washington by automobile for "Friendship," the country home of John R. Wilson, not far from Washington, where they spent the first days of their honeymoon.

COURTESY OF THE WHITE HOUSE

MR. AND MRS. LONGWORTH AND PRESIDENT ROOSEVELT AFTER THE WEDDING AT THE WHITE HOUSE

This remarkable photograph of Mr. and Mrs. Longworth and President Roosevelt was taken in the White House immediately after the wedding ceremony of February 17. One of the most interesting features connected with the scene was the fact that the material of which it was made was of elaborate design, and, in order to prevent a duplication of the pattern, its hem ends and in the wearing were promptly destroyed. It was a beauty of pure white, and was trimmed with old lace belonging to the Lady of New England, the family of Mrs. Roosevelt's mother.

Count von Zeppelin's new air-ship slowly rising over Lake Constance, and turning toward the Kurus above

Count von Zeppelin's Latest Air-ship

By Walter M. Wythe

LIEUTENANT-GENERAL COUNT VON ZEPPELIN, one of the world's most noted and indomitable students of the problem of aerial navigation and the inventor of an air-ship which has achieved a fair measure of success, has just made another experiment in flying at Friedrichshafen, in Württemberg. It would have been a most successful performance in every way had not a storm arisen when the balloon was something over 450 metres above Lake Constance, and damaged the couplings between the motors and the steering-gear. As a result of this the dirigible balloon was transformed into an ordinary balloon, and instead of coming to rest in the lake, as was intended, it alighted in a meadow. This, however, was not the only mishap. While the balloon lay overnight in the meadow a storm arose and wrecked it.

The performance of this latest air-ship to be designed by Count von Zeppelin was watched with the greatest interest by several prominent officials of the German government, among them Captain

Gross, of the Ballon Department of the Imperial Army, and Captain Dschunna, from the Ministry of War. The balloon had been rebuilt by Count von Zeppelin in seven weeks, which was, of itself, an achievement. It was 413 feet long, 38 feet wide, and weighed, when ready for flight, about 18,000 pounds.

The general shape of the Zeppelin air-ship, as will be seen in the accompanying illustrations, is that of a cylinder with pointed ends. Its framework is of aluminum and encloses sixteen compartments, containing in all about 13,000 cubic yards of hydrogen gas. The covering of the air-ship is a tightly woven bronze cloth. It is equipped for propulsion with four screws, two on each side, energized by two gasoline motors, each weighing 800 pounds and developing 85-horse power. The steering apparatus consists of three perpendicular rudders of linen stretched upon strong wooden frames. They are about eight feet long and four feet wide. By their aid the air-ship may be made to rise or fall without loss of gas or ballast.

The Zeppelin air-ship emerging from its shed on the shore of Lake Constance for an experimental flight

The Coming Conquest of Cancer

By C. W. Saleeby, M.D.

In this article Dr. Saleeby, whose discoveries in the problem of the origin of life have given him high rank among the scientists of the world, announces what, in his own words, "would certainly appear to be one of the greatest medical discoveries ever made." The discoverer is Dr. John Beard, of the University of Edinburgh, accounted one of the foremost living students of germinal or embryonic tissue. Dr. Saleeby's article presents many new aspects of the dread disease cancer, throwing doubt both upon its transmission by heredity and that it is infectious

EVERY reader of the lay or medical press is aware that the supposed parasite or microbe of cancer is a matter about which a week or two ago, who may most charitably be described as self-deluded. Somewhat more numerous, even, are "cancer cures"—the outstanding and constant feature of which is that they do not cure. Apart from the amazing progress of surgery, the only advance in the cure of cancer that has been made for very many years is the successful application of the Roentgen rays to that least malignant form of cancer which is known as rodent ulcer, and the similar employment of radium in a certain very limited class of cases. Thus, the wisest members of the public, conceiving the apparently stationary character of our knowledge of cancer with the marvelous conquests of medicine in other directions, are beginning to think that the cancer problem is insoluble. This pessimistic view is encouraged by the fact that the number of deaths attributed to cancer is steadily rising in every part of the world whose statistics are available. It is my purpose in the present article to dispose of two or three fallacies concerning this subject, and thereby to ground in the discussion of a really significant discovery, made by a worker worthy of universal respect, and not for a moment to be confused with the premature, outrageous, and, indeed, brutally cruel announcements which constantly infect the Press.

First of all, let me positively deny the widespread assertion that cancer is increasing among us. The wisest members of the profession have always been very doubtful as to this alleged increase. To minds already prepared by some measure of knowledge the assertion has never seemed a likely one. My business here, I take it, is to be somewhat dogmatic, or else to hold my peace; and I will not discuss at length the causes which have led to the belief that cancer is increasing—the improvement in death certification, the greater accuracy of diagnosis, the advance in surgery, the deliberate use of surgical operations for diagnostic purposes, and so forth. Suffice it that the incidence of cancer has lately been the subject of an exhaustive and critical inquiry in London by the Imperial Cancer Research Fund, which has lately issued its second annual report. I may note that the statistical investigation of cancer under this fund is an excellent instance of the "higher statistics," and bears so remarkable a resemblance to the most admirable statistical data which is usually dignified with the name of statistical inquiry. I quote the last sentence of the invaluable part of this report which deals with the reputed increase of cancer: "There is nothing in the statistical investigations of the Imperial Cancer Research Fund which points to an actual increase in the death-rate from cancer." If the reader care to purchase the report he will soon be assured himself that this dictum is based upon exhaustive, expert, and unbiased inquiry. If the authors have any natural bias, it must plainly be in the direction of asserting an aggravation of the malady, and thus the greater importance of the work in which they are engaged. Their opinion may thus be taken as the latest, the most surely based, and the most trustworthy that can be obtained. Whenever and wherever the reader hears or sees it asserted that cancer is increasing, he may safely put down the maker of the statement as unacquainted with his subject-matter. If I may be permitted an opinion, the present article is "worth its place" on the sole ground that it may tend to remove an erroneous belief which is productive of much mental suffering and is conducive to that distressing and too prevalent complaint which we call cancerphobia. There is no inherent probability of the increase of cancer; there is no evidence of it; and the statistical data which have led to a belief in it have been so interpreted only by those whose statistical criticism should more conveniently be confined to the data of athletics.

My second point is that recent statistical inquiry—which will not improbably be continued by the Imperial Fund—throws much doubt upon the common belief of the tendency toward cancer in the family. This is tenable only by heredity. On this point we cannot as yet speak so positively, perhaps, as on the last; merely we note that the many people who have a special dread of cancer because they know that the disease has affected one or more of their next relatives, can find very convincing and very considerable cause for doubt whether that special dread is in any way justified. I am certain that not a few readers will experience some sense of relief on reading this paragraph.

My third point is that we are not justified in believing or supposing that cancer is an infectious disease. Those who do believe, and whose stricken friends may be absolutely confident that no danger to themselves is involved. Statements in the public press have been apt to mislead. The Imperial Fund has proved that a portion of a neoplasm may be transplanted in an animal of the same species, and that from which it is taken; and there is no doubt in my mind that the same is true of the members of man. But, in the words of Dr. Baskford, the Director Superintendent of Research: "The processes by which growing cancer-cells are transferred to a new individual are easily distinguishable and fundamentally different from all the known processes of infection." Such transference, moreover, requires a surgical operation of the utmost delicacy and difficulty. Thus, for all practical purposes, cancer is no more infectious than gout.

So far, then, we are justified in offering the following summary

as in all probability true in the sense in which it will be read: Cancer is not increasing, is not hereditary (?), and is not infectious.

Before I proceed to the essential part of this article, let me briefly note, as regards the cure of cancer by the knife, that the percentage of lasting cures of cancer of nearly all organs is rapidly rising. Permanent results are nowadays obtained which would have been absolutely incredible even ten years ago. The overwhelming majority of cases of cancer are curable by the knife if taken in time; and the average date of operation is steadily becoming earlier as the public learns wisdom and the profession improves the art of diagnosis.

Even already, then, we may take heart of grace; though the brutal and lying assertions of cancer cures, almost invariably meaning that some one is trying to fill his pocket at the expense of one of the most pitiable classes in the community, have mocked our hopes so often that the heart is sick and loses all hope, and though statistics so often aggravate our plight by being in the hands of incompetent people to assert that the disease was not beyond the possibilities of science, but is steadily tightening its grip upon us.

And now for the remarkable discovery which I am concerned to announce. Let me premise, in the first place, that the work of the past two years—the newspapers notwithstanding—afforded nothing but confirmation of the view I expressed in 1904 (*The Code of Life*: Harper & Brothers) that the possible theory of cancer is quite untenable. The problem of cancer is a problem of cells and cell characters. The question is this: what are the peculiar features of the cancer-cell in virtue of which it revolts against the rule of the body in which it arises, and thus is capable of indefinite multiplication? Some time ago, three English students of cytology—that is to say, the science of living cells—made the discovery, which has since been abundantly confirmed, that malignant cells divide in a characteristic fashion of their own, which appears to be distinguishable from the division of normal cells. They have succeeded in elucidating the causes which lead to the production of these cells.

It would appear that the problem has been solved, after some sixteen years of labor, by Dr. John Beard, of the University of Edinburgh, who is perhaps the foremost living student of germinal or embryonic tissue—with the possible exception of the late Dr. Weismann of Freiburg. Dr. Beard adduces cogent evidence to show that a cancer is the product of what Weismann has taught us to know as a germ-cell. Beard has proved that germ-cells do not confine themselves to their own proper organs, but that many of them are apt to wander all over the body. Weismann, as he says, "There is hardly a place in the whole trunk or head in which such aberrant germ-cells have not been observed." According to Beard, it is from these germ-cells that cancers arise. Now every one has heard of the "continuity of the germ plasm"—the famous theory of Weismann—and it is in precise accordance with Weismann's views that, as Beard has shown, the germ-cells are not produced by the embryo, but are independent of it. In certain circumstances they tend to develop into malignant tumors which, as Beard believes, really represent what is called a parthenogenetic or asexual stage in human generation.

There is very much more, of course, to be said regarding the evidence for this view and regarding its significance for the biologist; but our present concern is to know how these theories have a practical bearing upon the problems of cancer.

Now Beard has asserted, four years ago, that the control of cancer must depend upon our understanding of the causes that lead to the arrest of this all but suppressed stage in the development of the human individual—this suppressed stage which, for some reason or other, occasionally appears in the uncontrollable form of a cancer by the development of a latent germ-cell in subsequent years. Beard applies the term "arrested period" to the epoch at which the suppression of this curious stage and the total disappearance of the structure produced by it are observed. In the case of the fish, he has shown that up to the critical period all the digestive processes of the developing fish have depended upon an external, or trophoblastic, structure similar to, if not identical with, the digestive process which occurs in our own stomach, flat, precisely at the critical period, there is a remarkable change. The extremely important gland known as the pancreas (the overboard) wakes into activity, and produces its characteristic digestive product, which is a mucous substance that is the specific product, and which, contrary to it, can act only in an *alcoholic medium*. Now the all important fact is this: that the alkaline product of the pancreas actually digests and causes the complete disappearance of the structures corresponding to the parthenogenetic or asexual stage of development—the structure which Beard calls the trophoblastic stage. Let me rephrase the "arrested period" in the words of "irreversible trophoblast." If the pancreatic secretion be absent, it is found that the trophoblast, which occurs normally in the development, for instance, of the fish, does not degenerate. Says Beard, writing a year ago, "The solution of the problem of the origin of cancer is therefore, in a sense, a little delayed, but it is not delayed by an *arrested period* and degenerates slowly by a parthenogenetic process, because at the same time the embryological,

on view at Philadelphia, since January 22, is one of the largest ever held by the Academy, by many of the best-known contemporary painters, among the most prominent being Messrs. David Cecilie, Beaux. One of the most interesting exhibits is a group of paintings by Whistler

Men of To-day

IV.—His Eminence Cardinal Gibbons

By Charles Johnston

As I drove up Charles Street past the gray Washington column, to an interview with Cardinal Gibbons, my imagination was colored by the traditions of pomp and circumstance which cling to the histories of the princes of the Church, something of the royal magnificence bound up with the great names of Mazarin and Richelieu. The reality was in marked contrast. The quiet simplicity of the Cardinal's residence struck the key-note. A single attendant showed me into a plain reception-room, carpeted and furnished in red, whose only adornments were a few ecclesiastical pictures and busts. His Eminence entered, gentle, kindly, alert, direct, with all the Old World courtesy so characteristic of the Church.

We spoke first of Ireland. I had thought of Cardinal Gibbons as a native of Ireland, but he told me that he was born in Baltimore, of Irish parents. His boyhood was spent in the west of Ireland, whither his father had returned from America in search of health; and he studied in private classical schools, having among his schoolfellows the present Bishop McCormick, whom his Eminence commends as a good Gaelic scholar. We then spoke of the great part played in the Catholic Church in America by men of Irish race, a large injury of the hierarchy and many of its most eminent men being of Gaelic Irish race. The contrast is startling when one thinks of the Irish Catholics less than a century ago, banished, proscribed, subject to penal laws, shorn of most of the rights of citizenship. And from this contrast our talk naturally turned to the golden age of the Irish Church, from the sixteenth to the tenth century, when the Roman Empire was submerged by the Huns and Goths, the Franks and Lombards and Vandals; and when missionary scholars from Ireland taught not religion only, but Latin and Greek, art and science, mathematics and astronomy, to the new-born nations of western Europe. We spoke of Columbia, the great Irish missionary to Scotland, of Irish colleges in the north of England, of Columbanus in France, of Gallus in Switzerland, of Virgilius still revered at Salzburg, first of moderns to teach that the earth goes round the sun, and many great names more, whose fame has only begun to shine again in the astronomy of our days.

Then I ventured to put forward a thought which I have long held in mind: that this great tradition of Ireland's spiritual life has a significance not only in the past, but in the present and future also, and especially here in the United States. In the midst of a civilization where so much is worldly, selfish, materialistic, there would seem to be an evident mission for the children of a race so full of mysticism, with so long a spiritual heredity, so tempered by suffering and sacrifice. Doubtless the materialistic atmosphere has tinged many men of Irish race among us; yet one has only to compare the life of the Church in Ireland and among those of Irish race in America with the life of the same Church in France or Spain or Italy, during the last century, to see how marked is the vocation of the Irish race for spiritual life. Cardinal Gibbons cordially agreed with the view which I put forward, that a chief means of keeping the Irish race in this country true to its spiritual birthright is the study of Irish history, so that every child of Irish race may hold in his heart the tradition of a great spiritual past and the hope of a great spiritual future.

I asked his Eminence whether he embodied a view, which I have elsewhere expressed, that the Catholic Church has a peculiar mission in this country, as standing for law and for obedience to law. We see on all hands so much levity not only in the administration of law, but in the very conception of legislative action and its possible uses, so strong a tendency to regard lawmaking as merely a branch of commercial enterprise, a means of fattening or hindering speculation, that the whole conception of the sanctity and exaltedness of law is in danger of being obscured, with the worst results on the national mind and spirit. In the midst of this

His Eminence Cardinal Gibbons

through the allotted confines of space and time." One invariably compares this very enlightened view with the curious conclusion recently put forward by Alfred Russel Wallace that our little earth is the centre of all things.

We spoke then of the doctrine of evolution, of an article by an eminent member of the Society of Jesus, who declared that "the principle of evolution is in no sense at variance with the faith of revealed religion," and the researches of a distinguished German ecologist and evolutionist, who insists on the truth of evolution, and yet insists that man is in a class apart, and is not the outcome of the great evolutionary stream alone.

Cardinal Gibbons aptly summed up the matter by saying that, as Newman pointed out, there is evolution even in the doctrines of the Church, and that this evolution applies to the apostolic Church, the Church held toward worldly conclusions. A doctrine of the Church may evolve, provided that the germ was there in the beginning.

It struck me at the time that there was a quite remarkable parallelism here with the views of Wicliffe and his teaching of the immovable germ. This brought the interviewer to an end, and I carried away the sense of a large and gracious nature, fitly representing the dignity of a great historic Church; a kindly, gentle, and alert mind; a gentle, courteous manner, expressing itself through the penetrating kindly gray eyes.

Let me express the sense of Cardinal Gibbons' alert and active nature by recording my astonishment when I learned that he was born seventy-one years ago, in 1824. Soon after his family left Baltimore for Ireland. As Daniel O'Connell died in 1847, the future Cardinal spent several years in Ireland during the life of the great liberator, when O'Connell was at the height of his power and fame. The period of Catholic emancipation in Ireland was also a time of general revival of the life of the Catholic Church from the septic swarms of the French Revolution. Curiously enough, the first symptoms of that revival was the provincial synod which met in Glasgow in 1825, at Tunn, the old archbishopsee of one of the ancient Kingdoms of Connaught. This was followed by the synod of Thurlock, five years later, and then by the very remarkable series of seven provincial synods which met at Baltimore. Cardinal Gibbons' birthplace, between 1829 and 1849. Two years after the latter date the future Cardinal returned to America; he was then seventeen years of age, and had a brief experience of commercial life in New Orleans. Indeed, for the greater part of his life

CHAPTER XIII

A LITTLE GRAY TRAMP
ARRIVES

FATE gave them exactly three months—three months to a day—of a happiness probably as great as any two people have ever known, much greater than most people could even imagine; then it came time for the reaping of that harvest which the woman had sown. Only where one sows, ten reaps, which is the way at the world.

Faring set off alone upon a long-delayed journey to New York and to Washington, where there were a number of important and pressing matters which demanded his personal attention. He was to be gone three days—an eternity! And at first, when it was found that the lower neglected affairs might no longer be neglected, and that the journey must be made, Beatrice had frantically refused to allow him to go alone.

"Of course I shall go with you!" she said. "Naturally! If I remained here I should die before the first day was done." But as they spoke more of it and it appeared that Faring must be very busily occupied during the whole of the time, she altered her first determination and, upon her husband's advice, decided to stay at home. Moreover, the weather was very hot, and travelling would be a torture. There was another thing also to influence her. She was by nature thoroughly introspective and experimental, and the instinct which leads a child to stare itself before a prospective feast moved her to ladle upon herself this stretch of three barren days by way of sweetening the long days to follow.

"It will be good for me," she said, "good for us both, this going without food and drink and air and sunshine for a little time. It will be good for me, starvation, almost literally, but I shall be rather glad of the opportunity to sit still—and alone—and think over my blessings. I shall appreciate you awfully."

They made quite a little appreciation of his going, laughing at themselves shamelessly the while. Beatrice followed the trap to the latter gate of the long laurel-bordered lane which led out to the highway, a half-mile distant, and she wept a bit as the trap disappeared down the lane. Then she laughed at her tears, and, having wept a little more, walked slowly back to the cottage and through it to the garden which she loved.

It appeared that the late roses were eiling, and the gardener, a surly old Scotman, was among them spraying them with an evil liquid out of a bucket. Beatrice stopped a moment to watch him, and the man lifted up his voice in lament over his perishing charges, which, alas of all things in the world, he loved.

"Ye muna find me a helper, mair!" he said, despondently. "I hae aar heart for the graw-ent' an' the water's an' a'; an' ye stable lads are so mair o' use. Ye muna find me a helper to lack the rough o' the work. My rooks hae used o' me o' the while." Beatrice tried to make a proper show of sympathy and concern, but, although she also loved her roses, she could not, just at that moment, make a tragedy out of these.

"I'm sorry," she said. "It would be quite too bad to have them die, wouldn't it? About a helper, though, I hardly know what to do. I expect we shall have to wait until Mr. Faring returns—unless, that is, you know of some one you could hire. Do you?" The old man shook his white head.

"No, na," he said, querulously. "I hae ne pairt wi' these gramin' laddies hereabouts. They canna be trustit. Aweel, I'll hunt him hae get on till the mair-ter's hame again. But they're bad, they're auid' bad! It folk make me growl to see 'em." Beatrice bent over her work again, spraying the roses with liquid from a great garden syringe, and Beatrice passed on.

She had meant to go in the little pavilion on the hill where Phryne looked over the sea, but it was sunny there in the morning,

and after a moment she turned back and once more went through the house and through the front garden to that long laurel-bordered lane where she and her husband often walked rarely in the day.

It was a shady lane, where the sun came through only in quivering dappled flecks of gold. Birds dwelt there in a discursive multitude, and sparrows ran across the roadway or, under the high hunk, sat up to peer inquisitively at the chance intruder. There were rustlings and speakings of life from the thicket at either side, there was a cool still scent of earth and of things growing, the rich aroma of nature's fecundity, the summer smell which is compounded of a thousand exquisite odors and some not so exquisite—the mother earth teeming with richness, drawing under a July sun.

Beatrice walked slowly down the lane over those trembling flecks of gold which the sun filtered through the vault of leaves, and with her was a Russian wolfhound which had followed her from the house. It was a dog which she had owned in the old days at Buchanan Lodge, a very beautiful beast, but, after its kind, unspeakably disdainful of all the world and of the thousand common weaknesses of lesser canine flesh. On this morning, as always, it paced soberly beside its mistress, paying no heed whatever to the fascinating sights and smells and mysteries of the wayside. A small red squirrel, very intent upon some affair of moment, sprang up almost from under the dog's feet, and, in an agony of terror, dashed into the shelter of the thicket to one side, but the hound only rolled a careless eye in that direction. It was a most superior dog.

A little bent man in ragged garments came shuffling up the lane, evidently from the highway beyond. He held in one hand his battered straw hat—the remains of a rat-off "Pomona"—and in the other a gaunt stick. He seemed a quaint little man. He had thin grayish hair and sharp features, but his step had none of the weary lag of the professional tramp's step. He walked, albeit shuffling, with a certain odd spryness as if he were glad to be abroad on that fine morning. And as he walked he crooned some tuneless song over and over in a dry voice, turning his head from side to side like a bird to peer into the thicket.

The Russian hound ran forward a few steps, pointing, like a bird-dog, and Mrs. Faring halted, meditating a retreat to the house, but after a moment of this she laughed and went on. "There's no harm in that poor little bent-over thing!" she said. "If he should turn nasty, Sergei would bite him to two. What an odd creature!"

The gray-haired tramp caught sight of her just then and caught sight of the dog too, and he stopped and half turned as if he meant to run away; but Mrs. Faring said:

"Don't be afraid of the dog. He'll not harm you." The man grinned feebly and made a funny little jerky, shuffling bow. He answered, and his voice was this, piping—the sort of voice to accord with that quaint personality.

"I—ain't afraid, an' so," he said. "Leastways, not much afraid, though, speakin' in general, I don't take to dogs—nor yet dogs to me. Thanks, ma'am!" Suddenly he dropped into the beggar's whining sing-song.

"Could you spare a few cents to get a meal with, ma'am?" he said. "I hae nothin' to eat for—for three days, awmost. I'm hungry, somethin' awmost!"

Mrs. Faring gave a little cry of distressed pity. The man, in spite of his wiry face and lean bent body, did not look in the least starved, and she greatly doubted the truth of his statement, but the very suggestion that a human being was hungry waked springs of ready tenderness in her.

"Oh, I'm sorry!" she said. "I'm sorry! Come up to the house! I have no money here, but I will have them give you something to eat, and then I will give you some money before you go."

The man made his awkward, jerky little bow again.

"Thank you, ma'am!" he said again. He shuffled uneasily.

"Could you call the dawg off, ma'am?" he said. "I ain't much used to dawgs. The Russian bound was sniffing at the stranger's knees with a most unbecoming curiosity. Suddenly it began to bark and yelp and to leap about the man, almost pushing him off his feet with its demonstrations of joy. Beatrix called out to it sharply, but it could not come to her. It continued to leap about the gray little tramp, lifting his hands and barking.

She took a very long time.

"I don't understand!" she said. "It's most extraordinary. Sergei never likes strangers." The man looked up at her with his uneasy, half-frightened grin.

"Could you call him off, ma'am?" he said again. "I ain't much used to dawgs."

Blackness came before Beatrix Farling's eyes, with something like a rushing wind, and passed. She thought that she screamed aloud, but there was no sound. She was curiously cold, icy cold from head to foot.

She put out one hand a little way.

"Herbert!" she said, in a still voice.

"Eh, what?" said the man. "What?" It was another man's voice. Something came into the dawn, winnowed face and struggled there—something like a great effort to remember a thing long forgotten—but it passed, and the little bent tramp smiled sadly.

"Could you call off the dawg, ma'am?" he said. "I ain't much used to dawgs."

A great boulder stood beside the roadway, half embedded in the high bank, covered with trailing vines. A dead sheep dropped down upon it, for her knees were shaking under her, and that blackness had not quite passed; it hung in a sort of circle before her eyes, blotting out all which was above and below and to either side. Through it, like something seen through a hole in a black cloth, the bent little gray tramp stood clear, with the honest Sergei looking his uneasy hands. Her mind was clear after that first stunned moment, and it worked with a desperate swiftness. Long afterwards, when she went back over that very terrible hour, she realized that her first thought was a passionate prayer of thanksgiving that Harry Farling was away, that she had been left alone to deal with this crisis. From that she went in a flash to ways and means. Concerned she was, hunted, sore pressed, but not yet panic-stricken. At first:

"He must be got away!" she said, in that lightning flash of thought. "Naturally away! He came nothing—there's no danger to him. He must be got away." Then:

"No, no, no! What if he—knows? What if he should come to his senses? And she sat looking at the man, very alertly, fancy spinning swift desperate plans, reason rejecting each as it was offered, until, after what seemed to her a very long time, and was probably, two or three minutes, she stopped out of sheer exhaustion, and sat in a sort of apathy, watching the gray little man under her lens.

"What is your name?" she asked, finally.

The little man waited to cough a great, rattling, tearing cough which shook all his body. Two red spots all at once stood out in his cheeks, and the woman, watching, drew a quick breath.

"Consumption!" she said, dumbly. "He's going to die." She had not a trace of feeling over it. She seemed to be beyond feeling. "John, ma'am," said the little gray man when he could speak. "Gentlemen John," the gang used to call me. I don't know why—'cept it may be on account of the tales I tell them as I tuckers up out of my head."

"Tales?" she said, mechanically.

"Yes, ma'am," said the little gray man. "You see, ma'am," he said, "the gang has been good to me ever since I they does kick me out at last, being suspicious like. They pinks me up somewhere—I don't remember where—with my head broke open (askin' your pardon, ma'am) and me very sick, and they nufers me very careful and kind, and feeds me and all, so I tries to please them by telling up tales out of my head to tell when we're sitting about on a evening. Very rum tales they is. I don't know how I thinks of them, but the gang likes them. They says I'm the finest liar they ever saw, and they just lies on their backs and yells when I tells them about my big house and my horses and carriages and all."

The woman gave a little gasp.

"Your house—carriages?" she said, in a whisper.

The little gray man gave an apologetic laugh and shuffled his feet.

"It's only tales, ma'am," he said. "I gets them out of my head. I don't know how they happens to come there. You see, I pretends to the gang that I was once a gentleman with heaps of money—hundreds and hundreds of dollars, and nothing to do but spend it. And I pretends that I've got a fine big house and men to wait on me and all. I tells them about the horses I've got and what their names is, and about my dawg—big handsome dawgs, with thin waists—like just like this dawg, ma'am, that's so friendly like. I tells them about the man that hasn't nothing to do but wait on me and how he fixes my bed for me—a grand, big, high bed with a queer thing over it—I don't know how I happened to think of that—and how he puts out a new clean shirt for me every single day. You'd ought to have the gang call when I tells them that? I tells them about the little white room with a white coffin full of water where I takes a bath, and about the beautiful table where I has my dinner, regular, all white with flowers on it. I don't know why there's flowers on it, but it comes into my head that way. And I tells them heaps of things, until they says they wouldn't 'at miss'd pinking me up and trying me together, like they done, for ten dollars, or even twenty. They says they'd rather hear me tell tales than out." The little man again gave

his apologetic, deprecatory laugh, and, reaching out a timid hand, patted the Russian dog's head.

"Of course it's all very foolish, ma'am," he said—"just tales as I makes up to please the gang. You see, they gets to running in my head sometimes, wonderful clear, till I'll swear they was awmost true if they wasn't so damn foolish. All sorts of things goes round and round in my head like—like bad dreams, sort of. That's from being sick, most likely. They was clearer in the beginning. I can't think of such good ones nowadays."

"Oh Herbert!" Herbert!" said the woman, wondrously.

The little tramp looked up, always with his ashamed, deprecatory smile, as one who must apologize for cumbering the ears.

"John, ma'am!" said he. "Grathman John," the gang calls me. Begging your pardon, ma'am."

"Not Herbert Buchanan?" said she. "Not Herbert Buchanan?"

She thought that that monstrous trouble, that weak bewilderment once more clouded the tramp's eyes, but so it was gone in a flash. He shook his head patiently.

"No, ma'am," he said. "I don't know him. Of course I wouldn't, ma'am, me being anything but a hobo—and not in good standing even then. I wouldn't know no gentlemen, ma'am—not such as a beautiful lady like you would know."

"Wait!" she said. "Listen!" Something within her which would not be denied drove her, in the face of terror and peril, to press the man, to awaken, if it could be awakened, that feeble inner spark of intelligence—all that was left of Herbert Buchanan of Buchanan Lodge. She rose to her feet, facing him.

"Don't you remember, Herbert?" she said, slowly. "Don't you remember? Try! Oh, try! Think! You were very tired of everything—being Chinese and Japanese houses and the carved pagoda and the Buddha! You sat there, your head aching, on how you hated everybody and everything, and then—"

She paused, breathing very fast, and the little gray tramp looked his lips, staring at her.

"You lost your temper at dinner, Herbert," she said, swiftly. "Don't you remember who were dining with us—the Kersbays and Stambold and Aunt Arabella Crowsley and Alanson Trevor and—"

and soon other? "She could not speak Harry Farling's name just then.

"And after dinner," she said, watching his drawn face, "after dinner you went to your own study, alone, and sat there for a long time brooding. I don't remember the study, that big room with the Chinese and Japanese houses and the carved pagoda and the Buddha! You sat there, your head aching, on how you hated everybody and everything, and then—"

She paused, breathing very fast, and the little gray tramp looked his lips, staring at her.

"And then," he said, in an odd, mechanical tone, "then I came in by the window."

"He?" cried Beatrix Farling. "Who, Herbert? Who came in?" And she caught her hands up over her mouth, for she saw that she had started the man away from that dim, faint thread of recollection.

He gave a little shiver and his face changed—the old, feeble, deprecatory smile returned to him—the smile of the wanderer who has been kicked and outworn and cursed at.

"What was I saying, ma'am?" he asked. "I—forgot—like sometimes. Things come a-spinning through my head so very rapidly that I can't have time to catch hold of them proper. I looked down to his feet and about him and stirred uneasily. He had a frightened air.

"I think I'll just be going on, ma'am," he said, after a moment. "I only come in to ask for a few cents to buy a meal with, I haven't had nothing to eat for four days. I mean five. The woman gave a low cry, and he looked up at her shamefacedly.

"No, ma'am," he confessed, "that ain't true. That's a lie. There's a pleasant old dame down the road a mile or two as gives me some breakfast an hour ago. She gives me a piece of cold beefsteak and some bread and a half of a butter. I ain't hungry, ma'am, really I ain't. I'll—just be a going on."

But she cried out to him. "No, no!" she said, swiftly. "No, you—mustn't go. I—want you to stay, Herbert."

"John, ma'am," said the little tramp. "Gentlemen John," the gang calls me. I don't know the gentleman you're talking about. I wouldn't you see, me being nothing but a hobo."

"Yes—yes!" she said. "Yes, I'll try to call you—John. But you must stay. I want to hear more about your friends—this 'gang'."

"You said 'gang,' did you not? I won't ask you again about that. About the other man, I—pretend. And I'll give you money, heaps of money. Only stay a little while. Wouldn't you like to sit down?" She pointed to the twin of the boulder upon which she had been sitting. It jutted from the bank a yard or so away.

"Oh, I ain't fit, ma'am," he protested. "I ain't fit to sit down with a beautiful lady like you; I'm such a hobo." But she insisted, and he perched uneasily upon the edge of the rock, turning his battered Panama hat between his hands. The Russian dog sat at his feet and laid its head out upon one of the little man's knees.

"Where," said Beatrix Farling, "was this—gang, of which you speak?"

"Oh, no, ma'am!" said he. "It was near out West—nearly far from Chik. That's Chicago, ma'am. They had a sort of camp, but I don't think they'd lived there always. They ain't there now, neither. They're scattered about on various jobs, though none in the same line. They're all good fellows, they says, and smart and well-bred, and sometimes they plays gay cats for very long in the little towns. They tries hard to learn me the game but it isn't no good. No one could't make a gun out of me, I ain't

even fit for moth-buzzing. I can't do nothing but tell tales. They likes the tales, the gang does, but after a bit they gets suspicious and chucks me out."

"Suspicious!" said the woman. "How suspicious?"

"Well, you see, ma'am," he said, "they says—the gang does—that I know altogether too much about the tales I tell—how a gentleman lives and all that. They thinks maybe I'm one of these newspaper reporters that goes out and lives with hobos and then writes 'em up in the prints, just like life, with the comes and all. One of the gang finds a book somewhere that a man has wrote about hobos and yeggers and all, and they begins to be leery of me and to sit about talking me over. I tries to tell them that the things is just tales that comes into my head, and that I wasn't never any gentleman like I pretends, but they won't believe me. Then something queer happens to make them sure, and it's all up with me. A dogo man comes along one day with a jangling bear, no, he isn't a proper dogo man, neither, but a Frenchy. He wants to ask the way to the meat town west from Chi, but he can't speak nothing but his own silly talk. I don't know how it happens, but all at once I finds myself a-chatting away with him in his Frenchy lingo, fast as you please. I can't explain that to the gang—it just comes to me, like the tales—and they turns very nasty over it all, and some of them wants to knife me because I knows too much about them to be let nifty free, but Kansas—that's my pal—says he'll drop anybody as puts a finger on me, so, finally, him and me comes away and starts out."

The little man's smile became radiant.

"You'd ought to know Kansas, ma'am!" he said. "He's the finest pal a man ever had since the world began. He ain't a big gun, because he starts too late in life—hasn't having been a gentleman case. He's only a second-story man, but if he hadn't wasted all that time whilst he was young he might be cracking coals with Sheenahs Red and Cal Gray and Scranton Shorty to-day. He's very bitter about wasting 'll these years when he was young. It sets him back so! I only wish I could do something for Kansas, he's so good to me, but I'm no kind of use. I can't learn nothing. It's all on account of the queer things that goes whirling and spinning through my head every now and then most wonderful."

The little man stopped suddenly.

"But this ain't very interesting to you, ma'am," he said. "I'm a-running on scandalous. A beautiful lady like you wouldn't care nothing about hobos."

"Oh, yes, yes," she said, hurriedly. "Yes, I want very much to hear. I'm—much interested in these—these men—this 'gang'."

"When was it that they found you, as you said, with your—head injured, and buried you back to health?"

"Oh, it was nearly two years ago, ma'am, and the little tramp. Only that wasn't out West: it was somewhere East. I don't know just where—me being very sick at the time. Kansas—he'd know. It was Kansas found me with my head broke open. He told me so once, but I don't like to talk about it. I don't know why."

"Two years!" said the woman, in a whisper. "Yes, of course, are years! And this Kansas, this friend—pal—of yours! Where is he now? Why is he not with you?"

The little man shuffled his feet and looked down at them. "Kansas he's busy just now, ma'am," he said. "He's on a little job a few miles away. He didn't want me to help, because I ain't no man nor of good. I always spoils everything. You can't trust me, ma'am. Not even you couldn't. I always gives the whole game away and spoils everything. I'm a-going to meet him at a place he told me about—Kansas knows all this country here like a book—when his job's done. Then if he

makes a good getaway we'll be in clover, Kansas and me will, with lots of money, and we can take the road without having to beg for a long time. We're very fond of the road. There isn't nothing finer. I don't know," said the little man, with sparkling eyes—"I don't know nothing finer anywhere than just shuffling along the road of a morning, before the sun is too hot, with nothing to think about or worry about except to wonder what amazing old things will turn up next. It's so various and sundry, the road is. There's so remarkable different things may be happening just round the bend—and usually is. It gets into your blood surprising. It was just like that this morning. I'd waked up nice and comfortable with the little ants-a-crawling over me, and the birds a-tittering cheerfully over my head, and the sun in my eyes, and when I'd started off that pleasant old dander, as I tell you of, ma'am, she gives me the cold breakfast and bread and bunk of par, so that I'm proper fixed inside, and I comes a-trotting down the road so airy you'd think I was a kid."

"I'd been pretending that I had heaps of money—a hundred dollars. That's a foolish aim, but while you're a-jogging you might as well make it big, and I was settling what I'd do with it all—five dollars here, and a dollar there, and two dollars and a quarter somewhere else—which is a very pleasant way of passing your time—when I begins to see things that worries me. There's a white farmhouse with green shutters and a queer squall thing on top. I says to myself: 'Here, I know that farmhouse! I've saw that before. And,' I says, 'if I remember correct, there's a well with a long well-sweep just round the next bend.' Sure enough, round the next bend there's that well with the well-sweep, and at that the things begins to go a-whirling and spinning through my head like they does sometimes—so fast that I can't catch hold of them—and I turns into this lane here a-shaking like a scared horse. It's very odd, ma'am."

"Herbert! Herbert!" said the woman, staring solemnly.

"John, ma'am!" said Herbert Buchanan. "Gee-own, John!" —though, of course, I ain't a proper gentleman, me being a hobo. I can't think how it is about that farmhouse and the well with the well-sweep. Maybe I've saw something like them somewhere before. I don't know. It's very queer, but I has so many queer things happen to me that a few more doesn't matter. I wish my head wouldn't go a-buzzing and a-whirling like it does. I don't like it."

After that there fell between the two a short silence. The little gray man, whose garrulity seemed for a while to depart from him, stood the Kansas dog's head and sharpened to the animal gaily, while Beatrice Faring, still and inert in her place, watched him under her brows.

She had fallen into a sort of apathy. Neither terror nor dread chambered within him. Her mind no longer flushed with desperate swiftness between hope and despair—from one futile hope to another. It was about as still as her torpor-stricken body. Vaguely she realized that this thing which had befallen was a thing long expected, that unconsciously she had been waiting for it to end that glory on the all-too-accessible mountain-peak. Vaguely she realized that it was the price to be paid.

She knew that the fall away was still to come, that in this first hour flesh and spirit were dulled almost past sensation, and at the thought gave a sad little shiver of pity for the woman who was later on to suffer tortures. For the present the woman dwelt in a fog—a deadening vapor. She looked at the least gray little man before her and dully wondered what terrible adventures and trials he could have endured to alter him from the Herbert Buchanan of her memory to this shuffling wreck whose part came to him in the guise of foolish fancies. The thing seemed to her so preposterously

Drawn by W. H. Chase

Beatrice walked slowly down the lane

unreal, so madly impossible, that once she laughed aloud, and the man looked up from his play with the Russian bond and smiled his apologetic, shamefaced little smile in response.

She watched the wizened face, feature by feature, with a bitter deliberation. Feature by feature it was almost as unlike the face of Herbert Buchanan as a face could be, and yet at the first full look she had known.

Would others know? she demanded of herself, and presently shook her head. It was unthinkable. It had been something beyond the physical which she had recognized. Herbert Buchanan's soul had somehow leached from this shrunken body into her soul, and she had known it. Surely an one but Buchanan's wife would know.

That set her again to asking what was to become of the man, and, to some degree, awakened her mind to activity. One thing, she said, was certain. He must be kept in sight. He must not be allowed to go away. What was in her done later she did not know and she dared not think, but the man must be guarded. Who could say when that feeble spark of confused recollection might chance to harden into shame and the creature's past come again to him unclouded? But how to keep him near? One cannot imprison a free man. One may not shut him up in an outhouse and set a guard over him. She sought for ways and means, and a thought came to her. A single day gained meant time for reflection.

"Do you," she asked, quickly, "like flowers? Would you care to help me with my garden for a day or two—only a day or two? I need a man to help me." The tramp looked up in mild astonishment, but she hurried on.

"It wouldn't keep you long from your—your other occupations," she said, "only a very little while, and you would have plenty to eat and a comfortable bed, and when you—go away, I will give you—ten dollars—twenty, if you like."

The little man fumbled at the Russian bond's ears, and the always-ready deprecating laugh broke from him.

"Why—why, yes, ma'am," he said. "Yes, I like flowers. They're so pretty and gaylike, but I—sin't much good, ma'am, I haven't never worked regular. I don't know." His eyes turned down the shaded lane towards the distant highway.

"And I—I expect I'd miss the road, ma'am," he said, a bit wistfully. "It gets into your blood, the road does. There's such various and sundry things might turn up just round the next bend—and generally does. I'd miss the road."

"Only for a day or two?" she urged.

"You see, ma'am," said the little gray man, "I'm sothing but a hob, and I'm very fond of the road. I'd be wanting to

Drawn by Nell Green

She sat looking at the man, pausing, swift, desperate plans

Apart, she said: "Watch him! Do not let him wander away. His head is not—quite right. In a day or two I shall make other arrangements. Understand! For the present he is to be carefully guarded."

Then, since she felt that endurance was almost at an end, she went into the house and, with slow steps up the stairs to her own chamber. There in the cool darkened room she dropped upon her knees beside the bed and laid her face upon her bent arms. Sola began to shake her very bitterly.

"O God!" she cried in her agony. "God, if you will hear me still, if you're not tired from me quite, help me now! I have done a very terrible sin—for love's sake—and I deserve punishment, but do not punish me now! Afterwards, when I'm dead, do what you like with me. I shan't beg off. I shan't shrink. But do not punish me now! Help me to keep this dreadful thing from Harry Farnie! Help me to make his life happy! Help me to hide from him, somehow, what must be hidden! Help me to be and pretend and make believe so long as Harry lives! Then you may torture me forever if you want to. Show me a way to prevent this horror from reaching him! That's all I want. I want his life to be beautiful, O God, if there's any kindness or goodness or mercy in you. You'll do this thing for me—I mean for Harry! Harry has been homeless. Do not let my sin cloud his life. Show me a way! Show me a way!"

To be Continued.

The Doll

By Louise Morgan Sill

A MAN said to a woman,
"Lovely indeed thou art!
Give me thy charms, thy witchery,
But—unt thy woman-heart."

"Give me thy sunny hours,
But not thy secret tears;

Give me thy hope, thy happiness,
But not thy woman's fears."

The woman's pride was mighty
Like to the pride of men,
But now her soul went weeping,
Nor ever smiled again.

THE SEVEN CHARACTERS OF HENRI DE VRIES

The upper photographs on this page illustrate the remarkable dramatic feat performed by Mr. Henri De Vries, the Dutch actor who is now playing at the Colonial Music Hall. Mr. De Vries appears in H. Heyerman's play, "A Fane of Arson," in which he impersonates seven different parts. The action centres about the destruction by fire of a cigar-factory, believed to be a case of arson. Various witnesses are examined before a magistrate, including the manufacturer himself, his half-witted brother, his father-in-law, a police sergeant, an inn-keeper, a grocer, and a house-painter. All of these characters, who appear in rapid succession, are impersonated by Mr. De Vries. The feat is believed to be unparalleled in the history of the stage.

Correspondence

APPROVAL

PHILADELPHIA, February 24, 1901.

To the Editor of Harper's Weekly:

Sir.—The thanks of the six million men who supported Mr. Bryan for the Presidency of the United States are due you for the merited recognition you give Mr. E. C. Benedict in a recent number of *Harper's Weekly*. It has been so long fashionable for Democrats of the Benedict stripe to descend very low in their criticism of Mr. Bryan, that they thought they were immune.

Mr. Bryan's and Mr. Roosevelt's great strength before the country comes from the very fact that they represent entirely contrary views of what constitutes good citizenship from those held by Mr. Benedict.

I am, sir,

RESPECTFULLY, RICHARD W. JENKINS.

CONQUERING THE BOSSSES

New York, February 22, 1901.

To the Editor of Harper's Weekly:

Sir.—The enactment of the proposed amendment prohibiting certain political contributions, and requiring a public accounting of the receipts and expenditures of all the other contributions, would insure the "professional political bosses," but it would not destroy them. No doubt thousands upon thousands of those belonging to both the great parties, who at the last election voted against their own party's candidates, were actuated by high and practical sentiments. Is there a resentment ranking in the people's hearts against "bosses"?

If this other destruction of "bosses" and this annual election of local leaders are the objects the people really desire to accomplish, then the amendment should be directed not only to the corrupt practices, but to the primary election law. On annual primary day, it should let the voter, by ballots containing the names of all the enrolled electors in his election district, prepared, printed, and placed in his polling-place not by the "bosses," but by the Board of Elections, secretly vote for the specific number of his neighbors for members of his assembly district, general committee, and for delegates to city, borough, county, aldermanic, assembly, senate, judiciary, congressional, and other conventions. It should declare a day in December reorganization day. On this day it should let the voter again repair to his polling-place, and, by ballots containing the names of all the elected committees prepared as aforesaid, secretly vote for a chairman, a secretary, and a treasurer for the committee. This elected chairman (or local leader) should be the assembly district's executive member in the county committee of thirty-five, which, likewise, should be required to nominate and elect its chairman (or county leader), and to decide all its resolutions only by secret ballot, and whose resolutions when involving resources, methods, money, or men should be inoperative until referred to and approved by a majority of all the thirty-five assembly district committees. Each assembly district committee should be required to make its nominations and elections, and to decide all its resolutions only by secret ballot. Delegates when to convention, likewise, should be required to nominate and elect all candidates for public office only by secret ballot.

The enactment of an amendment embodying this foundation principle, while costing the taxpayers a considerable sum annually, would withdraw the source and the control of governmental power from the clutches of "bosses," and restore them to the people. Then the people, knowing it to be worth while, would take an active and patriotic part in party politics.

I am, sir,

WILLIAM HENRY KNOX.

ENGLISH FOOTBALL

Pasadena, Cal., February 9, 1901.

To the Editor of Harper's Weekly:

Sir.—To an Englishman who knows the status of football in the United Kingdom, and the enormous interest taken therein, it is certainly very amusing to see the many absurd conceptions of it, as evidenced by the writers in America. An old English enthusiast, let me briefly give you a few absolute facts, and please don't, because I am an Englishman, dub me an Anglo-American. I am not; nor am I an Americanism. The actual truth is what we are after, not prejudice and ignorance. Football in America is a mere drop in the bucket as compared in the great organizations in England—there are thousands of teams there—all the leading teams are recruited from the best material to be found in the country. Many Americans seem to think that the football played in England is tame and spiritless. This is altogether erroneous. A minute's reflection ought to convince any one not a candidate for a lunatic asylum that picked athletes, playing in league or competitive football, before crowds of anywhere from ten to hundred spectators, for eight months in every year, cannot possibly be tame. You cannot draw crowds to England with tame exhibitions. It isn't wise to judge football in England by some Canadian team's display, either. To get an idea first hand by visiting England any time before April 30 would dispel all the ridiculous ideas that obtain in America at the present time. As regards the style of play and the general business, organization, and control of the game, we here in Amer-

ica are, honestly, only in the kindergarten class. A good many Americans will doubt that. I know, but investigate, and just as surely you will find that the statement is founded in fact. Association football has gained the ascendancy in the United Kingdom during the last twelve years, and there are probably three teams of that code to one of Rugby. The mere fact that a new style of game doesn't catch on at the first trial is no criterion whatever that it may not eventually be overwhelmingly popular. You don't always get your fire to burn with your first match, do you, now? In a kindly spirit I want to express a conviction, borne in upon me by witnessing many athletic contests of various character in America, that you are a little too effervescent and excitable, also that the grangling and talk spirit, lack of control by officials, are painfully evident in all too many cases. As a general rule, you will find the very reverse of this in the old country, not that enthusiasm is at all lacking, but there is a poise and calmness that is very noticeable in comparison. The New Zealand team (Hugbo) that has just completed a very successful tour of England plays under English Rugby rules; its success has been based on the cleverness and great ability of the team. Of course, Rugby in England is not today what it was ten or fifteen years ago; the spirit between amateur and professional organizations that took place some years ago, also the great popularity which the association code now enjoys, very largely accounts for this decline. As I was originally a Rugby enthusiast, I can say that it took me some time to get up an interest in the Association game, but now I know that it is a very scientific and fine game. Mark my words, if it is handled right, and you can get a first-class international match—say in New York next year—England versus America, it will gain in popularity by leaps and bounds. Now I won't inflict any more upon you at this time, except to say that I write in a purely friendly spirit, and that my statements are based upon actual knowledge of facts. I am interested only from the standpoint of truth and as a football enthusiast, believing, as I do, that when played properly no finer game exists. So don't say I write from national prejudice, because such is not the case. I can modestly claim, I think, to duly appreciate the good points in both England and America, in both of which countries I have had long experience.

I am, sir,

D. HUGGLESTONE.

WAR AND RACIAL EXTINCTION

Post-Hospital, PLATTSBURGH, BARRETT, N. Y., February 10, 1901.

To the Editor of Harper's Weekly:

Sir.—In the issue of the 20th you have commented upon Jordan's theory that war extinguished the Homicide Greeks and republican Romans. This in fact one of the hundreds of explanations of the disappearance of migrated races, and it astounding that Jordan does not apply to man the same laws he is constantly discussing as to other animals. He knows that a form which migrates too far perishes from unfitness to the environment, and yet cannot see that this law fully accounts for the death of ancient peoples who have migrated too fast for survival of the fittest variations. It is a matter of the environment, and is being investigated by anthropologists. I have worked upon one of the factors—sunlight and the pigmentation of the skin, and the facts elicited fully account for the degenerations and deaths he mentions. I think you should take up the matter, as it is of vital importance to Americans, all of whom are in the category of migrants, more or less out of adjustment.

As for war, Jordan should apply to man the laws he studies as to every other living thing—namely, more are born than can find food, shelter, or or by other means or perished because of increased birth-rate, are the inevitable consequences. There is no hope of codging war for many centuries, though they may end in time. As for Japan, it is absurd to claim that they have been powerful, and are, therefore, in better shape for war than we. They have had almost chaotic wars for centuries, and their methods of slaughter (or regency) was based on war. The war of their revolution of 1868 was dreadful. They had a bloody Satsuma (Barrington) afterwards. They have had more war than we, and not less, as Jordan says. Jordan knows that, by the law of selection, the embryos of the make are the means of increasing the present, and physics of male drub and other lower animals, for only the best survive. He should apply this natural law to man, for the history of the world shows a long line of conquering families, clans, tribes, and nations—a long line of the most warlike. The winners are later after circumstances the most vicious of this world's goods, and are better able to raise families. From 1863 for about one-quarter of a century we gave scant consideration to any public man unless he had been a soldier. As soon as war ceases the higher evolution of man ceases, for the weaklings will never be killed off. The strong will have an advantage.

I am, sir,

CHARLES E. WOODRUFF,
Major and Surgeon, U. S. A.

[We think Major Woodruff hardly allows due weight to Dr. Jordan's theory that the competitive nature of lower animals is in procuring the survival and predominance of the men fitted for civilized life than the competitiveness of war.—EDITOR.]

Music And The Opera

A REMARKABLE SYMPHONY

BY LAWRENCE GILMAN

MR. GUSTAVE MAHLER, of Vienna, composer, director of the Royal Opera, and Philharmonic conductor, is a musical prophet, who is honored in his own country. Each new symphony from his pen—he has written six—has aroused heated and protracted discussion, and his attitude upon various aesthetic principles touching the art of music is discussed with intense seriousness. He is said in rule the Opera at Vienna "with an iron hand," and to dominate imperiously

such ineffectual elements as prima donnas, first tenors, stage managers, and dignitaries of the court. Altogether, contemporary tradition makes him out to be a very formidable person indeed. Of Mr. Mahler's six symphonies five have been performed. The second one (in C minor) requires an orchestra including four flutes, four oboes, five clarinets, four bassoons, six horns, six trumpets, an organ, a dozen or so of drums, more drums "in the distance," three bells, soprano solo, alto solo, mixed chorus, "as many strings as possible," besides a few other instruments which considerations of space make it advisable to leave unmentioned. This particular symphony takes something like an hour and forty minutes to perform. There is a pathetic legend to the effect that Dr. Heinrich Reimann, who prepared the programme notes for its first performance at Berlin in March, 1895, was unable to discover the initial leading motive of the first movement, and that his analysis "swarmed with errors." Somehow, the fact does not strike one as altogether extraordinary.

Enough has been written, probably, to indicate the conspicuous position occupied by Mr. Mahler in the modern music world. The attention which he has succeeded in commanding will be evident when it is recalled that his fifth symphony, in C-sharp minor, has been performed four times in this country within the last year: at Cincinnati, on March 25, 1903; at Boston, on February 3, 1904; at Philadelphia, on February 12; at Carnegie Hall, New York, by the Boston Symphony Orchestra, on February 13. The disinterested observer will wonder curiously if Mr. Mahler's music merits such persistent exploitation. It is an admirable thing for an orchestral conductor to be alert and curious, and to give his audiences an opportunity to become acquainted with every important phase of the art of music in its contemporary unfolding; so, whether one accepts or rejects, for oneself, such offerings as Mr. Mahler's music, there can be no question that Mr. Gersky, for example—whose recent production of Mahler's fifth symphony is the occasion of these remarks—deserves the thanks of all sincere and receptive music-lovers for permitting us to hear this singular and much-discussed work.

As to the essential value of Mr. Mahler's symphony, there seems nothing more amiable to say of it than that it impresses one as being presagingly empty, prefix, and pretentious. It is in three "parts." Part I. comprises a funeral march, a contrasting section in faster tempo, and a stormy

allegro; Part II. consists of a scherzo—a show waltz with elaborate contrapuntal embroidery. Part III. contains an allegretto and a *reclio-finale*. The entire work requires an hour for performance.

Mr. Mahler, one understands, has set his face sternly against programme music. There is an anecdote which records a brightly utterance of his upon this subject delivered at a semi-public dinner in Munich. Some one mentioned programme-books. "Then it was that lightning flashed in a joyous, sunny kind-escape. Mahler's eyes were more brilliant than ever, his forehead wrinkled, he sprang in excitement from the table and exclaimed in passionate tones: "Away with programme-books, which breed false ideas! The audience should be left to its own thoughts over the work that is being performed." The tenacity of this attitude, which is not assumed by Mr. Mahler alone, consists in the fact that it invites one to listen to music that is essentially programmatic as if it were absolute music—that is, as if it has been composed with no thought of a poetic or dramatic subject. For it is not denied that Mr. Mahler in his symphonies has shaped his inspiration upon sequences of ideas external to the music itself; yet he requires us to listen to this music in entire ignorance of the ideas upon which it is based—an demand which is as unreasonable as it is

futuristic and obstructive. For, as Mr. Ernest Newman has trenchantly asserted, "if melody, harmony, and development are shaped and directed by certain pictures in the musician's mind, we get no further than the mere outside of the music unless we are familiar with those pictures." Mr. Mahler's attitude in this matter would be somewhat more tolerable if the character of his musical thought were less barren and unenriched than it is. With the exception of the passionate second half of the opening movement of this symphony—in which what one feels to be a note of lamentation is impressively sounded—this music is a vast and tumultuous sea of romanticisms. The melodic line lacks both beauty and salience; the harmonic structure is banal when it is not laboriously ineffective, and the magnitude of the constructive plan is grotesquely disproportionate to the importance of the musical substance. The work, as a whole, strikes one as the issue of an intensely sincere and competent intelligence; but of more genius it shows not a trace.

It is said that Mr. Mahler sets himself, or is set by his adherents, in opposition to the doctrines and practices of Richard Strauss. Mr. Mahler is quoted as saying of his own music that "it comes to a programme as the ultimate ideal explanation of its meaning in language; with Strauss, the programme is as a task, set to be accomplished" a not altogether illuminating dictum. It would be well if Mr. Mahler's friends were less eager to invite a comparison between the two men. For, whatever of weariness and extravagance one may find in the music of Strauss, the reality of his genius is, for any unbiased mind, beyond dispute.

Miss Maude Powell

The American violinist who has been heard this season in concert and recitals

Discount for Shortage

A COUPLE evidently from an exceedingly rural district recently presented themselves at the house of a Buffalo minister, and announced that they wished to be married. The would-be bride was of a homeliness to cause one less pity for the blind, but the groom seemed satisfied, and as they possessed the necessary license the minister proceeded to perform the ceremony.

"How much dowry that come to, Parson?" the man then inquired, bringing a handful of silver change from a deep trousers pocket. "Name yer regular finger that you charge th' weds, I'm a-goin' to limit, hy jinks!"

"Oh, I have no regular charge," the minister said; "just give me what you think it's worth."

The groom turned and eyed his bride in a speculative manner.

"She's a good gal, ef she ain't much on looks," he said, thoughtfully. "an' I'll be gosh derned ef she ain't wuth a dollar an' forty-five cents!"

He was about to hand over the silver, when the lady caught his arm, and deducted the five-cent piece from the silver.

"Wait, M!" she said. "Take back this silver! I can't know it, but when I was a child I slugged off two tens with th' hatchet."

Astonished

A CHICAGO business man who last year made a trip to the Philippines brought back with him a Filipino youth, whose mental alertness had made quite an impression upon him. The thrifling was installed in the Chicago man's office as a clerk, and he did very well, notwithstanding the fact that he was a trifle shaky as to his English.

One day the Chicagoan handed the Filipino a bill for some goods purchased by a customer a long time previously. "As this gentleman seems to have no intention of settling this account," said the business man, "I want you to typewrite a letter to him, stating that an immediate adjustment of the indebtedness will soon be expected."

In a few moments the Filipino laid before his employer the following report:

"My dear Sir.—This is to advise you that if you do not instantly send us the money you owe us, we shall be compelled to take measures that will cause you the utmost embarrassment."

What the Ailment Was

A NEW-ENGLAND statesman was referring to the dry humor of the late Senator Hoar, when he was reminded of the following:

The day Senator Hoar learned that a friend in Worcester, who had been thought to have appendicitis, was in reality suffering from acute indigestion.

"Whereupon the Senator smiled genially. "Really," said he, "that's good news. I rejoice for my friend that the trouble lies in the table of contents rather than in the appendix."

His Prize

A PITTSBURGH widow, while away from home on a business trip, met and married a lady who, though feared for her goodness of heart, would be spoken of even by her friends as "plain." The man believed that she would be a kind mother to his two children, however, and as she was also possessed of a fair amount of this world's goods, was not inclined to expect the beauty of the peach in a potato.

After his marriage, he telegraphed to the eldest of the children, a girl of fifteen:

"I have won a prize. Am married. Will be home to-morrow."

When the bride and groom arrived, the children were watching at the door, and at sight of their future mother gave a little leap of consternation.

The second child, a boy, judged his sister and whispered:

"Say, Nell, that must have been the consolation prize that pa got!"

CRYSTAL Domino SUGAR

A Triumph in Sugar Making!

Sold only in 5 lb. sealed boxes!

IMAGINATION COULD NOT CONCEIVE OF A HANDIER AND PLEASANTER FORM THAN IS PRESENTED IN "CRYSTAL DOMINO SUGAR." NEITHER COULD THE MOST PARTICULAR PEOPLE ASK FOR MORE PERFECT PURITY OR ECONOMICAL PEOPLE FOR LESS WASTE.

HIGHEST GRADE IN THE WORLD. BEST SUGAR FOR TEA AND COFFEE.

By grocers everywhere.

many important new decrees, made necessary by the rapid growth of the Catholic Church in America, which has almost added a new one with each year of the century. These acts and decrees were deliberated on and approved by the ecclesiastical authorities of Rome. As a mark of the high efficiency with which Archbishop Gibbons carried out his work at the council he was shortly after nominated for the dignity of cardinal, at a special consistory, and the nomination was immediately confirmed.

Cardinal Gibbons visited Rome in 1872, and was admitted to the College of Cardinals. On his return to America his Eminence laid the foundation-stone of the Catholic University at Washington, of which he has ever since been chancellor, and continued the ecclesiastical, literary, and social work which have made him eminent in fact as in title.

Two Hundred Million Dollars of Exports

ANOTHER notable characteristic of the year's foreign trade is the fact that the exports in the month of December were practically 200 million dollars, the preliminary figures of the Bureau of Statistics being \$199,000,000, exclusive of the trade with Porto Rico, Hawaii, and Alaska. It was only in 1891 that exports first reached as much as 100 million dollars in any single month, the earliest month at which they crossed the 100-million-dollar line being October, 1891, when the total was \$102,577,212. This total of more than 100 millions a month continued only during the months of October, November, and December, 1901, and January, 1902, and it was not until late in 1903 that the 100-million-dollar line was again crossed. In 1906, 1907, 1908, and 1909 the closing months of each year showed a monthly exportation of over 100 million dollars, and beginning with the past month the monthly total has in all cases exceeded 100 million dollars, except during the months of June, July, and August of 1902, 1903, and 1904, when it fell slightly below that sum. The largest month's exportation in any year prior to December, 1903, was that of December, 1904, when the total was \$175,000,000, but that record is surpassed to the extent of 25 million dollars by the record of December, 1905, which, as above indicated, is \$199,000,000.

Too Thin

THERE is a Representative in Congress from the West who is exceedingly thin, being a very good natured man, this Representative always takes in good part in joking reference to his emaciation, and he is not averse to a good himself in that connection, as is illustrated by an accident that occurred in a street-car in Washington.

It appears that just as the car was rounding a curve it fairly threw him overboard, and out he went in the Congressman's lap. He recovered himself quickly, and began a prayer for the apology, when he was interrupted by the statement's "cherry" that's all right."

"But," added the Congressman, plumply, "I wish, my friend, that you'd put me whether you thought I was pined or the worst."

Nisi Nisi Bonum

LAST summer there died in Washington a lawyer who, for many years, had clocked a larger number of friends by his rather blunt views touching religion.

A friend of the deceased who returned to Washington for the purpose of attending the bar exam for his colleague, returned the late lawyer's house some minutes after the beginning of the service.

"What part of the writer is this?" inquired in a whisper of another legal bird standing in the crowded hallway.
"I've just come myself," said the other, "but I believe they've opened for the feast."

Wanted to Get Rid of Him

A NUMBER of politicians in Washington were once discussing the good and bad points of various statesmen with reverence to their attitude towards their friends and enemies, when Senator Keim was reminded of an instance in the career of the late Senator Howell of New Jersey.

It appears that Sewell had been a generous friend and an equally good hater, so was evidenced by his treatment of a Colonel Wood, who, it seems, had dared to dispute Sewell's supremacy in Jersey politics. At one time Sewell imagined he had made his peace with Sewell, and ventured to ask a favor of his old enemy—something in the way of a pass to Chicago. The pass came to him in seven days.

The next day, at the offices of the railroad of which the Senator was an officer, Scott thanked him for the courtesy, but as he did so he called attention to the fact that there was no provision made in the pass for the return trip East. "Probably an inadvertence on the part of the clerk that made it out," he observed.

"Clock nothing!" roared Newell. "I'll have you know, Newell, that I myself filled out that pass! I'm willing to send you to Chicago, but I'll be hanged if I'll help you to get back to Jersey!"

The Latest Word In Sanitation

The name Salsin on a closet means health insurance for your home or any building in which the closet is placed; it means freedom from all those diseases which are usually traceable to noxious odors and poisonous gases arising from ordinary closets.

action of great power—an action which literally pulls the contents of the bowl into the drain, cleansing the non-reachable parts, instantly sealing the outlet channel with a water trap to an unusual depth, and absolutely preventing all danger of gas.

The Sy-CLO Closet stands for an interior cleanliness and purity impossible in an iron closet, and unknown in any closet but one made of china—like the Sy-CLO. Hand-moulded of china all into one solid piece like a vase, the Sy-CLO is without crack, joint or rough surface to collect dirt or disease germs. It is as clean inside and out as a china pitcher, being made exactly the same way and of the same material.

The surface of the Syc-Clo Closet cannot chip off, is not affected by acid, water or wear, and hence cannot rust or discolor as an iron closet does. The Syc-Clo is strong, simple, durable; it cannot get out of order and will last, with ordinary care, as long as the house in which it is placed.

It costs but little more than the common closet, and when health and comfort are considered, it really costs less; in fact, *your doctor pays the bill*. Your plumber will tell you that **Sv-Clu** is absolutely the latest word in perfect sanitation.

Double Your Salary in Spare Time!

IT is the way you make of the odds and ends of time that means success or failure. When you have extra time, don't just let it pass on top of the desk, and waste a cigar. That extra time is worth dollars, and lots of them. We will pay cash for it.

It is worth from \$200 to \$300 a year to us. You can make all your time worth \$200 a month to us, and you'll get your pay in the case of the reader, if you produce results.

To enlarge our selling organization as rapidly as possible, we offer exclusive territory to a good man in every locality where we are not already represented. If there is not an Oliver agent in your town, take time by the forelock, and get in your application immediately.

The OLIVER Typewriter

The Standard Visible Writer

suits the needs of the business world in a way that no other writing machine ever had. Because it is a perfect 5-course perforator it begins of its simplicity, durability, and power, and the simplicity of design that can be done so well.

Operators take to it because its visible writing and ease of operation gives confidence, and confidence breeds speed.

Because it responds to the slightest touch like a thing of life, it seems to catch your thought, and it transcribes it in beautiful characters, accurately aligned so that you can write and read at the work.

A machine like this practically sells itself. You can make it in a very little time, and you need not have a sales force or be a salesman in the most serious of the time to make the money selling Oliver's—just have the right man, believe in it as we do, and sell the simple truth about its features of superiority.

If you need our help in choosing sales, we will send one of our trained Salesmen, at our own expense, and you get ALL the commission of every sale in your territory.

Get in the bandwagon! Your request for particulars will have our prompt attention if you write to:

THE INCOMPARABLE WHITE THE CAR FOR SERVICE

FIRST, LAST, AND ALL THE TIME

The first endurance run in this country was held September 9th-13th, 1901, from New York to Rochester, under the auspices of the Automobile Club of America. Eighty cars, American and foreign, started, and but twenty earned first-class certificates. Among the starters were four Whites, all of which earned first-class certificates.

The latest endurance run in this country was held January 25th-26th, 1906, from Los Angeles to San Diego, under the auspices of the Coronado Country Club. Thirty representative cars started, and but two gained a perfect score. One of these was a White, and the other a gasoline car of 40 per cent. greater cost. As the White had used three gallons of gasoline less than its adversary, it was declared the winner and awarded the John D. Spreckels' cup.

All reliability and endurance competitions held in the interval between the two above-described contests have, with practically unbroken monotony, resulted in White victories.

Above is illustrated the White generator, one of the "reasons why."

COMMENT

At a dinner given the other evening by the Lotus Club of this city in his honor, we ventured to suggest the nomination of President WOODROW WILSON, of Princeton University, as the Democratic candidate for President of the United States, using substantially these words:

For nearly a century before WOODROW WILSON was born the atmosphere of the Old Dominion was saturated with true statesmanship. The fates directed his steps along other paths, but the effect of growth among the traditions of the fathers remained. That he is preeminent as a lucid interpreter of history we all know. But he is more than that. No one who reads, understanding, the record of his country that flourished with such apparent ease from his pen can fail to be impressed by the belief that he is by instinct a statesman. The grasp of fundamentals, the seemingly unconscious application of primary truths to changing conditions, the breadth in thought and reason manifested on these pages, are as clear evidences of sagacity worthy of the best and wisest of Virginia's traditions, as was that truly eloquent appeal which last year he addressed to his brethren of the South, that they rise manfully from the ashes of prejudice and lethargy and come back into their own.

It is that type of men we shall, if, indeed, we do not already, need in our public life. No one would think for a moment of criticizing the general reformation of the human race in all of its multifarious phases now going on by executive decree, but it is becoming increasingly evident that that great work will soon be accomplished. When that time shall have been reached, the country will need at least a short heretofore spell for what the physicians term perfect rest. That day, not now far distant, will call for a man combining the activities of the present with the sobering influences of the past.

If one could be found who, in addition to those qualities, should unite in his personality the finest instinct of true statesmanship as the effect of his early environment, and the no less valuable capacity for practical application, achieved through subsequent endeavors in another field, the ideal would be attained. Such a man I believe in WOODROW WILSON, of Virginia and New Jersey.

It was not a hasty or ill-considered utterance. And yet, though based upon earnest conviction and due reflection, there was no expectation that such a suggestion at this early day would evoke substantial response. That it has done so justifies a reference to the subject in these columns. Elsewhere we reprint some of the journalistic comments based upon the meager reports in the daily papers. In a more personal way, verbally and by letter, we have received a surprising number of approving messages, which we are not now at liberty to quote. It seems worth while, therefore, to invite consideration of some of the reasons that might properly be adduced in support of the proposal. (1) Mr. Wilson, as stated, more than the accomplished scholar, the practical educator, the competent executive he has proven himself to be; he is, in truth, a statesman of breadth, depth, and exceptional sagacity. (2) He is an idealist, yet notably sane. (3) He is a granite orator whose words ring true and bear conviction. (4) He stands for everything that is sound and progressive. (5) He holds the respect of every one with

whom he has come in contact, and the admiration particularly of all college-bred men. (6) His ability to the interests of the whole people is unquestioned as his integrity. (7) He represents no class, no creed, no hobby, no vain imaginings. (8) He is at the fulcrum of his powers in age and experience. (9) He has profound convictions from instinct and learning and the courage of forthright expression. (10) He has no enemies—his is a clean slate. (11) He possesses to a degree unequalled since the days of BLAINE that indefinable quality known as personal magnetism. (12) He is not only high-minded but broad-minded and strong-minded. (13) He was born in Virginia and hailed from New Jersey. His nomination would be a recognition of the South which the South nobly deserves. His election would be an everlasting pledge of a country united in fact, in determination to solve all besetting problems, in inspiration to fulfil America's highest destiny. Such is the man, and such a man is needed by the country, from whatever political party he may spring. We have no hesitancy, therefore, in inviting serious consideration of the suggestion.

The most satisfying feature of the report of the Airmen's committee embodying proposals looking to the reformation of life-insurance practices is the cheering indication that our legislative bodies are still capable of doing a thorough job. This particular work was of the most intricate nature, and required the exercise of both courage and skill of the highest order. The chief credit for the notable comprehension and extraordinary lucidity manifested in the report, no less than for the keenness with which the investigation was conducted, is due undoubtedly to Mr. CHARLES E. HUGHES, who, as a result of his work, has become not merely a national but an international figure of no mean dimensions. While according to him the high praise which is his due, the intelligence, fidelity, and courage manifested by Mr. AIRMEN and the other members of the committee should not be overlooked. They were in a most difficult position. Their political and personal friends were constantly under fire, and they were obliged to proceed without fear or favor. That legislators of the present day should maintain such an attitude manfully and consistently is as gratifying as it is surprising.

The bill submitted to the Legislature embodying the committee's recommendation seems to cover the ground completely. The abolition of the deferred-dividend policy was expected and essential to the eradication of the very root of all the evils. The sharp restriction of investments to mortgages and bonds directly representing mortgages is probably wise, although perhaps, in some particulars, more stringent than is necessary. The shares of a railway corporation, for example, leased to another corporation and carrying absolutely guaranteed dividends, often constitute a much sounder security than bonds representing even a first mortgage of undug magnitudes. If it should be found, however, in practice that the field of investments has been restricted too narrowly, this provision, of course, is susceptible of enlargement at any time by the Legislature. It is probably safe, therefore, for the present, to err, if at all, on the safe side.

The limitation of new business to be done annually hereafter to \$150,000,000 is probably necessary, if it be taken for granted that the mere greatness of a company is a measure. Its adoption will certainly reduce, if not extinguish, the almost competition which has given rise to hordes of impotent agents and cushions of the law, especially respecting rebates, without number. The immediate effect will be the encouragement of smaller companies and the establishment of more mutual societies throughout the country. Already several are projected, and, in the South notably, several are well under way of formation. This enforced division of life-insurance business is probably helpful on the whole, although experience has demonstrated the anxious and clamorous establishing a great number of small fiduciary concerns as contrasted with a few larger and more responsible ones. It is also clear that the limitation will be detrimental to the pecuniary interests of the policy-holders themselves. This, however, is an effect, and a necessary effect, of the entire reformation of practice. The companies have prospered amazingly by the exercise of the very principles of which now they are to be deprived. Neither of the three on it is conscious could

have continued in a competitive business successfully, during the past twenty years, except by doing as its neighbors did in unking investments, through participation in syndicates, and so forth, that were, practically sure to, and in fact did, produce exceptional profits. In the light of the expenses of individual gains through official relationships, it is not surprising that the extraordinary sagacity demonstrated in management, resulting not only in the undoubted solvency of every company, but in the very strength which has come to be regarded as a menace, has been overlooked. The making of large profits hereafter will be rendered impossible by the proposed restrictions, and necessarily the actual pecuniary interests of the policy-holders will suffer. But the chief purpose in mind is to make the companies safe and sound rather than great and prosperous, and this desirable result can be accomplished in no other way. It is wise and it is necessary.

The committee dealt with the question of control of the companies in a manner wholly unexpected. The scheme proposed leaving upon the Mutual Life and the New York Life, namely, to cancel all existing proxies and to postpone the election of trustees until November 15, accomplishes a double purpose. It extinguishes the *non-covered* privileges held by former or present officials, and for the time being, at any rate, it eliminates Mr. LAWSON. A clean slate is presented, and every policy-holder is invited to step up and write down the names of the men whom he chooses to trust. If the plan be carried out, many tickets undoubtedly will be proposed by the million or more people who have the right to vote, and no little disturbance and confusion are bound to ensue. This seems, however, to be inevitable, and certainly the plan possesses the element of fairness, if not of practicability. It is plain, though, that regard for stability and consistency in management should avert too great frequency of elections, which seem likely to prove second only to that of a President in importance and interest.

The Equitable, being a stock company, is in a position quite different from the others, and this difference is recognized intelligently by the committee. The absurd demand that legal rights be disregarded and property be practically confiscated is very properly ignored. The committee, however, urges mutualization through voluntary action of the shareholders, and suggests a plan which seems likely to prove feasible, in view of the fact that Mr. RYAN stands ready, as he has stood consistently ever since he cornered all interests by the purchase of a majority of the stock at no small risk to himself, to make any arrangement that would be pronounced by fair-minded men as reasonable and likely to prove effective and satisfactory. To how great a degree the shareholders would participate in the vast surplus accumulated by the Equitable in the event of the winding up of its affairs is a nice legal question. Technically it is probable that Mr. RYAN would receive many times the amount he paid for his stock, but he squelched the accusations of self-seeking at the very outset by declaring that at any time he would turn over to the policy-holders the shares which he had purchased, for the precise cost plus interest at the rate of four per cent. per annum. The committee tacitly recognized the strength of his position by noting the doubt respecting the legal title to the accumulations in excess of the requisite reserve, but the commendable attitude assumed and still maintained by Mr. RYAN would seem to make possible some such permissive arrangement as is suggested. That some way may be found to make it effective is surely of the highest desirability, and Mr. HUGHES could not add more effectively to the splendid service he has already rendered than by working out a legal, equitable, and practicable solution of the problem.

It should be noted in passing that in a practical sense the wrongs have largely righted themselves. The three presidents of a year ago have paid the penalty of morals blunted, chiefly by environment and custom. In their places are men of established probity, earnest in their desire to serve those to whom they are responsible, to the very limit of their capacity, and thereby enhancing so far as may be reputations already acquired of absolute fidelity to trust obligations. Simultaneously and as rapidly as circumstances permit, bands of trustees are being re-formed, and long before the day fixed by the committee for the election of their successors,

should be of a character to command the implicit confidence of the great body of policy-holders. So at any rate we may be permitted to hope, and if the result be attained, it will indeed prove a most gratifying outcome of the most humiliating and wretched experience, in a business sense, the country has ever been compelled to undergo.

We guess we must have offended Mr. LAWSON, of Boston, when recently we advised holders of life-insurance policies not to place their voting proxies in his hands. That is the only natural deduction from his latest effusion. And yet the form of his rejoinder is more than puzzling; it is almost inexplicable. We have grown accustomed to strong, virile, masterful, fearfully fearless words from this most accomplished of reformers. How then shall we account for such mere cooling as references to our "brevery bromides," our "egregious egotism," our "brazen assurance," our "circuitous methods"? Delightful irony this, but too subtle, altogether too subtle for those who may not detect the artistic autobiographical touch. To be a "wart" squirming in LAWSON "acid" or even a "vampire" covering in the effulgent rays of LAWSON "sunlight" would, we grant, be most disagreeable, but thus far the situation has passed us by. Moreover, the picture seems insufficiently lurid, ridiculously inadequate, and quite unworthy of a truly trenchant pen. Tut, tut! TIMMSS! These be words too gentle for modern Portos. Ucklen is the rapier in hands blistered by the bluegreen.

It is a species of political revolution that was brought about in the Federal Senate when the Interstate Commerce Committee decided, by a vote of eight to five, that Senator THURMAN should report the Hepburn bill unamended. That measure, it will be remembered, was non-partisan when it left the House of Representatives, having received the votes of all the members present and voting, except seven. At that stage it reflected no more discredit or credit upon one party than upon the other. Now, however, the Democrats having contributed five of the eight votes by which the bill was reported to the Senate, and the Senator from South Carolina having been made its official champion, it is obvious that the Democratic party will get all the credit or discredit for the measure not belonging to the President and his Republican friends, should it be passed in its reported form. To pass it in that form forty-five votes would be required, to which the Democrats, should they decide for tactical reasons to accept no amendments, could contribute thirty-three. Obviously twelve Republican votes would be needed to make up a majority. Inasmuch, however, as no fewer than three out of eight Republican members of the committee were opposed to any amendment of the bill, it is probable that more than four times as many would be willing to take up a similar position on the floor of the Senate-Chamber, especially as President ROOSEVELT, after some alleged hesitation, has expressed a wish that the bill should be passed without amendment.

Under the circumstances, if the Democratic Senators make the most of the tactical advantage acquired by them through the delegation to Mr. THURMAN of the official championship of the bill, not only will they share, as we have said, with the President whatever popularity the passage of the measure may confer, but they will tend to be looked upon as the main upholders of the administration. The Republican opponents of the unamended bill, on the other hand, of these there would be forty-four, if we assume that there would be only a dozen ROOSEVELT Republicans—would almost inevitably figure in the public eye as the spokes-men of an antiadministration party. Having been beaten by a combination between the President and the Democrats on a measure which, far more than any other, commands the attention of the country, they would be apt to retaliate by threatening him in minor measures, such as the Santa Domingo treaty, the Philippine tariff bill, and the Panama Canal affair.

Ultimately by such reprisals an irreparable breach might be created between the President and a large majority of the Republican Senators. That is, of course, precisely the position occupied by a majority of the Republican Senators toward ANASTAS JOHNSON after the latter had unamended and

resolutely tried to carry out his personal reconstruction policy. It is also exactly the same position held by a majority of the Whig Senators toward JONAS TYLER after the latter, who had been elected Vice-President on the Whig ticket, had refused to reestablish the United States Bank. What the consequences were in those cases is well known. TYLER and JOHNSON were constrained to lean for support upon the Democrats in Congress, and unavoidably came to be regarded temporarily as the official chiefs of the Democratic party. Both TYLER and JOHNSON were branded as traitors by the men who had elected them.

Is it certain or even probable that even a large majority of Republican Senators could read MR. ROOSEVELT out of their party on the ground of his cooperation with Democrats to pass the HERRMAN bill unamended? There are marked differences in the position now occupied by MR. ROOSEVELT and the positions held respectively by TYLER and JOHNSON. They were Presidents by accident, whereas MR. ROOSEVELT was elected Chief Magistrate by an immense majority. Moreover, we repeat that when the HERRMAN bill left the House of Representatives it was non-partisan in an emphatic and exceptional sense. It was as much a Republican as a Democratic measure. That could not be said of the United States Bank bill, or of any attempt to deal with the reconstruction problem. When TYLER vetoed the bank bill he did it with the knowledge that a majority in each House was earnestly in favor of the measure. ANDREW JOHNSON knew that he would bitterly offend a majority in each House by declining to accept the reconstruction policy adopted by most of the Republican leaders. MR. ROOSEVELT, on the other hand, pointing out that the HERRMAN bill received in the House of Representatives the votes of all the Republican members except seven, may justly claim that those Republicans would stultify themselves by objecting to his advocacy of the Senate's acceptance of that bill in the very form which it wore when it left their hands.

ROOSEVELT, unlike TYLER and JOHNSON, cannot be taxed with interested motives. Both TYLER and JOHNSON were believed to desire a Democratic nomination for the Presidency, and undoubtedly some steps were taken in that direction on their behalf. MR. ROOSEVELT, on the other hand, has explicitly declared and reaffirmed that under no circumstances would he accept a nomination for the office of Chief Magistrate in 1898. His course, therefore, must be acknowledged to be perfectly disinterested. He cannot, obviously, be actuated by any motive except a desire to promote the welfare of the American people, and if he favors this or that particular measure, it must be because he believes it adapted to that end. Under all the circumstances here set forth, we opine that even a large majority of the Republican Senators would find it impracticable to drive MR. ROOSEVELT out of their party. In the attempt they would be likely to get themselves seriously hurt. The sooner, therefore, they gulp down their disappointment and suppress resentment, the better it may be for their prospect of retaining their seats and for the prospect of Republican victory in the next Presidential election.

If, on the other hand, some Democratic Senators should agree to Republican amendments of the HERRMAN bill, and these consequently should be passed, their party would lose the tactical advantage which the course pursued by the Republican members of the Interstate Commerce Committee has given them, and they would prove unable to bring about a quarrel between President ROOSEVELT and a majority of Republican Senators. Now, unless Senator BAILEY and Senator JOHNSON are resolved to seize the opportunity of making the HERRMAN bill a distinctively Democratic measure, and unless a Democratic caucus should sanction the proposal, it is probable that certain Democratic Senators will themselves advocate amendments of the HERRMAN bill. Even the official champion of the bill, MR. TILMAN, has avowed himself dissatisfied with it, and intends to offer at least two amendments, which he deems essential to the perfecting of it. He is, for example, that the bill should prohibit the ownership and control by railway companies of commodities that they might be tempted to ship over their lines in the confusion of private shippers or the persons. It has been charged that such discrimination is habitually practiced in

the coal business of West Virginia. MR. TILMAN would also like, by another amendment, to compel railways to keep spare or subsidiary lines fully supplied with cars. On the other hand, several Democratic Senators are inclined to cooperate with the majority of their Republican colleagues in giving the courts a greater measure of authority over the acts of the Interstate Commerce Commission than the HERRMAN bill confers. It will be observed, however, that MR. TILMAN's purposes could be secured by separate bills, while the wish of MR. FOSTER, MR. McLAUGHLIN, and other Democratic Senators to insert in the HERRMAN bill a provision giving larger review powers to the courts may be subordinated to their desire to secure a tactical advantage for their party and to place it in a highly favorable position in the public eye.

Thus there are manifestly two conditions under which a quarrel between the President and the majority of the Republican Senators could be averted. If it were conceivable that the TILMAN amendments just mentioned could be carried, together with another, undertaking to deprive the courts of the power of suspending by injunction a rate made by the commission, the President might veto the bill on the ground that it went too far. If, on the other hand, the Republican opponents of the bill in its present form should muster enough votes to secure an amendment increasing a United States circuit court's power of review, it is possible that the President might sign the bill on the ground that it was better than nothing. MR. ROOSEVELT seems, however, not to be in the least apprehensive of the outcome of a quarrel between himself and a majority of the Republican Senators, if it be true that he told MR. CAYNE the other day that he (the President) could go before the people of Massachusetts on the rate-making question and beat both CRANE and LORIE two to one.

Why we need to spend much money on our army and navy is a question that was answered on WASHINGTON's birthday by the Secretary of War and the Secretary of the Navy. Much that was said by Judge TAYLOR, who, speaking in the Chicago Auditorium, discussed the organization and needs of the army, tended to confirm the conclusion reached by MR. FRANKLIN HENCKES in an article contributed by him to the February number of the *North American Review*, the conclusion, namely, that we are at present gloriously unprepared for a contest with any considerable power. The Secretary reminded his auditors of what too many of us forget, that during at least one-fourth part of our national life since the Declaration of Independence our government has had a war on its hands in some part of its dominions. It is, therefore, most wise to assume that we shall be blessed with peace for a very long period. Another thing that most of us forget is that time, and a good deal of it, is indispensable to the making of good soldiers. Judge TAYLOR reiterated, moreover, what has been brought home to us so often by President ROOSEVELT, that readiness for war is quite as effective an instrument for the securing of peace to-day as it was more than a century ago, when WASHINGTON so earnestly enjoyed it.

The Secretary of War finally expressed the opinion that, for a nation comprehending eighty millions, or, if we count the inhabitants of our dependencies, nearly ninety millions, of people, a regular army of 100,000 is but a small force, especially when we keep in view the remoteness of Alaska, Hawaii, Porto Rico, the Islands of Panama, and the Philippines.

It was at Baltimore, in the course of the commemorative exercises of the Johns Hopkins University that Secretary BENTLEY explained why large annual appropriations have to be made for the navy. Already modern naval warfare is very expensive, and grows more expensive daily. The fact is recalled that our present smokeless powder requires some six months after it is made to be really fit for use. It follows that for six months a war must be prosecuted with the stock of powder on hand when it is declared. Then, again, our gunners require fire-and-practice, yet a given gun can only be fired a certain number of times. Hence we require a great surplus of guns. We must also have engineers and mechanics of tried skill and long experience to deal with the complicated and delicate machinery of modern war-ships. If we do not keep a sufficient quantity of such workmen in our

navy-yards, it is by no means certain that we could procure them at short notice. Consequently, a reduction of the force maintained in these yards would be a public calamity. Above all, the rank and file of the navy need to feel that the public sympathies with their work and recognizes its value. The kind of men desired for the crews of ships of war will not subject themselves to the restraints of naval discipline unless they know that, as sailors, they can retain their self-respect and earn the esteem of their fellow citizens. All patriotic Americans will concur with the Secretary of the Navy in holding that to treat these seamen as outcasts when they come ashore is to cripple our ships more surely than if their guns were disabled or their engines put out of gear.

The Divorce Congress, held in Washington during the week ending February 21, spent four or five days in deliberation and discussion, and finally adopted a set of fifteen resolutions which were entrusted to a committee with instructions to embody them into a statute to be presently submitted to the Legislatures of all the States and Territories of the Union. We have not seen a report of the proceedings of the congress which includes the full text of these resolutions, but they name the causes of divorce which the congress considered adequate. Their chief purpose is said to be to unite all the States against divorce by collusion, and migratory divorce. The delegates to the congress included a number of first-rate lawyers (such as Messrs. FRANCIS LYMAN STETSON and JOHN E. PARSONS, of New York, and DEAN HOFFCUTT, of the Cornell University Law School), eminent clergymen of various denominations, including Bishop DOANE, and several women who took a particularly active part in the proceedings. It has been suggested that there should have been more women delegates than there were, so vitally important to women was the subject discussed. As it was, however, the congress was a strong body, and seemed to have the knowledge, ability, and matured experience requisite to intelligent dealings with the difficult and complicated questions with which it was concerned. We hope that better conditions ament divorce will eventually result from its labors. It is to meet again presently to consider and discuss the statute which it has directed to be prepared.

No doubt President ROOSEVELT has matured and edifying views on divorce as on other subjects. That the congress missed the advantage of hearing them expanded was due, presumably, to the unusual demands made that week upon the Presidential energies by the railroad rates bill. Conveying first aid to injured and imperilled legislation is an engrossing job while it lasts, and it lasted intensely all that week. Perhaps when the congress reconvenes we shall get the President's views.

Discussing "The Future of THURGOOD" in the *Courier-Journal*, Colonel WYTHESS remarks with passing approval upon Mr. JOHN BROWN's plan for life Senatorships at large for retiring Presidents, but considers that the Senate will never be a suitable arena for President ROOSEVELT. Mr. ROOSEVELT's experience, he points out, has lain along administrative, not legislative, lines. To shine in the Senate a man must be a lawyer and a skilled debater. Mr. ROOSEVELT is neither one. He could not pounce to any purpose with the big stick on the floor of the Senate. MAJOR HENRY says the Senate won't do for him, and that he must be made president of Harvard College. Well, that is a good job for any man who is up to it, and we should not wonder if it would be acceptable to Dr. ROOSEVELT. In some particulars he would be very good at it. He would conduct the best lunch-counter ever opened on Quincy Street, barring neither the Colonial Club nor the Harvard Union. He would contribute much more than any man since JOHN SULLIVAN to make Boston feel as if she had moved to New York. But could he get the job? The president of Harvard College is not chosen, as one might suppose, by the newspapers of Boston, nor by the General Court of Massachusetts, nor by the graduates of Harvard, nor the faculty, nor the thirty overseers, but by the seven gentlemen who compose the Harvard Corporation, every one of whom is a representative of an old and tried Massachusetts family. That these gentlemen should come to New York for a Dutchman to be successor of President ELIOT

used to seem impossible, but it has come to seem less improbable than it once did.

It may be, after all, that the Harvard Corporation will invite a Chinese into their china-shop. In favor of that possibility is Dr. ROOSEVELT's personal popularity at Harvard, his undoubted mental vigor, his prodigious reputation, and his sturdy influence in favor of clean living and Christian manhood in all its details. He would be an invaluable acquisition to a university that needed him. But does Harvard need him? It is a very vigorous institution that already draws more students than its funds readily suffice to take care of. It does not need advertising, nor extrication from any rut, for it is already the most progressive of the universities. It is the flower of Massachusetts civilization, and one of the great items of its strength is precisely its relation to that civilization. Lads from New York and the West are sent to it to breathe for a time the air of Boston. It is to the interest of all the Harvard constituency that lives west of the Connecticut River that Harvard should keep its present flavor and continue to taste of Boston. Boston has run the college for 270 years, and run it, so far as outsiders are concerned, to admiration. To send a lad from New York, Chicago, Denver, or San Francisco to Harvard is to give him a very advantageous and stimulating change of environment. But it isn't so much of a change for a boy from Boston, and therein lies the best chance for Dr. ROOSEVELT's being invited to be Dr. ELIOT's successor. He is not an expert educator, nor an expert man of business, but he is the biggest yeast-cake on the earth, and it may seem in the seven hundred-headed voters of the Harvard Corporation that he would make the Harvard dash somewhat more profitably northward to the Boston boys, whose bellies get overmuch distended with the East wind. Since about two-thirds of the Harvard undergraduates are Boston lads in the large sense that diffuses Boston all over eastern Massachusetts, their interests are important. At any rate, if Dr. ROOSEVELT goes to Harvard, it will be to make Harvard a better place for Massachusetts lads, and not to draw more lads from New York and Ohio and Illinois.

Young Mr. ROCKEFELLER in his interesting ministrations to his little chess board again, on February 25, on JOSEPH and his renowned corn in corn. He heartily commends JOSEPH's foresight in getting the corn when he could, and selling it in the lean years, and taking all the buyers' property, individual, real, and personal, in exchange. But we do not find any report of his views of JOSEPH's final transaction, in which, having bought everything in Egypt, including all the land and all the population, for Pharaoh, he said to the people, Here is seed; go sow the land and give the fifth of the crop to PHARAOH, keeping four-fifths for yourselves. Was that detail of conduct consistent with the ROCKEFELLER axiom that it is a man's Christian duty to make all the money he can honestly? Were not JOSEPH's terms a little easier than a thoroughly conscientious business man ought to have proposed? Surely he might have got two-fifths at least for PHARAOH, and still the people could have lived!

RABBI SALVEMAN, of New York, takes issue with Justice BREWER on the claim of the Judge that ours is a Christian nation. Dr. SALVEMAN says it isn't. The majority of us, he says, are not Christians. He considers that there are over forty million people in this country who belong to the various non-Christian religions, or to no religion at all. "Our government," he says, "owes nothing to the Christian religion as far as its elements are concerned. Our government is founded on the laws of MOSES." We are unable to agree with Dr. SALVEMAN. The Christian religion itself is a development of the Jewish, and it might be true that our government was founded on the laws of MOSES, and still be true that it was based on Christianity. An enormous majority of our people think in the terms of the Christian religion. What religion a man belongs to in a large sense is not to be determined by his conduct nor, often, by his professing it, but by his history. You can tell what a man's religion is by the way he swears as well as by the way he prays. An enormous majority of our population is Christian by heredity and tradition, and it is an entirely just and useful use of language to call the United States a Christian nation.

The Armstrong Insurance Proposals and Some Objections to Them

A NUMBER of bills have been introduced in the New York Legislature embodying the conclusions to which the committee headed by State-Senator Armstrong were led by their recent investigation of the affairs of New York life-insurance companies. Let us see, first, what the more important proposals are, and then note some of the objections which have been made by insurance experts to the adoption of them. We remark, first, that directors and officers of an insurance corporation are prohibited from being personally interested, either as principal, participant, agent, or beneficiary, in any purchase, sale, or loan made on behalf of such corporation. To this prohibition no exception will be offered. A violation of this prohibition is made by the proposed law a misdemeanor. The privilege now enjoyed by a stockholder or creditor of an insurance company to require the State Superintendent of Insurance to investigate the company is extended to a policyholder. The existing statute which requires a policyholder to obtain the consent of the Attorney General before beginning an action to compel the officers of an insurance company to render an accounting of their trust is repealed. Provision is made for the annual distribution of a previously ascertained and unannounced proportion of the surplus of each life-insurance company among its policyholders. The share of the surplus so apportioned annually shall be paid to the holder of the policy in cash, or at his option, which is permitted to accumulate to the credit of the policy, at such rate of interest as shall be allowed by the company, and with such interest shall be payable upon the maturity of the policy, or shall be withdrawable in cash by the holder of the policy on any anniversary of the date of issue thereof, or shall be applicable to the payment of any premium or premiums upon such policy, or to the payment of a paid-up addition thereto. At every election of directors in any mutual life-insurance company every policyholder whose insurance shall have been in force for at least one year prior thereto shall be entitled to vote in person, or by proxy, in by mail. At least five months before every election, each company shall file two lists in the names and post-office addresses of all holders of at least one thousand dollars of insurance whose policies shall have been in force twelve months before the date of the election.

No limit is fixed upon the amount of new business that may be written by any company whose outstanding insurance is not now in excess of \$50,000,000, but in the case of larger companies the amount of new business permissible is graduated, and in no event can exceed \$150,000,000 annually. The bills further prohibit companies from adding a greater loading to the net premium for each one thousand dollars of any kind of insurance than the loading for the same amount at the same age in the case of an ordinary whole-life policy, except in the case of a limited-payment life or limited-payment endowment policy, where an additional loading may be made for expenses after the expiration of the payment period. Moreover, no life-insurance company doing business in the State of New York shall allow an agent or broker for procuring an application for insurance, or collecting any premium thereon, any compensation other than that determined in advance, and if such compensation is to be a commission, it shall be a fixed percentage of the premium for each one thousand dollars of insurance, and not greater in amount for any one thousand dollars of insurance at the same age on any plan than shall be allowed in the case of an ordinary whole-life policy. Bonuses, prizes, rewards, salaries, or commissions of any sort, based on the amount of any policy or the aggregate of applications, are prohibited. Commissions are not to be paid save upon premiums for the first five years, and in no year after the first year shall they exceed an amount equal to seven and one-half per cent of the premium on a whole-life policy. Loans and advances to persons engaged in soliciting insurance are prohibited. All rebates made to an applicant for a policy are forbidden, and the recipient, as well as the giver, of such rebate is made guilty of a misdemeanor. The investments of the funds of insurance companies are carefully restricted. No stocks of private corporations may be purchased, and the classes of bonds which may be bought are rigorously defined. We remark finally that not only are corporations prohibited from making political contributions, but every officer or agent of an insurance company who aids or abets a violation of this prohibition, and any person who solicits or knowingly receives any such contribution, in money or in property, is made guilty of a misdemeanor. A person offending against this law is declared a competent witness against any other person so offending, and may be compelled to testify at any trial, proceeding, or investigation.

To many of these provisions an objection is offered by the spokesmen of the insurance companies. A spokesman of the New York Life, however, announces that his corporation will fight hard to prevent the passage of any bill that would restrict its new business to \$150,000,000 a year. Officers of the Equitable and the Mutual, on the other hand, have expressed the opinion that such

a restriction is expedient. A high official of the Mutual has objected strongly to the compulsory elimination of all stock holdings from the company's securities, on the ground that there are many "gilt-edged" stocks which are not only more profitable but more stable securities than are many bonds, even of the classes permitted under the proposed law. The very highest class of investments in the country is to be found in guaranteed stocks of the old railroad corporations, some of which are essential parts of the strongest railway systems, and are guaranteed to pay high rates of interest, as, for example, six, eight, ten, and even twelve per cent. Again, under the proposed law, investment in collateral trust bonds is prohibited, but second-mortgage bonds may be purchased. The result might be that insurance companies, forced to sell Treasuries, Railroads and Quincy Street Four, guaranteed by Direct Northern and Northern Pacific, might invest the proceeds in such securities as United States Ship-building Five. It is pointed out by the advocates of the Armstrong bill that savings-banks are equally restricted as to investments, and, nevertheless, prosper. The regulator is that if savings-banks and life-insurance companies are compelled to compete for the same classes of investments, they will have to pay more for them, and the dividends payable to depositors and policyholders will, consequently, be reduced.

Touthing the limits fixed by the proposed legislation for the amount of new business that may be written, Mr. EMERY McCLELLAN, the secretary of the Mutual, has expressed the opinion that, under the proposed restrictions with regard to companies and rebates, the big companies would work, and declare that the \$50,000,000 worth of business in a year. He believed that \$100,000,000 a year would be nearer the figure. Mr. McCLELLAN also regards as too drastic the provision making a violation of the proposed statutes a misdemeanor. He asserts that contingencies may easily arise which would unaccountably put the total annual expenses beyond the loadings on the premiums coupled with the mortality gain, but, nevertheless, the officers might be liable to imprisonment. No sane man, he says, would be willing to take such a chance. Especially worthy of attention is the fact that President PAUL MORRIS, of the Equitable, when invited to outline his views, declared that he had as yet no criticism to make of the Armstrong committee's report. He thought the committee entitled to great credit for its exhaustive work, and declared that he should be glad to conform to any laws the Legislature in its wisdom might see fit to enact. If, however, after carefully digesting the report, he should find himself in disagreement with any of the conclusions reached by that committee, he would say so frankly; but so representative of the Equitable would be a member of the Third House in Albany, nor would any agent of that company, as such, be permitted to appear there to expose insurance legislation. We should add that a supplemental bill, introduced by State-Senator ARMSTRONG on February 26, aims to insure further protection to policyholders. By this bill the cause of death need not be given when a claim is made for the payment of a policy, which, on the contrary, must be paid forthwith, after due proof of death has been furnished. Another change is that, after a policy has been in force one year, it is incontestable by the company issuing the same.

President Hadley on the Hepburn Bill

On February 25 the New York Herald published an interesting interview with Dr. ARTHUR T. HADLEY, in which the president of Yale University criticised the Hepburn bill, but expressed the belief that it would be better for the Senate to pass it in the form given to it by the House of Representatives than to insist upon imposing it. He considers the attempt embodied in the Hepburn bill to constitute the Interstate Commerce Commission a court of last resort, so far as findings of fact are concerned, blighted and potentially injurious. He assumed, what some probably he has some doubt about, that the conservative element in the Senate would be strong enough to insert in the Hepburn measure a provision for a fuller court review, like that which existed in the Esch-Toussaint bill. It was not clear to him, however, that much would be gained by such a course. The commission would still think itself a judicial body, and would make enough doubtful orders regarding rates to prevent it from having any real influence on the railroad management of the country viewed as a whole. He conceded that if the judicial function could be given exclusively to the courts, and it could be made plain to the commission that they were expected to do something else, there would be a very substantial gain, but, in Dr. Hadley's opinion, if you only give some of the judicial functions to the courts, and leave the commissions to exercise others, the gain would be too slight to be worth cashing.

Dr. HADLEY goes on to mention several strong reasons why in his judgment the conservative element in the Senate had better accept the Hepburn bill as it is than insist upon a compromise measure. He points out, in the first place, that if the railroad men attempt to have the bill modified, given a motion will be regarded

as a selfish effort to block the wheels of legislation for their own private interests. This is pronounced a blunder. Dr. HANLEY holds that, from the view-point of railroad management alone, the good derived from preventing the passage of the HERRICK bill in its present form would not amply counterbalance the harm that would come from assuming an attitude of factions or self-seeking opposition. The president of Yale University is convinced that the HERRICK bill would not greatly hurt the railroads. He thinks, on the contrary, that if anybody will be much harmed by attempts, which he believes will prove illusory, to limit rights of appeal, it will be the shippers. This being a free country, if the shippers are bent upon hurting themselves, Dr. HANLEY suggests that it may be inexpedient for the railroads to take much trouble to prevent them. He opines that, should the HERRICK bill be passed in substantially the form in which it left the House of Representatives, there is a chance that, after a few years of unsatisfactory operation, it may be repealed. That is to say, people may do here what they have often done in England—admit the failure of one piece of legislation and try to devise a better one. If, on the other hand, a compromise measure is adopted, nobody will know who is responsible for the failure. Each party will cast the blame upon the other. Ten years hence we shall recognize that we have accomplished nothing, but we shall be unable to tell whose fault it is. President HANLEY proceeds to remind us that to-day the country is swept by a great wave of moral sentiment, due partly to the insurance revelations, partly to the evidences of political corruption in cities, and partly to various abuses of corporate power which have been brought to light. He foresees that if the spirit of reform is allowed to have its own way, it will result in a good many wise acts, and also in some foolish ones; but he has faith that the good will outweigh the evil. If, however, the wave of moral sentiment is withstood, every case of intelligent resistance will give rise to deep-seated misunderstanding, will intensify the evils and dangers incident to the movement, will make undoable out of those who would use it should have been constructive, and will, when the next industrial and commercial crisis occurs, leave us face to face with the peril of bitter class struggle.

The president of Yale University avows that, in his judgment, the position taken by a minority of the Republican United States Senators, that they will stand for a bill which has the approval of the President, and not for one which lacks it, is a wise one. Personally, he does not concur with the President in believing that the Interstate Commerce Commission is a proper body to undertake a judicial determination of rates; nevertheless, he believes it is better to compromise in a measure of which the President approves than to insist upon a compromise which would not satisfy him or any one else. How does President HANLEY arrive at this seemingly inconsistent conclusion? On this ground, namely, although Mr. ROOSEVELT is a man of many-sided activities that very few persons believe him to be right in everything, yet a great majority of the American people are confident that he is right in general. Therefore, if Mr. ROOSEVELT announces his approval of a bill there is more than ordinary reason for making that bill a law. He does not represent himself alone. On the contrary, he represents a tremendous volume of public sentiment which, under leadership like this, will not have dangerous results, but which, should it fall as it might fall, under the direction of other leaders, would be apt to become hysterical or perverted.

Summing up the existing situation, Dr. HANLEY says that the HERRICK bill does not seem likely to accomplish its object. He recalls the fact that the history of English railroad legislation shows that a similar measure, passed under closely analogous circumstances, failed to do the good which its advocates expected. He predicts that the failure will be repeated in the United States when an act of Congress shall provide that a commission shall be set up as executive, a legislative, and a judicial body. He deems the combination of these three functions in one officer repugnant to the Constitution of the United States. To the common law of England, and to the American sense of fair play, he considers the HERRICK bill subject to this further criticism, that, by investing the Interstate Commerce Commission with certain judicial duties and powers which it cannot well assume, it imparts that commission for most important administrative functions which properly belong to it. Dr. HANLEY is convinced that what the United States needs is an act under which the commission would take part in the making of tariffs, and give effect to the public interest in the regulation of railroad management, leaving the specific cases of violation of statutes to be disposed of punished by the courts. He considers very strong indeed the arguments, both historical and recreational, in favor of a bill which shall empower a commission to do its own business, instead of believing it that duty in order that it may do somebody else's business. If, however, these arguments do not for the moment carry conviction to a majority of the American people, and if a measure framed upon these lines would fail to get the needed votes in Congress, Dr. HANLEY, for his part, would not try to compromise. In his judgment, a law based on bad principles is sometimes better than a law based on no principle at all; and the harm which would come, either to the railroads or to the

country as a whole from the passage of the HERRICK bill, or anything like it, is a far less serious evil than the spirit of distrust and of class antagonism which would be aroused by such an opposition.

Personal and Pertinent

THE European newspapers announce that the Grand Duke of Hesse has recently registered himself at Darmstadt as proprietor of the grand-ducal potteries there, and has received a license to trade. Now we know where the cracked Hessian Grand Dukes come from, we hope his grace will stiffen the mixing up a bit.

If a ton of coal is placed on the ground and left there, and another ton is placed under a shed, the latter has about twenty-five per cent. of its heating power, the former about forty-seven per cent.—*Adamsville News*.

A great deal depends upon who sees you put it there.

An interesting story, and one highly characteristic of the dead monarch, clings to one of the wreaths which were placed before the bier of King CHRISTIAN, of Denmark, in the "Garden Room" of the Amalienborg Palace at Copenhagen. The wreath bore this message: "From a thankful Snigglebe's boy, 1, Bernstorff Court Park. Thanks to you, my beloved King." Many years ago the sender was a shepherd's boy in the vicinity of Bernstorff, and, in some way, King CHRISTIAN became interested in him and his poor family. From time to time he helped them, and never failed to inquire about the boy when visiting Bernstorff. One day he sent him to the harbor authorities, recommending him for work. The work was given to him, and he is there now in a good situation.

The recent visit of the Prince and Princess of Wales to the Palace of King TITUBAN, at Mandalay, recalls the circumstance by which he learned to speak English. His father one day inspected a mission school in Rangoon, and the missionary in charge urged him to encourage the work by sending one of his sons to the school. The King replied that he would be very glad to do so, and asked, "What age should the boy be?"

"About fifteen, your Majesty."

Immediately the King turned to his Prime Minister. "Have I a son of about fifteen?"

"Oh, yes; many, your Majesty," was the reply.

And TITUBAN was selected.

When GEORGE ANN stopped in London on his way in Egypt the English newspaper reporters harried him out and interviewed him. We wonder what GEORGE thought of them. One of them wrote that "Mr. ANN speaks English without the assistance of an interpreter, and in casual conversation, as a *Deity* Mail representative was surprised to find yesterday, uses no slang at all, neither English nor American." If any of explaining the "awful effect," as he expressed it, Mr. "Fables" had had upon Mr. ANDREW LAMU, GEORGE said to the reporters, "I had referred in a restaurant in the Italian quarter of New York as a 'spaghetti joint,' and Mr. LAMU, in his kindly way, was sorry for me, as he pointed out that spaghetti, being well known to every one with the slightest acquaintance with modern languages, a plastic vegetable product, could not be described as a 'joint.'"

The future of the mosquito is clouded in the most tragic gloom now that the American Mosquito Extermination Society is after him, his foot, and, incidentally, after "moral and financial support." In a little pamphlet which cordially invites the recipient to join the society attention is called to a list of more or less alarming membership in the organization. For the small sum of two dollars annually one may become an "active" member, five dollars annually entitles one to the distinction of "sustaining" membership, and for other sums, up to \$1000, the joinder has his choice of "associate," "life member," "patron," or "founder." Contemplation of the inexpensive "active" membership suggests the idea that its purchaser can hope for little more than a wet towel, energized by his own agility, in the glorious work of extermination. The "sustaining" membership suggests anything save extermination, and, in that light, is heresically expensive at five dollars.

The Pope's fondness for boys is well known, and it has served slightly to distinguish one stately American youngster, SPENCER NIXON, the eleven-year-old son of LEOX NIXON, the shipbuilder. To him Pope PIUS X. gave not only an affectionate hug and a blessing but a large silver medal which is his proudest possession. When Mr. NIXON was on his way to build torpedo boats in Russia he stopped in Rome, and, with MRS. NIXON and their son, had a private audience with the Pope. Monignor KENNEDY, President of the American College at Rome, said to them just before their entrance, "when His Holiness sees your boy he will have no eyes whatever for you." And this was well borne out, because as soon as the Pope saw young NIXON he ceased speaking, opened his arms and hugged the boy to his breast. A few minutes later he took one of his chamberlains, bring the medal which he gave the lad with a benediction.

Woodrow Wilson as a Candidate

Some Press Comments

(From the *Atlanta Journal*.)

That was a high compliment paid to Dr. Woodrow Wilson by George Harvey, when, at the Ladies Club dinner to Dr. Wilson, he placed that distinguished educator in nomination for the Presidency on the Democratic ticket in 1908.

The surprise was complete to Dr. Wilson and all the guests, but the latter promptly showed their approval by prolonged and hearty applause. The dinner was in no way political, and of those present probably a majority were Republicans; but, none the less, all voiced their appreciation of the honor done their guest.

Since it is well known that Harvard men talk of President Roosevelt as successor to President Eliot, when Mr. Roosevelt shall leave the White House, this nomination of Dr. Wilson suggests what may prove to be a notable precedent.

If time should indeed bring it about then, then, verily, shall we have come upon a satisfactory solution not only of the problem as to what we shall do with our Presidents, but also of the puzzle as to where shall we look for them.

(From the *Washington Star*.)

George Harvey, the editor of HARPER'S WEEKLY, suggests President Wilson of Princeton University for the Democratic Presidential nomination in 1908. Well, why not? That is, if Mr. Bryan, or Mr. Hearst, or some other, is not their faith, is not the card for the contest. In other words, if the Democratic party is not wholly and irreversibly radical, and is willing to make another appeal to the country under conservative leadership, Professor Wilson has claim to consideration.

In 1904 the party turned from the strictly political to the judicial field for its candidate. The play was for conservative support. Mr. Bryan had twice been defeated on a radical platform, and hope of success on that line was faint. So Judge Parker, permeated with the approval of certain Eastern influences, was nominated. He failed. It is true, but not because of his conservatism. His colorlessness was a handicap, and besides, nobody could have defeated Theodore Roosevelt. The facts themselves would have upset any Democratic programme that year.

Now why not turn from both the political and the judicial fields to the field of scholarship? Why not try a distinguished educator, who stands in no field and in all fields for safe things and things of good report? As Mr. Roosevelt is a man of Eastern birth and Western training, Professor Wilson is a man of Southern birth and Eastern training. He is not only a distinguished executive as an educator, but has reputation as a brilliant historian, and he has lived long enough in New Jersey to imbed much of the spirit of that State about practical matters.

Two of the most successful of our early Presidents were scholarly men, who knew books as well as everyday business, and had strong leanings toward the academic shade. Mr. Jefferson, whose great pride it was to have founded the University of Virginia, would have made a perfect president of that, or any other similar institution. And Quincy Adams would have made a perfect president of Harvard University. Henry Clay marvelled at the ability of so bookish a man, who poured himself out so fully in a diary, to grapple familiarly with political affairs.

It might be well for the Democracy, unless it is thoroughly Hymanized, or Hearstized, to nominate Professor Wilson, or some other clean, clear thinker of his class. In the past forty years it has failed with several politicians, an editor, a soldier, and last time with a judge.

(From the *Washington Star*.)

The *Charlotte News and Courier* cordially endorses George Harvey's suggestion of President Wilson of Princeton for President. In commenting on *The Star's* comments on the subject, wherein it was pointed out that Mr. Jefferson and Quincy Adams, each of whom acquired themselves ally in the White House, would have served well in such an office as President Wilson now fills, the esteemed *News and Courier* says:

"According to his lights and for his day Dr. Wilson does not suffer in comparison with either of the great men named. He is capable, he is loyal, he is faithful to the Constitution, and he would make an ideal President. The so-called 'vested interests' would not be afraid of him, and the revolutionary or socialistic wing of the party would have respect for his honesty, however they might differ from him upon questions of policy. Dr. Wilson is a Southern man who is fully known and appreciated in the Northern half of our country. He possesses great executive ability. He is a man of wide reading and fine scholarship, and would make an altogether admirable candidate.

"Why not nominate him? He is sound on the currency question and orthodox in his views of popular government. He is not a selfish lack of regard by political failure, and he would measure up fully to the requirements of the office of President. We do not think he is any such man as Mr. Cleveland—we do not think there is any other such man in this country; but taking him by and large, he would make a fine candidate and an ideal President."

"Not any such man as Mr. Cleveland?" Let us all hope not. Surely the Democratic party does not want another such man as Mr. Cleveland in the White House. He got in the first time by a scratch—the same sort of scratch that landed his young pupil

McClellan in the Mayor's chair in New York for a second term—and at the end of four disastrous years was defeated. He was nominated and elected in 1862 under the management of William C. Whitney, acting for the great corporate interests in New York, and at the end of the four most disastrous years the country had ever known in times of peace the Democratic party was in such a state of discord and demoralization that a rattling stump-speecher, by the aid of our warring deliverance, took complete possession of it, and is still in possession. An educator—even an ordinary educator—ought to be able to beat that. The chances are that President Wilson, with an opportunity, would

but listen to Henry Watterson, a ho, breathing the balmy air of Florida just now, is seeing all things black and making prophecies. In a stimulating up of the political situation for his own party, Mr. Watterson concludes as follows:

"The old Democratic party grew so strong that it was able to make its exit the signal for a bloody war. The Republican party had grown so strong that it thinks it owns the earth, and has measurably lost the fear of God. The people stand at length ripe for a clean sweep. But they must be united on some fighting-line and under some adequate leader, who, whatever else he is, we may make sure will not be a conservative."

In this view of the case President Wilson will not do at all, for his nomination would appeal about all things to the conservative sentiment of the country. Can Mr. Watterson be "united on some fighting-line" with Colonel Harvey and the *News and Courier*?

(From the *New Haven Register*.)

The *Hartford Courant* takes a hand in the movement to persuade the Democratic party to nominate for its next President a college president. It says: "If Colonel Harvey's suggestion about trying their luck in 1908 with a scholar finds favor in the eyes of the Democratic leaders, they are by no means shut up to Colonel Harvey's nominee—Dr. Woodrow Wilson of Princeton. Dr. Eliot of Harvard is a little too old, perhaps, but there's Dr. Henry Wade Rogers, Dean of the Yale Law School, not yet forty-three, and young for his age. He isn't a university president now, but he was. And there's Dr. Edwin Anderson Alderman, president of the University of Virginia, not yet forty-five, and one of the wisest Democrats living. Dr. Rogers is a New Yorker by birth, Dr. Alderman is a North Carolinian." We grow nervous when we are left out of a controversy like this, so even at the risk of limiting in our suggestion that it end in an agreement to have the ticket read: For President, Rogers of Yale; For Vice President, Alderman of the University of Virginia. Platform, the old dog and an appropriation. The latter ought to corral every Republican in sight.

(From the *Charlotte News and Courier*.)

George Harvey is backing Dr. Woodrow Wilson, of Princeton University, for the Democratic nomination for President in 1908. The *Hartford Courant* suggests that Dr. Eliot, of Harvard, may be a little too old, but that Dr. Henry Wade Rogers, Dean of the Yale Law School, is not yet fifty-three years of age, and is young for his years, and it suggests further that Dr. Edwin Anderson Alderman, president of the University of Virginia, not yet forty-five, is "one of the wisest Democrats living." We would very gladly vote for Dr. Woodrow Wilson, and we might not offer any serious objection to Dr. Eliot or to Dr. Rogers, but we could not quite stand Dr. Alderman, of the University of Virginia. If we must have a University President let us draw the line on Alderman and take Woodrow Wilson.

(From the *Baltimore Sun*.)

George Harvey, the editor of HARPER'S WEEKLY, suggests President Wilson, of Princeton University, for the Democratic Presidential nomination in 1908. If he can organize the Jersey voters as well as he can drill the freshmen of Yale history, he would be a winning candidate.

(From the *Lowville Tribune*.)

HARPER'S WEEKLY suggests that the Democrats nominate President Wilson, of Princeton, as their next candidate for President. Such a proposition would give Bryan and Hearst, and lots of their followers a shaking up that would be the opposite of gentle.

(From the *Baltimore Sun*.)

George Harvey nominates President Woodrow Wilson, of Princeton, for President of the United States. This might stop Harvard from getting all the big offices.

(From the *Columbian Journal*.)

The suggestion of HARPER'S WEEKLY to the Democrats to try a scholar for a Presidential nominee next time has created a favorable impression.

The Ruins of a Fire at Panama, said to have been caused by the Fanigation Brigade of the Sanitary Squad during the Fight against Yellow Fever

The Panaynton Brigade of the Sanitary Department at Panama preparing a House for Disinfection

SNAP-SHOTS FROM THE CANAL ZONE

The photographs, which have just been received from Panama, are interesting as showing one of the methods of fanigating houses supposed to be infected by disease. The method is to paste paper over all the cracks in the outer walls of the building, place pots containing insect powder in each room, pour a little alcohol on the powder, touch a match to it, close up the last opening, and leave the house shut up for several hours. The house is then opened again and the air cleared. Each house in the town is fanigated once in two or three weeks. It is hoped that by this means yellow fever will be kept under control.

The Monroe Doctrine and Morocco

By the Hon. Henry Cabot Lodge

Senator from Massachusetts, Member of Foreign Affairs Committee

Many persons are asking why this government has taken a hand in the settlement of the Moroccan situation. The following authoritative article by Senator Lodge is at once an answer and an explanation. It answers the protest against the sending of United States delegates to Algiers, and explains the reasons for the presence of the United States at the international conference

THE presence of delegates from the United States at the Moroccan Conference at Algiers has given rise to more or less discussion both in the United States and Europe. The Democratic opposition in the Senate has attacked the administration of President Roosevelt for sending delegates to this conference, while in Europe there has been much speculation as to the reasons for the action of the United States, especially in view of the well-known Monroe Doctrine. The Democratic criticism has proceeded on the theory that the presence of American delegates at Algiers involves the disregard both of Washington's warning against "entangling alliances," and also of the principles laid down in the Monroe Doctrine. The discussion in Europe, on the other hand, seems to be chiefly concerned with the meaning of this participation by the United States in a European conference not wholly commercial in its purposes. The domestic criticism is based upon an erroneous and twisted conception both of Washington's advice and of the principles of the Monroe Doctrine, while the foreign speculation seems to be due partly to ignorance of American action toward Morocco in the past and partly to a wrong idea as to the well-settled policy of the United States in regard to its foreign relations. It is not, perhaps, surprising that the very active part taken by the United States in protecting her commerce in the Mediterranean, and the highly efficient and effective war which she waged with the Barbary States more than a century ago should now be forgotten. But it is a little odd that both at home and abroad the fact that the United States in 1803 and again in 1880 joined with the European powers in making treaties with Morocco should apparently be entirely overlooked, for that fact in at once the reason and the precedent for American action at the present time. The treaty of 1803 related to the establishment of a lighthouse under international protection at Cape Spartel, and that of 1880 was an elaborate arrangement for defining the rights and providing for the protection of foreigners in Morocco, and also for opening the ports of Morocco to the subjects and citizens of the signatory powers on terms of the most favored nation. When Moroccan affairs again appeared in the field of international politics as a subject of discussion, and it became necessary to settle the questions which had thus arisen, it was a matter of course that all the signatories to the treaty of 1880 should be invited to take part, and the United States was accordingly asked by the Sultan of Morocco to send

delegates to Algiers. In fact, it was understood that some of the signatories of 1880 refused to accept the invitation unless all were asked, and especially unless the United States was invited. There is, therefore, nothing new or startling in the fact that the United States should have been asked to take part in a conference to settle the affairs of Morocco, for this was merely the continuance of a policy which had been in existence for more than forty years. The United States had very naturally shared in the previous conferences and treaties because the protection of her citizens and of her commercial interests in Morocco was involved. Now that the commercial relations of Morocco with the rest of the world are again in question, the United States, in view of her previous action, could neither be excluded from a conference to settle this question, nor would it have been right for her to absent herself. The point made, however, by those in America who oppose this action by the United States is that the Morocco Conference involves military and political questions as well as commercial, and that the great powers of Europe are deeply concerned in these military and political differences, which are so serious as even to threaten war. There is really nothing in this point which should cause any objection to the presence of the United States at Algiers, and even the briefest consideration of the foreign policy of the United States will show the soundness of this assertion.

Washington's warning against "entangling alliances," so much invoked against permitting the United States to share in the Algiers Conference, was due to the trouble which had been caused by the treaty of alliance between France and the United States made when the American colonies were engaged in the War of Independence against England. When the French revolution involved France in war with the other European powers and with Great Britain, she insisted that the United States was bound to take part with her in these hostilities. Washington's administration held that the treaty with France bound the United States only in case of defensive war, and that the war in which France was then engaged was offensive, but this decision and the neutrality policy adopted by Washington in consequence of it were very unpopular in the United States, and led to many serious difficulties. It was with these facts strongly in his mind that Washington, in his farewell address, laid down so strongly the proposition that the United States should hold itself free from all "entangling alliances," and to the policy thus imposed upon his countrymen by

The Delegates to the Moroccan Conference in Session in the City Hall at Algiers

The Duke of Alameda del Rio

The Duke of Alameda del Rio, President of the Moroccan Conference

the first President the United States has ever since rigidly adhered. It is not worth while to discuss whether this policy, strictly enforced, is abstractly wise or not. The American people for more than a hundred years have not only believed in its wisdom, but have faithfully observed it, and there is an probability that it will ever or ought ever to be departed from.

The Monroe Doctrine, which was the recollection of Washington's neutrality policy, declared, broadly speaking, that Europe must not interfere with the governments established in America, and that no portion of the American hemisphere was open to any further colonization. It also reiterated the allegiance of the country to the doctrine of Washington as expressed in the policy of neutrality and in the avoidance of "entangling alliances." The policy of Washington, however, does not in the least exclude, and never has been held to exclude, the United States from agreements with one or more European powers as to matters affecting trade and commerce, or from international conventions which are entered into for the improvement of conditions in war, or for the promotion of the world's peace. The following list of treaties with European powers and of international agreements upon such subjects shows by the mere enumeration what the attitude of the United States has been in this respect for many years. In 1803 the United States joined with certain countries of Europe in a general treaty as to tariff duties on the river Scheldt. In 1806 she joined with France, Great Britain, and the Netherlands in a tariff treaty with Japan. In 1809 she made a joint treaty with Germany and Great Britain for the settlement of the Siam question. The United States joined in international conventions in 1834 relating to navigation in time of war; again in 1868 on the same subject; in 1875 on weights and measures; in 1883 as to industrial property; in 1884 as to submarine cables; in 1886 as to the exchange of official documents; in 1890 as to customs tariffs; in 1890 as to the African slave trade; in 1893 in a general treaty for the exclusion of spirituous liquors from Africa; in 1901 she was one of the signers of the protocol with China as to the Boxer trouble, and in 1909 united in all the Hague conventions. Any other policy, indeed, than that disclosed by these treaties and conventions would be childish in the extreme, and Washington, who was not only a great statesman but one of the wisest of men, would have been the last to suggest that the principle laid down by him in his farewell address was so foolish as to exclude the United States from such agreements as those just enumerated.

The theory that the Monroe Doctrine shuts us out from participation in any European engagement of any kind whatever is equally unfounded. The Monroe Doctrine is not international law. It is the policy of the United States which exists because the United States maintains it, and proposes to maintain it by force if necessary. It commands assent primarily by the support of the United States, and also, as the American people believe, by its own intrinsic reasonableness. The Monroe Doctrine is the balance-of-power policy applied to the Western Hemisphere, and the United States will uphold it as the balance of power is upheld by the nations of Europe, and because it is essential to her own peace

and safety. But the fact that we do not permit Europe to interfere in affairs which solely concern the American continents is no reason why we should not make with the powers of Europe such agreements as have been described affecting trade or commerce or the peace of the world. If we were to seek for territorial possessions in Europe, or if we were to engage ourselves in European alliances which might involve us in war, then indeed we should violate both the policy of Washington and of the Monroe Doctrine, let us have not done and have no intention of doing either. We seek no territory anywhere and desire none, least of all in Europe. For strategic reasons we were ready to buy the Danish Islands a few years ago, and are ready to do so now. But when Denmark, yielding to outside pressure, declined to ratify the treaty we found so fault. We are perfectly content that Denmark should retain her islands, but it must be distinctly understood that if she sells we are the only purchaser, and the attempt of any other power to take those islands or other American territory especially on the Caribbean Sea, or along the route of the canal, would be regarded by the American people as practically an act of war. I repeat, we seek no territory anywhere, we desire none; in Europe it could not be forced upon us, and our only purpose in any dealings relating to European affairs would be to protect our own commercial interests and to advance the cause of peace and good will among the nations. We do not pretend to be more disinterested or unselfish than our neighbors, but in the nature of things, so far as Europe is concerned, our objects can only be peace, commerce, and good relations. We are at Algiers because we are signatories to the previous treaties, and because our commercial interests are involved in the settlement of the recent differences. It is also true that the influence of the United States will be used, as it was used last June when the Moroccan troubles began, for the promotion of the world's peace, and this also, is no departure either from the policy of the farewell address or from the Monroe Doctrine. Under the Hague Convention, to which the United States was a signatory, each nation has the right to offer its good offices for the settlement of differences between other signatory nations. President Roosevelt exercised this right last summer to bring about a conclusion of the war between Russia and Japan. His brilliant success commanded the admiration and gratitude not only of his own countrymen but of the world. It would be a melancholy thing indeed if the moral influence of the United States could not be exerted for such a purpose. It is in conformity to this same policy that the influence of the United States has been used hitherto in the Moroccan question, and will be used again at Algiers to prevent war, if there is any danger of it, between two great powers, both friends of the United States, the conflict between whom would be a most dire misfortune which would roll down upon the aggressor the reproach of civilized mankind.

This is the whole case so far as the United States at Algiers is concerned. The appearance there of the American delegates is in strict conformity with the attitude which the United States

(Continued on page 332.)

MY BAGGAGE-CAMEL

By GILBERT WATSON

PLEASANTLY preeminent among trivial memories connected with the desert stands the recollection of my baggage-camel. Never will I forget her. She was the first camel I could truthfully call my own. The sum paid for the privilege of her society was exceedingly small—I doubt if she were even aware of it—yet when it disappeared into the capot of her master's burmes I verily with a new born importance. The insignificant handful of silver purchased for me the pleasure of possession and the exclusive service of four unwearied legs.

From the first moment I fell a willing victim to her fascinations. Wherein lay the secret of her charm I am unable to state, for although she courted interest, yet she defied analysis. Her power of attention, her deep, ill-dissimulated, her reserve, her pride, her modest demureness, her virginal strange air—all contributed to produce this effect.

Yet her mental attitude made even more directly for dominant charm than did her physical qualities. In a word, she understood men. She knew that to retain their interest a lady must ever practice a delicate shrewdness, and that satirist lurked in the completeness of comprehension.

I never inquired her age. Truth to tell, I never wished to do so. To have known her to be six, or sixteen, or sixty would have dispelled an illusion. And yet, there were moments when some unbidden prejudice—as, for instance, her insouciance of smoking—led me to believe that she had seen life in the dawn of the criminal.

Nature had not treated her well. It had withheld from her the joys of motherhood. No little son or daughter trusted beside her, rejoicing her heart with imitations of grown up staidness. Yet, with her, love of babies was almost an infatuation. When some infantile camel strayed in her direction she invariably made clumsy overtures of affection. Her dark, unfathomable eyes, usually so repellent, would rest upon the little one with unusual softness, and bending her head she would lick the soft fur of its neck with a gentle tongue. When interrupted by the approach of the real mother she would feign indifference, but no one who had seen her tenderness could be deceived or could fail to sympathize with the lonely heart seeking in vain for something to love.

Balked in the outpourings of natural affection, she assumed a moroseness which I felt was foreign to her nature; the sneer upon her upper lip and the supercilious pose of her head being but sand cast in the eyes of the world. Nor could the stores of her affection be entirely concealed. Like every mother maidenly she lavished her devotion upon an object quite unworthy of the honor. No lap-dog or cat or even parrot being available, she unwisely chose the thing she knew best—the desert. The pathos of it! The one sole the empty, childless heart, and on the other the great inhuman desert. The one professed her all, naïvely, ungrudgingly, almost unreasonably—the other accepted it with an indifferent yet glacial indifference, as if it were a

thing too insignificant to merit attention. Yet she loved it. She loved its immensities, its profound sunlight, its dense noons, its luminous nights. She loved to be for hours upon its warm breast; to feel the gyre of its sand beneath her feet; to look up in the night-watches and see its stars; to wake in the morning and anticipate its sun. I often wondered if in her dim, inarticulate way she were conscious of the similitude that linked them together—both were desolate, both were barren. And so the years passed; and day in, day out, she stalked through the sunlight, a lonely and disappointed old maid.

It was perhaps but a link in the chain of irony that the outward should unwearily give the lie to the inward—that she should possess the dignity of a grand duchess and masquerade in the costume of a scarecrow. The fact is indisputable. She had the disreputable appearance of a camel covered with the cast-off garments of others. A draggled bon from one, a scrap of petticoat from another, a suspender and a suspicion of a stocking from a third. It was sorely decent. And yet, such, triumph of innocence!—she stood before you as unabashed as though she were clad in all the furs of Africa. Her well-bred disregard of the obvious was inimitable. I admired this trait in her immensely. No woman of fashion but would have envied her.

A few remarks upon her personal appearance may not be out of place. Her tail attracted but little attention. She carried it with excessive modesty, neither flaunting it in the face of male camels, nor yet—by allowing it to hang motionless—leading them to suppose that its presence was necessary to her self-respect. Such was her marvellous discretion that the superficial observer was almost tempted to believe that she was unconscious of its existence—in fact, that she had made up her mind to put it behind her forever.

Old maids divide themselves naturally in either of two classes—the first, plump as peaches; the second, anatomical as trees. My baggage-camel belonged to the latter category. She was as lean as her Arab master, a thing of mere whistling and whiplash. She was but a few square yards of second-hand skin stretched over a framework of bones. When beaten she gave forth a muffled roll-call that sounded pitiable in the silence of the desert. You could trace her skeleton with your forefinger as unerringly as though she had already suffered amputation. Perhaps, more than any other trait, that was what condemned her to single-mindedness. Camels dislike skeletons—of camels, be it understood for I have reason to believe that the sight of a human skeleton is peculiarly comforting to them. From it they evolve the system of camel philosophy that sustains them in the hour of forced marches, and finds expression in such thoughts as—“All men are bones,” and—“While there is death, there is hope.” But a camel skeleton, more essentially a living one, awakens aversion. A collection of animated feather bones, to borrow Indianism a name, if my disport itself, appears to no prompting of sex; it leaves them cold, and they unobtrusively remain it to the proverbial enigma. Metaphorically speaking, no camel posed an unappreciated existence in the darkness of a camel cupboard.

But to notice her face was to forget her body. There was that in her expression that took you back to times pre-

Her intolerance of smoking led her to habits that she had no life as the dawn of the criminal.

historic—that set you to wondering—that almost made you afraid. As you looked into her eyes their strange supernatural beauty held you speechless, so full were they of inexpressible thoughts. Hostility brooded there, pride also, and more than all else a depth of liquid melancholy that touched ground only on the dark rocks of sorrow. I may be thought to exaggerate, but I pledge my word that the recollection of those unhappy eyes haunts me even now.

Our first and last step towards intimacy took place upon the fourth night after we left Biskra. How well I recall that camp in the Algerian Sahara; my little tent of felt goat-skins pitched as usual where darkness found us, the fire of camel-dung sending its thin perpendicular smoke into the air, the picturesque group flamed by the camels and my two retainers, waiting in attitudes of impatient patience for the approach of sleep, and on every side the great, wide, encompassing mystery of the desert.

Stretched upon my little framework of a bed I had fallen asleep. How long I slept I know not. But suddenly I was recalled to consciousness by a current of warm air fanning my face. I roused myself with a start. The tent was plunged in a sort of moving blackness, the opening through which I was accustomed to see the stars being a blur of shifting masses. The current of hot wind continued to fan me, but feebly, and as though the source from which it came were swaying to and fro immediately above my face. With every breath, the hair raised itself upon my head, and for a moment I lay motionless in a state of horrible anticipation. Tales of Arabian Nights rushed to my mind—of Djinn commissioned to remove gentlemen from their innocent beds at midnight and transport them at immense speed over starlit continents to the chambers of expectant ladies. Fear fell upon me. Was this such a Djinn? But I alarmed myself needlessly, for the intruder, shifting ground, revealed three slender legs curled by moonlight. The stump of a fourth made matters still plainer. The riddle was solved; it was the baggage-camel. The poor lady, prevented by her hobble from keeping herself warm with exercise, had sought the shelter of my tent. The situation, however, was sufficiently disconcerting—say, more, it was dangerous. My visitor was half within my little dwelling. The post-kins creaked ominously. Another step and my tent would be but a palquin devastating her hump. What was to be done? Was it possible to frighten her? I could but try.

"Humph!" exclaimed the baggage-camel; and she strove to induce that portion of her anatomy to follow the example of her neck. The tent rocked dangerously.

Many and vain were the devices I had recourse to. I called aloud, awakening no response from my sleeping guide; I threatened my visitor with boots, but had not the heart to throw them. At last I bethought me of the whistling noise with which her master was in the habit of inducing her to lie down. It was a brilliant idea and I put it into immediate execution. Sitting up in bed I whistled in desperation. I whistled like a bullfinch—I whistled like a very nightingale. The camel was evidently much impressed. She at once ceased her struggles with my tent and lent a wondering ear to my music. She had the appearance of meditating. The sounds doubtless awoke familiar trains of thought.

Her face of beads was stamped on infatuation

Murmurs of former prostrations preceded by just such unaccountable noises glimmered through her mind. It was evidently the hour for lying. Thus it had happened many times before—but never at midnight—never in a tent. Her attitude encouraged me. I continued to whistle with ever-greater enthusiasm. For a while the camel stood immovable as a statue, a lively interrogation in every limb; then, very slowly and as if under compulsion, she sank to her knees, drooped her long neck, and finally lay prone in the dust.

To say that I was pleased gives but a poor impression of my state of mind. I was jubilant. It was not so much the saving of my tent that delighted me as the fact that she, a baggage-camel of much experience, had actually mistaken me for an Arab.

It was very peaceful. She lay beside me without moving, her head within, her body without the tent. Her supercilious nose touched the foot of my camp-bed—her hump shone pleasantly in the moonlight. The novelty of the experience delighted me. Never before had I slept with a baggage-camel. Cheerful thoughts animated my mind. I was glad that she had come to me for shelter—glad, too, that she had not carried away the shelter with her. The better to see her I lit a watch and guided in her direction with the utmost friendliness. She, however, was to outward appearances actuated by no such amiable thoughts. Her expression was one of austere and uncompromising superiority. A cold sneer curled her upper lip. Her mischievous eyes said plainly: "I accept the shelter of your tent, but be it distinctly understood that I will permit of no further familiarity between us—Bismillah! I have spoken." But I was not deceived. She had sought me out. She could not really dislike me. I even go to the length of believing that somewhere in her cold camel-heart she nourished a smothered affection for me—an affection that she considered as unbecomingly, and which induced her to rush into opposite extremes. With my eyes fixed on her companionably hump I drifted into sleep.

But the next day there was a sad awakening. The camel had gone when I opened my eyes, and the little black ante ran to and fro over the dust of her bed. This I expected, but I did not expect when I rejoined her later to be treated with coldness. By the prophet, she all but ignored me! She even turned an indifferent tail in my direction! Her one aim and object appeared to consist in keeping our friendship a secret from the world.

Still I often wondered, and she really forgotten our night in the tent?—her one lapse from aloofness?—her one kindly indication? It appeared so. For once, when pressing on past favors, I laid an affectionate hand upon her, she shuddered as though I were fly alighting upon a worm. I was grievously disappointed. I had hoped for something far otherwise. But it was not to be: in the future we met as mere acquaintances—almost as strangers.

She had mistaken me for an Arab

Three Labor Leaders who are now prominent in English political life

The Labor Party in England

By Sydney Brooks

Lesson, January 1920.

WHAT we witnessed in the election just past, according to Mr. Keir Hardie, the well-known English Labor leader, "is the beginning of a revolution that will remodel political parties and disturb the foundations of political faiths. The struggle for supremacy between the disaffected toiling millions and their lords and masters was bound to come, and it is here, and its rate of progress will depend to a large extent on the spirit in which the Labor party performs its work in the House of Commons. The political conditions of the moment are favorable to its advancement. Both the great historic parties are broken and distraught by discordant elements in their own ranks, a fact which gives the new party an opening, of which, I venture to predict, it will make the most."

The most remarkable thing about the election was, that its predominant issue was protection versus free trade—a question that no one in England for at least a generation has thought it conceivable that he should be called to pronounce upon. But next to that, its most remarkable feature was the number of Labor candidates taking part in it. There were between eighty and ninety of them. Nobody expected that all or half of them would be returned; but those who have survived the ordeal of the polls are destined, I believe, to be the nucleus of what may develop into the mightiest of all English political organizations. They will be an absolutely independent party, unswayed, like the Irish Nationalists, by a single collective mind, forming temporary alliances with, but never merging themselves in, either the Liberals or the Conservatives, preserving both parties in turn, and guided both in policy and tactics by the sole objective of winning from Parliament the measures inscribed on the Labor programme. The old Nationalist game of complete abstinence, tempered by occasional cooperation for particular purposes, is to be played this time by an English party not inferior to the Nationalists either in capacity, determination, or resources.

Almost for the first time we are faced by the fact that the English working-man, with seven-tenths of the voting power in his hands, is becoming conscious of his opportunities, and is resolute to use them for his own ends. What has hitherto hindered the growth of that consciousness has been, above everything else, the social instinct. As a rule, the English laboring classes have preferred to be represented in Parliament by their social superiors. Mr. Crooks, the Labor member for Woolwich, recognized this quite frankly. "In spite," he said, "of the existence of what I believe is an earnest desire for labor legislation, Labor candidates must be prepared to live down the strange prejudice workmen have against their own class. In seeking election the ordinary candidate can come straight from his university with an other qualification than his educational career, his money, or his family influence, with some prospect of success. . . . On the other hand, what is good for the university goes is not considered good enough for the Labor leader. Notation or other the workman candidate is expected to have at least a record of fifteen years' experience in practical public work of a local character as a necessary apprenticeship for the important work of Parliament. Effective as this will prove in securing efficiency in the Labor party, it necessarily limits the area of selection for the next few years, during which period the education of the people must form a prominent part in the political training of the candidate."

The Independent Labor party was born in 1903. One of its founders described its birth as "the natural result of a continual revolt among disenchanted of electors tired and disgusted by the eternal see-saw of the professional politicians. They rose with indignation from questions of total impotence to the happiness of us all are tossed about from one another with the dexterity of a juggler." Several big strikes, such as the dock strike of 1888,

and later on the coal strike which Lord Rosebery adjusted, helped to swell the disgust with the inactivity of party politics. A strong desire made itself felt for the creation of a new and independent party whose primary object should be the forcing on of social reforms. That desire was realized in 1903, and an Independent Labor party, infinitely to the dismay of official Liberalism, came into being. At the general election of 1905 it ran twenty-eight candidates of its own, all of whom were defeated. I well remember that when the defeat of the leader and prime mover in the new party was announced, the Liberal papers and the Liberal clubs affected to regard it as the equivalent of a Liberal victory. In 1906, the Khaki election, the Independent Labor party showed a largely increased following, and in one case succeeded in winning a seat from a Liberal Imperialist. But it did not become a really formidable organization until it had attracted the support of the English trades-unions. The trades-unions had often put forward and elected their own candidates to Parliament, but these candidates had stood not as independents, but as Liberals or Conservatives as the case might be. The trades-unions were about equally divided in their allegiance between the old parties, and the idea of electing an independent and purely Labor party had barely more than occurred to them. In 1907, however, came the famous decision of the House of Lords declaring that trades-unions might be sued and that picketing was illegal. To upset that decision it soon became evident that a party directly representing labor and holding equally aloof from either Liberals or Conservatives would be by far the most efficient, if not the only, instrument. The trades-unions consequently found themselves in unexpected sympathy with the Independent Labor party. An amalgamation of forces took place, and out of it there arose the Labor Representation Committee.

The Labor Representation Committee, in its own words, is "a federation of trades-unions, trades-councils, the Independent Labor party, and the Fabian Society. Cooperative societies are also eligible for membership." Its object is "to secure, by united action, the election to Parliament of candidates promoted, in the first instance, by an affiliated society or societies in the constituency, who undertake to form or join a distinct group in Parliament, with its own whip and its own policy on labor questions, to abstain strictly from identifying themselves with, or promoting the interests of, any section of the Liberal or Conservative party, and not to oppose any other candidate recognized by this committee." There are in Great Britain some 2,200,000 enrolled trades-unions; of these about 900,000 are already affiliated to the Labor Representation Committee. The various cooperative societies have also a membership of over 2,600,000, and there, too, are beginning to join the movement, and must eventually abandon their present policy of trying to elect candidates of their own. Of the Independent Labor party there are 16,000 members, and of the Fabian Society about 1000. Altogether not far short of a million voters are affiliated to the Labor Representation Committee. Each society forming the organization pays to the committee for working expenses ten shillings a year for each thousand members, and a shilling a year is collected from every member and devoted to a Labor Representation Fund. The committee has thus an annual income of over £20,000 for working expenses, and of about £250,000 for the election and maintenance of members of Parliament. It pays part of the election expenses of all candidates who stand under its auspices, and gives them £1000 a year while they are in Parliament.

A party that can dispose of such resources as these, as Mr. Keir Hardie rightly maintains, very much more solidly based than either the Church movement of sixty years ago, or the great Radical movement of the Reform bill of 1832. Indeed, in it is so weighty that it no longer troubles to agitate for the state payment of members of Parliament. This demand has left all

(Continued on page 51.)

Why We Need a Bigger Navy

By Walter Scott Meriwether

To supplement the comparisons of the navies of the great powers of the world, which are given in figures in the article below, the reader is referred to the double-page drawing in this number, which shows graphically the relative sizes of the navies based upon their tonnage.

It did not require Kaiser Wilhelm's recent dictum to prove that the best insurance against war is the possession of a powerful navy, but since that utterance of his has attracted so much attention, it may be interesting to show the amount of such insurance which each nation now carries.

According to a recent edition by Representative George E. Foss, chairman of the House Naval Committee, our naval appropriation act for the current year carried \$100,000,000, and yet on the basis of per capita this is a little more than \$1 for each man, woman, and child in the country. It is only about 4 per cent. of our foreign trade during the past year, which amounted to about \$2,500,000,000. It is 14 per cent. of our annual governmental expenditures, a low percentage that was expended upon the navy one hundred years ago. It is only one-tenth of 1 per cent. of our national wealth. It is about one-third of what this country annually expends on premiums on fire-insurance, yet one hostile ship of war swooping to New York's harbor approaches could start a work of destruction that would bankrupt every insurance company here and abroad, while the amount of damage she could cause would be more than sufficient to maintain for more than one hundred years a navy three as big as the one we now possess.

There will be many to assert that this is impossible—many to contend that no nation has fleets powerful enough to force an entrance past the batteries which guard New York. Thanks to the people which the Spanish-American war brought to the seaboard citizen and which was reflected in the halls of legislation, that is doubtless true, but what should be if the coalition of powers against this republic? That is not inconceivable and, according to one well-known English observer, not even unlikely.

"It is only the knowledge that the sea barrier is impenetrable," writes Lieutenant Carleton Beals, of the Royal Navy, "which will effectively prevent the expanding Teutonic, Slavonic, and Latin races of Europe from contemplating aggression on the American continent. If unable to do so singly, nothing but sea power will prevent them from trying to effect their purpose in combination."

But protestants will say that there is nowhere viable any concert against this republic, and that in all likelihood the only other wars in which this country is ever to engage again will be the savage ones of peace. Yet it is only a few years ago since these pacifists were ringing their little parish bells over the demise of war, and at the same time—this being in 1897—our officials were high in the administration of the affairs of this country were strenuously assuring the earnest advocates of stronger armaments that there would never be another war. Since then the war drums have thrashed three over, and so anent was the hue of those alas of omission that part of Congress which, at the opening of the Spanish-American war, had left the country in such an appalling state of defencelessness, that there were many in the navy to earnestly rejoice over the panic of seaboard citizens, and to a unit these and many more have since adhered to the faith that if the fifty millions harshly appropriated by Congress directly after the Maine disaster had been previously appropriated for the upbuilding of the navy there would never have been a Spanish-American war, and along the coast line there would never have been imagined such "heavy firings" as disturbed the peace of the coastwise folk during the early days of that conflict.

But there are now signs of an awakening to the changed requirements of the country, and the Congress which has always been without a policy in regard to naval construction, saving that one of general antipathy to the navy and its needs, has recently granted considerable to the much-neglected service, but always in a grudging way, contentedly paying appropriations to pressing needs, and further nullifying the good intentions of those who would have a navy which, unit for unit, would be superior to any other; by setting a limitation on the size of vessels to be built, and, as in the case of the recently authorized Mississippi and Idaho, setting it so low below the standard that other nations are constructing that both of these battleships may be classed as waste products, ships that may be overtaken by obsolescence almost before they are commissioned.

It is to be hoped that the lessons from the war in the East, which are now conceded to read that the bigger ship, with its greater protection, superior speed, and more powerful battery, for outclassing in all three of these important factors the smaller, weaker-protected, and less-armed antagonist, will be taken to heart by those hardy tars and eminent naval constructors who form the Naval committees of the Upper and Lower House. For one needs only to glance at the vast contracts which we have taken as a world power to realize that our naval responsibilities of the future are second only to those of Great Britain. Since our recent accession to this high place in the world's affairs we have assumed, and have had thrust upon us, some immense liabilities in New and Old World policies. Specifically in the Far East do the most thoughtful now find a situation which leads them to unhesitatingly champion the rapid upbuilding of a strong navy. There, also, is the Panama Canal and the commercial expansion which will inevitably follow the opening of the isthmus which cuts the way; and not the least among our responsibilities is the self-imposed one of the Monroe Doctrine, a formula which does not rest on any law of nations, but on our ability to maintain it. In

the opinion of many observers our ability to enforce this doctrine and our chances of maintaining peace with the rest of the world depend solely on our navy programme.

"How many battle-ships," a distinguished American naval authority was recently asked, "should we have to be insured against aggression?"

"Seventy," he replied. "If we are to be prepared to defend our own against all comers, we must have sixteen battle-ships along the Atlantic coast, twenty-four for the Gulf of Mexico and the Caribbean Sea, sixteen on the Pacific coast, and sixteen in Philippine waters. We may never get them, but if we are to put up the front of a world power, the time may come when we will need them."

Build and building this country now has only twelve battleships built and thirteen others in course of construction. This country's present showing of total naval strength places it fourth in the list of sea powers, and it would now be fifth but for Russia's enforced recession from third place. According to a table prepared by Captain Seaton Schroeder, Chief Intelligence Officer of the Navy, the present relative order of war-ship tonnage of the eight first-class powers is as follows:

Navies	Tonnage
Great Britain	1,337,692
France	614,645
Germany	415,824
United States	390,428
Italy	361,411
Japan	353,401
Russia	225,760
Austria	112,336

But it is gratifying to learn from the same authority that when present building programmes have been completed this country will have moved to third place, and close to that second place where political economists believe she rightfully belongs. This would be the relative order were vessels now building completed:

Navies	Tonnage
Great Britain	1,499,138
France	798,365
United States	688,973
Germany	589,100
Russia	537,628
Holy	325,222
Japan	304,801
Austria	151,626

By battle-ships of the first class the ranking is:

Navies	Number	Tonnage
Great Britain	53	714,900
France	19	212,580
Germany	16	176,572
Italy	13	162,314
United States	12	137,329
Russia	7	82,849
Japan	5	70,516

Next in effectiveness to the battle-ship is ranked the armored cruiser. Of this type each country has now the following number:

Navies	Number	Tonnage
Great Britain	24	248,800
France	10	154,452
Japan	8	72,738
United States	6	72,235
Italy	6	39,145
Germany	4	37,040
Russia	3	30,222
Austria	2	11,320

Excluding vessels over twenty years old, those not actually begun, although authorized, gunboats, and other vessels of less than 1000 tons, transports, colliers, repair-ships, and torpedo craft of less than 50 tons, the present war-ship tonnage of the various powers is as follows:

Navies	Built	Building	Total
Great Britain	1,337,692	358,153	1,695,845
France	614,645	181,320	795,965
Germany	415,824	173,260	589,100
United States	390,428	302,545	688,973
Italy	361,411	46,810	408,221
Japan	353,401	31,490	384,891
Russia	225,760	110,818	336,578
Austria	112,336	39,290	151,626

Throughout the progress of the war in the East it was interesting to note how the eyes of the world were cast on Great Britain, and how eager were all maritime nations to gain a hint as to what her future building programme would be. As the Japanese were her ally, it was clear that she would be first to have the benefit of the lessons which that conflict taught. It is now highly instructive to learn that the British Admiralty has just planned the biggest of battle-ship, one designed to carry

COMPARISON OF THE STRENGTH OF THE

The men-of-war in the drawing above are shown in dimensions relative to the tonnage of the vessels of the nation whose flag it flies. The drawing represents all the vessels of all classes in the navy of the nation whose flag it flies. The many, United States, Italy, Japan, Russia, and Austria. The reader is referred to the accompanying text for further details.

From left to right: ship in center, Italy; ship on right, United States; ship on left, Germany.

THE EIGHT GREAT NAVAL POWERS OF THE WORLD

They represent. The type chosen for the comparison is the first-class battle-ship, but each one is a war-ship in name of the eight first-class powers is: Great Britain, France, Germany, Italy, Japan, United States, Russia, and Austria-Hungary. Comprehensive article on the naval strength of the powers of the world on page 337 of this issue.

Buchanan's Wife

By Justus Miles Forman

CHAPTER XIV

THE DOOR OF THE OLD

ODOR AGAIN

SHE saw no more of Buchanan that day, for she remained in-doors, locked into her own chamber, all the afternoon and evening, taking no food, repulsing the anxious, kindly maid who came from hour to hour to knock at the door.

And the God to whom she prayed so desperately held aloof—would send her no sign, show her no way.

"He'll have none of me!" she said to herself at nightfall. "He's done with me. He will not hear." Then she shut her teeth and prayed again—almost with threats.

"You've got to help!" she said, fiercely. "You've got to let me save Harry Faring. If you don't I shall know that all the talk about 'mercy' and 'forgiveness' and 'long-suffering' is lies, lies, lies. Harry Faring has done nothing to you. You shall punish him for what I've done!"

At some late hour of the night she fell into an uneasy sleep, crouching, dressed, beside a window, and, after evil dreams, awakened in the gray of the morning white, hollow-eyed, unrefreshed.

And God still held aloof.

With her breakfast came word from the old Scots gardener that he wished to speak to her. She had him brought in, and the man's dark face was crimson with wrath.

"Ye mean rid me o' yon doberlein milt weill, mon?" he burst forth. "I mean thae him an' ather day. The Lord may ha' made the pair loon witless, an' for that I hae pity, but the Lord or sunnast else has made him murtherous as well. He's jist past bearin'. I mean, ha' in among yae poovie. Ye'll hae tae cast him out the gate."

"I will come out presently," she said. "Do nothing until I come. Only—we must not be hard upon this—poor man. He is not himself." And she gave a little, bitter, very smile at the phrase. He was not himself indeed!

When she went into the garden later neither the old Scotsman nor the wreck of Herbert Buchanan was in sight. She walked down past the roses and past the still pool into the walled and hedged enclosure where old-fashioned flowers grew in an orderly tangle. Here she came upon a great watering-pot set heedlessly down, as in malice, upon a bed of spike pinks. The odorous little blossoms were crushed flat under its heavy bulk. She gave a cry of angry protest and dragged the thing out into the gravel path.

The Russian hound came whining and larking joyfully to meet her. The beast was as evidently hurt in feelings, if not in body, as a human being could have been. Every attitude bespoke indignation. Then on the farther height—the hillock where Phryne looked over garden and sea—came one moved, and Beatrice, the dog at her heels, went up the mounting path to the little open pavilion.

Herbert Buchanan sat there, staring out across the rugged moor where blue waves curled crisp under the morning sun. He rose politely when he saw her approaching, and pulled off his battered Panama hat. The old maid beamed ever from him—deprecating, apologetic, asking pardon, as it were, for his coming of the earth. Surely there could be no malice in the man, nothing but a foolish, witless good-nature.

"The gardener," said Beatrice, "seems a bit disturbed. Did you not get on well together? Of course I understand that the work is new to you."

"Why, yes, ma'am!" said Herbert Buchanan. "Yes, ma'am, we get on fine. He seems to be a sort of a cross old man. He doesn't like it when I has to step on the flowers sometimes—but we gets on fine. Oh yes, ma'am! And that little hound that you gives me, all by myself, that's fine too. I don't know when

I sleeps better than I sleeps these last night. I doesn't cough so much when I sleeps in a proper bed. It ain't so damp like."

The Russian hound thrust forward a suspicious nose and the man put out one of his hands towards it, but the dog at once drew back, growling, and retreated behind his mistress's skirts.

"Why, what is the matter?" she cried. "Why should Sergei act like that? Yesterday he seemed so—friendly towards you." The dog continued to growl, and she soothed it with one hand and spoke to it.

"Have you been hurting the dog?" she demanded, sharply. "Have you done anything to him?"

Buchanan broke into a little tittering laugh.

"I haven't done nothing to him, ma'am," he said. "I only kicked at him a bit to see him growl. He grows so ridiculous! And I put a bit of pepper on his nose, when I has my breakfast this morning, to see if he'll sneeze. I haven't hurt him none."

"Beatrice shut her lips very tight. Was this the only thing left of that Herbert Buchanan who used to be—this instinct to harm things, to torture, to inflict hurt?"

She sat down upon one of the curving benches which were there and fell into a brooding silence.

What to do?

"God has turned from me," she said. "He has done with me. He will not help. I must work alone. What shall I do?" Blindly she clung to her early decision. The man must be kept under her eye. He must not be lost. What was to be done further she did not know. No plan offered itself, and her mind was an aching darkness. She had thought once of an institution, an asylum where Buchanan might be cared for and guarded, but there was danger in that—the previous examination by keen medical men, possible discovery, and the consequent ruin of all things. She abandoned that scheme. It was not safe. And yet no other presented itself.

Messable something within her, morbid, unsteady, exalted in the face of peril, stirred her always to delving into that wrecked and shattered mind. How much might he be forced into remembering? What were the possibilities of recollection coming again to him, full, unimpaired? It was the same instinct which dragged a murderer back in the wake of his crime—dared him to court suspicion and possible discovery.

She turned her slow gaze to the man beside her, and he looked back, blinking amiably, the foolish smile spreading across his worried face.

"I think I shall walk across the hills," she said, "to a house just out of sight yonder, a house in which I need to live. It is not far—two miles, possibly. Would you care to come with me?"

"Why, yes, ma'am," said Herbert Buchanan. "Yes, ma'am, I'd like to do that. I don't like being still in one place for very long. It's foolish. There's so many places to go to—and all different. Yes, ma'am, I'd like very much for you to go."

"Come, then!" she said. "We will go at once."

They went back down the little hill and through the gardens, for Beatrice had to step in at the house to get a hat. At the garden porch she came upon the doctor from the neighboring village—a bustling, cheery man, small and round and pink-checked. He had called to dress an injured arm for one of the maids. He paused a moment to greet Mrs. Faring and say something polite about her garden. Then he hurried out to his waiting dogcart.

Beatrice let her go a few yards and called him back. "The dog is a moron," she said. "He's a moron. The man turned back with civility, pleased to be spoken to, for he stood much in awe of Mrs. Faring. Privately, he considered her the most beautiful woman in existence, and in his humble, harmless

fashion worshipped her as one might worship a lovely and very regal queen—from a great distance.

"Anything farther that I can—that I can do, madam?" he said, going a little pinker and gazing up at her from the path below. It was not what he had meant to say. He was always thinking afterwards of well-turned phrases which he might have used to her—phrases fit for her splendor—but here to face with her he was ever a stammering imbecile.

"You—you are perhaps a little palled down by the heat?" he ventured when she did not at once go on, but only stood frowning out over his head. "Not quite yourself—perhaps?"

"No," said Mrs. Faring. "I am—quite fit, thank you. It is about some one else that I wished to ask you. A—friend has sent a man to me, asking me to give him work. I am troubled about him because he has a bad cough—very bad, I think. Perhaps he—ought to have medical attention. Could you examine him for me—as a very great favor? I know you are very busy," she said, smiling down upon him. (Busy? He would have let the entire countryside die of typhoid fever for that smile!)

"But I am troubled about this poor man."

"Yes, yes!" said the little doctor. "Dear me, yes! To be sure. Busy? Not at all! I can never too busy, dear lady, to—oh, that is to say—Where shall I find this good man? Ah yes! Yes! Here we are!" He caught sight of Herbert Buchanan standing near, enveloped, as always, in his foolish beaming smile, and made for him with a cheery greeting.

The tramp dodged suddenly, and held up one arm, bent at the elbow.

"I haven't done nothing, sir!" he said. "Honest, I haven't. I only wanted a few cents to buy—I mean I was just going for a walk with that beautiful lady up there. She'll tell you I haven't done nothing."

"It is quite all right!" said Beatrix from the porch. "This is a doctor—a very good gentleman who is going to try to cure your cough. Go with him, please, and answer all he asks you. I will wait for you here."

The tramp gave one half-frightened look about him and went, hanging uneasily back.

In five minutes they returned, and the little doctor shook a grave head.

"It is consumption, of course!" asked Beatrix Faring.

"Oh yes," he said, "and bad at that. Very bad! He's living with about half a lung, and the general health is poor—severe; improper food, I take it, and exposure and all. The poor fellow cannot last long. He is badly broken."

"Perhaps," she said, and in her tone Cripps the worshipped heard only pity and kindness of heart—"perhaps if he were—sent to a dryer—climate—Arizona—the Adirondacks!" She held her breath.

"Dear lady," said Cripps, with emotion, "you have—may I venture to say it—a heart of gold—gold! But this poor old fellow is beyond what you would do for him—what any one could do for him. Comfort—good food—a decent bed—that's all you can do now. Let him go down as easily as possible. He can't climb. A strange type—bewildered mind—clouded memory! Doesn't remember whether the disease is hereditary in his family or not. Doesn't remember any family at all. Almost deranged. I should say."

"Yes," said the divinity in a sort of whisper, and for an instant an odd, bleak look shadowed her face.

"Perhaps—" she said, half-whispering still.

"Ah, what a heart! What a soul! What sympathy!" thought the prostrate Cripps.

"Perhaps," she said, "one ought to help him there also. Perhaps as operation—tripping—something to restore the poor wretch's memory. It may be due to a physical ailment. He could bear an operation? Yes?" Again she held her breath.

Cripps was overcome. This was going almost too far—was well-nigh Quixotic—but what a heart! He shook his head.

"Out of the question, dear lady!" he exclaimed. "Out of the question! In the first place, there is no reason for believing that any operation could restore this man's memory. Doubtless the loss of it is merely due to failing powers; and, in the second place, he could not endure any sort of an operation at all—ever a minor one. He is at a low ebb—a low ebb."

He smiled admiringly up into the still white lace above him.

"If this poor fellow is as fortunate as to recommend himself to your pity, dear lady," said he, "believe me you can do nothing more helpful for him than to smooth his downward journey. Again I say, he cannot climb."

Somehow the good little man must have made his embarrassed adieux and got himself away, but Beatrix did not know when he went. She walked to her surroundings only when Buchanan came sliding nearer and coughed to attract her attention.

"When was we going to take that walk, ma'am?" he asked.

"Walk!" said she. "Walk? Oh yes! to be sure! We are going to the Lodge. Yes, I am quite ready. Come along! We go this way."

They went, not by the highroad, but by a shorter, more direct route along slender lanes and paths, and, part of the distance, across an open meadow, and at last approached Buchanan's edge from the direction of the sea. The house was in charge of caretakers. Though excellent offers had been made to her, Beatrix had always refused to sell it. As for living in it, that was impossible. The place held too many bitter associations. The very sight of its walls made her shiver.

What she meant eventually to do with the estate she had never decided. There had been no will, and Herbert Buchanan had no kin. He was the very last of his family. For the present the house stood empty, and the invested fortune, in the hands of a trust company, earned its very respectable dividends, and increased after its kind, but the money went untouched.

"I will have none of it!" Beatrix said more than once to her lawyer. "Oh yes, I am a fool. If you like, but I could not touch it. It would harm me. Harry and I, between us, have much more than enough of our own."

Half-way between the greenhouse and the west wing of the Lodge, the Lodge's master, bent and winered and gray, halted, and passed on an unsteady hand across his eyes.

"It's very—queer!" he said in a sort of whisper. The foolish grin was gone.

"What is queer?" asked the woman, and watched his face.

"It's—it's the things I tell you about a whirling and a spinning in my head, ma'am," said he. He looked frightened and uneasy. "It's—I must have seen this place—something before," he said. "I don't know, it's very odd."

And once more as they slowly crossed the stretch of turf he said earnestly that it was very odd. And once he said that his head wasn't good to-day.

"I wish I was out on the road!" he said. "I like the road. I wish I was there, a shuffling along in the dust with Kansas, Kansas 's the finest pal a man ever had, ma'am—and very good to me."

At a door in the servants' quarters they rang up the caretaker's wife, a faithful old woman, brought with her husband and son from that Connecticut village where Beatrix

THE woman, watching, because aware that he imagined himself to be talking to some one across the great table

had spent the winter. The woman let them in, exclaiming with pleasure over her mistress and looking rather askance at her mistress's shabby companion.

"We should like a drink of water," said Bentrax, "and then I wish to go into the west chamber—Mr.—Buchanan's former study. You need not come. I have a key to the door of the passage. This man, my gardener, will go with me."

They drank up cool, fresh water the women brought them, and sat through darkened rooms, where the shrouded terrariums stood glasslike in the shadows, to the narrow passage which connected the detached chamber with the house. Heavily opened the door with her key, and they entered that high dim place, where the air reeked faintly of dead incense and smoke-stained fabrics and antiquity, where canted members primed from the gloom above and the old gulls sat awry, smiling, imperturbable, waiting with deathless patience for the venturists to pass and their cars to come in their train.

Sufficient light came slanting down from the small clerestory windows, where there were neither shutters nor blinds, and in its dim glow the great room stood as it had stood two years and more since. Nothing had been moved or altered in position. No hand had been there, even to sweep or clean, and a thin film of dust lay over the great Byzantine table in the middle of the chamber and over the things which were littered upon it.

The wreck of Herbert Buchanan moved slowly towards the centre of the room--towards the great table. He faltered as he went, one hand held out before him as if he were blind. And he muttered under his breath. The woman drew back into the shadows.

For a little while Buchanan stood before the table, with his head bent, quite motionless as a silent statue. He bent to his knees and dropped to the floor in the alcove, where he had used to sit through the many hours of lonely thought. His hand went out and played absently among the things on the table top—decorative and pipes and glasses and such. Presently, as the old memory came to the man, the hand dropped and fumbled under the cloth. There was a clicking of electric-switch buttons, but the power had long since been turned off from the house, and no lights sprang out flowerlike against those far shadows.

He seemed to feel that something was wrong, that something ought to happen, for the hand fumbled again among the clicking buttons, and he muttered unintelligibly to himself. Then, after a little, he shook his head and sank back in the deep chair, chin on breast, staring before him.

As on a certain other hot night it chanced that, as he was turned, he fured one of the aboriginal gods who sat against the wall—Indiaba, in gilded bronze, the shell gold gear in patterns from the worn surface; Indiaba seated upon a lotus cup, head bent downward a little, faintly smiling, sphinxlike, enigmatic, and it must have been that in this moment the clouds thinned a bit, varied for a space, and a ray of memory filtered through. The man stirred in his chair, and a sudden flush of anger swept across his white face.

"Oh, for God's sake, stop grinning there!" he said, aloud. It was the voice of Herbert Buchanan.

"I tell you," he said, thickly, with difficulty, as if that voice did not come easily to his tongue—"I tell you I can't—bear it—any longer. I want to be free—I want to—want to go—out and tramp the earth—breathe—air—I—am—afraid to nobody. My—nerves are drawn to—drawn to fiddle strings."

He snatched up a book from the table.

"For God's sake stop your dithered grinning!" he cried, and made as if he would hurl the book at that still, oblivious god, but the book dropped weakly from his hand and fell to the floor, fluttering its own leaves.

He began again to murmur, half under his breath. The voice was still Buchanan's, dropped to a weak, complaining, whining tone. Sometimes it quickened to a flare of anger, sometimes died away altogether. But presently the woman, watching from her shadows, tense, tight lipped, still became aware that he imagined himself to be talking to some one across the great table.

To whom? Who had sat with Buchanan on that night of mystery? Her mind flew to his words in the lane, what time she had driven verbally to reconstruct that scene. "Then he came in by the window." Who? Who? Had he not gone alone, then? Had some one taken him out into the night and into oblivion?

The man in the chair gave a sort of animallike cry of desperation. "Too cowardly to live!" he said, with great bitterness. "Too cowardly to die! What—what remedy can you offer for that, my—house-breaking friend?"

"Horse-breaking friend?" said the woman in the shadows.

Then he turned in his chair, half rising, with his hands on the table's edge, and his head craned forward over them.

"My God!" he cried in a whisper of ungraspable misfortune. "My God!" He dropped back again and sat staring before him. Then presently he rose to his feet and began to walk back and forth with his hands behind him. The woman drew back further into the gloom. Once she saw his face, and it was white and tortured. There was mind there, thought, intelligence. The vacant smile of the little gray tramp was gone. He wrung his hands, and his blue dress tightened and quivered.

At last he walked strongly once in twice and said something which was inaudible. He went across the room towards a tall Japanese cabinet which stood there and fumbled at it. He seemed at a loss and moved about uncertainly. Then he went again towards the centre table.

"Come!" he said. "Off with us now! Good God! must we wait here forever? I'm sick to be gone." He waited a moment

as if that other invisible presence were speaking, and his face flushed.

"Let 'em think what they like and do what they like!" he cried. And the woman gasped in her hiding place, for these were the very words she had heard him use in her dream.

"For sure," he said, sneering. "I shall be of interest to my friends—for the first time!" He moved quickly across towards the further side of the room, and the woman followed. He went to one of the windows and pulled at it with his hands. Then once more he faltered and seemed to be at a loss.

"It—it ought to be—open," he said, in a different voice. "You—left it open—didn't you? It ought to be open. How—"

He tugged at the fastenings again, muttering uselessly, but his hands dropped, and he turned about towards the woman who stood behind him. His face was almost contorted with anxiety.

"Let me!" said Beatrice. "Let me!" She wrenched open the bolt, and the two halves of the window swung inward, admitting a sudden, warm flood of daylight.

Ruchanov staggered backward a step with a quick, hoarse cry and caught his shaking hands up over his ears.

And in the same instant the cry was echoed from outside the window—a gasping cry followed by a name—"Buchanan! Buchanan!"

CHAPTER XV

李林果 胡小军 谷江涛 李林果 胡小军 李林果

INSTANTLY, without drawing back as she galled the back of the man's head, she thrust forward again over Heman's shoulder. A man stood in the turret facing the window in the little patch of shade which was cast by an angle of the building. He had covered his eyes with one hand and the other hand groped in the air. At his feet lay a short, strong implement of steel, not unlike a chisel. It would seem that he must have dropped this when the window above him was so suddenly thrown open.

The hand slipped from her before his eyes, and he looked upward, so that Beatrice saw his face. It was a face she did not know, a lean pale face, with a short growth of black beard which came high up on the cheek-bones. But what the woman saw first was the eyes. She thought that she had never before met eyes so pale blue and so curiously hard and unsmiling. They rested upon her for a long time, steady, unmoving, wholly without expression. Then Herbert Buchanan all at once gave a great sob and pushed back his chair, with a violent start. He scrambled out, dropping to the floor beside her, and caught the man who stood there by the arm, bounding, he cried, and cried out:

The man turned to him for an instant's quick, keen, searching look, and with one hand patted him on the side of the gray head as a mother might stroke a child just returned to her after an absence.

"All right, Johnny? All right, eh?" he said, and Buchanan laughed again, childishly, and shook the arm that he held between his two hands. Then he turned his face upwards towards the window.

"This is Kansas, ma'am!" he said, with great pride. It was the little, bent, foolish tramp again. The recreated spirit of Herbert Buchanan had fled with the inebriated of that fabled of summer daylight into the chamber of the old gods—the chamber of my-
—Kemp.

"This here is my pal, ma'am!" he said, "the finest pal a man ever had!" He turned to the man beside him with a swift-stammering narrative of the things the beautiful lady had done for him—the wonderful food, and the real bed in the little house that was all his own, and the garden, and the dog with the thin waist who snarled so remarkable when you kicked at him.

And the man whom he called "Kansas" seemed to pay him small attention after that first odd, womanish caress. His hard blue eyes, unsmiling, unwavering, without expression, never left the face of the woman in the window above. And the woman stared back nervously, with a vague cold fear beginning to grow about her heart.

What did this man know? Why had he called out: "Buchanan! Buchanan!" when his fellow tramp appeared unexpectedly before him? An odd sense of peril came to her, an odd presentiment of impending catastrophe, and she shivered in the warm summer air.

"Why are you—here?" she asked, presently. "What were you doing outside this window?" The hard blue eyes did not stir from hers.

"I was looking for a door, woman," he said, readily. "I rung and knocked at one door in the other part of the house yonder, but nobody answered, I thought maybe there was a door hereabouts."

"And *that?*" said she, pointing to the steel instrument which lay at his feet.

"That ain't mine, ma'am," he said, without emotion. "It don't belong to me. Some one else must have dropped it there."
"Who," said she again, "did you call out—a name?"
"In dream," when this window was opened and you saw your-

The man below continued to gaze at her, unsmiling. There was not the slightest trace of expression in either his face or his restless tone.

"They told me down the road a bit, ma'am," he said, "that a—gentleman named Buchanan lived here. I was a-going to ask him for work. When I saw the window open so quick I was startled like, and I called out, 'Mr. Buchanan!'" He paused a moment, and then still in his holed, carefree-sounding voice, asked:

"Beg pardon, ma'am! are you Mrs. Buchanan, ma'am?" She answered quite mechanically, taking no thought.

"I was Mrs. Buchanan," she said. "I am Mrs. Faring."

Then, for the first time, something flickered in the hard blue eyes—an odd, enigmatic look. The eyes dropped, and the man turned a little aside. He did not immediately speak again, but looked towards the gray tramp who stood braving foolishly near by. And he looked down at his hands, twisting and turning them slowly before him. He seemed to be reflecting.

"I was going to ask Mr. Buchanan for work," he said at last. He spoke as if half to himself.

"Mr. Buchanan is dead," said she.

The man raised his eyes again slowly, and the woman was conscious of a dull anger that they should so baffle her, that eyes should be so wholly without expression.

"Yes, ma'am," he said. "To be sure, ma'am."

"You couldn't find something for me to do, could you, ma'am?" he said. "I'd like to have a steady job. I'm tired of starving and sleeping out in the rain."

"I'm afraid I have nothing to offer you," she said, coldly. "The others—your—friend, doubtless without meaning any disloyalty, has told me something of your ordinary occupation. One would hesitate, I think, in the face of that, to take you in."

The man gave a swift side look towards his smiling companion, but he did not hesitate.

"Johnny don't always know quite what he's saying, ma'am," he said. "He don't always understand things. I wouldn't—steal anything. You could set a watch over me if you wanted in."

"I can offer you no work, I am afraid," said the woman. There was a note of very definite finality in her tone, but the hard blue eyes did not stir.

"I'm tired of starving and sleeping out in the rain," said the man again. He spoke quite unemotionally, but for some reason the still about Beatrice Faring's heart grew colder, and it seemed to her that a hard almost physical began to press at her throat. She tried to look away, but the still blue eyes held her fast.

"And Johnny, ma'am," said the man, softly, "Johnny he's tired of sleeping out too. He isn't very well, Johnny isn't. He's got a bad cough. If Johnny and me now could have a quiet place to live in and good food to eat and no more worrying to do, that would be very pleasant. Remarkably pleasant!"

"It is impossible!" said Beatrice Faring in a shaking whisper. "Impossible! I could not think of it."

"Of course," the man went on as if she had not spoken—"of course Johnny he isn't up to much for work, but I'm strong. I can do his work, while Johnny lies about in the sun and gets stronger again—as strong as he'll ever be. It would be very kind to take Johnny in and make him comfortable in his old age, wouldn't it, ma'am? Of course I'd have to come, too, because

Drawn by Will Geiss

I was stood on the turf before the window. It has not yet a short, strong emphasis of steel, not unlike a chair.

Johnny couldn't get on without me. He wouldn't stay, it's likely. He'd be restless."

"You see," he said, passively, "see and Johnny, we have been together a long time, ma'am, and we wouldn't like to be separated. Would we, Johnny?" He turned to the foolish, smiling figure of the tramp, and Buchanan gave a little laugh.

"Oh no, ma'am," said he. "I couldn't move here without Kansas. Kansas is the finest pal a man ever had—and wonderful good to me."

"A long time," said the man with the blue eyes—"ever since Johnny got—got his head hurt, and even before that, ma'am."

Beatrice Faring, standing rigid and still in her window, gave a low cry.

"Even before that," said the man, gently. "He's had a remarkable old life, Johnny has. Some day I'll tell you all about it, ma'am. You see, Johnny was once—"

"Yes, yes!" said Beatrice Faring. "Yes, I—Another day you shall tell me. I—do not know about the work—I will ask the—gardener." She pressed her hands over her heart that was so cold, and a hush came before her—a colored hush. Through it she saw only two hard blue eyes that stared and stared and saw through her far down into her quaking, shivering, terror-racked soul. It would have been a comfort to scream, but she had no voice.

After a long time she said, with difficulty:

"I will—see. You may come with me—if you like—to where I live. I will see about the work. Wait for me. I will—join you in a moment."

She swung the window shut with the best of her strength, and bolted it. And she turned with trembling, groping steps to make her way out of that chamber of horrors. An infinite weariness lay upon her.

"He knows—everything," she said to herself in the shadows.

"Everything! And I am lost."

"Oh, Harry! Harry!" she cried in despair, shaken with silent agony. "God has forgotten me, and I am all alone, and my sin has found me out. I shall lose you, Harry, after all!"

The grace of tears came to her and lay wet upon her face. But after a little she brushed them angrily away and drew a great breath.

"Not yet!" she said, defiantly, to the ancient gods who stared across at her, sitting alone. "I'm not lost yet!" she cried. "God has forgotten me, and I am all alone, but I shall fight until I can fight no longer. Oh, Harry, it may be that I can save us yet, for love's sake! It may be, Harry! It may be!"

Then, locking the door behind her, she went out to rejoin Herbert Buchanan and the man with the blue eyes.

To be continued.

Renewal

By Louise Morgan Sill

ON the highways of the world I hear them tramping,
Anglo-Saxon, Teuton, Malay, Celt, and Black,
All the horses of the earth their limbs are clamping,
Blithe and eager for the lead upon the track.

In the ruff all the sails are roughly leantling,
With a hugging for the freedom of the gale,

While the silent steeds of Nature are unobtruding,
Soon to battle with the reaper and the flail.

Love and laughter fill the orchards and the gardens,
Flowers are blossoming, bees are humming, birds are gay;
All the good and mighty birds of life are rising—
Hastened hither to the highway—and away!

Men of To-day

V.—The New United States Ambassador to Brazil

By Charles Johnston

I SHOULD like to make Mr. Griscom the text of a sermon on the great part played in forming a man's fortunes by a happy temper, a gentle nature, and perfectly good manners. Mr. Griscom also possesses high qualities of intelligence and will; that goes without saying. Yet at the critical points of his career what really pulled through was the quality of tact. Every one who has come into personal relations with our young American minister has felt the spell, from the wandering Apache to the Grand Turk from the obscure Japanese student to the senior Senator from New York. We shall find Mr. Griscom, in half a dozen situations critical for his future career, where perfect manners were indispensable, always rising gracefully to the height of the occasion.

Born at Riverton, New Jersey, thirty-four years ago, Lloyd Griscom went to the University of Pennsylvania, and studied law. In his class was a young Japanese, Iwasaki by name, a quiet, strong-going youth hidden among the mass of undergraduates, and, no doubt, hiding a good deal of loneliness and homesickness under a stolid mask. Lloyd Griscom was drawn to him, talked to him, made friends with him, and finally took him home to dinner. Better acquaintance grew into friendship, and the two became fast chums. After graduating,

Lloyd Griscom felt a yearning for Old World travel, and finally decided on such a "grand tour" as young Englishmen used to make a century back. He talked of it with his Japanese friend, and found that young Iwasaki had formed very similar plans, desiring to see the countries of Europe before returning to his island home. So they sailed together across the ocean, and, like Ulysses, saw many men and many cities. At last they went their several ways, promising to meet some day in Japan, but hardly believing their promise would ever be fulfilled. Mr. Griscom from time to time gave his friends letters of introduction to the Japanese student, but beyond this they dropped almost completely from each other's life.

While finishing his law course at Philadelphia, Lloyd Griscom had a bad attack of typhoid fever. Curiously enough, it changed the whole course of his after life. For the doctors declared that he must give up study for a year or two, and his father thought that the intervening time should not be wasted. So he tried, with success, to get his son the post of honorary attaché to the American embassy in London, and Lloyd Griscom accordingly sailed east with Mr. Hayard, then newly accredited to the court of St. James's. This was in 1882, and Lloyd Griscom was then just twenty-one.

Returning to this country a year later, Lloyd Griscom took up his law work, this time in New York. But his health still gave him trouble, and he was compelled to stop work and flee southward from one tedious winter. Richard Harding Davis had already written up the doings of our troopers in Mexico, and was projecting a new trip toward the isthmus and farther; and Lloyd Griscom and a young Englishman named Somerset agreed to join him. Thus was planned the expedition of the *Three Gringos* in Venezuela, of which Mr. Davis is the historian.

On his return to New York, Lloyd Griscom served for some months as deputy district attorney of this city. He was now twenty-five. But his health again broke down, and he was forced once more to leave New York. This trip took him through New Mexico, Colorado and Arizona, and he rode for thousands of miles through the deserts and across the hills, sleeping under canvas or beneath the stars, and watching the red dawn come up like thunder over the yellow cactus wastes. Once more the personal note; in his wanderings through the land of the Canyon he made so many friends and was such ardent admirers that the good citizens of Arizona offered to make him District Attorney of the Territory if he would agree to settle down among them.

Then came the spring of 1895 and the Spanish war. Griscom shared the feelings of Mr. Roosevelt, who is said to have declared that "when he thought of the rifles crackling at the front, he could

His Excellency Lloyd C. Griscom, United States Ambassador to Brazil

not stand it any longer," and he immediately volunteered for active service. He got a captain's commission, having had some training previously in the Philadelphia Naval Brigade, and was garrisoned on the staff of Major-General James F. Wade. He and a fellow officer were detailed on duty in a fever district, where it was necessary to find lodgings for the American troops. Young Griscom got through it safely, but his companion was stricken down by yellow fever, and, in spite of Griscom's assiduous nursing, died one night in his arms.

At the end of the war Lloyd Griscom was recommended for promotion, but decided to leave the army and go back to law. Even so late as this he had no thought of a diplomatic career. He had made several short trips to Europe, always greeting his friends at the Embassy in London, and had come into very friendly relations with Mr. Hay, then ambassador at the court of St. James's. Mr. Hay was now in Washington, at the Department of State. After the war, in the early summer of 1899, Lloyd Griscom was traveling on the Continent, when a cable overtook him from Mr. Hay, asking whether he would care to have the post of secretary to the American Legation at Constantinople. Mr. Griscom, after the fullest consideration, wired back that he would be very glad to accept, and in a few days he was on board the

Orient Express, speeding through Bulgaria and the Vale of Roses to the Golden Horn. Mr. Theodor S. Straus was at this time our minister to Turkey, and was testing to the full the bitter cup of Oriental diplomacy and double-dealing in live questions, and came up: the Armenian massacres, which included naturalized citizens of this country, and the attacks on our missionaries in Asia Minor. Mr. Straus was keenly concerned with these matters; and his position was made far more difficult by the fact that, not having ambassadorial rank, he had not the right of access to the Sultan, except on invitation, which frequently meant not at all. Abdul-Hamid was playing one of his eternal games of procrastination. A few weeks after Lloyd Griscom's arrival, Mr. Straus was forced to return to this country by urgent business, and the newly appointed First Secretary was straightway made *chargé d'affaires*. Immediately the personal note began to make itself felt. The Grand Vizier fell under the attraction of the new *chapel*, and spoke of him to his imperial master. Something in his description appealed to Abdul-Hamid, who expressed a desire to see the young American. A singular attachment was presently formed between the young American lawyer and the nervous, sinister Moslem despot. Mr. Griscom admired the keen opinion of the Sultan's statesmanship and diplomatic skill, while Abdul-Hamid felt the charm of his young friend's winning personality. His regard for young Griscom became an international incident, and its results were instant and admirable. The grievous master of the Armenian massacres was presently brought up and the claims of the American missionaries were promptly settled. The attacks on the missions were punished, and the entourage of the missions was safeguarded by special provisions.

By this time Mrs. Griscom had come into the saga. She was formerly Miss Phoebe Blumson. One may say that she is the most living proof of Mr. Griscom's singular good fortune in all the great matters of life. Mrs. Griscom is admirably fitted by birth, gifts, and training for the very difficult duties which fall on the hostess of an embassy. There are problems of etiquette and precedence to be settled, which demand the higher mathematics, and only fine tact, springing from inner feeling, is a safe else through the labyrinth. There is a certain winsome wisdom in Mrs. Griscom which turns possible critics into sympathetic friends.

While Lloyd Griscom was spending a short vacation in this country the post of minister to Persia became vacant. Mr. Hay offered it to our young diplomat, who had done such good work at the sublime Porte, and Mr. Griscom was sent on his way to the land of the sun. When Abdul-Hamid heard of it, and learned that his friend expected to pass through Constantinople on his way to Tehran, he at once made special preparations to receive him.

THREE PLAYS OF THE WEEK

A General View of the Sportsmen's Show at the Garden, showing the Island and the Motor-boat Waterway

A Corner of the Long Island Exhibit, with its characteristic Craft and Sporting Parasol

THE SPORTSMEN'S SHOW AT THE MADISON SQUARE GARDEN

The annual Motor Boat and Sportsmen's Show, which was opened at the Madison Square Garden on February 21, drew a record crowd on the first day of the exhibition, when 17,000 persons passed through the gates. In view of these shows, the most interesting feature for the visitor is the exhibit of motor boats, of which there are three types at the Garden—motorized speed craft, racing boats, and smooth-water boats. Exhibits of racing craft are not conspicuous. In addition to the exhibits from various States illustrating numerous phases of the sportsman's activity, the programme of the show offers exhibition contests of speed and skill, including aerobating matches, life-saving maneuvers, canoe races, and tilting contests.

Men of To-day

(Continued from page 344.)

Mr. and Mrs. Girescu were invited to a private dinner at the Villa Kiosok, and both were detained. Mrs. Girescu receiving the grand marshal order of the Order. Mr. Girescu received an even more striking proof of the Sultan's favor and affection. When the time came to depart, Adnan Huseini presented him with the jeweled and exquisitely chased cane-case which he himself had used for a score of years. His father said word to all whom it might concern that Mr. Girescu was his personal friend, and that all time and effort must be shown him. The response was that Mr. Girescu's voyage along the Bosphorus and past the ports of the Empire was something of a royal progress, the Turkish officials trying with much after as to who should show him the most honor.

While in Persia Mr. Girescu was struck by two things: the somewhat faded magnificence of the court of the Shah, and the remarkable way in which Russian influence was being in the front. At that time every plan in Persia seemed tending to fall into Russian hands, and Russia had already secured important concessions in agriculture, political and commercial. Mr. Girescu was struck by this preponderance of Russia that he came to be counted a trouble in the Russian at Tehran, and he was invited to St. Petersburg on his return to the U. S. In order that he might give every opportunity of understanding the aims and aspirations of the Czar's government. While in Persia Mr. Girescu started on an expedition of exploration investigating such routes, riding many hundreds of miles through wild desert and mountain regions, and visiting districts that few white men had ever seen.

It happened that our minister in Japan had just been killed in a hunting accident, and the President declared that, if there was not a prize claimant for the post, it would be put in the place for Lloyd Girescu, whose prizes he was principally bearing home, the post was already promised to a distinguished man who had travelled in the East and who had strong supporters in the East.

This was disappointing. But the weather suddenly cleared. It seems that the favored candidate for the Tokyo ministry had found serious changes not to his liking in the last papers, and had said so, with some at Tokyo and Mr. Hay was in the course could not be considered persons seen by the Russian government. A new choice resulted. The new choice was, very appointment in December, 1902. Then came news: He crossed the continent to San Francisco and sailed for Tokyo. On arriving at the Japanese capital he was met by his old college friend, with whom he had once again made the grand tour. He discovered, to his great surprise and extreme pleasure, that of one of the largest shipping firms in the East. The friendship gave Mr. Girescu more opportunities of burning the deeper aspects of Japanese life, and he made good use of his advantage.

From the capital at Tokyo Mr. Girescu has been transferred to the embassy at London, and he will shortly go to Brazil to represent the United States in the new Latin Republic of the Amazon. There, Japan even more than the United States, though it is a quiet republic, containing only one-third million. The total is a large island, surrounded by only three of our own. The Pan American Convention, which will make for Japan one of the most interesting political points in the world, and there between the hands of brotherly love truly say to each other that the American.

CARTOONS OF THE WEEK

THE INCOMPARABLE WHITE THE CAR FOR SERVICE

FIRST, LAST, AND ALL THE TIME

The first endurance run in this country was held September 9th-13th, 1901, from New York to Rochester, under the auspices of the Automobile Club of America. Eighty cars, American and foreign, started, and but twenty earned first-class certificates. Among the starters were four Whites, all of which earned first-class certificates.

The latest endurance run in this country was held January 25th-26th, 1906, from Los Angeles to San Diego, under the auspices of the Coronado Country Club. Thirty representative cars started, and but two gained a perfect score. One of these was a White, and the other a gasoline car of 40 per cent. greater cost. As the White had used three gallons of gasoline less than its adversary, it was declared the winner and awarded the John D. Spreckels' cup.

All reliability and endurance competitions held in the interval between the two above-described contests have, with practically unbroken monotony, resulted in White victories.

HASWELL'S OLD NEW YORK

"Reminiscences of an Octogenarian of the City of New York"

The volume is a perfect mine of topographical information. It has something to say about monumental landmarks, about the streets and their names, about restaurants and places of amusement noted in their day, about the thousand and one celebrities who were prominent in the making of the city, vignettes about the thousand and one celebrities who were prominent in the making of the city.

With portrait of the author, many illustrations, and map of New York in 1816. *Cover Price, \$3.00*
HARPER & BROTHERS, PUBLISHERS, FRANKLIN SQUARE, NEW YORK

both sexes; (2) the enforcement of industrial wages in all public contracts; (3) the monopolization and control of gas and electric lighting, of transportation and water supply, but of coal, bread, milk, and eggs; (4) an eight hours' bill for miners, railway servants, and government employees; (5) legislative recognition of the principle that the state should provide work for the unemployed; (6) free meals for school-children; (7) laws to limit strikes, and to free trade unions from all liability to be sued for their actions during strikes; (8) state contributions to workers' insurance funds against unemployment; (9) a complete decentralization of government, including home rule for Ireland; and (10) the compulsory sale of land and division into small holdings. All of these measures are favored by the new labor party, and I venture to prophesy that in seeking to get these passed it will play cards and drinks with the party system as it exists in England today.

The Monroe Doctrine and Morocco

(Continued from page 222.)

has always taken in regard to Africa in Europe and beyond the line so strictly observed hitherto the United States will not go and cannot be drawn. But the policy of the United States is to prove. She will not only to maintain her own peace, but the peace of the world is to her of the first importance. She will always use her influence to maintain the world's peace, acting in accordance with the language and spirit of the Hague convention. She will be drawn into no alliance, defensive or offensive or both, with any nation anywhere, and into no war by connection with any European power. Yet at the same time she will not hesitate to use her moral influence to prevent wars if her good offices can prevent them, either between the powers of Europe or in any portion of the settled part, where her efforts can rightfully be made.

To the Rescue

A WELL-KNOWN actress says that one afternoon, while she was being painted in a dressing room, a particularly engaged section of Broadway, she glanced through the window and discovered that in another room jammed against her own there sat a man she knew.

The two vehicles crouched along for some distance side by side, but all efforts of the lady to catch the eye of her friend were unavailing. Signs and telegraphic communications alike failed to attract the attention of the unconscious passenger to the right.

It would seem that the driver of the lady's limousine had observed through his very big difficulty of the actress, for in the midst of his heart he heaved over to one side and with the built of his whip prodded his driver of the other vehicle, observed:

"Tom, for Heaven's sake, tell the gentleman to smile at the lady!"

Judicial Acumen

The late Justice Daly, of New York, frequently relieved the indignation of legal gentlemen long before him by his kindly wit.

One day a suit was brought before him in which damages were claimed by reason of an assault. Plaintiff had been knocked down by the defendant and severely punished while prostrate. One of the witnesses seemed very reluctant to answer questions put to him on cross-examination in which he was asked to place of the court.

"With all due respect to your Honor," complained the attorney for the plaintiff, "the court does not appear to take any notice of the underlying principle of the case."

"In my opinion," replied his Honor, "naturally, the underlying principle is the case in your client, Mr. Attorney."

An Electric Despatch System

A system for the rapid transport of mail and small parcels have been devised from time to time, and to exploit one of the latest of these a company has recently been formed in Paris. The method consists of an underground conduit or tunnel about 7½ ft. in diameter, with two tracks, one placed above the other so that cars can pass simultaneously in either direction. The cars are about 2½ ft. in length, and have a square cross-section about 2½ ft. on each side, the ends being pointed. The wheels run on an upper and lower rail, against which side-rollers are pressed in order to keep the cars on the track, especially on curves. There are three pneumatic electric motors with which it is hoped to develop a speed of 150 miles an hour. In such a railway, a much greater volume of business could be handled than on any pneumatic system, and the precautions are such that the rapid and safe transportation of goods for considerable distances can be accomplished.

A Matter of Equilibrium

Dr. Thomas the English evangelist who was recently conducting meetings in the West, is a man of ready wit, which he uses with effect when interrupted while speaking. On one occasion in London a libelous fellow arose and announced, water-tight, that he did not believe everything in the Bible. "I don't see how anybody can walk on water," he declared. "Can you do it, Dr. Tom?"

The preacher looked grimly at the man for a moment and then answered:

"Well, I can walk on water better than I can on sin."

Gardening as a Cure

Nine months ago a German physician declared that a number of diseases could best be treated, not by having the patient rest, but by actually putting him to work. He made a number of patients, about whom a report has recently been published, into a number of gardeners, and about fifty cases of various kinds of diseases, such as rheumatism, neuritis, rheumatoid arthritis, and the results are worth noting. It is interesting to note that a large proportion of the cases were both benefited, and the treatment is common in the patients' diseases and symptoms. The plan, however, has not yet been adopted by the gardeners' unions, which claim that if gardening were forced on a large number of sick or disabled persons, it would be a very serious matter, and would be a great loss to the nation. The theory is that if gardening were forced on a large number of sick or disabled persons, it would be a very serious matter, and would be a great loss to the nation. The theory is that if gardening were forced on a large number of sick or disabled persons, it would be a very serious matter, and would be a great loss to the nation.

Father's Forgotten Classics

William had not returned from college to spend his spring vacation. One of the boys, the daughter of his young man was angry. She had during his absence, changed from a bookish schoolgirl into a fellow and also reduced the change, and returned to his own.

"Where have you noticed how old you have become?" he asked her, and she replied: "I have noticed that you are a very young man."

"My mother is, father," said William, "but I am not."

"How can you say that?" she asked. "I have noticed that you are a very young man."

Close To a Woman's Heart

It is important in selecting an Automobile that you take into consideration the women of your family. If your selection is a

POPE WAVERLEY ELECTRIC

any member of the household can operate it. These carriages are always ready, noiseless, clean, stylish and dependable. All that is necessary to operate is to turn on power and steer. It has three effective brakes.

Model 36 illustrated above, price \$500, is an ideal carriage for general purposes, the early morning spin, the station, theatre, shopping or calling. Very popular with physicians.

Be sure the name "POPE" is on your automobile.

We make 15 distinct models at prices from \$250 to \$2,750. Runabouts, Mashoes, Surreys, Chetons, Physicians' Road, Station, and Delivery Wagons. Electric Trucks on specifications.

HARPER'S NEW PUBLICATIONS

Mark Twain's Library of Humor

The initial volume, *Men and Things*, is a veritable encyclopedia of humor, containing the best work of such prominent humorists as George Ade, John Kendrick Bungs, "Mr. Dooley," Artemus Ward, Eugene Field, Thomas Bailey Aldrich, Bill Nye, etc., etc., and Mark Twain himself. That the great editor knows what is best in humor and how to select it goes without saying. *Men and Things* is the perfection of fun. Its distinguished editor and notable contributors make it THE humorous book of the year.

Randvar the Songsmith

A romance of the fabled Norse occupation of America, by Ottillie A. Lohencrantz, flushed with passion and great deeds, and starred with beautiful episodes. Randvar, the king's song-maker, loses his heart to the king's sister—the old love-tale, but in a new atmosphere, where stirring fact and mystic legend meet. Altogether it is a tale of real charm, novelty, and stirring romance.

Evolution the Master-key

Dr. C. W. Saleeby's new volume shows how the law of evolution has grown in authority since the time of Herbert Spencer, and how the results of modern investigation point more and more to evolution as the master-key to the solution of all problems of phenomena. Dr. Saleeby's comment on the newest phases of the great scientific questions makes an interesting and very readable book.

The Jeffersonian System

Volume 12 of the *American Nation, A History*, in 27 volumes, is by Prof. Edward Channing of Harvard University. Jefferson's interesting personality is the dominant note in the period. The volume emphasizes the innate tendency toward expansion of territory, begun with the Louisiana Purchase, and other important phases of the young republic's growth.

THE GENIUS

By

MARGARET POTTER

Author of "The House of de Mailly," "Ishtar of Babylon," etc.

A NOVEL of stirring plot, and yet a striking presentation of the artistic temperament in its most interesting phases. The story is based upon the life of a famous Russian composer—the sensitive, gifted son of a powerful, iron-handed government official. His career is a strange and deeply moving tale of shifting fortunes, dramatic episodes, and final artistic triumphs.

LIEUTENANT-GENERAL JOHN M. SCHOFIELD

General Schofield, who died at St. Augustine, Florida, on March 5, was the most distinguished of surviving commanders of the civil war. He was born in Chatham County, New York, on April 28, 1813, and was graduated from West Point in 1833, in the same class with Sheridan and Grant. After a distinguished career in the service of the Union army, General Schofield became Secretary of War in President Johnson's cabinet. He retired from that office in 1868 and became a major-general. After serving as Superintendent of the West Point Academy and as head of the Division of the Atlantic, he succeeded, in 1878, to the command of the army after the death of General Sherman. He was awarded the rank of Lieutenant-General in 1885, and retired in the autumn of that year. He was discussed as a possible Democratic candidate for President in 1896.

COMMENT

Not long after the election of Mr. ROOSEVELT to the Presidency by an overwhelming majority, a writer in the *New York American Review* reminded him that in Roman times, as the triumphal car ascended the Via Sacra toward the Capitol, it was the custom to station just behind the exultant general a slave to whisper in the victor's ear, "Remember that thou too art mortal." The President has learned in his turn that Fortune makes a lottery of life. How could he have foreseen on the morrow of that memorable election day of 1901 that within a few months after a single year measures most earnestly desired and urged by him would have but little if any chance of being placed upon the statute-book? Yet such is undoubtedly the fact to-day. In spite of the almost unparalleled hold which he has hitherto possessed upon the House of Representatives—though no one would now venture to assert that he will long be able to retain it—he has proved impotent to get a single bill passed by the Senate in the form which he prefers. The Philippine tariff bill, which passed the House of Representatives by a very large majority—and which, of all the projects bearing the administration's stamp, commands itself most thoroughly to the national sense of justice—has been beaten, to all appearances irrevocably, in the Senate Committee on the Philippines. By a vote of two to one that committee refused to report the bill favorably. It even declined to report it adversely, and the only remaining mode of putting it before the Senate is for Mr. LOUIE, the chairman, who has had the bill in charge, to move on the floor of the Chamber that the Senate discharge the committee from further consideration of the measure and proceed itself to take it up for discussion. If Mr. LOUIE shall make a motion to that effect, the signs are that a counter-motion to lay the proposal on the table will be carried. We may therefore look upon the Philippine tariff bill as dead and buried. Yet to this bill in the forum of equity there was only a single objection, namely, that it did not go far enough, and withheld from the Philippines a part of the vitalizing boon of free trade which has been conferred upon Porto Rico.

Since justice demands it, the Philippine bill is one day sure to be passed; but not, we apprehend, in the ROOSEVELT administration. The fate which that measure has experienced in the Fifty-ninth Congress is almost certain to await the Statehood bill. The feature of that project which from the outset has excited bitter controversy is the provision that the Territories of New Mexico and Arizona shall be admitted to the Union as a single State. We have heartily concurred with the President and Senator BRANDEGE, in thinking that if the two Territories named are to enter the Union at all, they must be amalgamated. Even the aggregate population which the census of 1900 gave them is too small to justify

the bestowal upon them of two United States Senators, who would counterbalance the representation in the Senate of the imperial commonwealth of New York, which, if compared with European powers, will be found to rank next to Spain in respect of population, and to exceed either Spain or Italy in respect of wealth. To admit either Arizona alone or New Mexico alone would be preposterous. There appears to be no doubt, however, that the Statehood bill cannot pass the Senate in its present form, and that the two Territories will either come in amalgamated or not at all. Should the measure pass under any guise, it will be looked and, in the President's eyes, hamstrung by the FORAKER amendment providing that within thirty days after the bill shall have been signed an election shall be held in each of the two Territories named, the sole question to be submitted being whether each favors joint Statehood or not. We say "hamstrung," because there is no doubt that Arizona will vote against unification with New Mexico.

Another measure dear to the President has, seemingly, no chance of adoption. As we have formerly pointed out, the friends of the Santo Domingo treaty, even if every Republican Senator could be put in that category, can now, it is thought, although it has received many amendments which have improved it, obtain the assistance of only two Democratic votes, those, namely, of Senator McKENNEY, of Louisiana, and of Senator PATTERSON, of Colorado. That would not be enough to constitute the two-thirds needed for ratification. Moreover, it is by no means certain that the Republican friends of the railways in the Interstate Commerce Committee—galled as they are by the report of the HERRIN-TILMAN rate-hunking bill without amendment—can all be relied upon to vote for a treaty which some of them have been long reported to eye with misgiving, and only disposed to tolerate in order to save the President's face. There remains the HERRIN-TILMAN bill to be disposed of, and nobody can foretell what shape it will wear when it emerges from the Senate's hands. The Democratic Senators may make the question a subject of discussion in caucus, and desire to keep the bill intact, in which event there may possibly be enough ROOSEVELT Republicans among their colleagues to pass the measure by a very narrow majority. In that event, however, the national Republican party would be, as Senator CRAWFORD warned Mr. ROOSEVELT, split wide apart. If, on the other hand, the bill is to be subjected to amendments, no man can say what will become of it. In no event, apparently, can the Democrats fail to gain much profit from the Republican discord. As we pointed out a week ago, they have already secured a marked tactical advantage through securing the privilege of having the HERRIN bill reported from the Committee on Interstate Commerce to the Senate by Senator TILMAN, who, by the way, seems resolved to make a statesmanlike use of his opportunity. Technically, the measure should now be called the HERRIN-TILMAN bill; just as the WILSON tariff became the WILSON-GORMAN tariff after it had been manipulated in the Senate by the last-named gentleman. In that case both of the joint authors were Democrats. Of the two sponsors of the BRAND-ALLEN bill, one, of course, was a Democrat, the other a Republican. That was a perfect counterpart of the present conjunction of names.

How is the Republican party to carry the great States of New York and Pennsylvania this year, in both of which a Governor is to be elected, and which between them will send sixty-nine Representatives to the Sixtieth Congress? In the latter State the Democrats elected their candidate for State Treasurer last November, while the former is always doubtful in a non-Presidential year, Mr. ROOSEVELT himself having been chosen Governor in 1898 by a plurality of less than 18,000, while Mr. ORRILL in 1902 got less than 9000. In Pennsylvania the Republican machinery, both throughout the State at large and in the city of Philadelphia, is shattered, and it seems almost impossible to reconstruct and put it in working order in eight months. In New York, Mr. ORRILL is still chairman of the Republican State Committee, and although he is likely to be ousted from that post at an early day, he and his friends will retain control of the local organizations in a number of counties. Neither they nor Senator PERRY'S followers can be relied upon to do much

hard work for a candidate personifying the views and wishes of Mr. ROOSEVELT, whose repudiation of both OWELL and PLATT is naturally not the less offensive because it is deserved. A sign of the times is the paucity of candidates for the Republican nomination for the Governorship, which contrasts oddly with the eagerness with which Mr. HEARST is seeking to become the nominee of the Democratic national convention. No doubt if Mr. HEARST should run on a third ticket, the Republican standard-bearer would win, especially if he should be such a man as Mr. CHARLES E. HUGHES, who has suddenly acquired a national reputation by the ability with which he conducted the examination of witnesses in the investigation of life-insurance by the ARISTOCRATIC committee. It is pretty evident that Mr. HUGHES can have any job he wants within the gift of the Republican party. It is reported, for instance, that if the HERRICK-TILLMAN bill should become a law, he will be invited by the Interstate Commerce Commission to act as their counsel in the prosecution of inquiries under that statute and the ELKINS law.

The strike situation is becoming clarified. The causes of the clarification are two, each working on one of the two parties to the contest. As might have been predicted, Mr. ROOSEVELT decided to interpose for a second time, but on this occasion his interposition seems to have been prompted not so much by sympathy for the individual consumers of anthracite for household purposes—the companies producing this combustible have sufficient reserves to meet any demands that are likely to be made upon them during the summer—as by a recognition of the indisputable fact that a universal or widespread cessation of the production of bituminous coal would prove a death-blow to our present prosperity by paralyzing most of the industries for which an adequate supply of this kind of fuel is indispensable. His duplicate letters were addressed, on the one hand, to the leader of the United Mine Workers, who lately held a national convention at Indianapolis, and, on the other hand, to a conspicuous representative of the owners and operators of the bituminous coal-fields. It is possible that the bituminous operators would have paid only a perfunctory deference to his appeal; but the mine-workers, who have learned to look upon him as their mainstay, have heeded it, and have called a new convention with the evident intention of reducing materially their former demands. What, apparently, had decided a majority of their employers to evince a conciliatory temper is the attitude, ostensibly courteous but essentially pre-emptory, of the colossal United States Steel Corporation.

The directors of that powerful body, which produces a very large proportion of all our annual output of iron and steel, have politely but firmly notified its purveyors of bituminous coal that in one way or another the latter must avert a strike, for otherwise the company will treat as cancelled the contracts by which it has agreed to buy from them yearly immense quantities of that combustible. Needs must when the devil drives. The operators, who were so stiff and so hump-toned yesterday, have now seen a great white light, and the most important of them, who would have most to lose by the fulfillment of their mighty customer's threat, have evidently made up their minds to coerce their weaker brethren into the acceptance of a compromise. So all's well that ends well. The bituminous miners will get somewhat increased wages, and the huge iron and steel industry will continue its prodigious activity. It is not quite so certain that we may not witness a strike in the anthracite region, where the conditions are materially different. The owners and operators of the anthracite coal-fields have, as we have said, such large stocks on hand that they have been reported to desire a strike, apprehending that otherwise they might be forced to resort to a lockout. To ourselves this report seems hardly credible, however, and we incline to the belief that in the anthracite region the miners and their employers will ultimately during the present month agree to renew the three-year agreement, which expires on April 1, though, possibly, some trifling alterations may be made in it. The miners will probably be made to understand that if they repudiate that agreement, they are not unlikely to lose the sympathy of Mr. ROOSEVELT, whom they look upon as their best friend.

The demonstration made by the advocates of woman's suffrage at the opening of the British Parliament excited so much commotion that a large force of policemen had a good deal of difficulty in preserving order. The women were mostly of the working class, and one of them bore a huge banner bearing the inscription, "We demand a vote to work out our own salvation." As no procession is allowed within a mile of St. Stephen's on the opening day of Parliament, the woman-suffragists had to take refuge in a hall, but a lobby committee of twenty was permitted to enter the Parliament building. It was stopped, however, at St. Stephen's Hall, only a few leaders being suffered to go into the lobby. The exclusion excited much indignation, and Mrs. DAWKINS, of Manchester, expressed an earnest wish to get hold of CAMPBELL-BANNERMAN'S whiskers. SIR CHARLES DILKE has introduced into the House of Commons a bill providing for the enfranchisement of women and the removal of all their political disabilities. The proposal has already provoked some discussion, but there is no likelihood of its passage during the present session, nor, indeed, of its meeting with a more favorable reception in the present than it met with in the last House of Commons. On the whole, the bestowal of the franchise upon women seems farther off in England now than it seemed two decades ago, in spite of the fact that the experiment has been tried successfully in some of the British colonies.

The passage of an old-age pension bill for all French workmen by the Chamber of Deputies suggests the question whether such a system of providing for the deserving poor who have outlived their usefulness will ever be adopted in this country. It will scarcely do to take a negative answer for granted, in view of the fact that an old-age pension law was earnestly advocated in Massachusetts some months ago, and the State Bureau of Statistics of Labor, after making an exhaustive inquiry, reported that the State's present expenditure on charities would, if disbursed in old-age pensions, provide \$200 a year for about one-fourth of the persons sixty-five years of age or over. A movement started in Massachusetts is likely to reach other States, and to find many supporters in great centers of industry like New York, Chicago, Pittsburg, and Philadelphia. The experience of New Zealand, which passed an old-age pension act in 1898, does not confirm the Massachusetts assumption that the bestowal of such pensions would do away with the necessity of a simultaneous large outlay upon charity. The experience of the British colony in question has been that the public disbursements for charity are now as great as they were before the pension law became operative. The objection to old-age pensions, that they tend to make workmen thriftless, is met by the precaution taken in Germany, where, in order to secure the benefits of the legislation, a workman is obliged to contribute annually a certain sum, to which an equivalent amount is added by the employer, the State contributing the remaining third. This provision of the German act is reproduced in the French bill; indeed, in France, compulsory provision for old age has been for some years made in the case of seamen and miners. In New Zealand, on the other hand, no contribution toward a pension fund is required from the beneficiary. This is a subject, as we have intimated, about which we are likely to hear more in this country at no distant day.

It will be remembered that Dr. LOUIS LIVINGSTON SEAMAN, in a hastily written book produced before the close of the contest in the Far East, described some of his observations as a volunteer surgeon in the Russo-Japanese war. A new and more elaborate work, called *The Real Triumph of Japan*, presents the ripened fruit of his experience, and should go far to accomplish his aim, which is an immediate and thorough reform of medical and hygienic methods in the United States army. He maintains that in their contest with disease the Japanese achieved a victory far greater than they won by arms over the forces of the West. To enable us to appreciate Japan's achievements in the field of sanitation and surgery, Dr. SEAMAN recalls the records of mortality in some previous contests. In the Russo-Turkish war of 1877-8, for example, no fewer than 80,000 men died of disease, and only 20,000 of wounds. In our civil war almost three-fourths of the hundreds of thousands of fatalities were caused by disease. In six months of the Crimean campaign the allies

lost 50,000 from disease, while only 12,000 were killed in battle or died from wounds. What was the experience of the Japanese themselves in their war with China in 1904? They lost three men from disease for every man who was brought low by cannon-shot or bullets. Consequently, when they foresaw that a struggle with Russia was impending, students were sent all over the world to study the sanitary, surgical, and medical systems of other countries. Out of the reports brought back Japan evolved an army medical system of her own, based on German practice, but with modifications.

In the Japanese archipelago no fewer than twelve sets of main hospitals were organized, to each of which from one to five branch hospitals were attached. The 25,000 beds which these originally provided were increased rapidly in number as the campaign was prosecuted. In the field every practicable precaution against disease was taken. All milk used in the army was sterilized; all the water used was boiled. Every baggage was disinfected. Chemists went ahead of the army with the vanguard, and after testing the water of every well, labelled it as drinkable or undrinkable. Fumigating-plants, baths, and X-ray machines were also kept well toward the front. It is to be noted further that before every battle the soldiers were made to bathe and don clean clothing. The result of these sanitary precautions was that while the Japanese lost during the war 52,046 men by wounds, only 11,992 died from disease. In other words, the deaths from cannon-shot, bullets, and bayonets outnumbered those from disease by more than four to one, a sanitary record which Dr. SHIMAN is justified in pronouncing not only unparalleled, but unapproached, in the annals of war. The surgical and medical treatment was scarcely less remarkable than was the sanitary system. Only one and a half per cent. of the soldiers died of gun-shot wounds, although twenty-four per cent. were wounded. It was interesting to learn on February 24, from Baron TAKAKI, surgeon-general of the Japanese army and navy, that Japanese surgery is founded on the teachings of the late Dr. SAMUEL T. GROSS, who was for many years connected with the medical school of Jefferson College, Philadelphia. It seems that Dr. GROSS's *Systes of Surgery* has been translated into Japanese, and is the principal text-book of Japanese students of surgical science to-day.

An unusually interesting meeting of the American Academy of Social and Political Science was held in Philadelphia on February 24, the subject being the prospects and significance of the third pan-American conference, which is to take place in Rio de Janeiro in July, 1906. Speeches were made by Don JOSEPH DE CARLOS, the Mexican ambassador, by Don JOSEPH NARCEO, the Brazilian ambassador, by Don IGNACIO CALDERON, the minister from Bolivia, and by Don BERNARDO CALVO, the Costa-Rican minister. We call these speeches interesting, because the speakers showed a much livelier appreciation of the MEXICAN doctrine than is exhibited in Chile, Argentina, and some other Latin-American republics. The Brazilian ambassador, for instance, asserted that the Latin-American commonwealths ought not to regard the part which the United States have had, and have, to play in maintaining the MEXICAN doctrine as in any way offensive to the pride and the dignity of any of them, but, on the contrary, as a privilege, in the possession of which the United States ought to be upheld by Latin-American sympathy and gratitude. Señor CARLOS, for his part, pointed out what had been achieved by the second pan-American conference, which was held in Mexico in October, 1901. That conference adopted a convention making the arbitration of contractual claims obligatory, which convention, having been ratified by the Congress of the United States, by that of Mexico, and by that of Peru, will soon, it is hoped, be approved by all the other Latin-American republics. The Mexican ambassador reminded his auditors that by this convention had been consecrated in a general and binding form the principle propounded by Don CARLOS CALVO, the eminent Argentine jurist, the principle, namely, that the collection of debts arising out of contract should never be made by force.

The meeting, on March 4 and 5, of sundry seekers after political righteousness at Mr. J. G. P. STOKES's house at Noroton, Connecticut, got a good deal of attention from the newspapers, but it was a private gathering, and there have

been no detailed reports of what was said. The papers called it a meeting of socialists, but Mr. STOKES said afterwards that there were only five committed socialists at the gathering. The rest were seekers who wanted to know, and thought they saw a profit in interchange of speculations. Such profit no doubt they found. To have something to talk about is one secret of having something to say, and good lively talk is the making of a house-party. Because Mr. STOKES's party was not advertised there was some disposition to regard it as a secret convalesce for the discussion of the best methods of adjusting giant-power to society. But that is absurd. It was a meeting of radicals to discuss social and political reforms, which are matters that need to be perennially discussed, and the furtherance of which interests everybody who is trying to do his duty in the world. Mr. STOKES said his guests arrived at no conclusions about anything. That is not to the discredit of the meeting, which included men of a variety of experience and convictions, and aimed rather at discussion than conclusions.

Among the seekers were a number of rich young men. That was thought to be remarkable, but it wasn't. Rich young men have leisure to think and to observe and to read, and some of them use some of their leisure in these exercises. One of these at Mr. STOKES's party was JOSEPH MORRIS PATTERSON, of Chicago, whose grandfather was the old-time editor of the *Chicago Tribune*, and whose father is the present editor of that paper. Young JIM was Commissioner of Public Works in Mayor DRISCOLL's government in Chicago, and worked hard and to some good purpose at his job, but recently resigned it and announced that he had become a socialist. "The government," he said to the reporters in New York, "should own all the sources of wealth. Every man should have the same natural opportunities of making a living. Now he doesn't. Comparatively few reap the benefit of their industry, and the man is very lucky who gets all that's coming to him." To maintain equality of opportunity is a sound political aspiration, and it is quite safe to wish young Mr. PATTERSON joy and success in his quest of means to fulfil it. But that equality of opportunity would be promoted by having the government own all the sources of wealth is not easily apparent. If that befell, the way to get wealth would be to control the government. One of the greatest complaints now is that the tariff beneficiaries and others get too rich too quickly by too much control of the government. If the government owned all the sources—but we spare our readers. Enough to say that Mr. PATTERSON, being still young and apparently strenuous and thoughtful, will probably outgrow the opinion that the government should take over all the sources of wealth, though we trust he will not outgrow the desire to promote equality of opportunity. A young man possessed with a boisterous desire that every man should have a fair chance is a much more engaging figure than a privileged person seeking to wrest the utmost extension of his privileges from hands imperfectly taught to hold their own.

What makes socialists? Some are made by reading the ten-cent magazines. Others by personal contact with facts so intolerable and so pathetic that no merely scenic tour drastic for them, provided it seems to be a remedy. One of the seekers who went to the meeting at Mr. STOKES's house was Mr. JOHN STOKES. Whether he is a socialist or not we don't know, but he is the author of a new book called *The Bitter Cry of the Children*. One section of the book deals with the working child. The policy of *brides-faire* had its turn in the last century in England, and is advocated here now, but as far as working children are concerned, Mr. STOKES protests against it. He talks of children four years old at work in running-factories in New York State, and of little girls five or six years old working in Southern cotton-mills at night, and he makes a pathetic picture of little ANNETTA FERNY, four years old, working with her mother making artificial flowers in her tenement home at eleven o'clock at night. He mentions the distance run every night by a "carry-in boy" in a glass-furnace. It was twenty-two miles. He tells of a glass-factory owner who said that while it was true that machinery was as good as boys, he did not care to "bother with machinery so long as he could get boys." He speaks of protected Pennsylvania as the State that en-

slaves more children than any other. He speaks of protected manufacturers who in New York demanded the right to employ children four years old, and in the South have had laws repealed that forbade night employment of six-year-old children. The cure of these horrors does not necessitate socialism, but we need not smile nor even wonder when men who have personal and painful knowledge of great wrongs done to helpless human creatures by the existing machinery of civilization go readily to meet with other men who feel more or less as they do, to talk things over and discuss remedies.

The new edition of *Who's Who in America* gives brief biographical statistics of 16,216 persons. Another book could doubtless be compiled which would include as many more Americans of quite as much average importance to the country as those in this volume. That is because the scope of *Who's Who* does not include the great world of business, but tends to be limited (though not strictly) to writers, politicians, teachers, and professional people. The book, however, does very well what it sets out to do, and gives facts from which some interesting deductions can be drawn. The people whose names are in it may be accepted as people of note. The average age of them it appears, is fifty-one years. Where were they born? where do they live? We learn that 2857 of them were born in New York State, and that 3965 now live in that State; that 400 were born in New Jersey and 523 now live there; that 1903 were born in Massachusetts, and 1492 now live there; that 1432 were born in Pennsylvania, and 1192 now live there; that 1101 were born in Ohio, and 610 now live there; that 116 were born in the District of Columbia, and 1221 now live there; that 116 were born in California, and 503 now live there; that 997 were born in Illinois, and 1024 now live there; that 330 were born in Vermont, and 79 now live there; that 475 were born in Maine, and 140 now live there; that 505 were born in Connecticut, and 376 now live there; that 290 were born in Michigan, and 272 now live there; that 179 were born in South Carolina, and 90 now live there; that 448 were born in Virginia, and 208 now live there.

New York, New Jersey, Missouri, and Illinois, it seems, are the only ones of the older States that gather into their populations more people of note than they produce, though Maryland and Tennessee hold their own. That is, of course, accounted for by the location in or near the attracting States of the cities of New York, Chicago, St. Louis, and Baltimore, which offer to talent and skill the highest remuneration and the broadest markets. The District of Columbia, of course, gathers in far more persons of note than it produces, but for obvious reasons the District does not count. Boston does not quite provide for the large product of talent in Massachusetts. The case of Tennessee is peculiar. It produced 182 of the people whose names are in *Who's Who*, and it is the present residence of 184. Tennesseans seem to be fond of their homes. Indiana produced 408 celebrities, and shelters 244. The average age of these noted citizens being about fifty-one, their average time of birth was in the fifties. Taking the census of 1850 as a basis of calculation, it appears (we quote the *World*) that Massachusetts produced 161.2 persons of note to every 100,000 of population; California, 125.3; Vermont, 101.5; and New York, 92.2. Where our notables are being born now, these figures do not determine, but we should guess, if invited, that the good showing made above by New York State for our, will prove to be maintained. The State is exceedingly prosperous, and the city is constantly drawing to itself a stream of people of more than average energy and ability who, in spite of all the disadvantages of metropolitan life, are likely to have children of more than average ability, and to give them better than average educational chances and extra good opportunities to get out what is in them.

Dr. CHARLES S. MINOT, professor of embryology in Harvard University, is reported to have told the New York Academy of Medicine on February 25 that his own experiments on guinea-pigs, rabbits, and other animals had convinced him that old age begins at twenty-five, when the period of physical growth normally ends. He went on to contend, so it is reported, that intellectual growth ceases with physical growth, and that a man of thirty is not nearly so likely to have an original idea

as one of twenty-five or twenty. To most persons these assertions will seem paradoxical. There is, of course, nothing new or strange in the dictum that the human body is an organism wherein from birth a process of decay and a process of repair are going on concurrently and incessantly. So long as the reparative process preponderates over the decadent process we say that the organism grows. It is counter to observed facts, however, to allege that old age begins from the moment when such preponderance comes to an end. There is a vast amount of evidence for the current impression that during a period, the duration of which varies in individuals from fifteen to thirty years, an equilibrium is maintained between the process of decay and the process of repair. According to this, which is the common theory, old age does not begin until the equilibrium is interrupted by a preponderance of the decadent over the reparative process.

A project, which has been regarded seriously in France and Russia, contemplates the construction of a tunnel under Bering Strait, the Asiatic end of which would be connected with the Transiberian Railway, and the American end with a Canadian line. There is, it seems, an island about midway in Bering Strait, so that each moiety of the tunnel would be not much longer than that proposed under the Strait of Dover. French and Russian engineers are convinced that there is nothing impracticable in this scheme, and work upon the tunnel would probably have been already begun had not Russian finances been disorganized by the war with Japan and the subsequent internal troubles of the Russian Empire.

The pure-food bill that passed the Senate last month by a vote of 63 to 4 makes it a misdemeanor to manufacture or sell adulterated or misbranded foods, drugs, medicines, or liquors in the District of Columbia, the Territories, and the insular possessions of the United States, or to ship them from one State to another, or to a foreign country. It also prohibits the receipt of such goods. The penalty for breaking the law is a fine of \$500, or imprisonment for one year, or both. Corporation officers are made responsible for what their companies do. The chief of the Bureau of Chemistry in the Agricultural Department is to examine the wares defined in the bill, and if they do not come up to a defined standard, he is to notify the United States district attorney, who is to institute proceedings in the Federal courts. The general subject of pure food has been under consideration by Congress for fifteen years. The unanimity of opinion in the Senate about the present bill argues favorably to its becoming a law.

After all, when all has been said about the extortionate dispositions of the ice trust, isn't it true that we did have an extraordinarily mild winter, and that the Hudson River ice crop was pretty much a failure? The Hudson seldom produces continuous navigation and ice in the same season. In the winter just passed it gave nearly all its attention to navigation. If the ice trust could sell ice this summer at a reasonable profit without putting up its price, it is smarter than we have supposed. We know nothing about its affairs or its supplies, but we have observed the weather, and we wonder a good deal what the facts are on which some of the contemporaries base their cries that putting up the price of ice is merely a maneuver of the trust to smother the poor under pretence of scarcity. If ice isn't scarce this year, all signs fail.

Lieutenant-General JOHN M. SCHOFIELD, who died at St. Augustine, Florida, on March 4, left no veteran of the civil war surviving him whose services were as important as his. He graduated from West Point in 1855 in the same class with SHERIDAN, McPHERSON, and HOOVER, and was thirty years old when the civil war broke out. President JIMMISON, in 1868, appointed him Secretary of War. On his retirement from that office the following year he became a major-general, and on the death of General SHERIDAN in 1888 he succeeded to the command of the army, and later was appointed lieutenant-general. So late as 1896 he was much talked of as a possible Democratic candidate for President, and in 1898 he was chairman of the commission appointed by President McKinley to investigate the War Department's conduct of the war with Spain.

The Opponent of Government Rate-making

It was an interesting day in the United States Senate when on February 28 Senator FORAKER of Ohio spoke for three hours on the rate question. We are told that every seat on the Republican side was occupied, and that Democrats came over and sat as closely as possible to the speaker, so that they might not lose a word. There was not a smile, we read, on any Senatorial countenance, which, on the contrary, was fixed grim and hard under the tense strain of following a severely legal argument. An enunciation, no pleasant, nor agreeable, to anyone, fell from the lips of the Ohio Senator, and was in any case interrupted by applause, but the deep impression made by his pellucid and elegant sentences upon the mind of many a colleague was undoubtedly expressed by Senator HARLEY, who remarked to Mr. TELLER, the veteran Senator from Colorado, "If that speech cannot be answered, the HERRICK-TILLMAN bill deserves to be defeated."

In his opening words, the Ohio Senator defined his personal attitude toward the project of government rate-making for railways, which is embodied in the HERRICK-TILLMAN bill. That measure he denounced in principle and in detail, as gloriously unconstitutional and grossly inexpedient. He held it to be so contrary to the spirit of our institutions, and of such a drastic and revolutionary character, that, if not in its immediate effect, at least in its eventual influence as a precedent, it would have grave and far-reaching consequences. Reviewing the history of railroad development in the United States, Mr. FORAKER covered the existence of certain evils in the existing methods of railway management, evils undoubtedly incident to the upbuilding of so vast an interest, but evils every one of which, he said, is curable by the Federal courts, without creating a commission of doubtful constitutionality. The evils complained of, he reminded his auditors, are, for the most part, comprehended in three classes—excessive rates, rebates, and personal or local discriminations. Of these evils excessive rates are the least serious, because, if we consider the country as a whole, we find that the average charge for transporting freight per ton per mile is less than it is in any other country. More prejudicial, he acknowledged, in their consequences, are rebates, which have assumed many guises, and have facilitated all kinds of discriminations between individual shippers. For the extinguishment of rebates, however, the HERRICK-TILLMAN bill is not required. Mr. FORAKER quoted several members of the Interstate Commerce Commission itself to prove that the ELKINS law, which focuses the machinery of the courts alone, had proved effective in stopping the payment of personal rebates, and that, in so far as there are still examples of such violations of the statute, they can be stopped altogether by a rigorous enforcement of its provisions. He went on to point out that there has as yet been no residue attempt to execute the ELKINS law for the purpose of preventing discriminations as to locality, but he insisted that a glance at its text would convince any fair-minded man that the statute made efforts as broad, direct, explicit, and efficient as remedy for that kind of an evil as it has been found to offer against personal discriminations. That the ELKINS law has not been tested with reference to local discriminations is no fault of the statute, but is due simply to the fact that nobody has seen fit to apply it. In a word, so far as Mr. FORAKER'S affirmative and constructive position is concerned, it may be condensed in the statement that probably the ELKINS law, as it stands—and certainly it strengthened in one or two particulars—gives at once a constitutional and an efficient means of eradicating all the evils imputed to the existing system of railway management. That is to say, he believes in the court plan, as contradistinguished from the plan of rate-making by a commission, not alone because the former is much simpler, more expeditious, and less costly to the shipper, but because it avoids all kind of constitutional questions, whereas the rate-making plan set forth in the HERRICK-TILLMAN bill is certain to encounter constitutional objections of a weighty and probably fatal character.

Concerning the right of Congress to make rates, the Senator contended that the United States Supreme Court had never yet passed on that question, but he pointed out that many eminent lawyers are of the opinion that the Court will hold, when it has to decide that question, that Congress possesses no such power. It is, manifestly, impossible for Congress to fix by statute all the rates for interstate commerce. It would have to resort to some plan under which it could avail itself of the help of some kind of board, commission, tribunal, or agency, in undertaking to do this, however, it would have to take heed lest it should delegate legislative authority, and thus make its effort unconstitutional and unenforceable, for it is beyond doubt unconditional for Congress to delegate legislative powers. Even if the United States Supreme Court should hold that Congress has the power to fix rates for railways, that power could only be utilized under some such statutes as those enacted by the Legislatures of Iowa and Wisconsin, when in 1873 and 1874 they made laws classifying railroad, according to earnings, and providing that the officials chosen to execute said laws should, taking the classification as a basis, determine by computation what statutory rates should apply. The function delegated to such officials might fairly be described as administrative,

not legislative. Later in his speech, Mr. FORAKER challenged contradiction of his assertion that the enactment of the HERRICK-TILLMAN bill would contravene the ninth section of the first article of the Federal Constitution, which prohibits a preference by Congress of the ports of one State over those of another State. If Congress shall invest the Interstate Commerce Commission with the power to make rates for railways, that power must be exercised subject to the prohibition of the Constitution, to which we have just referred. The whole system of differentials, therefore, would have to be abandoned. Not only would the port of Boston be closed, but many other ports would be most seriously affected. The general business that could be taken as well to one port as another, under the then existing regulations, would inevitably be concentrated at the port most favored by natural and artificial conditions.

Concluding his speech, Mr. FORAKER said that he had not found it easy or agreeable to differ with the President, who, for the time being, was the head not only of the nation, but also of the political party to which he, as a Senator, was proud to belong. Believing that the welfare of the nation is beneficently affected by the supremacy of Republican policies, the Ohio Senator thinks that every man who believes in those policies should do all in his power to secure unity of action in his party, and to that end should be willing to make concessions in minor matters. When questions arise, however, of such commanding importance as are now presented by the HERRICK-TILLMAN bill, Mr. FORAKER holds it to be the duty of every man who has an official responsibility to observe with respect to them, to make a careful investigation for himself, and then to act in accordance with his conviction. Should the measure now under discussion prove disappointing, as Mr. FORAKER believes it will, he foresees that the people will not listen to Senators who can only say in their defense that they, like demagogues, legislated in response to popular demands. The people expect their representatives to act, not demagogically, but intelligently, patriotically, in conformity in their best judgment and to their oath of office, which latter binds them to disregard public clamor, and legislate for the public welfare as they see and understand it.

The United States and the German Emperor

SINCE our acquisition of the Philippines, and especially since the accession of Mr. ROOSEVELT to the Presidency, the Emperor WILLIAM II. has shown himself keenly alive to the actual and prospective importance of the part marked out for the United States to play in the theatre of world politics. He has observed with regret that the refusal of the British Unionist government to lead direct or indirect aid to Spain in the recent contest of that power with our republic has been followed by a marked improvement in the international relations of Great Britain and the United States. Indeed, a year ago, he must have noticed indications that the Washington government seemed disposed to become a party, so far as sympathy is concerned, to the *entente cordiale* which had been established between Great Britain and France. Under all the circumstances, it may well have seemed almost hopeless for Germany to attempt competition with Great Britain for American goodwill. Nevertheless, Emperor WILLIAM did not despair, and he foresaw that if he could be patient and conciliatory he could rely on the co-operation of two considerable coefficients of our population. We refer, first, to those American citizens, native or naturalized, who are of German birth, or wholly or partly of German parentage, and who unquestionably number many millions of voters; and, secondly, to those comprising the vast numbers of Americans who regard Great Britain with implacable vindictiveness, and who would rather see our country enter into a friendly understanding with any other European power than with the United Kingdom. Such Irish-American and similar many hundreds of thousands, if not, perhaps, some millions, of voters. Both of these factors in our composite population could, we repeat, be counted on to strengthen the hands of the Emperor WILLIAM, if he could succeed in winning the confidence and friendship of that element in the American community which will easily be identified, if any one will take the trouble to note the obvious racial origin of most members of the regiment, of most high officers of the army and navy, of the judges of the Federal courts, and of the Senators and Representatives in the Federal Congress. An inspection of the list of names has doubtless convinced Emperor WILLIAM that he would not accomplish much if he relied exclusively on German Americans and Irish-Americans.

Accordingly, for years, he has been trying in sagacious and courteous ways to captivate what must be acknowledged as intellectually and morally the predominant component of the complex American people. He has sent his brother, Prince HERZOG of Prussia, to visit us, while at all times he has shown himself exceptionally gracious to distinguished American visitors and to the diplomatic representatives of our government. He has earnestly endeavored in a plan intended to bring about a community of feel-

ing and interest between the friends and the beneficiaries of the higher education in both countries through an annual interchange of German and American professors. He has requested our government to accept a statue of his famous relative, **FREDERICK THE GREAT**, and he has made many a valuable gift to American institutions. It was only the other day, just before the end of February, that he gave a memorable proof of the lengths to which he is willing to go to gain the regard of our American government and people. By prevailing upon the Reichstag, through his Chancellor, Count von Bülow, to suspend until June 30, 1907, the application of the maximum duties of the new German tariff to American commodities, which ought to have been subjected to them on March 1 of the present year, Emperor **WILLIAM** practically gave to the United States far almost nothing concessions which his European neighbors have had to buy for a great price, and he has, consequently, exposed himself to remonstrances and reproaches on the part of our European rivals. Not to another country in the world would the Emperor **WILLIAM** II. have offered gratuitously such a boon. Nor is this probably all that he might consent to do for us. For an undoubtedly believes in striking when the iron is hot, and we should not be in the least surprised should he follow the suspension of the German tariff in our favor with an intimation that he will accept a compromise at Algiers, provided it is proposed and urged by the United States. Such a compromise could easily be framed on paper, but there are, as yet, no indications that the Berlin government would acquiesce in it, were it put forward by a European power. Rather does the whole drift of events in the Morocco conference suggest that Emperor **WILLIAM** is arranging to assure to Mr. **ROOSEVELT** another such a triumph as the latter achieved at Portsmouth, so that, for a second time, the President of the United States may stand forward as the peacemaker in the eyes of mankind.

Public Playgrounds

THE Jamestown Exposition Company in Virginia have now under consideration the establishment of a large seaside playground, under the general direction of Mrs. **RUTH ASHLEY HANCOCK**, for the accommodation of all the children at the exposition. Such a playground was one of the most attractive features of the St. Louis Exposition, and it was proved to be invaluable not only to the parents who wished to go sight-seeing unaccompanied, but even more so to the children themselves, who were spared the tedium and fatigue of crowded impressions, jostling humanity, and a weary dragging through scenes that meant little or nothing to them. The playground was, as well, a refuge for all the children on the grounds who were lost or separated in the crowds from their guardians.

The St. Louis Playground had eight different pavilions, offering accommodations for rest, baths, free dispensary, indoor games, while outside there were little gardens laid out and gardening tools, sand-piles, carpenter's benches, gymnasium apparatus, swings, ladders, horizontal bars, May-poles, hammocks, tennis-courts, and croquet sets. The big play-room pavilion for rainy days had a complete kindergarten in charge, and the management of the whole playground was in charge of its designer, Mrs. **HANCOCK**, who, with twenty-two helpers, four trained nurses, and a small corps of physical directors and kindergarten teachers, kept the grounds open every day throughout the exhibit to an average daily attendance of three hundred children.

At the St. Louis Exposition the public playground had special entertainments once a week. Miss **HELEN GORDON**, who was a persistent advocate of the playground, and in pursuance of whose wish the board of lady managers appropriated five thousand dollars to further the work, gave a party to the children. Miss **MARIA SUDOLSKY**, the friend of **BRUNSWICK** and **COQUELIN**, and one of the most fascinating and gifted of mortals, told her charming fairy-tales, **ANDERSEN'S** and **GRIMM'S**, looking in her quaint fairy-goddess costume of green satin and silver as if she had just come alive from the covers of one of **WALTER CRANE'S** books. Commissioner **BERNS** gave a birthday party there to sixteen hundred children. Mr. **JOSEPH LEE**, of Boston, gave a baby party. There was a specialty festive luncheon for fifty lost children on one day, a minstrel show, a maple-sugar treat, and various other festivities.

The playground, however, is supposed to be not only an accommodation, but a truly educational factor in the lives of the little folk gathered there. Every attention is given to its architectural and horticultural beauty. There are shade-trees and flower-beds, well-laid-out paths, plots of grass, and vine-enveloped pavilions and buildings.

In the larger Northern cities the playground is no novel thing. There are said to be in the neighborhood of fifty in and about New York. To the South, emerging from an agricultural to a mercantile mode of life, the institution is new. The main benefit of such a model playground at the Jamestown Exposition will be the setting before the people the real benefit of public playgrounds managed by expert and trained people.

Above all else, the foundation of worthy manhood and womanhood depends upon the happiness, health, and outdoor life in childhood. Enough of these three things will be found to do away with a great deal of punishment and thwarting. A child, whoever he is, has a right to be well and to be happy. Gloom and confinement make sin.

It is said to be statistically true that our jails are largely filled with institutionalized men and women. It is taking the child before his habits are formed and surrounding him with healthy and joyous conditions which will lessen the burden of taxation for reformatories, jails, and insane asylums.

In a recent book on *Erewhon* by Dr. **SALISBURY**, he points out that the survival of the fittest by no means need be construed into the survival of the best. It merely means that he shall succeed and survive who is most nearly suited to the environment. There are many environments in which fraud and convention and mean-ness survive and a fastidious honesty goes to the wall. It is a fine sign of the times that so much effort is being made to make the environment of the little folk what it should be.

There has been some question raised as to whether the kindergarten turned out the best students or not. First, after all, there is one thing a man must be before he is a scholar, and that is, a man who can possess his own soul and deal equably with his neighbors. There has been no question but that the kindergarten teaches the child his relations to his neighbors. The kindergarten, the playground, the free library (poor as it is, and far enough from any ideal), the garden cities, the park systems, are all movements in the same direction,—the endeavor of man to make life livable for all men. The maxim of one of the most lovable characters in English letters was, *Transferre sensum* from his machine-man and. Perhaps there is but one better to go through life with: to make many men glad.

Personal and Pertinent

HAVING lost the privilege of rhyming the Russians across the rice-fields of Manchuria, the Japanese are now studying other plans for making their legs longer.

By ordering an advance of thirty per cent. in prices, the Ice Trust seems to be laboring under the impression that the coal trust overlooked something.

Administration officials at Washington are looking for trouble in the Far East. The number of persons who have been disappointed in looking for trouble is exceedingly small.

These Senate investigating committees have a habit of suddenly suspending their sessions as soon as they begin getting information they asked and hoped they would not receive.

The War Department has not yet decided upon the place for holding the annual joint army and navy maneuvers, but there are some indications that they may be held in China.

Senator **ALDEN'S** joke in having Senator **TILMAN** made leader of the administration's railway-rate measure has a very sharp point, particularly for those Western Republican Senators who will have to seek reelection by the Legislature to be elected next November.

On the whole, Mr. and Mrs. **LESCROVER** have been well used, since their marriage, by the newspapers. Their journeyings have been widely reported, as were not improper, but they have not been "showered" and we have not witnessed a disposition to fill newspaper space at the cost of their reasonable privacy.

The newspaper which, on March 4, recorded that a French court had denied a motion to annul the divorce of an American, one of New York, from his second wife, went on to give the complete tally of this gentleman's marital experiments. It seems it has required four divorces, first and last, to secure to him the happiness which he at present he enjoys with his third wife, and with which the French court declined to interfere. He has himself been divorced, as yet, only twice—from his first and second wives. His first wife remarried after losing him, leaving with her mother one child, for whose support the father is now being sued. His second wife was a divorcee when he married her; his third wife was also a divorcee when he married her, so that four divorces have already contributed to make him the happy man he is, and he is still young and insensitively domestic. "Numerous congratulations," says the newspaper, "were sent to the present Mrs. —, whose marriage would have been invalid had her husband's second wife's appeal to set aside the divorce decree been upheld." Such congratulations show great respect for the marriage ceremony and certificate. An outsider might think that the marriage of a once-divorced woman to a twice-divorced man would be somewhat humorously regarded, but the insiders seem to take marriage very seriously in all its fluctuations, and to lay exemplary stress on successful compliance by adventurous marriages with the letter of some law.

THE INSURANCE INVESTIGATION AND ITS RESULTS

By Ralph H. Graves

Illustrated from Photographs taken while the investigation was in progress

Charles Evans Hughes

The attorney who conducted the insurance inquiry

ten bulky volumes, showed that the large corporations had contributed to campaign funds out of the policyholders' money; that they had spent enormous sums to influence legislation at different State capitals and even at Washington; that the expenses had been extravagant, the salaries of officers extraordinarily high, and the perquisites of some of the directors unjustifiable; that the actuarial side of the business had become infected with unsafe theories in many instances, and that there had been cases of personal inappropiety and gross mismanagement.

Mr. Hughes first turned his attention to the so-called "Big Three"—the Mutual, Equitable, and New York Life. Then he examined the Metropolitan and a number of smaller companies. The Mutual's president, Richard A. McCurdy, defended the investment methods of the great concerns, declaring that advantageous purchases of securities could not be made in these strenuous times without the aid of "syndicates." He also contended that the officers and directors had done nothing improper when they participated in the syndicate transactions on their own account. On both of these points he was supported by most of the prominent insurance men who followed him on the witness stand.

Holding of shares in subsidiary banks and trust companies, too, was excused energetically by Mr. McCurdy. Incidentally he said that his annual salary of \$150,000 was justified, and he denied the exaggerated stories about his having bought for his private office a \$250,000 rug and a \$2000 chair.

Other witnesses from the Mutual were Robert H. McCurdy, the president's son and the company's general manager, who testified that he had not participated in syndicates, and that his yearly earnings in salary and foreign commissions had been as high as \$125,000, and Emory McCluskey, the actuary, recognized as the head of his profession in America, who favored a limiting of risks, prophesied a "safe future for insurance," and argued that deferred-dividend policies were not necessarily bad.

That the Mutual maintained a house at Albany for its "legislative agent," Andrew C. Fields, was proved; but Mr. Hughes endeavored in vain to secure evidence that this much-talked-of "house of birth" was a pleasure resort for legislators. Fields had left the city and could not be found by the subpoena-servers. The other witnesses gave an information to uphold the scandalous rumors.

In general, however, it was admitted by the elder Mr. McCurdy, and by lesser officers, that much money had been spent for legislation, though each of them insisted the expenditures were confined to proper fees and payments for public crusades against inequitable bills. As in campaign contributions, the chairman of a trustees' sub-committee, Robert Glynn, admitted that amounts as large as \$25,000 had been given in the Republican National Committee,

the examination of witnesses, and his associates were James McKee and Matthew C. Fleming. The committee of inquiry, appointed at Albany in the spring, had, as its chairman, Senator William W. Armstrong, of Rochester, whose fellow members were two other Senators and five Assemblymen.

With only such reserves as were necessary for the counsel to keep pace with their study of records in the offices of the companies, the committee worked steadily through the four months. While crowds of spectators listened, and hourly newspaper "extras" heralded fresh sensations, Mr. Hughes delved into every phase of the insurance business, only omitting the details that had to be overlooked for lack of time.

When the close of the year put an end to the testimony, the investigators had scrutinized the affairs of fifteen companies, exclusive of several assessment concerns. The evidence, collected in

ten bulky volumes, showed that the large corporations had contributed to campaign funds out of the policyholders' money; that they had spent enormous sums to influence legislation at different State capitals and even at Washington; that the expenses had been extravagant, the salaries of officers extraordinarily high, and the perquisites of some of the directors unjustifiable; that the actuarial side of the business had become infected with unsafe theories in many instances, and that there had been cases of personal inappropiety and gross mismanagement.

Mr. Hughes first turned his attention to the so-called "Big Three"—the Mutual, Equitable, and New York Life. Then he examined the Metropolitan and a number of smaller companies. Mr. Ryan

Thomas F. Ryan, who purchased the controlling interest in Equitable Stock, in the Witness-chair

MR. HUGHES. "Your purchase of the control of the Equitable Life Assurance Society was a contribution to peace and prosperity?"

MR. RYAN. "I thought I was doing a great public service."

Mr. Hyde

James Hazen Hyde before the Committee. It was his interest which Mr. Ryan acquired

MR. HUGHES (referring to one of the executive expenditure accounts of the Equitable). "Isn't you think it your duty, as an officer of the Equitable, to ascertain the sources from which came the money for that purpose?"

MR. HYDE. "That is a very good illustration of the fact that I unfortunately relied upon other people to do right."

TWO LEADING FIGURES IN THE INSURANCE INQUIRY

and smaller sums disbursed for similar purposes. In one instance, as testified by a regularly employed lawyer, a contribution of \$2500 was made to the Congressional committee of each political party simultaneously.

The Equitable's affairs of latest date were made public through Thomas F. Ryan's testimony. Mr. Ryan told how he bought the controlling 502 shares of stock from James Bacon Hyde for \$2,500,000, after having decided that it was necessary for some one to avert a financial panic by taking charge of the society's management. He then sound the investigation—and, through them, the public—of his readiness to reveal the stock, for the purchase price plus four-per-cent interest, to the society whenever its directors should decide that it ought to be transformed into a strictly mutual organization.

From Mr. Ryan the committee also heard for the first time the details of the arrangements whereby Grover Cleveland, George Westinghouse, and Justice Morgan J. O'Brien were to act as trustees of the 502 shares, managing the society for the best interests of the policyholders. It was after this that Mr. Ryan was led to tell how Edward H. Harriman had desired to participate in the purchase from Mr. Hyde.

The evidence given by Mr. Harriman, besides containing an attack on Mr. Ryan that showed the financial hostility of the two gentlemen, was distinguished by a defence of stock investments and syndicate participations on the part of insurance companies. Mr. Hyde alluded to the complication of contradictions by testifying that Mr. Harriman and ex-Governor Benjamin R. Odell threatened him with legislative retaliation for Mr. Odell's ship-building trust

Richard A. McCurdy, former President of the Mutual Life

Mr. HUGHES. "Do you know of any president of any other insurance company that receives as large a salary as your \$150,000 a year?"

Mr. McCURDY. "I felt all the more complimented by the fact that I believed there was no other life-insurance president that got so much."

as he could not do by any other means. It was brought out that Mr. Hergeman's industry and judgment had been almost entirely responsible for the Metropolitan's growth, and that the directors had left the management in his hands.

Of the smaller companies investigated, there were half a dozen

losses through a banking company controlled by the Equitable. This Mr. Harriman and Mr. Odell denied emphatically.

For the New York Life the principal witnesses were the late John A. McCall, president, and George W. Perkins, vice-president. Mr. McCall candidly admitted authorizing Andrew Hamilton, as the company's agent, to use a free hand in "watching legislation and taxation," for which purpose Hamilton spent more than \$1,000,000 without furnishing itemized accounts. Mr. Perkins was the first insurance officer to admit the giving of campaign contributions. He caused what was probably the most dramatic scene of the investigation by announcing that he had paid \$48,702 to the managers of President Roosevelt's campaign in 1904.

Later both Mr. McCall and Mr. Perkins defended the Republican contributions by saying that the policyholders' interests were being protected against a possible "free silver revival." The representatives of other companies presented the same defense afterwards.

John E. Hergeman, president of the Metropolitan, and Jacob Fiske, the vice-president, testified concerning that company's "industrial" insurance. Mr. Hergeman, who had told of his refusal to accept more than \$80,000 a year in salary, and of his resignation of personal syndicate profits in deference to public opinion, declared "industrial" policies to be the greatest boon to the poor man, enabling him to save his money

as he could not do by any other means. It was brought out that Mr. Hergeman's industry and judgment had been almost entirely responsible for the Metropolitan's growth, and that the directors had left the management in his hands.

Of the smaller companies investigated, there were half a dozen

George W. Perkins, former Vice-President of the New York Life

Mr. HUGHES. "Will you furnish a copy of that article [of excess purchases and sales of securities by the New York Life] for us?"

Mr. PERKINS. "I'll give you all the information in my power, and produce any records you require."

Edward H. Harriman, former Director of the Equitable

Mr. HUGHES. "It has been charged that, through your relation with Mr. Odell, you have political influence. What have you to say to that?"

Mr. HARRIMAN. "Well, I should think that Mr. Odell had political influence because of his relation with me."

SENATOR PLATT

Senator Thomas C. Platt being examined by Mr. Hughes

MR. HUGHES. "Did you make any request for these campaign contributions from insurance companies?"
SENATOR PLATT. "I did not. They came voluntarily."

that showed interesting features of management. The Home Life and Germania, after rigid examinations, were found lacking in the areas for which the larger concerns had been criticized. The Prudential was shown to be closely allied with the great New Jersey railroad and banking institutions. The Washington Life, it was discovered, had been reorganized and placed on a firm footing by Thomas F. Ryan. The Life Association of America, as its officers admitted, had paid dividends on losses. The Mutual Reserve, an assessment concern, some of whose officers have since been examined by the grand jury at District Attorney Jerome's instigation, had engaged in many complex transactions, raising assessments arbitrarily, paying fabulous commissions, and once disbursing \$15,000 to ward off damage suits likely to reflect discredit upon the officers.

The insurance men's testimony was supplemented by that of several "political witnesses." Ex-Governor Odell, besides denying Mr. Hyde's charges, declared his ignorance of political corruption by insurance companies. United States Senator Thomas C. Platt frankly said that he had collected contributions, and that the companies undoubtedly expected good treatment in return, although he was positive in his assertion that the gifts were voluntary. The other New York Senator, Chauncey M. Depew, who was also a director of the Equitable, explained rumors about his insurance activities, admitted that certain methods needed improvement, and said that he had rendered ample legal services for the annual

retainer of \$20,000 which the Equitable paid him. Francis Hendricks, the State Superintendent of Insurance, acknowledged his ignorance as to insurance matters, but excused the department's lack of efficiency by saying that the law was defective and the money supply limited. Louis F. Payn, an ex-Superintendent, who once eliminated from an examiner's report certain unfavorable criticisms of the Mutual Reserve, was another witness.

Results from the legislative inquiry came fast. While the committee was drafting its report, special investigating boards were named by the trustees of the Mutual and New York Life, and Mr. Ryan put into effect the reforms needed to place the Equitable on a proper basis, beginning by selecting Paul Morton for president. The Mutual's investigators, although an internal quarrel has resulted in the resignation of Stuyvesant Fish, have accomplished much in reducing expenses, and have recommended suits against the two McCurdys for the recovery of "excessive salaries and commissions." The New York Life's "house-cleaning" committee has submitted an exhaustive report, adjudging Andrew Hamilton liable for the money he spent without accounting. Meanwhile, Charles A. Peabody has succeeded Mr. McCurdy as president of the Mutual, and Alexander E. Orr has become executive head of the New York Life.

The report that was handed to the Legislature on Washington's birthday provides that investments in stocks by insurance com-

MR. ODELL. "There is an truth in that statement—no help me God!"

R. H. McCurdy, former General Manager of the Mutual Life

Mr. HUGHES. "What is the salary of your father, the president of the Mutual Life?"

Mr. McCURDY. "I don't know."

Mr. HUGHES. "You have never known?"

Mr. McCURDY. "Never."

panies must cease, except in the case of stocks of municipal corporations, and that bonds purchased must not be secured by hypothecated stocks beyond one-third of the total security. The companies are required to get rid of their present stock holdings in five years—which means the sale of about \$250,000,000 of high-class stocks by them within that period.

Syndicate purchases are to be prohibited, as well as individual participations by insurance officers or directors, in transactions pertaining to their company. Deferred-dividend policies are to be abolished, without nullifying past contracts. The reserve of a company is to be restricted to a percentage of the net value of policies in force. An annual distribution of dividends is provided, either payable in cash, or applied to a reduction of the next premium or to added insurance. The new business of each of the three largest companies, or those with total insurance in force above \$1,000,000,000 apiece, is to be limited to \$150,000,000 a year.

Publicity for all the dealings of the companies is urged. Assessment conveners are not to be chartered in future. Expenses are to

Mr. HUGHES. "What does the holder of an industrial policy get when the policy lapses?"

Mr. HEGEMAN. "Nothing."

be limited, and all salaries above \$5000 must be approved by the full directorate of a company.

The report suggests that all proxies in the mutual companies be made void, and all the spring elections postponed until November 15, so as to give the policy-holders an opportunity to assume the reins. It is recommended that the law shall contain ample protection and assistance for the policy-holders, as the administrators must file lists and computations ahead of time with the State Department, to which any group of one hundred policy-holders may send an independent ticket by way of rebellion.

An important provision is the repeal of the notorious Section Fifty-six of the New York Insurance Law, under which no policy-holder could sue an insurance company without the consent of the attorney-general. Further, the new law will make every violation thereof a misdemeanor, and it will also make it a misdemeanor for any man to accept a rebate. Finally, provision is made that stock companies may "mutualize" themselves, if the stockholders and directors desire the change.

Senator Chauncey M. Depew, one of the Equitable Life Directors, who received \$20,000 a Year for legal Services

Mr. HUGHES. "Did you know that \$10,000 was contributed by the Equitable for campaign purposes in 1902?"

SENATOR DEPEW. "I did not. I had a general idea that there was a contribution, but I didn't see the amount, nor by whom nor to whom."

GROWTH OF LIFE-INSURANCE IN THE UNITED STATES

By James Davenport Whelpley

THE figures which illustrate the growth of life-insurance in the United States are almost incomprehensible. Since 1843 American life-insurance companies, exclusive of beneficial societies, fraternal orders and industrial concerns, have issued 68,836,765 policies. They have paid to beneficiaries and policy-holders \$3,517,041,523, and now hold \$2,518,001,792 in gross assets, constituting the combined reserve fund for the payment of policies now in force, making a total of \$6,035,133,204 in benefits to policy-holders. The companies have received \$6,006,673,293 in premiums, so as the account now stands it shows a profit of \$29,459,921 to the policy-holders. The premium receipts last year were \$469,342,922, as compared with \$283,039,202 in 1909.

The ratio of assets to liabilities of the three big companies at the close of last year, figured on a twenty-per-cent. basis—which means that one-fifth of all premiums is set aside for expenses, the remaining four-fifths going to the reserve and for the payment of current claims—was: Equitable, 124.71; Mutual Life, 120.59; New

The amount of life-insurance in force in other countries, much of which is in American companies, is as follows: Great Britain, \$4,344,522,975; Germany, \$1,329,163,683; France, \$720,209,000; Austria, \$370,021,530; Scandinavia, \$130,000,000; Switzerland, \$70,300,250; Russia, \$47,935,570.

Industrial insurance, in which poor people, by the payment of a few cents a week, insure their lives for from \$50 to \$500 to pay funeral expenses, is a product of recent years, but it has had a wonderfully rapid growth. The money comes in in pennies, but the profits are enormous and have built up three rich and powerful companies. Though the premiums are small in amount they figure up, at the end of the year, from forty to fifty per cent. higher than the rates charged on ordinary business. The amount of insurance of this class in force in 1909 was \$335,500,467. At the beginning of this year there were outstanding 14,862,739 industrial policies, insuring \$2,653,073,214.

American life-insurance has not only survived an ordeal which would have wrecked half the banks in the country, but, in the face

York Life, 111.07. The percentage of expenses to income last year was: Equitable, 18.77; Mutual Life, 20.50; New York Life, 20.07.

In 1909, all of the companies reporting to the New York insurance department had outstanding insurance amounting to \$141,497,977. The insurance in force on January 1, 1908, in all American companies and societies was as follows:

No. of Companies	Insurance in Force
Regular companies	\$12,547,957,441
Assessment societies	480,781,584
Fraternal orders	7,273,869,328
Total	\$20,302,608,353

Percentage of increase since December 31, 1909, 14.248.

The total resources of the national, State, private and savings banks of the United States and loan and trust companies doing a banking business are \$12,108,900,000. The resources of the national banks have increased 40.60 per cent. since 1903.

The combined assets of American railroads, owning all property owned by them of whatever nature, are \$14,862,111,544, as compared with \$1,266,716,000 in 1900, an increase of 1073 per cent.

The material wealth of the United States, as estimated in the last census returns, was \$14,300,000,000, as compared with \$10,132,800,000 in 1900, showing an increase of 40 per cent.

of all of the strife and storm and scandal, it has steadily, if less rapidly, increased its multiplied millions of trust funds. Another impressive fact, developed by the recent legislative investigation, is that its untold wealth of assets will continue to grow.

This is particularly true of the three "giants" which have been under fire—the Equitable, New York Life, and Mutual Life—and the statement holds without regard to whatever new legislation may result from the legislative inquiry. Even if they did not issue another policy, which is an impossible development either from law or sentiment, the accumulating premiums would increase the assets of all of the big companies by fifty per cent. or more, representing hundreds of millions, before they would begin to fall in response to the increasing demands of death claims and maturities. As matters now stand this piling up of assets would continue for almost eight years, and it is evident that it would not be seriously interfered with by lapses, for stand all of the clamor the policy-holders have not become panic-stricken, and are not throwing away their insurance.

Avoid from this statistical development of a badly muddled and often misrepresented situation, life-insurance will continue to grow in the ordinary course of events. But its growth will no longer be forced by an overpowering desire for mere "legends," and it will be developed along ways that do not lead to pitfalls. Inevitably the

(Continued on page 357.)

BILLY CAMPBELL'S JUNGLE STORY

By HUGH PENDEXTER

Illustrations by Albert Levering

"SHALL it be torrid or cold storage?" inquired Billy Campbell, the strolling actor, as he knocked the beef from his pipe and crammed in some plug-cut, very strong, that he was given to consuming.

With a shiver I glanced at the strings of sheet slapping the window-pane of my room and replied, "Torrid."

"Then we'll have to go to Chihuahua," decided Campbell, as he settled down contentedly before the grate and drew long and deep at his briar. "And this is the only way we can visit the home of frijoles and tortillas," he added. "For ever since Tiberius Smith wratched four of his countrymen from the rude grasp of the Aztecs that republic has been closed to us. And say, the exit of Tib from the home of the Montezumas cost him one of the best animal shows that ever growled through the streets of a country town at 11 A.M."

"Suppose, old chap, you begin at the beginning," I suggested. "All right. Now, look. It was early in the winter when we reached the southwestern circuit with a wild-animal show, and Tiberius decided to run down to Chihuahua from El Paso. His object was threefold. He wanted to obtain some Mexican specimens for his outfit, and he believed he could meet expenses by satisfying the childish curiosity of the mestizos, who, by the way, form one-half of the population in old Mexico, and are in as abject a state of slavery as were their forebears under the first passenger-list of Spaniards coming over in the Mayflower. And lastly, he had contracted to capture a troupe of bull-fighters and Marescau-like Dogs for a big wild West show. So much for the incentive."

"We arrived healthy and flea-bitten, and easily picked up the

secrecy desired by the colonel, and were considering a tempting offer to show for the winter in Mexico City, when a sun-kissed peon, with a large quantity of aguardiente concealed about his person, came to our show-trail and tried to bite his way by the rotund Vermont man without crossing our palms with silver. That's largely autograph, as we let them in for what they had, except the stouthe, who entered deadhead. 'Take what you can,' was our motto; but the half-breed forestalled a shake-down by explaining, in badly fractured English, that he had a message for Don Hidalgo Berio, which he would only deliver in return for a front seat. It was written by an American, he said, who was in Querita, an adjacent town.

"We yanked him within the portals and placed him perilously near the hyena's cage and then procured the note. I could see Tib was worked up over the contents, for his round face was drawn down in four curves as he digested it.

"'Too bad, Billy,' he said, in a whisper. 'And one of them worked in Vermont once.'

"'Poor devil!' I sighed; for as Vermont was Tib's home State, I knew my irrelevant remark would make him mad.

"'Criminally it's poor devil when a white man fresh from that blessed State is in this plight,' he snapped, his brown eyes becoming two points. 'Here, read!'

"It seems there were four 'poor devils,' all Americans. They were in Querita, the letter said, waiting to be sent to the salt-mines for life. Now a man who knows Mexico would rent the salt-mines out to his dearest enemy and live in Hialeah—if he owned both. The letter was a brief one, the writer merely stating his prospects,

"With force putting your man barrel through the shipping!"

and saying he had heard from his guards of Smith's presence in Chihuahua. He begged Tiberius to rescue him if he had any love for the children of the Star-Spangled Banner.

Tib knew Spanish more or less, chiefly less, but he carried a gift-brochure that would make up the difference in effect on the average alcade, and a quick trip to the halls of justice gave him an insight to the situation. It seems Murphy, the writer, and his friends had been foolish enough to hire out as a train crew on the Central, and that their train, *saw* Quetta, had run over a big-kay's hired man. Now the average peon, after absorbing all the visible supply of aguardiente, will hunt all over the map for the most *outré* place in which to sleep off his pink rabbits, and nothing appeals to his sordid imagination so much as a busy railroad-track when it comes to trundle-beds. But while the U. S. lines yearly cause the battle of Gettysburg to blush when it comes to looting of earnings, our little *hennette* brother beyond the Rio Grande has a way of making it uncomfortable for train crews when a simple life is crushed out. It isn't because a peon is highly prized as a bit of social bribe-brace, but because, I reckon, the train crews are usually made up of, or bossed by, Americans.

"The alcade admitted the defendants had no course to choose, except to run over the man, but he added with a graceful flourish of his hands: 'The man is dead. What would you have? The lesson must be taught.' He also said that the three judges who sat on the case at first were of the inclination to let a line of bare-footed riflemen toy with the quartette behind a 'violet wall.' But," he concluded, "we are merciful, we are merciful!"

Incidentally to slip into Murphy's hand a note of minute instructions.

"This dose, Tib, tried to get me to go north and sit on the farther bank of the Rio and await the last curtain. Of course I won't for that, and he blessed me and said I would probably wind up as salt-miners. Then he directed me to throw some hardware and cartridges into the cages, and on Saturday morning, with two closed animal-wagons, we started for Quetta. We had our man who could drive chain lightning, let alone the most erratic Mexican mole, and, best of all, we could trust him. He had lived in Mexico for years, but had never forgotten he came from the land of greatness and graft. He led the way, while Tib and I did the brake act on the second tally-ho. The rest of the show we left at Chihuahua.

"It took as a day to cover the short stretch over their rotten roads, but at last we arrived at Quetta, amid a Teftee bus of excitement, and pitched the side-show tent, as if preparing for the Sunday performance. Tib explained to the head injun of the town, who met us two miles out of the place to make sure of the tickets, that if the rest of the treat arrived *per schedule*, Quetta was to enjoy a highly moral entertainment that would be the red-hot and starting-point on all Mexican calendars for all hence. And he cemented his promise with a sheaf of free passes. You can wager the mayor was there with a group of corn-fed peasants to erect the tent when we did arrive. And so the time came for us to set down and wait.

"My plans are built like a watch, and if it don't happen in five

"Tiberius, standing near Murphy's cage, hissed, 'Growth, you villain, growth!'"

"After kicking the hyena to stop his howling, Tib sat down by the hearth that night and thought steadily for ten minutes. Then he jolted his hat over his right ear, and I began to realize we were about to become fair and merry night cravants.

"Billy," he declared, "I could never paint polka-dots on a greynose and believe he was a leopard if I left those men to go to the country of satins pure and true we can get them out of Quetta this a quick dash to the Rio, and farewell to the Dons of the blue Pacific."

"That was his poetry. Whenever he was stung into radical action he always talked in verse type. But he had a scheme back of it all that caused my sapphiric eyes to bulge out and touch the walls of the tent. I asked him if we were to invade a hostile asylum that we must indulge in such opera bouffe. I even doubted if Murphy and his friends would submit to being rescued by such ingredients.

"I've thought it all over and it's our only way," replied Tib. "The relatives of the deceased would go without fire-water a week if those sons of Uncle Sam would only escape into the open and give the bereaved family a chance to shoot them up. Why, look! They are doing real work out-of-doors, and I don't doubt but what their guards are yearning for them to make a lark for liberty. If they did they would never get ten miles from Quetta. So, my way is the only way, my bosom the only haven of refuge."

"The upshot of it all was I hustled back to El Paso, where we had some greenroom effects of a new opera staid, and as best-footed as possible I hiked back to Chihuahua, accompanied by two big trunks. Meanwhile Tib had sent our bill-poster to Quetta to hang up a few valentines, advertising the coming of the show, and

minutes I've missed fire," growled Tib, as we unlocked the covers to the carts.

"Then it happened. First we heard a yell; then half a dozen champagne-bottles opened in quick succession, and the little chapel-bell began ding-donging excitedly.

"Next, with fierce panting, four men burst through the chaperon that came up to the rear of our tent and plunged inside the white walls. I had just time to notice they were ragged and unkempt, and then in a second the wooden covers were down to allow them to enter the cages, and then snugged back in place again.

"I'm afraid, Billy," declared Tib, calmly, as he began sorting out some posters, "that the rest of the show won't arrive in time for to-morrow's performance."

"Just as he said this a levy of villagers, headed by our trusty driver, Collins, burst through the canvas, yelling and brandishing carbines and other impediments.

"Four men escaped from the soldiers, Mr. Smith, and I told the guards I thought they came this way," panted Collins, with an expressive wink.

"What?" roared Tib in Spanish. "Law-breakers escaped! Free passes to the brave men who capture 'em. I believe they did pass this way behind the tent in the brush. I heard a cracking and thought it was a snake. My lion growled fiercely. Hark! He is growling now!"

"The gang passed in running away to hear the growl, and Tiberius, standing near Murphy's cage, hissed, 'Growth, you villain, growth!'"

"And thereat a most blood-chilling roar came from Murphy's

"Don't sit with folded arms. That's too much, even in a hyena!"

den, and the others, to make sure, began to throw in a series of yells that would cause a Bowery gallery-god in go home and through sheer entry take lessons. The crowd fell back in a wave: It simply swept 'em off their feet, sir. To cap the climax, Collins cried, 'I don't let 'em get excited, Mr. Smith! Remember the three men mailed to death in El Paso!'

"After they'd gone Tib turned to me and grinned. 'I think we'll win the trick. And isn't that Collins a jewel?'

"Now each cage was divided by a grating of bars, and in each every nook was one of the same-open suits I'd brought from El Paso. In designing these animal make-ups Tib had made use of air-chambers, so that when a man got tucked into one and the bicycle-pump had been agitated for padding, you had a real life-like beast, with muscles standing out like harness on a forgotten dredge. Of course at the last it was a mere counterfeits, and when the quadruped forgot and stood on his hind legs the effect was simply stupendous. First, Tib ordered Murphy to slip into the lion's pelt, and Murphy was mad. He said he was Irish and would pose as a bear, but never as the emblem of Merry England. Tib talked in him like a hired son to a sick horse, and at last the metamorphosis was effected. Then the others were speedily transformed into a black bear, a tiger, and a hyena respectively.

"After they had struggled into their masquerades and Tib had used the pump on the air-pockets we dropped the covers in get the tout cascade. Dear! dear! Scrimus as the situation was, Tib and I sat down and cried like children. And then if you could only have heard 'em sneeze! All hour going at once, with their front paws thrust through the bars and snaking at us. They were half starved and hysterical, you see; besides, there are cooler things in Mexico than fur suits. But Tib soothed them down at last and reminded them of what they were missing in the salutes, and they promised to be good and ant east any more. As they were quitting down and we were replacing the covers, the lion's amazed head was thrust inside the flaps, and he said: 'I heard you shouting at the lions, now. Such a confusion, I had to look within. Surely, they must be devils. I must see them all to-morrow.'

"Tib snapped the barricades in place in a jiffy, and said, stiffly: 'I never give a performance unless I have all my animals. These are but the advance-weapons and tent. If the others do not arrive, I cannot exhibit!'

"But, señor, I have tickets. I have invited my friends. As a sleight of hand command you to exhibit to-morrow to prove you are not a bungler, cried the intruder.

"That comes of promissory, Murphy; growled Tib, after the shackle left us. 'I brought these suits along as a safeguard, so that if any one should get a peep the hefting glance would not arouse suspicion. Now, hang it all! we've got to give a performance to placate the mayor. For if we don't we can never leave town. So you've got to learn your will-said lessons, my boys!'

"For mercy's sake, please a drink of water!" roared the bear, "A sup of th' erasther!" howled Murphy, and before we could quiet them we had to pass a bottle.

"We didn't dare allow them to remove their disguises, and between the temperature and the dew I am afraid they posed a troubled sight. But early next morning we fed them up and carefully outlined what they were to do.

"Above all things, Murphy, don't sneeze," begged Tib. 'It's immoral, and again, lions, as a rule, covet promissory. And don't, Reynolds, don't sit with folded arms. That's too much, even in a hyena. Fourth, that's the idea, crouch! and snarl occasionally. The tiger must lie on his side, asleep, the lion on his stomach, dignified and solemn, and the bear should huddle up in a ball.'

"Then the unthankful beasts began to protest, and Murphy and Reynolds wanted to be the tiger and sleep, but Weisman swore he'd claw the lining out of any one that disturbed his fellow nose. Burke, the bear, didn't know what kind of a nose to make, and it took Tib ten minutes to teach him to say 'woof' in a bawny-manner. Then we took each one in turn and gave the key, and made him practise his call of the wild so there would be some individuality. Then we waited for the mayor.

"I remember Tib wore a pink shirt and a suit of clothes that resembled one of a bookman's board. But it would have done you a world of good, sir, could you have seen him walking to the entrance in his old cheerful manner, smiling pleasantly as he confronted the rabble and explained that no show would be given until all of his menagerie had arrived. He compromised, however, explaining that the shackle and his friends could come in for a private inspection of the few animals now on hand, and the shackle silenced all grumbling by telling the crowd that Don Tiborio was an honest man to refuse their money until he had his best to offer. Then Tib took up the passes and called me to stand guard while he arranged the mayor and a dozen men and women on the marvellous points of his collection.

"I can't see in the bloody thing," growled the lion, as the party swept aside.

"Silence!" roared Tib to the king of beasts. In English. 'The villagers approach. Be better to be a circus lion than a deliver after table salt, known only by a number. Remember that, my lad.' With this admonition he began to spout to the jabbering, half-embled jays in his unique Spanish.

"Fear them not, señores and señoritas. For though they rage and writh in anger, they know their master's voice—Look out, Burke, pull in your left leg!—the last in English. 'They never dream of incurring my displeasure. Nero here, your Excellency, are three men and two women before he was brought low in captivity, and has added a choice collection of thumbs and fingers to the total since then. The villagers near his wild fire house called him 'Ah-Gee-Hak,' which being interpreted means, 'He Who Eats-Men-Gladly.'—I guess, Murphy, Ah, not so loud. Even a lion has limitations! And the sound of the Irishman buying freedom with a series of bull-like bellows except by me and enjoyed the chocolate poppette without a shudder.

"Now we come to the hyena, the most treacherous of all beasts," continued Tib, skillfully drawing the spectators away from Murphy's rage, as that animal, I observed with horror, tried to scratch his left shoulder-blade with a most unlikable contortion. 'His record was kept for three years by my head trainer as to the number of digits he has chewed off, then the task was given up because of its monotony. So, too, near señores and señoritas, not so near. See him show his teeth in vain—show your teeth, Reynolds!—repeating for his native air. Note his antipathy to serpents, the monarch of the Abyssinian wild, for he hates and dreads his rent.—Now, Murphy!'

"But Nero, in desperation to escape a flea, began to clamber to his hind legs, and Tib saw the move just in time to jump to the lion and snarl him to the moon.

"Don't!" muttered Nero. "It's all the same!" it sounded as though he spoke! gasped a little, dried-up señorita.

"Ahem! His long association with men has given his hoarse growl an almost human quality," said Tib, his face going a bit white at the inside of his teeth as the men he has eaten. Down, you devil! down!" he cried, jumping to the lion's cage and striking him with his cane to distract their attention. Reynolds was lying quiescent at the time, and at the blow promptly raised

his head in amazement. 'Scur!' hissed Tib, in English, and Reynolds made good with a long-drawn hoat that sounded like a buzz-saw suffering from diphtheria.

'These idiots will see their finish yet, Billy,' cried Tib to me, in disgust. 'It's them to the salty brine all right, I guess.'

'This caused the quartette to averdo it as they attempted to catch freedom by cunning acting. Some of them had ever read nature stories, however, and only Tib's ready cane and warning—'Back! back! Not too near!'—saved the day. 'Where I can approach with impunity,' he explained, turning easily to the alcide, 'you would feel their cruel fangs. Ah, late, would you! This to the bear, who was lying perfectly quiet, and Tib gave him a poke that brought a cloud of dust from his flanks, whereat he raised his paw to straighten his head, that now was at right angles with all the laws of nature.'

'Behold the lion about to spring!' shrieked Tib, thrusting into the ribs of the king of the forest and thus bringing him into a more reasonable posture.

'Fer th' love iv—o-o-gh!' spoke and snarled Murphy, in his rich brogue.

'Wonderful!' gasped the alcide and his followers.

'But I never heard a lion use such a delightful Irish accent before or since he giving his howl of rage.'

'Now we come to the royal Bengal tiger, bought by me from the Sultan of Skowhegan for \$10,000,' rattled Tib, rapidly, drawing his audience to the second bin. To his horror he found the royal stretched out on his stomach, legs straight before him, while the head, turned upside down, stared complacently at the top of the cage.

'Notice the wonderful elasticity of his neck,'—and snap! Tib had reared in and turned the head-piece into place. It simply swept 'em off their feet, sir. It didn't need a naturalist sharp to detect that the tiger was abnormal in some respects.

'Thanks, mate,' growled Weisman. 'The dead—'

'But the lion and the hyena promptly came to the rescue and drowned the visitors' exclamation of wonder in a series of prolonged yells that put cramps in my tympanum even at the entrance.

'Ah, he purrs, sedors. He purrs, sedors.——Purr, Weisman. At last he is in good humor,' cried Tib. Then in sotto English: 'Group your legs, you would-be alcide! Cluster yourself! It's no use, Billy,' cried Tib to me. 'I would have saved them if I could, but they won't have it me; and all the time he was pausing dramatically at the bear. 'Kindly throw something at Murphy. He's about to stand up.' I tossed a trout-peg, that didn't do the harp a bit of good, and his muttered curse was only drowned by Tib's addressing the bear.

'Well, sir, it was the most exactly fifteen minutes I ever put in. You see, if the game was discovered, we were in as bad a box as the fugitives. And when the sight-seeing began to file out I felt as limp as a rag.

'I shall come again when the whole menagerie is here,' declared the alcide, on leaving. 'Wonderful and marvellous!'

'Some first and certain,' panted Tib, closing the tent-flap leisurely, while I shoved bottles and fodder to the animals. In three seconds their disgusted faces were slipped free from the head-pieces and were busy with food and drink.

'Then we held a council of war and decided we would leave immediately while the alcide and other citizens were having their sleeves. And the way Collins and a dozen poms consulted the Arab in striking that tent was a caution. From the natives we learned the guards had got no trace of the fugitives, and that Chibwahua was being searched by inches. Tib accordingly decided to skirt the town and make for the Rio.

'We got away from Quetta all right, and whenever we met any of the home people we stopped and inquired for the missing caravan, while the inmates of the wagon let off a few howls to heighten the effect. By night we were abreast of Chibwahua and drove slowly north until morning, when we got a change of mules. Then we crept nearer freedom, but never appearing to hurry, and on the second night out we allowed the four men to ride on top of their homes in their underclothing. But with the sun they again put on their trimmings and hopped inside. By this time Tib and I were nearly dead for want of sleep; for although we let Collins slumber every little now in a while, we dared not quit our posts. At last we reached the Rio, and the men wanted to take off their suits and make one dash for it, but Tib said nay. On inquiring from a half-breed we at last learned we had only a few miles to make.

'Now let's go through with a rush,' I suggested, wearily.

'We'll have to,' replied Tib. 'I see the glitter of their shields.'

'And looking back I made out a party of horsemen galloping a mile in our rear, while the sunlight played brightly on something they carried in their hands.

'With a yell the souls we bumped and tore along, the heavy wagons swaying fearfully as we went down a decline. Nearer and nearer crept the pursuers, their shouts now reaching us, but before they could get within good shooting distance we caught the glimmer of the Rio, where in the dry season the stream is a mere trickle. Smash went the head cart against a ladder, and a wheel was broken into toothpicks. Then in a second we were all out, making for the rock-studded stream, while the soldiers coming up dismounted and began to take pot-shots at us.

'They had got wind of our game some way and did not seem to be greatly surprised at beholding four fierce denizens of the jungle scrambling, wading, and swimming through the stream, each armed with a rifle or revolver.

'I reached home bare first, closely followed by Collins. And, sir, I shall never forget that spectacle. There was the lion, unable to loose his head-piece, swimming profusely in rich felt as he sent back shot for shot. There were the hyena and tiger, very clumsy, using revolvers. And in the rear, in the midst of the danger zone, old Tiberius was rubbing his show-clothes by supporting the bear by the scruff of the neck. I hauled to the lion, and he firmly turned and went back to assist my patron. There they got Huric ashore we found a neat bullet-hole through his neck, but no arteries or large veins were cut. And I didn't feel a bit bad when I saw that two of the enemy needed the kind care of a physician when they rode away.

'Well, that's all. The fellows couldn't thank Tib enough, for he had saved them from worse than death. And in doing it he lost one of the best animal shows that was ever foolish enough to leave the States.'

"This caused the quartette to averdo it"

THERE IS A NEW KING IN DENMARK

By Paul Harboe

ALTHOUGH Denmark was greatly moved by the death of its old King, there was nothing poignant nor violent in its grief. The nation did not stagger under the shock, the political structure did not tremble; indeed, the wave of the event hardly stirred the ship of state. It was otherwise in 1863, when Christian's predecessor, Frederick VII., passed away, leaving the country face to face with one of the direct misfortunes that over befell it: the war with Germany and the subsequent loss of the duchies.

The explanation is, not that Christian IX. was disliked by his people, or merely tolerated, —on the contrary, his place in their hearts is second only to that of Frederick VII., "the people's King"; but it is years since the father of England's Queen retired from active service as a ruler, years since the Crown-Prince became the virtual head of the government. Still, King Christian never abdicated, nor did he risk at any time to have it understood that he had passed the reins of power into the hands of his son, now Frederick VIII.

The life of the King of the Danes was not very eventful. He walked slowly and carefully, as it were, through the ways of being. He never stumbled, he never dealt in passion, or tempted trouble. His nature had the aspect of a typical Danish landscape, — nothing was rugged or crude or aggressive in his qualities, — in short, he was anything but a picturesque Norse legend.

King Christian occupied the throne of Denmark for a longer period of years than had any other monarch of the House of Oldenburg before him. It is a curious fact that one of his sons, Wilhelm, became King George of Greece a few months before his father was chosen to rule over the Danish people, in 1901. Princess Alexandra

Frederick VIII., Denmark's new King

had already then married the Prince of Wales.

No monarch ever lived "the simple life" more consistently than Christian IX. He rose early, exercised, out-of-doors when the weather permitted, lunched at one, dined at seven, retired at ten. His favorite evening pastime was the game of whist, which he played after dinner with his physician or others, always for money, though the "limit" was never high. He smoked, as most common mortals do,—never excessively, however, nor did he drink drop of the wine-cup. A little claret and water, or a small glass of Madeira, were the only "strong" spirits he tasted at meals on ordinary occasions. And yet the royal cellars of Denmark contain some of the choicest wines in the world. The German Emperor can testify to the truth of this statement!

The new King of Denmark, Frederick VIII., is now sixty-three years old. As a young lieutenant he was attached to the Nineteenth Regiment, at the little town of Nylars. The young prince was extremely well liked by all the men who had to do with him and who learned to know him. In 1863, shortly before the outbreak of the war, he entered the university of Oxford, only to be forced soon after to give up his studies and return to fight the Germans. The time came, however, when Oxford saw fit to award

him an honorary LL.D. Between the present ruler of Denmark and the German Kaiser the most cordial relations are said to exist. Frederick VIII. has been so closely associated with crowned heads, and has been for so long an apprentice in the workshop of royal authority, that he enters upon his reign with a large fund of experience, and there is no doubt that he has the full confidence of his subjects.

The Body of King Christian IX. lying in state in the Amalienborg Palace, Copenhagen

The "Dreadnought" brought to Anchor in Portsmouth Harbor immediately after the Launching

THE battle-ship "Dreadnought," of the British navy, represents a marked advance in marine construction. Her distinguishing feature is a main battery of twelve 12-inch guns, so placed that she will be able to fire eight ahead, six astern, and nine in broadside. This battery, calculated to be effective at 9000 yards, and an exceptional speed of twenty-one knots, combine to make the "Dreadnought" the most formidable vessel of her type afloat. Her length is 490 feet and her displacement 18,000 tons, which is 3000 tons greater than that of the "New Jersey" class of the United States navy. The "Dreadnought's" novel hull conformation, and the disposition of the guns in her main battery, are accurately shown in the accompanying plan and elevation.

King Edward VII. at the Launching of the "Dreadnought." He is looking upon the Gun which has won her name indispensable to him. At his Right is Admiral Fisher. As the "Dreadnought" started down the Ways the King cried, "Good luck to the Ship and all who sail in her!"

KING EDWARD AT THE LAUNCHING OF THE BRITISH "DREADNOUGHT"

Buchanan's Wife

By Justus Miles Forman

CHAPTER XVI

BEATRIX LOOKS HER DOOM

FARING returned home late on the third day after his departure. He was just in time for dinner—they made a habit of dining early, so that they might have the best of the sunset and the beginning of dusk in the garden—and Beatrice was waiting for him at the inner gate of the long lawn.

His face went quite white when he saw her, for these three days and what had

occurred in them had altered her terribly. He leaped down from the trap which had brought him and stood holding her hands, staring into her face, quite silent until the trap had driven on to the stable and the footman had taken his luggage into the house.

"What is it?" he said then, in a whisper. "Oh, Betty, what is it? What has happened?"

She broke into a dry sobbing, and hid her face on his breast, and in the circle of his arms she crept closer, pressing against him until he felt the soba shake her from head to foot.

"Nothing, Harry!" she said. "Nothing, nothing! Only—don't go away from me again! I can't!—Really, it's nothing! Believe me. But I can't bear being alone. Such—things might happen. Don't leave me alone again, Harry!"

Faring began a little nervous, overwrought laugh.

"I shan't let you out of my sight again," he said. "I shan't go out of yours—ever. But for a moment you frightened me horribly. Has it been so lonely, Betty?—you know, I haven't had such a very jolly time myself! If I weren't ashamed to, I should have belted back home within twenty-four hours. Anyhow, I don't go alone any time. That's certain. Look up!" he said.

She raised her face to him, and the joy of having him back, of again having his strength to cling to, the touch of him, the sound of his voice, were so powerful that, for the moment at least, the strain and fear seemed to have passed from her, leaving a glory in their place, and Faring laughed again—a laugh of relief.

"Ah, that's better!" he said. "That's more you, Betty! You did frighten me."

"Hold me closer, Harry!" she cried in a little drowsy whisper. "Closer! I want to forget everything except that you're here again. Ah, never go away from me again, dearest! Never, never!"

They dined, after a fashion—a rather ally, homely, and fashion such as early Victorian painters were so fond of portraying—and afterwards walked in the garden.

Down below the roses, in the walled enclosure of old-time flowers, the man with the hard blue eyes bowed himself, and too feverishly, with a watering-pot, and Johnny, quelling his amiable smile, looked on from the vantage of an overturned barrow.

"Hello!" said Faring. "Who are those two? New gardeners?"

"One of them is," said the woman, "the one with the beard. The other is a poor old man—a tramp, who is ill and worn out and cannot work much. He was sent to me by—she started to say by Arabella Crowley, but there might be danger in that—"

"By some people up in that Pinner-street village of mine," she said. "He has had a very bad time of it," she said, "and I want to make him comfortable for a while. You must let me, Harry. You mustn't stop me. It's a whim of mine."

Faring laughed gently.

"You shall have all the whims you like," he said, "and you shall follow them all out! The poor old beggar looks as if he needed a remarkable time. Don't that's a noisy cough! Are you putting him up in one of the beds? Good!"

He halted near the urn with the watering-pot, and looked at him attentively with a little frown as if he were trying to remember something.

"I've seen you somewhere before, my man," he said at last.

The man said, "Yes, sir," civilly, and as Faring did not immediately go on, he said:

"It might be abroad anywhere, sir. I've been about a good bit."

"Yes," said young Faring, frowning intently. "I should like to know where, if it's rather odd."

Suddenly Beatrice saw something come into the hard blue eyes. They seemed to widen a bit.

Then for an instant they dropped and the man put up one hand over his mouth. She imagined a smile there—a triumphant smile, very odd.

"I think I know where it was, sir," said the man, looking up again.

"Yes?" and Faring. "Where, then?" The man looked towards Beatrice, and she drew a quick breath.

"I think it must have been in Cape Town, sir, three years ago," said the man. "I was down from Mafeking just about then."

"Yes," said Faring again, slowly. "It may be. I was there at that time. I think I have seen you since then, though. It doesn't matter, of course."

"Yes, sir," said the man, still looking at Beatrice Faring.

She pulled at her husband's arm.

"Come, Harry!" she said. "We're missing the sunset. Come!"

And they turned away. But Faring paused for an instant more to look at the little gray man, who sat smiling on the overturned barrow.

"Mrs. Faring tells me you have been ill," he said. "I'm glad she has taken you in hand. We shall have you right again soon, doubtless—but if I were you I'd keep in bed out of the night air. It isn't too good for coughs."

Herbert Buchanan made a sort of bobbing courtesy.

"Thanker, sir!" he said. "The beautiful lady has been very good to me, sir. I feel fine, being fed so proper and so often and having a real bed to sleep in."

Faring smiled cheerfully, and they turned away towards the foot of the garden, where the path began to mount to Faring's little hill of vantage. As they turned, Beatrice stumbled, and would have fallen if Faring had not caught her in his arms. She gave a small cry.

"It's—nothing!" she said. "I—rushed my foot. Come! We'll go on."

She turned a bit behind, and her husband as they walked, and drew his arm close about her shoulders. Faring thought it was one of her many little expressions of tenderness, and when they had gone out of sight of the two men he stooped and kissed her lips.

As a matter of fact, she had come very near to falling. She had not reached, until it was over, how terrible a strain she suffered when Harry Faring stood face to face with what remained of Herbert Buchanan and spoke with him. She had brought the meeting about rather deliberately, because it had to occur, but when it was over, when Faring turned away with a careless nod, the man went suddenly black before her eyes, and she cried out and would have fallen but for her husband's arm.

Stilling up in the little open pavilion with his wife's head in the hollow of his shoulder, Faring looked out to the golden west, and the glowing effect at twilight again paled at his brows.

"It seems as if he forgot mine," he said. "And it seems we still more to forget people. Where have I seen your villainous garden man before? These hard eyes of his are extraordinary. One would hardly forget them, I should think, and yet—I vaguely connect him with something—shady, but I can't think what."

What's the matter with his left cheek, by the way? He lets his beard grow high up on the cheek bones, but on the left side there's something like the beginning of a scar above the line of beard.

If I could see him shaved now I should remember, I think. Let me see! A man with hard blue eyes and a scarred cheek! If only he hadn't that scabby head!"

Beatrice stirred her head uneasily on his shoulder, and he gave a little laugh and bent down over her.

"Hang beads and scars and blue eyes!" said he. "They're nothing to us!"

"No!" said the woman, turning her face away. "Oh, no, they're nothing to us, Harry. Let's forget them. They're nothing to us."

It seemed to her that her soul must be writhing and shivering. That golden glowing splendor of the western sky darkened before her, and out of it two cold lights burned, hard lights, pale blue lights—a pair of steady, unblinking eyes that watched and waited, never closing, never wavering, either by night or by day.

"He knows—everything!" her quaking soul said to her. "Everything! When will he tell?"

Faring spoke to her. Some outward, mechanical second-self heard him and mechanically answered. Presently she became aware that this outward second-self was engaged in an extended and varied conversation which it managed with surprising fidelity to life—quite as she would have done it herself. Inwardly, she stood alone with her naked soul and covered before it, striving to elude it from those hard pale eyes that stared and stared and laughed and bided their time.

This endured for, it may be, two hours. Then the night came down, black and damp, and a little chill breeze bore up from the invisible sea.

"We must go in," said the man. "You will be chilled through if we wait here longer."

They went, clasped, embraced, as they were wont to go, save that Beatrice Faring's heart was a little heap of gray ashes instead of a passionate thing which shivered with joy. They went through the garden, where strange odorous growths, night-transmuted, leaped towards them out of the gloom, and so on into the lamp-lighted house and up the stairs.

In her own bedroom, dim chamber Beatrice turned to her husband and pulled his head down so that his face lay upon hers. And she gave a great sob, with-out tears, and pushed him towards the door which opened from her room into his. He kissed her and went, but behind his back he heard the door close sharply and the key turn in the lock.

He turned with a sudden exclamation. There had never been a locked door between them, nor even a closed one. He stood thinking for a moment, one hand on the door-knob. It occurred to him that Beatrice had been hurrying herself all the evening—silently, distrust, preoccupied.

He went out of the room and along the corridor to her door, which the two had not closed on entering, so that it still swung half open. He knocked upon it lightly and went in. Beatrice was crouching upon the floor beside her bed, and her head was between her out-stretched arms. He called out to her gently: "Betty! Betty!" And she rose silently and turned towards him.

"You locked your door," he said. It was as if he had said, "You struck me in the face!" "You locked your door, Betty!" he said.

She nodded, looking away.

"Yes," she said. "I know."

"But—why? why?" cried Faring, and put out his arms to her. "You've never—locked me away from you before, Betty! Why?"

She came into his arms, but passively, without response, her head turned away over his shoulder.

"Oh, dearest," said he, "you must tell me what is the matter! You're very far from being yourself. I felt that something was wrong the moment I arrived, and I've felt it ever since. What is it, Betty? For Heaven's sake, can't you tell me if anything is troubling you? Must we hide things from each other?"

"Oh, trust me, Harry!" she said, in a voice that was much sadder than tears could have been. "Trust me! I'm doing nothing that—that is unnecessary. I—locked the door because I had not the heart to say what—what the locked door said so briefly. I hoped you'd understand, or misunderstand, or something, and not come back. The door must be closed—locked, for—the present. And—don't ask any questions! Trust me! I'm doing only what I must do." She turned in his arms, facing him.

"Oh, Harry," she cried, "if you think I am doing this for any light when, if you think that my love for you is the lightest, blindest, blindest, if you think that I can bear being away from you without agony, I think I shall die. You must trust me, Harry, and not ask me any questions."

"Trust you?" said he, with his face against her hair. "Trust you? I couldn't distrust you and go on living. But I wish—"

He gave a sudden cry.

"Betty! Betty!" And he tried to turn her face up to his, but she held it against the strength of his hands. "Oh, child!" he cried, "do I know what it is! Have I guessed it?" Poignant and joyful imaginings raced through his brain.

"Is it—that, Betty?" he said. "Are you going to make me even happier than I was before? Is it that?"

Beatrice stared blankly at him through the half-darkness. Then she gave an exceedingly bitter moan and turned away across the room.

"Ah, go! go!—go, Harry!" she said, and once more dropped down upon the floor, crouching beside her bed, and hiding her face between her outlying arms.

Faring took one step towards her, then he turned and tiptoed softly out of the room, closing the door behind him.

After a long time the woman stirred, writhing on the floor.

"I am stained and blackened from head to foot," she said. "That Harry should have thought—that! That I should let him think that!"

She bent her hands together very miserably.

"Shall I ever be clean?" she cried. "Shall I ever be free of lies and deceit?"

Again, after another long time, she arose.

"And I did it all for love's sake, Harry!" she said. "All for love's sake! Are you going to turn from me—like God—when you know?"

CHAPTER XVII

JOHNNY AND KANSAS MAKE THEIR PLANS

MEANWHILE Little Johnny and the man called Kansas had gone to their lot at the foot of the orchard, down beyond the greenhouses. The lot was a tiny structure, a story and a half in height, with two connecting rooms below and a loft above.

The man Kansas lighted the lamp which stood on a table against the wall of the larger room, and then bowed himself with filling his pipe from a paper of black tobacco. Little Johnny sank into a chair, and a fit of coughing seized him and severely shook all his wasted, shrunken body. It was piled in now, but one would not have expected a show of emotion or it from that singularly emotionless individual with the

Drawing by Will Leitch

"You must trust me, Harry, and not ask me any questions"

lured blue eyes. However, the man really had, it would seem, something like a heart which could be touched by the suffering of this wretched wreck whose fortunes he chose to share. He stepped with the pipe half-way to his lips, and his face twisted as if he were in sudden pain. Then he crossed the room in the chair where Johnny crouched, bent double with his rending paroxysm, and struck the lacerated shoulder as tenderly as a woman could have done.

"There, there, Johnny!" he said. "There, there, little man!" And Johnny, albeit with crimson face and starting eyeballs, grinned up to him, and, presently, when the fit had passed, leaned his head against the other's arm, gasping and breathing hard till his feeble strength had come back to him.

"That was—a nasty one!" he said, whispering. "That there was a nasty one!"

"Ay, Johnny," said the other man, and went back to his pipe. "A nasty one it was! We mustn't let you stay out in the night air so late another time." He lighted the pipe and sat down in a chair across the room.

"That's it!" said Johnny, eagerly. "It's the night air does it. It's damp like, Grrr! It hurts in the middle of my chest. There's something burns there, most remarkable had."

The other man did not answer, but sat still in his chair, puffing great clouds of smoke and, through them, staring very thoughtfully across the room. Suddenly he gave a short laugh, quite without mirth, and said, "I've seen you somewhere before, my son!" he quoted, with seeming relish, and laughed again, very grimly.

"Ay, governor, that you have!" he said. "That you have! And it weren't in Cape Town, neither. Ho, ho!"

His fell silent once more, puffing great clouds of smoke from his pipe, but he seemed to be thinking hard, for at intervals that odd mirthless laugh broke from him and he nodded his head. When once he laughed little Johnny, watching his face, worshipfully, dog-like, laughed also his variant, meaningless laugh and shuffled his feet on the floor. The other man smoked in silence for a long time.

"It's come," he said at length, staring into the cloud of tobacco smoke as one who saw things there. "It's come at last, and, Grrr, it's come queer!"

"Most remarkable queer!" echoed little Johnny from across the room.

"We'll just be a-going on soon, Johnny, lad," he said. "We've had enough of trading little flowers and stoncking our caps when people comes near. We'll just be a-going on soon. Like that, eh?"

"Ay, Kansas, wouldn't I, just!" cried the best little man, handsly. "It's so foolish like, a-living in one place for days and days when there's the road a-waiting out yonder. I want to wake up with the sun shining comfortable in my eyes," he said, "and the little ants a-crawling over me. That's what I want."

"And your pockets full of money?" said the man with the blue eyes. Johnny grinned with humorous appreciation of the jest.

"I haven't never waked up just like that," he said. "I don't know where the money is a-crawling from."

"Maybe not, little man," said Kansas. "Maybe not, but I do. Heaps and heaps of money we'll have. Money enough to buy yourself in. Money enough to buy houses if you took a fancy to 'em. Money enough to be a gentleman and never do nothing but go about throwing it away."

The other manifested the feeble grin of one pleased at a jest somewhat beyond his reach.

"I don't know," he said, doubtfully. "I haven't never had any money."

"She'll do anything to keep it quiet," he said, nodding.

Drawn by W. H. Gould

"Never, Johnny?" said the man with the blue eyes. "Never?"

"No, never!" he said. The man with the blue eyes bent forward, pipe in hand.

"Once there was a man called Bushman," he said. "He had heaps of money."

Little Johnny's eyes clouded, and he stirred in his chair.

"Are you a-going to begin that all over again, Kansas?" he pleaded. "It's all so damn foolish, and it makes my head go round, and I don't know, I'd rather not." The other man sighed, leaning back in his chair.

"Never mind," said he. "It's no good, anyhow. You've forgot altogether, haven't you, little man?"

Johnny shook his head gloomily. "I expect I must have knew such a man," he said. "because his name makes my head go round, but I can't remember, and I don't like to try. When are we a-going away? I don't like it here. My head's had most of the time. I want to get out on the road again."

"Very soon, Johnny, very soon!" said the man Kansas, nodding into the shadows. "It ain't quite safe here now, with that gentleman come back. I don't like the look of him. Some day he'll remember where him and me met before. He'll remember that it weren't in Cape Town. I'd like to be away then."

"You ain't afraid of him, are you, Kansas?" drummed little Johnny, anxiously, and the other laughed.

"No, Johnny," he said. "He's afraid of me—lastways he would be if he knew some things—and if he's ever afraid of any thing. I wonder, but just the same we'll go in a day or two. To-morrow night, maybe, after I've had a little talk with your beautiful lady. No, I don't like the look of him. He's a bulldog, Johnny. He'll never let go, once he took hold." The man smoked for another long time in silence.

"Easy! easy!" he said, finally. "Easy as you like! He seemed to be speaking his thoughts aloud, forgetful of the man across the room.

"She'll do anything to keep it quiet," he said, nodding. "She's frightened blue. Anything to keep it quiet. How much now, I wonder? Something down and something every quarter or every month. That's his!"

Again he dropped back into his brooding silence of thought and smoke, and so continued for an hour or more, muttering to himself at intervals, shaking or nodding his head judiciously. Towards midnight he rose, stretching his arms, and looked across to where his comrade sat huddled against the wall, chin drooping sleepily upon his breast.

"Time for bed, Johnny!" said he. "You ought to have went long since. I was thinking things over, and I lost track of time. Tiff with you now!" Johnny rose, blinking.

"Maybe it's the last time we sleep here," he said, rubbing his eyes. "I'm glad. I want to wake up with the sun shining in my face and the ants a-crawling over me, comfortable like."

At the door to the other room he turned and put out his hand, touching the other man's arm.

"You're the finest and a son-of-a-bitch, Kansas!" he said, as shyly as a girl. "I don't know what I'd do if you wasn't about."

Oddly enough, a sudden flash came over the man Kansas's face. "There, there, Johnny!" said he. "Just along to your bed! You've sat too late already. I'll whistle up the dog to come in and sleep with you if they haven't chained him. Get along to your bed!"

He opened the outer door of the hut and whistled twice.

(Continued on page 351.)

Buchanan's Wife

(Continued from page 280.)

Something stirred in the darkness near by, and the great horror, which had made such a demonstration over the best little tramp on the occasion of his first arrival, came into the light. The animal slipped quickly past the men pressing against the door casing, and disappeared into the lesser room. The sun Kansas stood for a moment looking after it.

"I wonder why that beast doesn't like me," he said, aloud. "Animals never does. I haven't got time to play with them. That's it. I expect. Johnny he can kick that dog all over the shop, and pull its ears, and feed it pepper, and it still comes a-ringing and a-barking at his feet. If I should hit at it it 'ud eat me alive."

He stepped out into the odorous darkness, where the cool slight wind came from the garden, and he turned his face towards the north, where the house boomed black against a starlit sky. One upper window showed a gleam of yellow light.

"Still awake!" said the man with the hard blue eyes. "A-plotting and a-planning and a-thinking, eh? and a-shivering too, I'll warrant! A-shivering for fear. Ho, ho!" A sudden laugh broke from him in the darkness. "A-shivering for fear!" he said again. "Yk, you'll shiver more afore we're done, me lady. Shiver and pay. Shiver and pay."

He stood for some little time watching that lighted upper window, and then at last turned back into the hall, closing the door after him. He pulled a chair across to the table where the lamp stood and made himself comfortable in it. Then he took a book from the table, and turning to a certain page which was marked by a slip of paper began to read.

The book was *The Minister's Wooing*, by Harriet Beecher Stowe.

To be Continued.

Couldn't See Him

AN Ohio man tells of the sad case of a young fellow, the son of a wealthy Toledo manufacturer, who, against his father's wishes, insisted upon going to Chicago to make his way, whereas the parent desired that the son turn himself in the Toledo business house.

At first the lad did very well in the larger city, but it was not very long before he was making urgent appeals to his father for financial assistance. To these the old gentleman, who had himself been trained in a hard school, turned a deaf ear.

Finally, the desperate boy wired his father in these words: "You won't see me starve, will you?" The old man's reply came in the form of the following telegram: "No, not at this distance."

Then the boy decided to return to Toledo and go to work for the old man.

Bookbindings in Europe

AN official of the Congressional Library was recently remarking upon the difference of the bindings put upon the documents issued by the United States government and those of European countries.

"Here, for instance, is a volume issued by the French government upon fish culture," he said. "You will observe that the paper, press-work, and illustrations are the finest, while the binding or cover, rather, is a very cheap paper. A volume somewhat similar is the annual report of the Smithsonian Institution in this country, but upon this report is put a good binding of green cloth."

"The reason for this is simple. Practically every book-collector or institution in Europe has its private binding, it being possible to have this work done at a very moderate rate, and the paper covers are intended merely as wrappers until the volume shall have reached its destination. In this country there are a few individuals and some libraries which have their books bound in a private binding, but the cost of such work is so great that it is far from being usual.

"This is one reason for the fact that the paper and press-work of a French book, for instance, are so much finer than those of an American book of the same price."

Bumped-into-the-Bureau Kind

JUSTICE HARLAN, of the Supreme Court, despite his length of service on the bench, still preserves that elasticity of spirit and love of a joke that have distinguished him all through his career.

On circuit last year the justice rendered considerable merriment in a Western court. A learned counsel was arguing the question as to what circumstances constituted an "accident," and was offering instances of what he considered would properly come within that term and what would not, on the other hand. "Suppose, your Honor," said he, "some one were to hit me in the eye, making it black in consequence. The fact of its becoming black could not be called an accident."

"Perhaps not," suggested Harlan, with a chuckle, "but you would doubtless explain it on that ground."

In Camera

A SAINTLY ten-year-old girl, whose father is addicted to amateur photography, attended a trial at court, the other day, for the first time. This was her account of the judge's charge: "The judge made a long speech to the jury of twelve men, and then sent them off into a little dark room to develop."

ADVICE TO MOTHERS.—Mrs. WHELAN'S SOOTHING Syrup should always be used for children's teething. It soothes the child, reduces the fever, clears all pain, cures wind colic, and is the best remedy for diarrhoea. (Ad.)

FOR CONVENIENCE

Music And The Opera

MACDOWELL'S ORCHESTRAL MUSIC

BY LAWRENCE GILMAN

WITHIN the last fortnight, New York and its neighborhood have had the very unusual experience of hearing, in close succession, performances of all but one of the orchestral works of an American composer—about the most distinguished of those whom one may claim as such, Edward MacDowell. The fact would, of course, occasion less surprise were it not for the realization that these attentions were prompted, quite naturally, by the peculiar personal circumstances of Mr. MacDowell's case.

But although one encounters affliction in order to being themselves to the notice of our lords of musical publicity, one cannot but welcome such exploitation, whatever its immediate cause. The event is especially gratifying in MacDowell's case for the reason that, while his working in the smaller forms is well known to a large section of the cultivated musical public, his orchestral works constitute, to all intents and purposes, a territory unexplored and unexplored. Their scores are, of course, not intelligible to the average music-lover; and they are so seldom played by our orchestras, especially in New York, that their recent performance had, for most of those who heard them, an astonishing air of novelty. The representation was admirably complete: we heard from the Philadelphia Orchestra, under Mr. Seibel, on March 3, the first performance by that orchestra of the "Hamlet" and "Ophelia" studies; the New York Symphony Orchestra, under Mr. Dausbach, played the two "Fragments" after the Song of Roland—"The Saracens" and "Lovely Alda"; on March 10 the New Music Society of America, under the direction of Mr. Modest Atschuler, did the "Indiana" suite; and, as this goes to press, there is in prospect a performance, on March 15 and 16, of the first suite (op. 42), by the People's Symphony Orchestra, under Mr. Aron.

This is a noteworthy showing, for it accounts for all of MacDowell's orchestral works except his symphonic poem "Lancelot and Elaine" (op. 25)—of which it may be hoped that a performance will soon be forthcoming, for it is in some ways MacDowell's most interesting orchestral achievement. That, as a general thing, he is an individual and compelling in his orchestral works as in his writing for piano, will scarcely be maintained by those who best know the quality and scope of his art. Partly because his orchestral music, with the exception of the "Indian" suite, represents a comparatively unexplored period in his creative activity (it was all, saving this Suite, produced during the first ten years of his work as a composer), it lacks, naturally enough, the ripeness and distinction of such mature achievements as the "Sea Pieces," the "New England Idylls," and the last two sonatas, which disclose the finest flower of his art.

The "Hamlet" and "Ophelia" studies—two "poems" for orchestra, he calls them—were written two decades ago, during MacDowell's memorable Frankfurt days. Their performance on March 3 and 4 by Mr. Seibel and the Philadelphia Orchestra—the first one by

that organization—was of uncommon interest, for it was the first performance of them in this neighborhood in more years than one likes to think of. They were composed while MacDowell was still in his early twenties, and they give sufficient evidence of this fact; for, despite much that they have of tenderness and sincerity of emotion, they are somewhat lacking in penetration and depth of insight. The "Lancelot and Elaine" music, which was written some years later at Wiesbaden, is a more noteworthy accomplishment. It is sifter in its emotional grasp, of a deeper and finer beauty, than the earlier work, and it is decidedly more individual.

"The Saracens" and "Lovely Alda," admirably played last week by Mr. Dausbach at the last of the season's New York Symphony concerts, stand in the list of MacDowell's works as op. 20. They were written at Wiesbaden, and were originally intended to form part of a "Roland" symphony—a plan which was finally abandoned. They were published in 1891 in their present form: as "Two Fragments from the Song of Roland." The first, "Die Saracenen" (to give the title as it is printed in the score), is a sonnet picturing of the scene in which the lance-charge scenes to commit treason against Roland; while the "Saracens" forest amid the firing of pikes fires and the wailing of sinister music. It is a forceful—though too brief and incomplete—conception, barbaric in color and rhythm, and scored with ingenuity and imagination. The second "fragment," "Die Schöne Alda," is a more memorable work. The music depicts the loveliness and the grieving of Alda, the wife of Roland, who died, broken-hearted, after the fall of her hero at Roncesvalles. Despite its strong Wagnerian flavor the music bears the impress of his own thought, although it has not a great deal of his essential quality. It has, however, moments of compelling beauty, and it is orchestrated with exquisite art.

The suite, op. 42, is the most familiar of his orchestral works, and, as I think, the least important. It is very Babbalanza-like, more in conception than in effect—and it is a product of that imperfectly realized romanticism which I have elsewhere attempted to separate from the intimate spirit of sincere romance which MacDowell has so often succeeded in embodying. It has atmosphere, spirit, undeniable vitality; yet somehow it does not impress one as being either as poetic or as distinguished as one imagines it might have been made.

The second suite, entitled "Indian" is in a wholly different case. Composed in 1892, performed for the first time in 1893, and published a year later, it had been heard in New York but three times before its performance last Saturday, at the first concert of the New Music Society of America. Although this music is admittedly, for the most part, based upon authentic Indian melodies, it is saturated from beginning to end with the rich and unmistakable flavor of MacDowell's own personality. Not only does it constitute the high-water mark of his orchestral writing, but it is, one may be permitted to say, the most impressive achievement of symphonic magnitude yet made public by an American composer.

Harold Bauer

This distinguished pianist who has been heard here recently in concert and in recital

Our Trade in Shoes

EXPORTS of leather and leather manufactures from the United States during the calendar year 1905 were the largest on record, being valued at \$39,546,422, against \$35,354,892 in 1904, \$27,109,614 in 1903, and \$12,275,470 in 1902. The growth in this feature of the foreign commerce has occurred chiefly during the past decade, especially the last half of that period. As far back as 1885 the exports under this head had reached a total of practically 10 million dollars, and they ranged between that amount and 10 millions up to about 1897, since which date they have more than doubled.

The exportations of leather and leather manufactures, as classified by reports issued by the Department of Commerce and Labor, through its Bureau of Statistics, fall under three principal heads: Sole-leather, upper-leather, and leathers and shoes. About one-half of the total is in the form of "upper-leather," but use in the manufacture of boots and shoes, and about one-fourth is represented by boots and shoes and sole-leather respectively. Hides and skins show a total of a little over a half-million dollars, and other leather manufactures 1-1/3 million dollars. Exports of boots and shoes have increased about 4 million dollars since 1904.

While the United States is now exporting leather and leather manufactures to the value of nearly 40 million dollars annually, it is still importing leather and manufactures thereof in no inconsiderable quantities. In the year which ended with December, 1905, our total imports under the above head aggregated \$12,052,510, against \$10,870,214 in 1904 and \$13,297,706 in 1903. The principal articles under this class were gloves of various grades, \$5,424,437, about two million dollars' value each coming from France and Germany and a little over one million dollars from other Europe; skins for moccasins, \$2,311,017, skins and upper-leather, dressed, \$2,082,823, and hides and patent, enamelled, and japanned leather \$691,345.

No Sense of Humor

AN old Georgia dorky owned a small and ancient mule, but which, at a casual question as to the price at which it was held, became suddenly endowed with all the virtues of the best blood of Kentucky.

"But he is at least twenty years old, mule," the would-be purchaser protested.

"Dat mule," Uncle Moses said, indignantly, "No, uh! Et dat mule's no' an six years old, Ah hopes he dies fo' mawin'!"

Upon visiting his stable the next day, Uncle Moses was struck with consternation to find his animal stretched lifeless on the ground.

"Look at dat, now!" he exclaimed, with intense disgust. "What yo' think o' dat? Never did see sikh or loak mule—couldn't even take or lil' joke look dat!"

How He Knew

Not long ago a man was about to purchase a barrel of apples at the establishment of a produce-dealer. They appeared to be especially fine ones, but an old farmer standing near whispered to him to look in the middle of the barrel. This the would-be purchaser did, to find that with the exception of a layer at each end, the apples were small and inferior.

"I'm much obliged," he said, turning to the old farmer.

"I've got some nice ones on my wagon I jest brought in," the old fellow ventured, diffidently.

"I take a barrel from you, then," the man said, paying him the price and giving him address for their delivery.

"Say," a bystander asked, as the purchaser walked away, "how did you know those apples in the centre of the barrel were no good?"

A twinkle came into the old coddger's eye. "Oh, that was one of my lar's," he said.

Lea & Perrins' Sauce

THE ORIGINAL WORCESTERSHIRE before pouring it over the meat.

CARTOONS OF THE WEEK

The Growth of Life-Insurance in the United States

(Continued from page 311.)

cost of life-insurance will be cheapened. Things already are moving in that direction through the cutting off of extravagances, and the application of the strict business methods which hereafter must prevail.

The amazing growth of life-insurance in recent years has been a product of last-house evolution. Starting out as a protection to widows and orphans, it became a gamble, and, in later days, it has been held out as an investment. The speculative feature is certain to be done away with in the new order of things, and life-insurance will no longer pose heavily as an investment enterprise. There will be a return to first principles, and protection to dependents will be furnished at the lowest possible cost.

In the beginning there practically was only one form of policy on which the premiums were paid annually until death, when the exact amount for which the person was insured was paid to his beneficiary. In the last year for new business the greater assets, which brought about the evils that now are being eliminated, changes in and additions to the policy forms followed each other with increasing rapidity. One of the big New York companies now has on the shelves in its policy department nearly 1400 different forms, of which almost 500 are in daily use. Of the latter, more than 100 are for use in the United States, 130 are printed in English for use in other countries, and 250 are in foreign languages covering all the world.

Fashions change in life-insurance, as in all other things, and the deferred-dividend policy, which has been the chief cause of the wonderful growth of life-insurance, seems destined to go out of style for a while. The element of speculation entered largely into the original deferred-dividend policy, as the premiums paid in by those who allowed their policies to lapse, less their proportion of death claims and expenses, plus the earnings of the accumulations, were divided among those who continued their payments to the end of the period. Policies maturing by death during the period were paid in full, but received no share of the earnings.

This arrangement, long ago abandoned, produced large dividends, which have recently been used as a basis for unfavorable comparisons with dividends paid under more equitable conditions, but it also worked so injuriously to those who were unable to keep up their premium payments, in modified form, with protection to those who were compelled to surrender their policies, the deferred-dividend plan has been continued; and under ideal conditions—sound and economical management and careful investment—it probably is the most satisfactory form of insurance, in spite of all the criticism to which it recently has been subjected. The great objection to it is that it creates an enormous fund, which is a continual temptation to extravagance, or worse. On the other hand, accumulating dividends compound the interest which they earn, and become available in a lump sum at a time when they will be of the most value, instead of being paid in small instalments when the insured is young or in middle age.

With the changes in policies have come more liberal conditions. In its infancy, insurance was open only to men in the ordinary course of life, and the policy was burdened with all sorts of restrictions which produced many lawsuits. Gradually the restrictions have been lessened, claims are paid promptly, and litigation is rare. In most companies a policy is irrevocable after the first or second year. After three years a policy has a cash-surrender value equal to its share of the reserve fund, or the amount of the insurance is automatically extended for a graded period without further payment. The list of risks allowed on hazardous or extra-hazardous has been greatly reduced as the result of experience, and outside of the tropics, missionaries to China, racing automobilists, and bartenders now are the only people who cannot secure insurance even by the payment of increased premiums. Fire-

CRYSTAL Domino SUGAR

A
Triumph
in
Sugar
Making!

Sold only in 5 lb. sealed boxes!

men, policemen, officers of the army and navy, and even life-savers, except those stationed at very exposed places, are no longer regarded as hazardous risks, though they are placed in separate dividend classes. Automobileists who operate their own machines are accepted at ordinary rates, but chauffeurs pay an extra premium. Makers and handlers of dynamite are penalized in proportion to their intimacy with the explosive. Even the man who is not in perfect health can secure insurance, for there are sub-standard policies for slightly impaired lives.

Practically, life-insurance calculations are based on the American Experience Table, which gives the limit of life at sixty-six years. The annual premium on any policy is based on this table, and is made up of two parts—the net premium and the loading for expenses and other contingencies. The net premium, plus three-per-cent. interest, constitutes the mortality fund from which all maturing claims are paid. The balance on hand, which is accumulating for the payment of future claims, is called the reserve. Theoretically, the reserve is just sufficient to pay off all claims as they mature, until the last policy-holder is reached at the age of sixty-six, when the balance will exactly equal the face of his policy. However, all insured lives are carefully selected, so there ordinarily is an annual saving in mortality and often in the loading. These savings, added to the excess of interest earned over the legal requirement of three or three and one-half per cent., as provided in different States, make up the dividends. In estimating future dividends years ago, the insurance companies made the mistake of basing their expectations on a continued interest rate of six and seven per cent., which then prevailed, and there have been many disappointments in consequence as policies matured.

The rates now charged by American life-insurance companies are generally lower than those of foreign concerns. At age twenty-five for the English rate is \$23 12, the French, \$23 50, and the German, \$25 82, as against \$21 40 in the United States. At age thirty-five the rates are: English, \$28 00; French, \$30 70; German, \$28 02, and in United States, \$26 11. At age forty-five the rates are, respectively, \$28 13, \$32 00 and \$30 21, with \$30 35 in the United States.

On a non-participating policy for \$1000 the rates in the United States are again lower than in England and France. At age twenty-five for the English rate is \$16 17, the French, \$21 20, and the American, \$17 37. At age thirty-five they are, in the same order, \$23 75, \$27 60, and \$22 00, and at age forty-five they are, respectively, \$33 13, \$36 40, and \$32 68.

One result of the present agitation is likely to be the building up of stock companies, which, with directors who will actually direct and prevent waste, for their own profit if for no other reason, will sell life-insurance on a responsibility rather than on a speculative basis, and at a price which will be low enough to meet and increase the demand.

Should Have Pushed

REPRESENTATIVE JOHN SHARP WILLIAMS, of Mississippi, is considered to be possessed of the keenest and most sarcastic wit of any member of that body.

Last spring Mr. Williams, in order to reach a certain town in time to make an address to a political meeting, was obliged to avail himself of a notoriously slow train.

The train made its fifteen or twenty miles as slow as right, but to the impatient Williams it was the slowest thing on earth, and he told the conductor so several times. Finally, the latter, as is not uncommon in such cases, took these observations to be in the nature of personal insults. "If you don't like the speed of the train, you can get out and walk," he exclaimed angrily, not knowing the identity of his passenger.

For fear of being crushed, Williams calmly replied: "I would, only the good people of Augusta don't expect me till the train gets in."

Actors Who Have Left Fortunes

SOME interesting facts concerning the relation between stage fame and wealth have been brought forward by an English observer. Probate of the will of the late Sir Henry Irving was recently granted to his two sons, Messrs. H. H. and Laurence Irving. Details of the dispositions of the will have already been published. The gross value of the estate was £20,527 10s. 4d., of which the net personality has been sworn at £16,623 10s. 4d.

Those who contribute to the entertainment of the public, whether as managers or performers, although sometimes they earn large incomes—always, however, exaggerated by report—have leave of death large fortunes. Constant attendance, direct and indirect, is deemed essential to their business, and is costly. They are expected to be lavish in their generosity, and to give whenever asked in the cause of charity free performances which they cannot afford to give.

It is the custom in the theatrical profession to call an actor's salary at least thirty per cent. more than it is, and the temptations are many to live up to or beyond the nominal rather than the actual incomes.

An Interesting List

Among the fortunes left by members of the theatrical profession have been those of:

Wilson Barrett, aged 37; left £2000 for charities	£30,562
Lady Martin (Helen Faucit), aged 82	27,000
Edwin Booth, aged 39	24,000
Sir Augustus Harris, aged 44	23,677
William James Lewis (William Terrie), aged 50	13,257
Frederick Hobson (Fred Leslie), aged 37	16,113
George Wild Galvin (Dan Leno), aged 45; and to have earned £150 a week, and probably did earn twenty some time £100 a week	10,994
Herbert Edward Stoney (Herbert Campbell), aged 61	4,477
William Rigdon, aged 68	4,196
Maxwell Fleischmidt (Jenny Lind), aged 47	40,630
Ernest Dichter (Ernest Nicholson), aged 62, the famous operatic tenor singer	44,540
Richard Corney Grain, aged 50	18,950
Frederick Burgess, aged 67 (Moore and Burgess Minstrel)	10,884
Frederick Charles Hengler, aged 67, circus proprietor	50,653
Frederick Ginnett, aged 67, circus proprietor	32,170
Frederick William Sanger, circus proprietor	10,000

The estate of Richard D'Oely Carte, aged fifty-five, of the Savoy Theatre, was sworn for probate at £240,071, probably the largest sum ever left by a public entertainer.

Sterling Advice

The inner side of every cloud is bright and shining:

I, therefore, turn my clouds about,
And always wear them inside out—
To show the lining!

Sizing Them Up

Near long ago Governor Folk of Missouri, upon reaching his office at the Capital in company with a friend, found a number of men waiting in the anteroom. He paused as he passed through, and made a joke that was a decided chestnut. When the Governor and his friend were in the private office, the friend remarked:

"See, that was a fearfully old one you got off just now."

"I know it," was the complacent reply.

"Then why did you do it?" the puzzled friend asked.

"Did you notice which of those fellows laughed?" Well, they are the ones who have favors to ask," was the explanation.

Safe

A New York man was stopping for a month at an inland town in Florida. This man is exceedingly fond of swimming, but has a horror of snakes, and this fear kept him from indulging in his favorite sport in the near-by river. He was fishing one day, and mentioned his desire and the barrier to its enjoyment to his guide, a lanky and successful "cracker."

"Oh, I kin fix 'ya all up all right," the guide drawled, and led the way to a beautiful little lake some distance back from the river. "Ain't nary snake in hyah," he said.

The Northerner enjoyed a half-hour's sport in the clear water, and then coming back to the white sand beach began to dress. He then observed that what he had taken to be several logs floating upon the water were in motion.

"Wonder what causes those logs to move?" he said.

"Them ain't logs," his guide calmly replied, chewing on a straw; "them's gators. That's howcom' they ain't no snakes in hyah—'gators keeps 'em off."

He Knew

MISS DE STYLE. "What is a good recipe for home-made fruit-cake?"
GRUNT (a *dyperdile*). "Pepain, nut com-
ics, and bicarbonate of soda."

What He Thought

THE man stammered painfully. His name was SIMONS. Especially difficult to him was the pronunciation of his own name. He led the pretension to stay out late and sup-
piciously one night, and to account for it before the magistrate at the Police Court next morning. "What is your name?" asked the court.

SIMONS began his reply: "Sim—what is—"

"Stop that noise and tell me what is your name," said the judge, impatiently.

"Sim—what is—"

"That will do," said his Honor, severely. "Officer, what is this man charged with?"

"I think, your Honor, he's charged with sody water."

Identifying Them

SOME lady visitors, going through a penitentiary under the escort of the superintendent, came to a room in which three women were sewing.

"Dear me!" whispered one of the visitors, "what vicious-looking creatures! Pray, what are they here for?"

"Because they have no other home. This is our sitting-room, and they are my wife and two daughters," blandly replied the superintendent.

Too Much to Ask

A TRAVELER in the Highlands observed, while at a tavern in a small village, a very beautiful collic. At his request the owner was pointed out to him, and he asked the man what he would take for the dog.

"Ye'll be taking him to America," the Reid asked, cautiously.

"Certainly, if you sell him to me."

"I no want part wile Reid," the dog's owner then said, emphatically. "I'm muckle fond-like o' him," and liberal offers were no inducement.

To his astonishment the traveler later saw the dog sold to a drover for half what he had offered, and after the drover had disappeared, requested an explanation. "You said that you could not sell him," he remarked.

A twinkle came into the Highlander's eyes.

"No; I didna say I'd no sell him—I said I couldna part wile him," he said. "But he'll be home in two or three days frae me, but I couldna ask him to swim across the ocean. Na, that wou'd be too muckle to ask!"

THE INCOMPARABLE WHITE THE CAR FOR SERVICE

THE WHITE STEAMER ABROAD

The favorable comparisons frequently made between various American machines and the best-known of the foreign makes are interesting, but we believe that a specific statement of the sales abroad of these American machines would be more convincing.

This company has a branch office in London (exclusively for its automobiles), which was established in 1901. We also have flourishing agencies in Paris, in Antwerp and in Milan. Our cars are thus sold in four European countries in competition with the home product. The price abroad is the American price, plus all extra charges for freight, duty, etc. The number of White cars already contracted for to be delivered in Europe this season reaches well into three figures.

This extensive European organization ensures that White tourists will receive abroad every courtesy and attention.

In addition to our European business, we have agencies in Japan, in Australia, in the Philippines, in Hawaii, and in Mexico. As an example of the importance of these agencies, we might call attention to the fact that there are more Whites in progressive Japan than all other makes combined.

American Diplomacy

ITS SPIRIT AND ACHIEVEMENTS

by

JOHN BASSETT MOORE

Author of
"Entreaties and Interstate Arbitration," "History and
Digest of International Arbitration," Etc.

For years Professor Moore has been regarded as being the highest living authority concerning the history of American diplomacy. This series of papers on American diplomacy has commanded wide attention, not only in this country, but in all the capitals of Europe as well, and places many historical facts before the reading public for the first time. It shows how from the very first the American policy has been to negotiate treaties and carry on international business fairly, squarely, and aboveboard; and it unfolds and expounds in a clear and connected form the distinctive principles and policies the maintenance of which has caused American diplomacy to be acknowledged as one of the great formative forces in modern history.

HARPER & BROTHERS, NEW YORK

MARK TWAIN'S Complete Works

MESSRS. HARPER & BROTHERS take pleasure in announcing that, having acquired the exclusive rights of publication of all present and future books by Mark Twain, they have prepared a splendid edition of Mark Twain's works complete in twenty-three volumes, uniformly and beautifully bound. Now, in view of this exclusive arrangement, they are able for the first time to offer Mark Twain's Complete Works at a lower price than ever before permitted.

The twenty-three volumes are beautifully bound in a handsome olive-green cloth with leather labels, and in half-leather with uncut edges and gilt tops. There are photogravure frontispieces and many other illustrations in each volume. The staff of illustrators engaged in this work includes such artists as Smedley, Du Mond, Kemble, Fogarty, Beard, Newell, Brown, and De Thulstrup. The edition is in every respect a model of artistic book-making. The volumes—twenty-three in all—make a handsome appearance upon the shelves of any library. This is the first time that the complete works of this great author have been offered at a moderate price

FREE—A photogravure portrait of Mark Twain

"Probably No One Thing

Has Given a Greater Stimulus to Saving Than Has the Development of Insurance, and the Endowment Policies in Connection With It."—From *The Principles of Economics*, by Fetter.

Under this plan you can save money and insure your life at the same time.

Every Up-to-Date Man Should Look into Endowment Insurance. For an annual payment by him (which is always increased) he is guaranteed the return of a sum of money, with dividends added, all to be drawn out upon reaching a certain age.

He also has the Company's pledge to pay the full amount of policy in the event of death, even if it were within the day after the payment of the first premium.

Prudential Policies have many benefits—cash loans, cash dividends, cash surrender value, permanent insurance, and automatic extended insurance. No compensation to residence, travel or occupation. If you are insured, you are protected.

COMMENT

DURING the week ending March 10 the Statehood bill in its original form met with the fate which had previously befallen the Philippine tariff bill. By a majority of thirteen Senator FOWLER carried his amendment providing that the question whether Arizona and New Mexico desire to enter the Union as a single State should be submitted to the inhabitants of each Territory separately, and if a majority of those voting in either Territory should reply in the negative, the amalgamation should not take place. It is believed that the amendment would have killed the project of joint Statehood, so far as Arizona and New Mexico are concerned, because a large majority of the voters in Arizona are alleged to be opposed to the plan. The opponents of the measure, however, resolved to make assurance doubly sure, and, accordingly, by a majority of two, they eliminated all reference to Arizona and New Mexico from the bill, and sent it, thus mutilated, to a conference committee. As the bill now stands it provides only for the admission of Oklahoma and Indian Territory to the Union as a single State. What course will be pursued by the House of Representatives is not known with certainty. It will be remembered that in the House the bill encountered for a time strenuous resistance on the part of a considerable minority of the Republicans as well as from the Democratic members. Speaker CANNON, however, by a relentless use of the large powers vested in him and in the Committee on Rules, succeeded in quelling the revolt to a large extent and in securing the passage of the measure.

What will now be the attitude of the former insurgents? They can now say that the original Statehood bill has been condemned in the Senate by many Republicans as well as Democrats, and that Speaker CANNON cannot consistently undertake to discipline them for opposing the measure in its original form, unless he purposes to read eighteen Republican Senators out of the party. Obviously, it is unreasonable that Oklahoma and Indian Territory, which conjointly will have a population entitling the proposed State of Oklahoma to five Representatives and seven Presidential electors, should remain excluded from Statehood because Republicans happen to differ among themselves concerning the expediency of fusing Arizona with New Mexico. We ourselves have advocated the fusion on the ground that neither of the two Territories last named has now, or is likely to have for many years to come, a population justifying its admission to the Union. As it is, too many rotten boroughs have been permitted to balance in the Senate such imperial commonwealths as New York, Pennsylvania, Illinois, Ohio, Missouri, and Texas. We want no more of them. That is not to say that Oklahoma and Indian Territory, which before long are likely to have two million inhabitants, ought to be barred out of the Union for no fault of their own.

The owners and operators of the anthracite-coal mines have rejected all the demands of the anthracite miners, but have offered to renew for three years the agreement concluded three years ago under the auspices of the Anthracite Coal Strike Commission appointed by Mr. ROOSEVELT. They have made this offer in spite of the fact that they consider some of the provisions of that agreement extremely onerous. That agreement, although on its face it was made terminable in three years, was believed by the members of the commission which framed it to present a just basis for the permanent regulation of the relation of miners to their employers. There is no excuse for a second interposition on the part of the President. He professed on the former occasion to interpose between the striking miners and the mine-owners in the interest of the community at large, or rather that part of it which is accustomed to use hard coal. He can offer at this time no such pretext. The aggregate reserve of the anthracite-mine owners is now computed at twenty million tons—a quantity amply sufficient to carry the consumers of hard coal through the spring and summer. It has been announced on good authority that there will be no material increase in the price of the commodity. As soon as the reserve stock is seriously depleted the mines will resume operations with the help of non-union labor. This year there will be no cowardly attempt on the part of the State authorities to shirk the duty of maintaining order. The improved constabulary and the militia will see to it that non-union workers are thoroughly protected. The mine owners and operators can rely at this time upon the sympathy of the community. If the United Mine Workers refuse the liberal offer to renew for three years the agreement sanctioned by the Anthracite Coal Strike Commission, worse will befall them. If, after the failure of the strike, the owners and operators consent to employ them at all, it will be under conditions very different from those by which they have profited during the last three years. At this critical juncture the leaders of the anthracite miners may do well to heed the Scriptural injunction, "Agree with thine adversary quickly, whilst thou art in the way with him." As for their action that the American community, at a time when it is neither undergoing nor threatened with privation or hardship, will tolerate any interference on the part of President ROOSEVELT with freedom of contract, they will find it entirely without foundation.

Why have several regiments of infantry and some batteries of artillery been sent to the Philippines? The impression which the Federal authorities at Washington have industriously striven to convey is that a considerable military force may be needed at any moment for the purpose of protecting the lives and property of Americans in China. Of late, however, there has been a great deal of testimony to the effect that, with the exception of two or three local outbreaks against missionaries, which have been quickly repressed and severely punished, the lives and property of American citizens have not been threatened; while as for the boycott, about which so much has been made as an index of anti-American feeling, it is pointed out that our exports to China are actually greater now than they were before the boycott was started. We are now inclined to think that additional troops have been sent across the Pacific not because they may be needed in China, but because they are urgently needed in the Philippines. Naturally, Secretary TART, who, during and since his visit to the archipelago, has repeatedly declared that the islanders have been pacified and are now completely reconciled to their connection with the United States, does not like to acknowledge that he was misinformed. Letters to the newspapers from private persons residing in the Philippines tell a very different story. These writers assert that the Filipinos are more widely disaffected and rancorous against Americans than they ever were. The recent necessity of killing in the island of Jolo more than 500 insurgent Moros, together with many women and children, seems to indicate that, whatever may be the case in Luzon and some islands of the Visayan group, the inhabitants of the Sulu archipelago and of Mindanao (where also there are many Moros) are by no means contented with American rule. There are even rumors, which seem to find embryo in some private circles in Manila, that a wholesale butchery of all Americans in the archipelago has been planned. One Smith's refusal to give the Filipinos, who have lost their old Spanish customer, an equivalent market

for their principal products in the United States may well have added the last drop of bitterness which has made the cup to overflow.

On March 7 the House of Commons, by a majority of 238, passed a motion introduced, not, as might have been expected, by a representative of labor, but by a Liberal capitalist, Mr. W. H. LEVER, in favor of paying members of Parliament £1,500 a year. The Premier, Sir H. CAMPBELL-BANMANN, accepted the demand in principle, but said that the government at present had neither the time nor the money to carry it into effect. We do not believe that either of the reasons given for inaction will be accepted as adequate. By applying the demand expressed in the resolution, and the House of Lords would undoubtedly concur, even if that body should consider that it had a constitutional right to dispute the exclusive jurisdiction of the Lower House in the premises. As for the amount of money, only a little more than a million dollars would be needed. It seems absurd to say that the British Treasury could not stand such a requisition. Even Russia, which is in sore financial straits, is to pay every member of the State Duma, or National Assembly, twelve dollars a day during the session. We can recall no European country except the German Empire, Italy, and Spain where, as regards the payment of members of the popular branch of the national legislature, the British precedent is followed.

French Senators and Deputies get nine thousand francs, or about \$1,750 annually. The members of the Austrian Lower House receive about four dollars a day, while the Hungarian Table of Deputies allows a salary of one thousand dollars a year and \$325 for house rent to every member. In Belgium members of the Chamber of Deputies are entitled to \$789 annually and to free travel over the railways; in Holland, to \$900 and travelling expenses. Switzerland is economical; the members of the Swiss National Council obtain only \$3 80 a day, together with the cost of travelling. Prussia buys her legislators more cheaply yet, giving the members of her Chamber of Deputies only \$3 50 per day. The members of the Norwegian Storting have to content themselves with \$3 20 per diem and mileage. In Saxony the members of both the Upper and Lower House of the legislature receive only \$2 85 a day with mileage. Denmark cuts underneath these figures, paying its legislators only \$2 a day during their presence in the Landsting. Japan, on the other hand, pays both her Peers and her Representatives two thousand yen annually in addition to mileage. Compared with these statistics, the treatment of members of the Congress of the United States is munificent. The bill passed twenty or more years ago which gave Senators and Representatives \$7,500 a year was repealed principally because it was not made applicable solely to successful Congresses. It is well known that at present every member of Congress gets not only \$5,000 a year and twenty cents a mile for travelling expenses, but also a number of perquisites, of which the allowance for stationery alone has been valued at from three hundred to three hundred and fifty dollars, which is about the amount awarded by way of salary to the members of the Greek Chamber of Deputies and to the members of the second branch of the Swedish Diet. Yet a great many members of our Congress assert that they are unable to live in Washington on their pay. On the other hand, one of the new members from Missouri has proclaimed his intention of saving the whole of his annual stipend, and living on his mileage and perquisites.

On March 6, in a series of *skisser*, the Czar defined the constitution of the coming Russian Parliament, which, it seems, is to be bicameral, the function of an Upper House being delegated to the Council of the Empire, only half of whose members, however, will continue to be appointed, the other half being elected. The body's powers of legislation will be equal to those of the State Duma, or National Assembly, as regards even the right to initiate money bills. The elective half of the members are to be distributed among the land-owning nobility and the clergy, certain representatives being also allotted to the Academy of Sciences, the universities, and to the chambers of Industry and Commerce. The organization of the Upper House is evidently designed to provide a check upon the popular branch of the national

legislature. The ministers may be interpellated in either chamber, but, as in the case of the German Empire, they are not to be responsible to the Parliament. They remain agents of the sovereign, accountable to him alone.

Other precautions are taken to safeguard the Czar's supremacy. He reserves the right to convoke and dissolve the Parliament, though it must meet once a year. Any bill passed by the two Chambers may be vetoed by him. Certain subjects are expressly excluded from the jurisdiction of the Chamber—to wit, reports of the Minister of Finance upon the state of the treasury; charges of malfeasance against members of the Council of the Empire, Ministers, Governors-General, and Commanders-in-Chief of armies; the establishment of stock companies with special privileges; and, finally, questions relating to entailed estates and titles of nobility. We observe, also, that the government has been careful to retain the power of promulgating "temporary" laws during the recesses of Parliament. It follows that, in time of stress, the Czar would be able to rid himself of an obnoxious legislature, and proclaim, by executive decree, such regulations as he might deem needed to meet an emergency. We add that the President and Vice-President of the Chamber will be appointed by the Emperor. In this respect the State Duma will be deprived of a privilege possessed by the Reichstag. These elaborate attempts to make the Russian Parliament conservative will in practice be counterbalanced to a very large extent by provisions that the sittings of both the National Assembly and the Council of the Empire shall be public; and that the members of both Chambers shall be immune from arrest during a session, except by permission of the bodies to which they belong. Experience has shown that, with such concessions, a nation's voice is almost certain eventually to become irresistible. In the work of naturalizing free institutions, it is only the first step that costs.

During the week ending March 10 substantial progress was made at Algiers toward an agreement of the powers represented in the Moroccan Conference. The French delegates receded from their original demand that France should have exclusive control of the police employed to maintain order, not only on the Algerian frontier, but also in the eighth Moroccan *cajima*, and accepted Russia's proposal that Spain should share equally with France in the exercise of the policing function. An Austrian delegate, speaking, apparently, as much for the Berlin as for the Vienna government, suggested subsequently that while French and Spanish officers should organize, train, and direct the Moorish policemen appointed by the Sultan for the purpose of preserving order in *ceren* of the *cajimas*, the commander-in-chief of the whole force should be a Swiss or a Hollander, who should also possess exclusive police authority in the eighth port, *Casa Blanca*. It is probable that a compromise will be reached upon this point, France accepting a Hollander or Swiss for the post of inspector-general, but not for that of commander-in-chief. There is also reason to expect an accommodation of the conflicting views of Germany and France with reference to the management of the Bank which is to be entrusted with the administration of Morocco's financial affairs. Germany will acknowledge that France, which, through its *cajimas*, has lost more money to Morocco than any other European power, shall have the largest representation in the Bank's directorate, while France, on her part, will accept a smaller increase of preponderance than that upon which she at first insisted.

What, then, will be the outcome of the conference, from which so much was hoped and feared? It is evident that France must resign herself to a large abatement of the privileges which, ostensibly, were accorded to her in the treaty negotiated by M. Drouot with Great Britain and Spain, but against which the German Emperor protested. She is not to be permitted to make of Morocco a second Tunis or a second Egypt. That she has special interests in the Sherifian dominions is conceded, but she will not be allowed to transmute special into exclusive interests. An open door in Morocco is guaranteed to all the signatory powers, not only for the forty years originally promised by France, but for an indefinite period. The German Emperor, on his part, may justly feel that he has established the principle that no combination

of European powers may arrogate the right to settle, without Germany's consent, the future of any country in which Germany is interested.

We have often pointed out the desirability of doubling the salary of the President of the United States. He has far greater responsibilities and incomparably more work to do than has the President of the French Republic, who, nevertheless, receives nearly \$250,000—or, to be exact, a salary of \$120,000, plus the allowance of an equal sum for expenses, besides the use of two furnished palaces, the Elysée and Fontainebleau. It seems that we have not been able to convince some of our fellow citizens in Kansas. In the course of a somewhat heated newspaper discussion of the subject, an inquisitive individual has instituted a minute investigation of all the appropriations made by the Federal government for the Executive Mansion. Besides the salary of \$250,000 a year paid to the President, a number of employees engaged in executive or quasi-executive work receive their stipends from the Federal exchequer. These include a private secretary who gets \$3250 a year; an assistant private secretary, \$2500; a stenographer, \$1800; five messengers, each of whom gets \$1200; two doorknockers, \$1200 each; four other clerks at salaries varying from \$1500 to \$2500; a telegraph operator, \$1200; two day ushers, \$1400 each; one night usher, \$1200, and a watchman, \$900. Besides these expenditures for the performance of what may now be deemed executive duties, though there was a time when the President defrayed the outlay for such purposes mainly from his private purse, the government furnishes a man to take care of the fires at \$864 a year, a steward at \$1800, and also places at the President's disposal two special funds of \$40,000 and \$8000 a year.

Of the former special fund \$12,500 is for repairs and for refurbishing; \$15,000 for gas, matches, the maintenance of the stables, and diverse miscellaneous objects; \$4000 for the greenhouse, and \$2500 for fuel. The smaller special fund is for stationery, for carpets (which, apparently, are not regarded as furniture), and for the care of the stable, which, seemingly, is distinguished from disbursements for feed, equipage, harness, etc. To sum up, the tenant of the White House gets from the government in one form or another more than \$100,000 a year in addition to about \$25,000 paid to employees assigned to so-called executive work. On the whole, the people of Kansas seem to think that the President has nothing to complain of, and it is, we believe, a fact that Mr. ROOSEVELT has not contemplated any proposal to increase his salary. He possesses some means of his own, however, and doubtless derives considerable income from his copyrighted books. We should bear in mind, however, that many Presidents have been less fortunate in these particulars, and it seems only reasonable that the most opulent country in the world should pay its Chief Magistrate enough to allow him to save something for his old age.

Governor JOHNSON, of Minnesota, is credited with saying that he does "not believe that any man should have more than \$10,000 a year, for if he lives right he does not need any more." He is not belligerent about it, nor does he propose to take away the excess of income from persons who have more than \$10,000, but merely suggests that the excess should be devoted to good works. Ten thousand dollars a year is a good deal of money, especially when it comes in without labor and leaves its possessor the use of his time. But it is a great deal more money in some places than in others. There are very rich men in Minnesota who could spare \$10,000 out of their incomes a good many times a year and not miss it. Nevertheless we presume that in Minnesota that amount of annual income commands a moderately luxurious style of living. The possessor of it can probably live more comfortably than the great majority of his neighbors in the same social group as himself. But in New York it is a modest income on which the family of a merchant or professional man may subsist comfortably with careful management and give children better educational chances than the public schools afford. It isn't riches, by a long shot. A New York family can "live right" and need very considerably more than \$10,000 a year without effort or compunction. What we need depends in considerable measure upon what our neigh-

bors have, and what scale of living prevails among our natural associates. Right living, moreover, does not consist in living cheaply, but in living usefully. There are many people in New York whose usefulness is promoted by incomes vastly larger than \$10,000. If Governor JOHNSON will modify his opinion to read that no man in Minnesota should have more than \$10,000 a year, we will not quarrel with it, though Mr. HILL may. But it isn't a sound opinion as applied to New York.

SARAH BROWELL ANTHONY died at her home in Rochester on March 13, eighty-six years old, a greatly honored and respected woman. She was one of the group of remarkable American women who first became conspicuous in anti-slavery agitation days, and who, starting their public life in that period of storm and stress, got a broader and deeper renown as public characters than women have attained in this country before or since. Miss ANTHONY's father was a Quaker, a cotton-manufacturer in Massachusetts, who had his daughters carefully educated. SARAH was sent to a Quaker boarding-school in Philadelphia, and after graduation became a school-teacher. Her first inclination towards the woman's rights movement came with the indignant conviction that women teachers ought to be as well paid as men for doing the same work. A little later, being a born reformer and bent to reform something, she became interested in temperance, and being refused admission to a temperance convention because of her sex, she was the more assured that women's rights needed looking after. In this conviction she was joined at this time by Mrs. STANFORD, her early associate in temperance reform and her lifelong friend and colleague. As early as 1854 Miss ANTHONY began to demand a fair deal for women. She was a truly strong-minded and courageous person, and she demanded it with aggressive vigor. In 1856 she became a regular agent of the Antislavery Society, and shortly afterwards gave up school-teaching for politics and public life. As antislavery soon ceased to need discussion, she gave all her strength to the woman's rights and woman's suffrage cause. In 1860, under the stimulus of the demands of Miss ANTHONY and her coworkers, the New York Legislature passed the act giving to married women control of their earnings and the guardianship of their children. Since that time women in New York and all, or very nearly all, the other States of the Union, have had accorded to them by legislation pretty much all the rights and privileges relating to personal liberty, property, education, and the pursuit of happiness and gain that their champions have been able to suggest. In these great and beneficent acquisitions of power and independence for her sex Miss ANTHONY took a leading and conspicuous part. Doubtless many things that she contended successfully for were on the way anyway, and were the irrepressible fruits of popular education, republican institutions, and the general diffusion of enlightenment. That, however, in no way detracts from the credit due to her devotion and generalship.

The one great boon, long sought and hard fought for, which was denied to Miss ANTHONY was woman suffrage. Not even that failed entirely, for they have it without limitations in some of the Western States and limited forms of it in many States, but taking the country as a whole, it has not come yet, and there is no present certainty that it will come. The great obstacle to it is that the great majority of women are either indifferent to it or adverse to it. Most women do not care to vote themselves, and considerable groups of them in this and other States object so strongly to having political responsibilities forced upon womanhood that they have put up an organized opposition to the suffragists and the suffrage movement. For that or other reasons the woman-suffrage movement has seemed of late years to be at a standstill, if indeed it is not going backward. The average man seems to be willing that women should vote if enough of them want to, but he is not urgent about it, and doubts whether it would do any good. If it had been practicable to bestow the suffrage upon women like Miss ANTHONY who wanted it, without imposing voters' obligations on the rest of the women, no doubt it would have been done long ago. That, however, would by no means have appeased Miss ANTHONY, whose interest was not in getting the voting privilege for herself, but in arousing the spark and promoting the mastery of all womankind.

What Miss ANTHONY thought of men, or that she ever took much thought about them except as inconvenient but indispensable supplements to women, we do not know, nor does it matter. She was one of the bravest figures of her generation, and outliving and outfighting the ridicule and disparagement that met her early demands, she came to be honored as her single-minded courage deserved, and in her later years to be affectionately regarded by thousands of observers who did not share her views. When she died she was by very much the most distinguished citizen of Rochester. Perhaps they will set up her statue there some day.

We spoke last week of the scheme for a tunnel under Bering Strait and a railroad through it to connect St. Petersburg with Seattle and the rest of North America. A St. Petersburg despatch, published on March 11 in the New York *Herald*, spoke of this enterprise as beginning to look up again. The American Trans-Siberian Company is said to be pressing the project vigorously again, and to offer to bore the tunnel and connect it by 3000 miles of railroad with the existing Siberian Railroad in return for land grants (alternate eight-mile sections on the railroad) and mining concessions. The company, it seems, expects to find the Siberian side of Bering Strait as rich in gold as the Alaskan side, and to dig out pay-dirt in its tunnel-building. Mr. WITTE is said to be sympathetic with the enterprise because it promises to foster closer commercial relations between the United States and Russia, and the Emperor has appointed a commission to huddle with the company. The company, through Baron de LORNA, wants eighteen months in which to begin work and then ten years to finish the road. These details make this prodigious enterprise seem a tangible possibility. How will it be regarded by the patrons of the Yellow Peril spectre? The last time the Dover-Calais tunnel project was pressed, a scare about its opening England to invasion defeated it. Shall we be invited presently to shudder at the thought of a railroad that might deliver an endless chain of Asiatics upon American soil at the rate of 100 a minute—or say, 100,000 a day? What ingenious master of imaginative history shall he join on the press with a Battle-of-Borking story of the stupendous conflict of the Comptons on the far-off shore of Bering Strait?

President ROOSEVELT being credited by DEACON RUSSELL, of Brooklyn, with knowledge of statistics demonstrating that eighty-two per cent. of the prisoners in the penitentiaries for crimes against morality were Jews, has formally disclaimed possession of any such knowledge. DEACON RUSSELL says that he read the statement that he quoted in the *Globe American*. We don't know what are the statistics of crime among the Jews in New York, but whatever they are it must be remembered that they concern a group of people seven-eighths of whom are recent comers from southwestern Europe, very poor indeed, and living closely packed together on the East Side. It makes for clarity and precision of judgment about Jews in New York to keep this large group of seven or eight hundred thousand (mostly Russian) Jews of recent immigration distinct in the mind from the group of sixty or seventy thousand Jews, mainly of the German stock, who have lived in New York as long as most of the other New-Yorkers, and are thoroughly Americanized and enjoy a high average of prosperity.

General Wood says it is true that many women and children were killed in the fight with the Moros at Dajo Hill, but he explains that there was no help for it, because many of the women wore men's clothes and fought desperately, and the Moros used the children as shields in the hand-to-hand fighting. Evidently the fight was at best a very nasty job, as to which the important question is whether it was imperatively necessary. Perhaps President ROOSEVELT sent his message of congratulation to General Wood before he had received the details of the battle. "I congratulate you and the officers and men of your command," he said, "upon the brilliant feat of arms wherein you and they so well upheld the honor of the American flag." Heaven save the mark! If General Wood's command performed a pressing but repulsive and dangerous duty effectively and in the only way it could have been done, we do indeed owe them our grateful

acknowledgments, and the more repulsive the job the greater our debt. But the disposition of our people would be rather to send General Wood their condolences than their congratulations. A feat of arms that compassed the destruction in a trap of 600 semi-savage men, women, and children is better characterized as deplorable than brilliant, and though it may warrantably demonstrate the resoluteness of the American purpose, surely it does not appreciably embellish the honor of the American flag. The like, on a smaller scale, has often been done in years past by American troops in Indian-fighting where there was no other practicable course, but nobody was proud of it or talked much about it, least of all the officers immediately concerned. The exploit which General Wood has reported must not be misjudged nor condemned merely because it wasn't nice. War is not nice, even at its best. To the victors at Dajo Hill we offer our respectful and sympathetic thanks for having completed what seems to have been a warrantable job of extermination. We congratulate them in having got to a point where they can rest and wash up, in which last exercise we hasten to join them.

Mr. CARNEGIE has agreed to finance a campaign by the Simplified Spelling Board to facilitate the reading and writing of the English language. The board is the property of the National Educational Association, and includes Professor BRANDIS MATTHEWS, chairman; Dr. WILLIAM HAYS WARD, Mr. HENRY HOLT, Dr. I. K. FINE, and Colonel SPRAGUE, who form its executive committee. For a beginning, Mr. CARNEGIE provides \$15,000 a year for the work of the board. Mr. MATTHEWS, as the papers quote him, says that what the board hopes to do first of all is to encourage every one to spell just as he sees fit, in order to introduce the system of phonetic spelling, and thus advance to a much simpler and at the same time more unified system. The reforms to be introduced will aim primarily to do away with all unnecessary letters. It is easy to foresee that this effort will meet not only with ridicule, but with an opposition not untinged with resentment. To call a man "out of his name" is apt to be regarded as disparaging, and tends to make the man cross. So, to take liberties with familiar words, endeavored to us by long and intimate association, is sure to make a great many people cross. Mr. SUTSWANE, for example, who has long been on terms of the freest and most affectionate intimacy with the parts of speech, shows prompt indignation at the proposal to meddle with them. "A monstrous, barbarous absurdity," he calls the proposition. Without doubt the board will have a hard row to hoe.

It seems an excellent board, but whether it is the best possible body to undertake the proposed work is debatable. If it were desired to simplify the spelling of the French language, it could best be done, if it was possible to do it at all, by the French Academy. We have heard it rumored that there exists in this land an association, or the skeleton of one, which came into being as the result of an aspiration to create a distinguished depository of literary tradition and authority fit to be compared with the circle of the Forty Immortals. We have understood that this American Academy has a distinguished membership, but no dwelling, no endowment, and no definite job. If Mr. CARNEGIE should investigate the status of this American Academy, and furnish it (if his inquiries encourage him) with a house and an endowment, this effort to reform our spelling would supply the association thus stimulated and buttressed with an exceedingly competent occupation. The Academy might not be able to execute the job, but it could discuss it interminably, and the more interminably the better, because the job would take care of the Academy. Nobody will object to spelling reform if only it is gradual enough. If it is to be accomplished systematically and according to the preconcerted plan, it must be entrusted to some permanent and self-perpetuating body that has all the time there is at its disposal, and that has a strong and lasting motive for keeping at its work. A strong group of American academicians, who would agree gently and gradually but firmly to spell reform, might in time accomplish some beneficent modifications of the prevailing orthography. As an incentive to effort it would be well that the members of the group should receive salaries—modest ones. It would be worth it, for only an altruist of superhuman devotion can regard illiterate-looking spelling as its own reward.

Mr. Morton on Proposed Life-insurance Reforms
